Three years ago almost to the day, Senator HUBERT H. HUMPHREY and Representative JOHN A. BLATNIK of Minnesota introduced into the Congress a proposal for a 10-year management and development program for the conservation of America's natural resources. A major feature of their plan was establishment of a Youth Conservation Corps, modeled on the old Civilian Conservation Corps of New Deal days, one of the most highly successful and generally admired innovations of the Roosevelt era.

The Humphrey-Blatnik proposal in its entirety, which would have rehabilitated the badly depleted natural resources of the Nation, was estimated at the time to cost about $1.2 billion a year over a 10-year period, or, as Mr. HUMPHREY pointed out, for the entire decade one-fifth of the cost of the defense program for 1 year. However, nothing of a comprehensive nature was done, and there the matter rested.

Now the Kennedy administration has revived the Youth Conservation Corps part of the plan, under stimulus of the excellent report issued in January by its Natural Resources Advisory Committee headed by Representative FRANK E. SMITH of Mississippi. Establishment of a YCC alone will not solve the problem, but it is an important and progressive step.

With the 9-year experience (1933–42) of the CCC to guide it, the proposed YCC would employ some 150,000 boys aged 17 through 19 for 1 year's outdoor manual labor ranging from construction of check-dams to planting of trees, and covering the whole range of national park, forest, water and soil conservation activities. The estimated

labor cost would be some $400 million annually; and we can think of few ways in which such a sum could be better spent.

The amount of work required to be done in restoring this country's natural resources staggers the imagination—yet it must be done sooner or later; and the longer it is put off, the more expensive it will become. Three years ago Senator HUMPHREY estimated that only a third of the Nation's farmlands were yet protected by soil-conservation measures; that 50 million acres of forest land needed replanting and another 275 million improvement; that two-thirds of our western grazing land was suffering from erosion. These figures are still substantially the same.

In the spirit of the CCC almost a generation ago, the YCC today can be a tremendous force for the conservation of resources and the useful employment of American youth in the 1960's.

POSITION OF SENATOR McCARTHY AND SENATOR MUSKIE ON THE BYRD AMENDMENTS TO THE TEMPORARY EXTENDED UNEMPLOYMENT COMPENSATION ACT OF 1961

Mr. HUMPHREY. Mr. President, I should like to amplify and clarify the RECORD as to the situation of the junior Senator from Minnesota [Mr. McCARTHY] and the junior Senator from Maine [Mr. MUSKIE] on rollcall vote No. 16—CONGRESSIONAL RECORD, pages 4192–4193, March 16, 1961. That vote was on the question of adoption of the various committee amendments—the so-called Byrd amendments—to the Temporary Extended Unemployment Compensation Act of 1961.

Both Senator McCARTHY and Senator MUSKIE were assured by the Democratic leadership staff that there would be no problem in their attending a meeting held adjacent to the Capitol. They asked to be given sufficient notice about the time when a vote was scheduled.

Unfortunately, the vote on those committee amendments came before the time indicated to Senator McCARTHY and Senator MUSKIE, and we were unable to notify the two Senators in time for them to return to the Senate Chamber for the first rollcall.

They were, of course, announced as being against those amendments; and they are recorded properly on all other rollcall votes on this measure.

I make this statement because this body has no more conscientious Members than the junior Senator from Minnesota [Mr. McCARTHY] and the junior Senator from Maine [Mr. MUSKIE].

Mr. President, I thank the Senator from Florida for his courtesy, and I wonder whether he would like to have the absence of a quorum suggested at this time.

Mr. HOLLAND. No, Mr. President; I think adequate time has elapsed in order to enable Senators whom I have already notified, and who previously have shown an interest in the subject I shall discuss, to be present at this time; and if any such Senators have not yet reached the Chamber, I do not wish to compel their attendance, even if I could.

BRITISH BROADCASTING CORP. REBROADCAST OF FILM "HARVEST OF SHAME"

Mr. HOLLAND. Mr. President, I deeply regret that last night the British Broadcasting Corp. presented throughout the United Kingdom the film, "Harvest of Shame," under an arrangement with Columbia Broadcasting System. On February 6, I spoke in the Senate on this so-called documentary film, which CBS had presented as a network domestic broadcast on November 25, 1960. At that time, I spoke primarily as one of the Senators from Florida, representing the interests of the people of my State. My remarks were directed to seven specific misrepresentations of facts in this film and its unfairness to Florida migrant agricultural workers and their employers. I showed that matters supporting the views held by the producers of the film were included in the film, and that matters not supporting their views were excluded.

Today, Mr. President, I should like to speak primarily in my capacity as a Senator of the United States with a heavy obligation to all the people of our great Nation. I shall address my present remarks to the grave damage to our Nation's best interest which may be expected from the exporting of this untrue and unfair documentary film.

When I first heard, at midafternoon Monday, March 20, the shocking news that the film was to be presented by BBC, I contacted Gov. LeRoy Collins, former Governor of Florida, who now is serving as president of the National Association of Broadcasters. He pointed out that the National Association of Broadcasters exercises no control over network programming; but he expressed serious concern about the national interest, especially in the light of Mr. Edward R. Murrow's present position as Director of the U.S. Information Agency, as distinguished from his position at the time when the film was made. At that time Mr. Murrow was connected with CBS, and he appeared in the film to narrate its introduction and its conclusion. Governor Collins contacted high officials of the CBS network, and asked their urgent consideration of steps to avoid the showing. He was later advised by these officials, on Tuesday, March 21, that the showing would be made as contracted, but that, in the light of my protests, an announcement would be made, at the beginning and at the end of the film, to the effect that at the time when the film was produced, Mr. Murrow was in the private employment of CBS, and then held no official position with the U.S. Government.

After discussing the matter with Governor Collins, I called it to the attention of the State Department, which promptly made inquiry concerning the showing of the film in Great Britain, and was informed that it had been contracted for with CBS, and was about to be shown as advertised.

I talked three times with Mr. Lincoln White, at the State Department, and twice with Assistant Secretary Roger Tubby. Since then I have been advised that as a result of my conversations and those of others with the Columbia Broadcasting System in regard to this matter CBS has now promised not to offer this film for sale for showing in any other nation.

Mr. Edmund Bunker, CBS representative in Washington, called me as a result of the conversation I had had with Governor Collins. Mr. Bunker advised that the film has been sold some time ago to the BBC; that it is routine for programs to be put on the market for foreign distribution after domestic presentation by CBS; and that it was too late to cancel the British showing of the program.

In the course of those discussions I received two calls from Mr. Murrow, who yesterday was sworn in as head of the U.S. Information Agency. Mr. Murrow advised me that he both deplores and resents the fact that CBS sold the "Harvest of Shame" film for foreign presentation; that he is deeply distressed that it did so; and that he regards this CBS action as "wholly irresponsible." He emphasized that the film was made for domestic presentation, and that he had nothing whatever to do with its sale for showing abroad.

As I stated in my remarks to the Senate on February 6, the presentation of this film within the confines of the United States was highly undesirable in itself. I brought out at that time the fact that officers of the Philip Morris Cigarette Co., which purchased the time for the network presentation of the film, later repudiated it after making their own investigation, with the statement that the show was unfair, that it does not paint an accurate picture, and that they found in Florida "a dedicated people who have worked for years to improve the life of the migrants." I presented seven specific ways in which the film was false. One of these was the statement in the film that "there is no case upon the record of the child of a migrant laborer ever receiving a college diploma." I gave the names of 11 college graduates residing in one county alone who were former migrants or children of migrants. Another misrepresentation was the statement in the film that "there is no interstate standard with regard to safety." I showed that since 1956 a Federal statute has authorized the ICC to regulate interstate transportation of workers by motor vehicle. Other inferences in the film whose falsity was easily demonstrated were that the rent generally paid by migrants in certain areas is $15 per room per week, and that migrants have little hope of owning their own homes.

Since my remarks before this forum on February 6, there has been no contradiction on the Senate floor of any of my allegations of misrepresentations. Furthermore, since then there has been no contradiction from CBS or from any other source.

There are a number of reasons why the sale of this film to the British Broadcasting Corp. and its presentation last night throughout Great Britain were

highly detrimental to the best interests of our Nation. I shall now mention two of these reasons.

First, it presents a very bad picture of our country, at a time when the new administration and our people generally are making a strenuous effort to improve our Nation's image abroad. If the picture presented were an accurate one, the showing might not be so objectionable. However, the national image presented is not only an unfavorable one; it is also a very unfair and untrue image.

Many of the migrants in the picture are Negroes. In close juxtaposition with pictures of Negro migrant workers, such terms as "slaves" and "sweatshops of the soil" are used. This fits easily into the false picture of the position of Negroes in American society which our Nation's enemies are bending every effort to create throughout the world. By the use of such invidious terms, the impression is created that labor in the United States, particularly agricultural labor, is exploited.

Second, coming as it did on the very day that Mr. Murrow was sworn into his new responsibility of such grave importance to our country, the BBC broadcast could have no other effect than one highly embarrassing to our country and to Mr. Murrow. Despite the announcement at the beginning and the end of the film to the effect that Mr. Murrow was in no way connected with the U.S. Government at the time when he participated in its production (which was made because of my intervention in the matter), there were undoubtedly many viewers who tuned in at times when this announcement was not made or whose attention was diverted at such times. The impression that the film was a U.S. Government documentary was further fostered by the appearance of Secretary of Labor Mitchell. Mr. Murrow was justified in his dismay over the film's foreign presentation, since he must now, in his new official capacity, bend every effort to correct its misrepresentations and to erase its false picture of America and American life.

It is impossible to justify the actions of the Columbia Broadcasting System in putting its own monetary gain ahead of the best interests of the Nation, which all those connected with this great network must love as do other Americans. That the CBS officials responsible could, for a few "pieces of silver," permit this malicious and false slander against our Nation to be presented abroad is incomprehensible. By this thoughtless, irresponsible action, CBS has damaged the Nation whose government has granted the franchise by which it operates as a great medium of public information. It is my fervent hope that CBS officials and all others who are tempted to export such harmful and false film presentations of American life will take this experience most seriously and will in the future exercise the greatest care both in making such documentaries and in exporting them for foreign presentation.

Mr. WILLIAMS of New Jersey and Mr. KEATING addressed the Chair.

The PRESIDING OFFICER. Does the Senator yield; and, if so, to whom?

Mr. HOLLAND. I yield to the Senator from New Jersey.

Mr. WILLIAMS of New Jersey. Mr. President, first let me thank the senior Senator from Florida for advising me that he was going to make a speech this afternoon. Only because I was presiding over a hearing, and could not get away, I missed his early remarks. However, I wish to thank the Senator for his thoughtfulness, because we have discussed the problem of migrant workers together, informally, and on the floor of the Senate. I have been in colloquy with the Senator when he has been critical of the CBS film "Harvest of Shame."

On some of those occasions I have not felt it was any responsibility of mine to represent the Columbia Broadcasting System here on the floor of the Senate. I certainly do not feel I have any responsibility or authority to deal with the wisdom of the company's decision to let the film go to England to be used there by the British Broadcasting Co.

In reply to the suggestion that the film gives an absolutely false and malicious picture of the condition of migrant workers, I wish to say I have had the opportunity to be in the fields and camps where migrant farmworkers work and where they live in eight or nine States around the country.

I feel that part of the film was made during field trips of the subcommittee on migratory labor. I feel that way because I have seen the conditions there shown, and those pictures were accurate pictures. They were not false pictures. I know it because I was there.

It is true, and this I have said many times, that there is hope of improvement. There is a demonstrated hope, and I have said, publicly and to the Senator, that much of this improvement, he can be proud to know, is in his State of Florida, where there are day centers for youngsters, where there is home ownership in small degree, but I saw no other evidence of it in any other States, with the possible exception of California.

Do I correctly understand that an agreement has been entered that the film will not be shown abroad any more?

Mr. HOLLAND. The Senator is correct. As I understand, the company has agreed not to take the initiative in offering it for sale to any other country, and, if there are requests for it by other countries, to consider them most carefully.

I do not believe the distinguished Senator would hold it was good for the interests of our country for the film to be shown to upward of 60 million people who could see it in Great Britain, meaning England, Wales, Scotland, and Northern Ireland, and some areas of the continent, in the form in which it was shown and narrated by a man who has just been confirmed as the head of the U.S. Information Agency, and with the former Secretary of Labor from the State of New Jersey, which State is so well represented by the distinguished Senator to whom I am now speaking. I do not believe the Senator would hold it was an act in the national interest to sell that film for production to that huge audience as it was produced last night.

Mr. WILLIAMS of New Jersey. Let me say to the Senator from Florida that I have been working earnestly to understand the problems of migrant farm families, particularly American migrant farm families. In these two years we have worked as diligently as we could, and we have discovered some desperate human facts of life within this group of Americans, whose average income is under $1,000 a year, whose housing is unbelievable in its wretchedness, whose youngsters get little or no help, after they leave their home base in Florida, Texas, or California, in getting anywhere near a decent education, whose health and welfare are not taken care of by the communities, for whom no provision is made for unemployment compensation or minimum wages.

They are today, notwithstanding improvement in very measured step, the truly left-out people when we think of the social and economic gains of this country.

It was not until the Nation's conscience was aroused by the film that we began to get citizens' support for the 11 bills I introduced, from people all over the country, support for health and welfare and better working conditions for these people, through Federal legislation.

I hope we can move on to dealing with the legislation, and not waste all our energies in condemnation of a film, not in argument, but at least in discussion that arises.

Mr. HOLLAND. I find much in what the Senator has said to which I can agree. I think there are some bad conditions as shown in the film. I do not think that is a good excuse for exhibiting it overseas. I know that there are completely false expressions in that film. I called attention to seven of them on the floor of the Senate. In a colloquy later with the Senator from New Jersey commenting on the statement, he did not deny the accuracy of my statement in any one of the seven instances I pointed out. If he wishes to deny them, now is a good time to do it. I know those statements were false, and I know the Senator from New Jersey would not for a moment support, for instance, the statement that there was no college graduate from among the large group, whereas, we showed, in a short period of time, there were 11 such college graduates in 1 comparatively small community, giving their names and occupations. So there could be no possible question about it.

The Senator has mentioned another fact. There is housing belonging to the migrants, approximately 100 such families owning their own homes in 1 community alone. Yet there is an inference in the film that there is little chance for migrants to acquire homes of their own. There were similar statements which I am sure the Senator knows were false.

I hope the Senator will not leave the record in such shape as to indicate that he approves the showing of the film in Britain by the CBS, after CBS knew

these falsities existed and after CBS had not taken the trouble even to have them corrected for the discussion before the Senate.

There is one item in particular to which I should like to invite attention. In supporting certain things which the Senator is recommending, I have joined the Senator in the introduction of one bill, as written, and another almost in the form it was written.

Mr. WILLIAMS of New Jersey. I wish to make my position clear.

Mr. HOLLAND. I hope the distinguished Senator also feels that the very distinguished commentator, Edward R. Murrow, who has the heavy responsibility which the Senator and I helped place upon him as head of the U.S. Information Agency, knows what he is talking about when he speaks of his resentment at the sale and when he speaks of the complete irresponsibility which he says has been shown by the CBS officials in doing this thing to his country and to him.

Mr. WILLIAMS of New Jersey. In reply to the Senator from Florida, I thought at the beginning of my brief remarks I should make it plain I did not join the colloquy to approve or disapprove the decision of the Columbia Broadcasting System, a private company. I am not going to engage in discussion of that point.

Mr. HOLLAND. I understood the Senator to say also that he was glad Columbia Broadcasting System had agreed not to offer the film for sale to other nations. Was I mistaken?

Mr. WILLIAMS of New Jersey. I believe I said words to that effect. I was hopeful that perhaps this would put an end to the persistent effort to discuss at unusual length a film, when there is a program I wish to talk about, to work on, and to have enacted by the Congress.

The Senator knows that when I learned there were errors or mistakes, I agreed. That was true in our earlier discussions in connection with college graduates from the migrant farm communities. I have seen one or two such people, but I have seen literally thousands of families. While the film was technically in error, certainly it was only in small degree.

Finally, before yielding the floor, I wish to express my great gratitude to the Senator from Florida [Mr. HOLLAND] for his support of some of the most humane measures to deal with this social, economic, and human problem.

I state my gratitude because the support of no other Senator is more meaningful to the success of a measure which deals with health or welfare, and I believe the program will be advanced a long way.

Mr. HOLLAND. I thank the Senator for his gracious remarks. In order that the RECORD may be clear, I have joined the distinguished Senator on the bill, as presented and written, for giving Federal aid in establishing day nurseries wherever migratory workers go. I believe the Senator has already stated that there are such nurseries in my State at present.

I have also joined the Senator by introducing a revision of his bill to have the Federal Government aid in the construction of migrant housing, when such aid is needed, after I had made a few minor changes in his bill.

I have not been able to go all the way with the distinguished Senator, but I can see there is a problem. Our State has already acted. There has been action by the State legislature, action by the board of health, and action by the Governor with emergency funds when such were needed. In many other ways we have taken action, as indicated in the earlier discussion.

My appearance today is not primarily a Florida appearance. It is inconceivable to me that any Senator could feel that a wholesome thing was done by the CBS in its release of the film, which depicts our rural life in such an unfavorable light.

I have been handed a release marked "For immediate release" by CBS news, on "Harvest of Shame," which states:

> To deny overseas subscribers the use of the news report would be inconsistent with basic principles of freedom of information and full circulation of news.

That does not gee with the statement made to me by responsible Government agencies today, that CBS has agreed not to offer the film to other nations.

There has also been incorporated in the statement the announcement at the beginning and the end of the presentation in Britain, concerning Mr. Murrow's participation. Perhaps it would be best if I read it:

> In order to make clear that Edward R. Murrow's participation in the program was solely in his capacity as a CBS news correspondent we asked the BBC, and the BBC agreed, to include the following announcement at the beginning and the end of the broadcast of "Harvest of Shame."
>
> "This program was produced by the Columbia Broadcasting System and broadcast in the United States on November 25, 1960. Its preparation was begun in 1959. Edward R. Murrow was associated with the program while he was an employee of CBS news and prior to his appointment as Director of the U.S. Information Agency."

Without arrogating any importance to my own efforts in this regard, the announcement was made wholly as a result of my intervention. The pitiful part is that it does not seem to have occurred to the heads of this great and supposedly responsible organization that they were doing a disservice to our Nation by selling, without condition, for telecast in the United Kingdom by the BBC, a highly controversial film, which was known a long time ago to be controversial. The officials of CBS knew, as a result of arguments with the Farm Bureau Federation, which consists of 1.6 million farm families in this Nation, that the film was regarded by that organization as being false in 19 particulars. The officials knew, from my discussion before the Senate, that the film had been branded as false in seven particulars, which have never been denied or offset in any way about which I know.

For the CBS to sell the film for showing to more than 50 million people who are our friends and allies—who, in the greatest number, come from the same stock as we, and who speak the same language—was, I thought, a horrible thing.

I have yet to speak to anybody in Government—and I have spoken to more in Government than appears from the record today—who does not think that shocking irresponsibility was shown by the CBS officials who released this diatribe on American life.

Mr. WILLIAMS of New Jersey. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator.

Mr. WILLIAMS of New Jersey. I thank the Senator again for yielding to me for this opportunity to discuss migrant farm families. I look forward to the weeks and months ahead when together we shall work for an affirmative program of relief in respect to these vital areas of health and welfare which the Senator is supporting with me, in part. I suggest that if our program for these people can be enacted we shall not have to worry in the future, for there will not be any possibility of the filming of a "Harvest of Shame."

Mr. HOLLAND. I thank the Senator. The Senator from New Jersey is always gracious. Particularly now I note with gratitude that the Senator does not seek to excuse or to apologize for the attitude of CBS in doing what has been done.

I am also happy to note that the Senator agrees with me that it is a good thing CBS has agreed not to offer this despicable film to other nations. I believe we are not far apart.

I have regarded it as an honor to join the Senator in respect to two of his bills, as to which I am not only representing myself, but also things already done by my people and my State, in an effort to make them more generally applicable to people who deserve some attention by Government. I thank the Senator for inviting me to join him in those respects.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. LAUSCHE. When Mr. Murrow's nomination came before the Committee on Foreign Relations, among other questions I asked him the following questions and he gave the following answers:

> Senator LAUSCHE. Mr. Murrow, now, then, I would like to ask a few questions about the migrant worker picture. Did you do any studying of the conditions in Ohio on migrant workers?
>
> Mr. MURROW. In Ohio? No, sir.
>
> Senator LAUSCHE. Many Ohioans wrote to me and were of the belief that the picture as shown contemplated reflecting the conditions on migrant workers in Ohio.
>
> Mr. Murrow, was your picture directed at the Nation as a whole?
>
> Mr. MURROW. It was directed at the Nation as a whole, sir.
>
> Senator LAUSCHE. That means it was directed at Ohio? How could you direct it at Ohio if you made no study of Ohio?
>
> Mr. MURROW. Because it was shown in Ohio as well as in other States of the Union.
>
> Senator LAUSCHE. But it was not intended to say that these are the conditions in Ohio?
>
> Mr. MURROW. No, sir.
>
> * * * * *
>
> Senator LAUSCHE. We are rather proud of what we have done in Ohio. We have migrant workers under unemployment compensation. We have agencies serving those workers. We have provided living quarters

for them, and they have provided sanitation that is good.

I point out that many citizens of Ohio believe that the picture as shown was reflective of the general condition. It was intended to be absorbed by the citizens of Ohio. It could not have been reflective of the conditions in my State, because the producer of the picture never was in the State and never made a study of conditions.

I point out the general weakness of showing a picture that highlights the bad and completely omits the good. If Ohioans were misinformed, undoubtedly people in the United Kingdom will also be misinformed if the picture is shown to them.

Mr. HOLLAND. Mr. President, I certainly appreciate the comment of the distinguished Senator from Ohio, which is so true. Not only was the picture not made by someone who actually went to Ohio to present it, but the people who took the pictures in my State, at least, took those that fitted the pitiful situation which they wanted to show and included them in the film. They took a much larger number of pictures, which were omitted from the film. The omitted pictures would have given a clear picture of the situation in my State.

However, the problem with which we are now faced is a national problem. I think we have a right to bring it up on this floor. Every network operates by sufferance of the Federal Government, because it must use channels which are granted the station under Federal law. In the first instance, the network should not have portrayed to our neighbors in the friendly countries of the United Kingdom conditions which are not representative and which, instead of being true, are in many instances false pictures of an important segment of our American life.

I wish to make one more comment. Not only were both Senators from Florida urged, but various other Senators were urged, by letters from people in their respective States, to oppose confirmation of the nomination of Mr. Murrow in the highly responsible post to which he had been named. The Senator from Florida investigated and found that the picture in question was taken by others. It was pieced together by others, Mr. Murrow, as narrator, accepted the picture as it was given to him, and he merely contributed the narration at the beginning and at the end of the film.

The Senator from Florida thought it would be hopelessly unfair and unjust to a man with a reputation of many years' standing to base opposition on any such flimsy situation as that. So the Senator from Florida stayed away from the confirmation hearing, as did other Senators from agricultural States who discussed the subject with me, and who felt aggrieved by what had happened. The Senator from Florida and others contributed to the unanimous confirmation of the nomination of Mr. Murrow.

It must be disappointing to Mr. Murrow to find that his former employers were less fair and less considerate to him on this question than were those who had some real cause—at least before making an investigation—to feel somewhat aggrieved by his participation in the film. I cannot understand how people for whom Mr. Murrow had been a loyal employee for many years could have treated him in the way in which they have treated him. I certainly appreciate his statement that he resents such treatment, and believes that the officials of his former company were irresponsible in making the sale of the film referred to.

Mr. KEATING. Mr. President, will the distinguished Senator from Florida yield to me?

Mr. HOLLAND. I yield to the Senator from New York.

Mr. KEATING. I wish to preface my inquiries, which are directed toward getting the ideas of the Senator from Florida as to how we should deal with such a problem in the future, by saying that I have not seen the film. However, I have had a great deal of mail about it from constituents who have seen it.

A number of people in whom I have confidence, as I do in the Senator from Florida, say that there were omitted from the film matters that dealt with the other side of the problem, which should have been included. I know nothing about what arrangement might have been made by CBS for the showing of the film by the BBC. I assume from what the Senator has stated, that BBC purchased the right to show the film. Is that the Senator's understanding?

Mr. HOLLAND. That is my understanding, but I do not know whether it is correct to assume that the showing was either under license or purchase, or any such arrangement. The point is that CBS delivered the film for showing by BBC to millions of British, Scotch, North Irish, Welsh, and other people who regularly look at programs on the British Broadcasting network in the early evening at their homes.

Mr. KEATING. Mr. President, to this extent I agree with the distinguished Senator from Florida: We do show and distribute things in this country which it would not be in our best interest to show in foreign countries. When disputes about our foreign policies are taking place, I never like to have representatives of this country, of either party, going to a foreign country and attacking the foreign policy of our own country. I believe that is not in good taste or in the national interest.

I wonder whether the Senator from Florida feels that there should be some ironclad censorship or a governmental effort to prevent a network or agency from showing or distributing a film in a foreign country.

Mr. HOLLAND. That would be a question which I believe the whole Congress would have to consider for a very long time. I have never favored censorship. I have always claimed that these great managers—that is what they are for the most part—of great investments would show responsibility and would react wisely to the opportunity to operate freely. I have voted on that basis in the Senate for nearly 15 years.

I am just now of the feeling that nothing could more quickly bring some limited censorship than such conduct as I have described on the floor of the Senate, which has resulted in exhibition in Britain of a film which in many respects is false and, even as to many respects in which it is true, is hopelessly unwise to show elsewhere, particularly by a narrator who has just been named as the principal mouthpiece of our country to carry the picture of our country to our friends and enemies alike throughout the world.

Mr. KEATING. I share the Senator's views about censorship. I wondered whether his criticism of this action would lead him to think that Congress should take any legislative action. If so, should it apply to magazines and newspapers and other media of communication that are sent overseas. I personally would be loath to take such action.

Mr. HOLLAND. This problem was brought to my attention on Monday afternoon of this week at 3 o'clock. Since then I have been trying to make some correction in view of the situation which confronted us. I believe I have. As a result of my efforts, there is, first, the announcement being made, before and after the showing of the film, that while Mr. Murrow is now the principal mouthpiece of this country as director of the USIA, he was not such at the time, but was an employee of CBS.

Second, I am advised by a high authority in the Government in Washington today that they have further assured our people that there will be no initiative taken by the network in offering the film for sale to other nations.

If it is necessary to go further, the Senator from Florida is willing to consider such a course of action. He is not a member of the Committee on Interstate and Foreign Commerce, which would have legislative jurisdiction. Because of that fact, however, he would not be unwilling to offer proposed legislation if he felt it was necessary to do so.

The Senator from Florida is now doing his best to help correct this situation and to minimize the possible effects of the taking of the picture by those not friendly to us, and the showing of it—and I am told by experts today that that could be done—in a somewhat less clear form but nevertheless in quite discernible form to nations that are not friendly to us.

I think it was an atrocious thing for people who should be patriotic and should be directly interested in serving their country to do. I hope it was not done by deliberation, and that we are through with such incidents.

Mr. KEATING. I have known some of the officials of the Columbia Broadcasting System for some time, and I am sure that if they did it, they did not do it out of any lack of patriotism or loyalty to their country. I cannot believe that the men who work for CBS and who have the responsibility for action of this kind, are not loyal, patriotic citizens.

Mr. HOLLAND. I would like to join the Senator in that feeling. I stated in my earlier remarks that the people who comprise the personnel of that company

should be, and I believe they are, just as patriotic as any other Americans. That makes it all the more the subject of my wonderment as to how they could have made this particular decision, after knowledge that their property was so highly controversial and that it had kicked up as much disturbance in this country and as much resentment as it had. I am referring to the fact that the principal utterance of resentment has come from officials who represent the American Farm Bureau Federation, which has a membership of 1.7 million farm families. Their statement of resentment has been heard from one end of the country to the other. Apparently they did not realize the logical results of their releasing the film to be shown in Britain.

Mr. KEATING. Obviously an outlet should not release a film which they know, or it has been demonstrated to them, is false in important respects. I believe that we could all agree on that.

Mr. HOLLAND. I thank the Senator.

Mr. KEATING. I know nothing whatever about the merits of the controversy, as to whether it is true or not. I do not mean by that in any way to question what the distinguished Senator has said. I was concerned lest the result of the Senator's plea might lead to the kind of problems overseas that I have just described. There are elements in our American life that we do not have any particular reason to be proud of. That applies to elements in my State and to the State of the distinguished Senator from Florida.

Mr. HOLLAND. Does the Senator believe that we should advertise it to the world?

Mr. KEATING. No. I am coming to that. I believe there is a difference between showing it in this country and showing it in a foreign country. I am not sure, if the story is true, that we should stop a publisher or broadcasting system in this country from showing a true picture of our country in every respect in a foreign country.

Mr. HOLLAND. That is not a debatable question. No such case has been made here. There is no question whatever about it. The Senator apparently was not on the floor throughout my remarks. For instance the film said that there is no case on record of a child from one of these families having earned a college diploma. A very brief and cursory census taken in one of the agricultural counties in Florida produced 11 persons with college degrees who were teaching—most of them were teachers—in the schools of that county, and who themselves had come from families of migrants.

There was a statement that there was no hope for the acquisition of homes, but a very brief census in the same county showed approximately 100 homes purchased, owned, and occupied by migrant families. Other statements were made. One of them was that there was no interstate standard to safeguard the migrants as they traveled by automobile or truck—generally by truck—from one State to another. The fact is that Congress passed such legislation in 1956 and that the ICC has issued comprehensive regulations which have been in effect for several years. Whether it has been effectively enforced is another question, concerning which I have no information. But it was said that there was no interstate standard in that field.

There were other statements, equally false, and demonstrably so. I think no one would deny their falsity.

Mr. KEATING. Does the Senator understand that those statements were included in the film shown in Great Britain?

Mr. HOLLAND. They were included in the film. The transcript of the film as a whole—every word in it—was placed in the CONGRESSIONAL RECORD by one of our colleagues, so the Senator from New York will have no difficulty in reading it, if he wishes to do so. It appears in the CONGRESSIONAL RECORD for January 23 beginning at page 1145.

Then, if the Senator will do me the honor to read the statement I made on the floor, not yet controverted—no one has denied it—he will find 7 particulars out of 19 made by the American Farm Bureau Federation, particulars which I think were clearly applicable to my State—and at that time I was speaking of this as a State matter largely, but now not so at all. This is a national matter, in which the good will of our best ally is challenged, is at stake; in which the respect of the people of that ally for us and for our institutions will be shaken; and in which all kinds of evil results and effects can be received by our country in its friendly relations with the United Kingdom.

Mr. KEATING. Does the Senator from Florida know whether Great Britain has any provision for equal time?

Mr. HOLLAND. No; but if he did, he would not expect the good people of Great Britain to listen to the statements of his fine and distinguished friend from New York, much less his own modest statement as a Senator from a southern State, and contrast them with the very interesting, sensational, although false pictures which, in many instances, were incorporated in the film. It really was an interesting film.

The best proof of the interest manifested by the people, and of the fact that they believe the picture, has been the great flood of letters which Senators have received, based upon the feeling by people who saw the film that it was gospel from beginning to end, that they believed it, and therefore resented the terrible statements and things therein shown.

Mr. KEATING. I think the Senator from Florida has performed a service, at least to the extent of focusing attention on a real problem. The more we talk about it, the more important it looms.

The distinguished Senator from New Jersey [Mr. WILLIAMS] has performed outstanding service in this overall field. I appreciate the clarification which the Senator from Florida has given by his views on the subject.

Mr. HOLLAND. I thank the Senator from New York. I have heretofore expressed on the floor, not once, but several times, my appreciation to the Senator from New Jersey. He knows that, but perhaps he was not here when I made this statement. I am not at all insensible of the fact that he has made a careful investigation of the situation. I have expressed my gratitude to him because on five separate occasions, in public utterances—perhaps on other occasions also, but in five which have come to my attention—he has made highly complimentary remarks about my State.

In one such statement I took unusual pride, because it was made at Fresno, Calif. As Senators know, a friendly rivalry exists between the great Golden West, which is so well represented by California, a truly great State, and our own smaller but, we think, very great State. However, we have not used the word "golden" as applied to it. Perhaps we can find a more appropriate, alluring word. We have used the word "sunshine" as applied to Florida. Last year that word, or other things connected with our State, brought 11 million Americans to visit Florida. We are grateful for the visits made by everyone.

Mr. KEATING. They came mostly from New York.

Mr. HOLLAND. We hope there will be more visitors to Florida next year. However, the Senator from New Jersey was gracious enough, in addressing a public gathering at Fresno, to make a complimentary statement about Florida. I think it took courage as well as conviction to state to the crowd which was present that "Florida is probably the most enlightened State we have seen in the total picture of migrant State problems." I express to the Senator my very warm appreciation. Whenever he goes to Florida, he will find the red carpet out and the hand of friendship and welcome extended. We think the Senator from New Jersey has performed his service in an excellent manner. We have no fault to find with him.

He has found no fault with the statement I made in connection with the film. Neither has he to date found fault with the fact that I went to bat, as I think I should have, or as someone should have, against the Columbia Broadcasting System for releasing a production which is not at all characteristic or representative of rural life in our Nation, and showing it in a country where it would be viewed by millions of people who have little knowledge of rural life, because in the main, by force of circumstances or otherwise, they are city dwellers, employed in industry.

Mr. WILLIAMS of New Jersey. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. WILLIAMS of New Jersey. I desire to express my gratitude to the Senator from Florida [Mr. HOLLAND] and the Senator from New York [Mr. KEATING] for their kind remarks about the Senator from New Jersey.

Mr. HOLLAND. If the Senate would be willing to leave the solution of this

problem to the Senator from New Jersey and, under his leadership, the Senator from Florida, I think we would reach a solution. I have appreciated always the Senator's gracious attitude.

Mr. JAVITS. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. JAVITS. I am a member of the subcommittee of which the distinguished Senator from New Jersey is the chairman. I have sat in many hearings and have been appalled by some of the conditions disclosed in my own State. So are we all, each in connection with his own State.

I join with my colleague, the Senator from New York [Mr. KEATING] in the statement that certainly anything which brings the subject more forcefully to our attention, whatever may be the occasion, is helpful to all of us.

I saw the release from the Columbia Broadcasting System, which my colleague was kind enough to hand to me. May I ask the Senator from Florida whether the CBS has been asked to make or has volunteered to make a point-by-point answer to the statement made so very effectively by the Senator from Florida.

Mr. HOLLAND. I have not addressed a letter to the CBS, in which I said that on the floor of the Senate I made a statement about the film and about the seven points to which I have referred. I take it for granted that they get the CONGRESSIONAL RECORD. They have made no answer. My recollection is that they made a 20-page reply to the American Farm Bureau Federation, of which I received a copy. I have received no written communication at all from the CBS.

I think they are very much disturbed about the incident. I hope they are disturbed enough to the point where they will not do this kind of thing again, because it is not in the national interest that they should do so.

I am not talking at all about all the domestic implications. That can be reserved for another day. I am talking about an agency which is important in our own country, and which holds the public confidence to the degree that it has been granted, through its various outlets, at least dozens, if not hundreds of channels, and which exists by the sufferance of the Federal Government and under Federal law. I cannot understand how they could have come to the conclusion that it was proper for them, no matter how much they were paid—I have not asked them how much they received for the film—to surrender the film for a showing in Great Britain. To me, it is completely incomprehensible that that decision could have been made.

Mr. JAVITS. The Senator from New Jersey [Mr. WILLIAMS] says there is in the RECORD a copy of the statement made, in answer, to the American Farm Bureau Federation. I think that is important, because with all due deference to the feelings of the Senator from Florida, which I can well understand, I think many of us would be appalled by governmental restraint in connection with matters of this sort, because if such restraint were to occur, conclusions which thereby would be drawn would not be in line with our position throughout the world in regard to governmental restraint.

However, I can well understand that the Senator from Florida wishes to have a correct presentation of the facts made and given to the people, and wishes to have a dressing down made when he thinks those responsible deserve it.

I wish to make sure—and the Senator from New Jersey [Mr. WILLIAMS] now assures me that it is so—that, just as the Senator from Florida wishes to have open covenants openly arrived at, there is in the RECORD an answer in detail.

Mr. HOLLAND. There is no answer at all to the points I made, so far as I have observed or so far as has been called to my attention. I think some of the same points are dealt with in the earlier answer or statement made by an attorney of the CBS; but it is more in the nature of a legal brief, than anything else. But to say that it refutes the charges I made about the matters of falsity set forth and contained in the program—matters of falsity which I documented, and which are set forth in the RECORD—is inaccurate.

For instance, in regard to the representations made on the program about college graduates, to the contrary of those representations, the actual facts are available to those who will now make inquiry in that community. The man who made the film, Mr. Lowe, admits that some of the representations made in the program were incorrect, and makes other statements which are quoted in our press, but which I shall not discuss at this time. Probably there will be opportunity to discuss them later.

But if the Senator from New York will read my statement on the subject before he reads the statement which was made to the American Farm Bureau Federation by the attorney for the CBS, I believe the Senator from New York, with his great acumen, and as a result of his long years of experience as attorney general of his State, and in view of his outstanding ability in that field, which has received widespread recognition, will be able to determine for himself that no categorical answer was made to the points I raised.

Mr. JAVITS. I thank the Senator from Florida.

In order that those who read the RECORD may have access to the material I have mentioned, I now point out that the material to which the Senator from New Jersey [Mr. WILLIAMS] has referred was contained in the RECORD of February 16, beginning at page 2218. So it can easily be found by referring to the RECORD for that day.

Again, I thank the Senator very much for his graciousness in yielding.

Mr. HOLLAND. Mr. President, inasmuch as the Senator from New York has cited that RECORD and those pages, let me point out that by examining the RECORD for February 6, 1961, he will find, beginning on page 1756, my own remarks on this subject, with the seven listed misrepresentations.

Mr. JAVITS. Good.

Mr. HOLLAND. I hope the Senator from New York will take the time to read them.

Mr. JAVITS. I certainly will.

Mr. HOLLAND. And I should be very glad to have his analysis and his judicial decision after he has read them.

Mr. JAVITS. I thank my colleague for his usual good humor and graciousness.

PRESIDENT KENNEDY'S MESSAGE ON FOREIGN AID

Mr. COOPER. Mr. President, I have read with great interest the President's message today on his program of foreign aid.

I hail the President's message on foreign aid. His recommendations must be accepted by the Congress and the people if our aid program is to be effective, indeed, if it is to survive.

The administrative reorganization which he proposes is necessary; but I believe it will have little importance unless the Congress and the executive branch make, during this congressional session, the vital decisions the President suggests.

First. The Congress must provide a 5-year program, for without continuity the nations we help cannot plan effective programs or manage their limited foreign exchange. A 5-year authorization will make possible the development of wealth-generating industrial projects, reform in public administration, and long-term plans for education, health, and land reform which reach the people.

Second. The administration must insist that European and other advanced industrial countries join in this program, for the United States cannot bear the burden alone. A yearly contribution of 1 percent of gross national product is a reasonable goal for the United States and other countries.

Third. The administration should secure the assistance of the World Bank and other institutions to work with countries we aid in the formulation of the best developed plans. President Kennedy now has his greatest opportunity—one he may not have later—to work with recipient countries toward the development of plans which have the greatest promise of success. We should not commit substantial sums for aid until such plans are developed.

I make two additional suggestions:

First. The United States should urge the countries we assist to look carefully at their agricultural development plans.

There is great emphasis upon industrial development in these countries, and, of course, that is necessary if there is to be any substantial increase in their wealth. However, food and clothing are always the first essentials. If the democratic governments we help cannot make food available while they develop their countries industrially, they may lose the support of their peoples.

Second. The United States should be forthright with governments which may

suggest that if we do not give help on certain projects, they will ask Russia for such aid. We should say to them: "We are ready to develop with you programs, for which we will provide the maximum assistance possible over a period of 5 years. If Russia desires to provide assistance, let it do so. Our purpose is to be of assistance, not to bargain over Russian aid."

During my service as Ambassador to India, I was able to see the operation of our foreign-aid program. While it was uniformly good in India, I saw that the lack of continuity limited its effectiveness and caused dissipation of our funds in secondary projects and in a foreign aid establishment entirely too large in terms of personnel.

I mention this matter because I may be the only Member of the Senate who has discussed and considered foreign-aid programs from the standpoint of their formulation in the Senate and also has had opportunity to observe their actual operation. In 1956, I recommended to the Department of State many of the points which are made in the President's message. In 1958 and 1959, I joined with President Kennedy, when he was then a Member of the Senate, in sponsoring two resolutions affecting India; and at that time, in our speeches during those years, several of the recommendations now made by President Kennedy were presented to the Senate. On April 29, 1960, in a speech on the floor of the Senate, I recommended the separation of military and economic assistance; a 5-year program, so as to provide continuity; assistance by the World Bank and other institutions in the development of plans by recipient countries; and the entire reorganization of our foreign-aid program.

I emphasize again that the President has made recommendations without which our foreign-aid program cannot be effective, and without which, in my opinion, it cannot survive. I shall support fully his recommendations.

I ask unanimous consent to have printed at this point in the RECORD excerpts from the speech I made on April 29, 1960, when—and I am glad of it—I recommended at least four or five of the points which are included in President Kennedy's message of today.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS BY SENATOR COOPER IN THE SENATE ON APRIL 29, 1960 (CONGRESSIONAL RECORD, VOL. 106, PT. 7, PP. 8982–8983)

I believe that if the foreign aid program is to survive, it demands a reorganization by the executive branch, and by the Congress.

One of the chief reasons for the growing disillusionment over our foreign-aid program, in my view, is that many people do not believe that it is as effective as it could be, considering the amount of money that we appropriate each year. From my observations for a short time in another country, that was my belief—that it is not as effectively used as it should be, and that it demands reorganization.

I wish to suggest a few points today which I believe this administration, or the incoming administration, and the Congress and its appropriate committees might take into consideration in the formulation of a foreign aid program for the future.

My first point is that military assistance and defense support should be stricken from the mutual security bill and placed in the defense budget.

The second point I make—and I believe this is the most important of all—is that if a foreign aid program is to be truly effective, it must be given continuity by the administration and by Congress.

The Marshall plan succeeded, in my judgment, because Congress made a statement of policy, a moral commitment to a 5-year program. The European countries were able to plan programs to fit their needs. They were able to organize their plans and programs for a 5-year period. The United States on its part was able to make its economic arrangements, its delivery of supplies over a period of 5 years. This course produced an effective program. And the cost was less than was contemplated at the time of the adoption of the Marshall plan.

As long as we have an economic program under which appropriations are made year by year, the recipient country cannot plan its expenditures; it cannot manage its foreign reserves. The United States cannot plan with the recipient country programs which would be most effective in that country. As a result, a country will not undertake wealth-creating programs because it does not know that help will be forthcoming from succeeding Congresses.

Russia has an advantage in this respect: It can select one or two great projects in another country, of large cost, which are wealth creating. It will make commitments at one time, to enable the major projects to go forward under Russian aid.

It seems contradictory to the very spirit of this country—a country which prides itself on its efficiency, and on the effectiveness of its private enterprise system, where plans are made years ahead—for the Congress to appropriate vast sums of money year by year, piecemeal, which deny the very effectiveness and the fulfillment of the objectives of our foreign-aid program.

Continuity for 5 years would make possible a far more effective foreign-aid program with the same amount of money we appropriate now, or even with smaller sums.

The third point I make relates to the selection of projects in the recipient countries. Our programs are bilateral. Usually a country submits to the United States a program which it would like to undertake. It is difficult for the United States to say that a better program could be initiated. To do so offends the sense of sovereignty of the other country. It offends their sense of freedom and independence in a newly established country. A multilateral organization, however, could assist in the selection of the best program for a country, without difficulty.

I should like to see the State Department and the executive branch be able in the future to arrange consultations with the World Bank, or with the United Nations program of preindustrial planning. If the preindustrial planning program of the United Nations or the World Bank were used to determine the most suitable programs for recipient countries, we could be sure then our money would be spent on the best programs and would be more effectively used.

My fourth point is that we should give more attention to agriculture. As these countries industrialize, the slow advances in personal income will first be spent on food and clothing. Unless they make progress toward modern agricultural development, we will see inflation in these countries, and the small advance in personal income from their industrial progress will be wiped out.

We know that our foreign aid program, in self-interest, takes into account the struggle between the two great world forces—the democratic countries and the Communist countries. But for many people throughout the world—and I know this to be true from my service in other countries and from my service in the United Nations—this struggle has little appeal. It ought to have appeal, but it does not reach the people. Many countries are engaged in a revolution, peaceful or violent, to upset the old order in their countries; an order which they believe has held down their living standards and prevented them from attaining equality in the world. Whether it be a democratic revolution or a Communist revolution, there is mystique and attraction in revolution. We see this today in Latin America.

If we base our mutual aid program with these countries solely on helping us maintain our own defenses and our own security against communism, the program will not have full appeal to the countries that are developing. Although they know of our self-interest, they want to be certain that our purpose in maintaining this program is also to help the newly independent and developing countries advance in the ways our country has advanced. We can communicate that purpose to them only through action.

So if we are to have a mutual security program which the country will continue to support, this program must be reorganized. I have had the unique experience of observing this program from both sides (as a Member of the Senate and as Ambassador to India); and I have made these same recommendations since 1955 and 1956, when I saw our mutual security program in operation.

EMPLOYMENT THROUGH INITIATION OF PROGRAMS OF NEEDED PUBLIC WORKS

Mr. HART. Mr. President, in the last few weeks I have had increasing numbers of visits, telephone calls, and letters from representatives of Michigan communities who have in common a concern that I fully share. They want employment provided through initiating programs of needed public works.

Like many parts of the country, Michigan has been experiencing severe unemployment. Unemployment in Michigan in mid-February was 13.7 percent of the labor force, compared with the U.S. average, not seasonally adjusted, of 8.1 percent. At the same time, community after community in our State is in critical need of additional water systems, sewage disposal systems, flood control projects, airports, land and timber conservation facilities, and the like. These are not "dreamed up" projects. They represent a backlog of needs which will have to be met if we are to realize our economic potential and strengthen the Nation.

The new administration has come into office pledged to raise the economic growth of the Nation. This is essential for the strength of the Nation, the well-being of our people, and the fulfillment of our responsibilities as a world leader. We must move ahead on this commitment with every responsible means we can devise.

Our distinguished colleague, the Senator from Pennsylvania [Mr. CLARK] in-

troduced last month a bill—S. 986—which offers real hope in this direction. It would tackle the unemployment problem through the acceleration of capital expenditure programs of State and local public bodies. Senator CLARK's bill is aimed particularly at smaller projects which can be initiated promptly—and completed over a reasonably short period of time.

In answer to those who claim that the public works approach is too slow to be efficacious in meeting unemployment, I wish to insert in the RECORD a letter from R. J. Alexander, director of public works of Oakland County, Mich. With his letter Mr. Alexander presented a brochure outlining projects which could be placed under construction, if money were available, within 30-, 60-, and 90-day periods. These projects, in this one county which I know, will total $74 million. Mayor Louis C. Miriani, of Detroit, has sent me a schedule of needed public works projects, totaling $250 million, which his city could undertake without delay if Federal assistance were available. N. G. Damoose, the city manager of Traverse City, Mich., has sent a copy of his letter to Senator CLARK, in which Mr. Damoose outlines a $10 million program which his community needs, but cannot hope to achieve on its own for many, many years.

This story has been repeated to me over and over in the past months, from all sections of my State. From my discussions with these persons, I gather that in addition to the Federal grants provided in S. 987—which, as it is now written, would aggregate not more than $500 million—they would welcome a program of low-interest loans. It is my hope that the Labor and Public Welfare Committee, to which this bill was referred, will schedule hearings on it at an early date. Various amendments to the bill will no doubt suggest themselves, but I commend its general approach to the committee and to the President's Council of Economic Advisers.

Mr. President, I ask unanimous consent that the letters from Mr. Alexander, of Oakland County; Mr. Damoose, of Traverse City; Mayor Swanson, of Ironwood; and Mayor Miriani, of Detroit, presenting concrete evidence of the need for this type of legislation, be printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF PUBLIC WORKS,
COUNTY OF OAKLAND, MICH.,
Pontiac, Mich., February 28, 1961.

Hon. PHILIP A. HART,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR HART: Transmitted herewith are a number of projects, which if money were available, could be placed under construction within a 30-, 60-, and 90-day period by this department alone.

It is thought that this information would be of value to you, should there be a desire on the part of the administration to initiate a public works program to alleviate unemployment in the so-called distressed areas of the country, of which the Detroit metropolitan area is one of those areas hardest hit by unemployment.

It has been stated many times that 80 percent or more of moneys spent on public works goes directly or indirectly for labor, and at the same time provides a much-needed facility.

Further detailed information can be provided as you may wish.

Respectfully,
R. J. ALEXANDER, *Director.*

Estimate of cost, Oakland County Department of Public Works planned projects, Feb. 15, 1961

FARMINGTON SEWAGE DISPOSAL SYSTEM

	Grand total	74,114,000

CITY OF TRAVERSE CITY, MICH.,
March 9, 1961.

Hon. JOSEPH S. CLARK,
U.S. Senator from Pennsylvania,
Senate Office Building, Washington, D.C.

DEAR SENATOR CLARK: Washington Municipal News reported that you had introduced legislation to provide aid to municipalities needing public works.

Frankly, I am torn between two philosophies. On the one hand I am dedicated to the proposition that a municipality, like an individual, should and must stand on its own two feet, do what it needs to do without outside help. On the other hand, again like an individual, a community sometimes must have assistance.

Somewhere between these two extremes is an area of compromise and, under certain conditions, we must compromise if we are to move ahead.

I earnestly believe that your program admirably satisfies this condition. It honors the principle which made our country and our people great, and it recognizes the realities of life. If a community can show that it is doing all that it can and still has need for a little help, there is adequate justification for accepting this without jeopardizing its civic honor and pride.

Since 1956 my city (18,000 population) has, with Federal aid, expanded its sewage treatment plant to preserve our cherished water resources. It has paid its share of the cost of 4 miles of pavement, 6 miles of storm sewers, 18 miles of sanitary sewers, and a new street-lighting system.

From its own tax revenues the city has built and paid the entire cost of 3 bridges, a footbridge, a new police station, beach bathhouse, 15 voting machines, $180,000 worth of trucks and street equipment.

The above are but a sample of the major improvements we have made and are intended to be indicative only of our efforts.

Ours is a resort city located in the northwest section of Michigan. Three months of tourism is our basic industry. Only 14 percent of our total assessable tax base is industrial. Some 3 years ago we lost our largest plant, employing some 400 people.

Over 65 percent of our city land area, occupied by city, State, and Federal agencies; churches, schools and streets, is tax exempt.

Despite these handicaps our little city has pulled itself up by its own bootstraps. It has moved ahead. It has completed its basic public facilities—sanitary sewer system, water main system and other needed but less vital public works.

Traverse City, with its woefully modest economy, has provided its people with $3,450,000 worth of capital improvements in the past 4 years and we are now unable to tackle anything more of any size and are now at a point where we urgently need the kind of help your bill will provide.

Our most needed facility is a water treatment plant, estimated to cost approximately $3 million. We have needed this since 1947 when the State health department first ordered a survey and report.

Our city just hasn't had the funds, could not increase water rates to the extent needed for financing and could not raise taxes on the basis of a 3-month tourist business economy.

Our water "plant" consists of four pumps pulling water out of the Grand Traverse Bay, sterilizing it and pumping it directly into the system. This is our water "plant."

To build the plant that the State Health Department says we need would require a 237-percent increase in water rates. Our people just cannot sustain such an increase.

We have 56 miles of streets within the city. Only 39 percent, or almost 22 miles, are paved and the pavements all need replacement or major repair. The balance, some 34 miles, are dirt and gravel streets.

We, therefore, need a street improvement program estimated to cost $5.8 million.

Our airport was built and used by the Navy during World War II. It was given to the city with the proviso that the U.S. Coast Guard Air Station could use it, without limitations, at no cost. Another stipulation was that the city must maintain the airport in such condiion as to make it usable by the U.S. Air Corps which could take over on a 24-hour basis in any emergency.

No maintenance or operating cost help was considered.

Over 70 percent of the people using the commercial air service come from outside the city. There is very little private plane use or activity but we get no maintenance or operating cost help from the surrounding area.

The city of Traverse City has maintained this regional airport, in operable condition, for almost 20 years without help from the Federal Government, the Coast Guard, or the communities around us. The latter just will not share this cost. We've tried.

To maintain the airport requires a budget of some $50,000 per year. Its annual deficit, made up from our general tax levy each year, varies from $8,000 to $10,000 per year.

Here, then, is a $10-million program that my community cannot hope to achieve, on its own, for many years to come.

Our condition and situation is no doubt true of thousands of small (and large) cities throughout the country.

It is my considered opinion that your proposed legislation will not only improve the present (and I pray, temporary) unemployment situation but it will also permit American communities to catch up on public works that they have needed for many, many years.

As much as it hurts to ask for financial help, I urge you to do everything within your power to enact this legislation into law as soon as possible.

Respectfully yours,

N. G. DAMOOSE,
City Manager.

CITY OF IRONWOOD, MICH.,
February 11, 1961.

Hon. PHILIP A. HART,
U.S. Senator, Washington, D.C.

DEAR SENATOR HART: Perhaps you will recall that in April last year we experienced one of the worst floods in our history due to the Montreal River overflowing its banks. Because of the contour of the river between the cities of Ironwood and Hurley we are troubled more or less every spring with high water when our heavy accumulation of snow begins to melt and coupled with spring rains.

During the flood emergency the officials of our two cities requested this area to be declared a disaster area and the U.S. Army Engineer Corps came in to make a survey to see what preventative measures could be taken. Enclosed is a copy of a letter recently received from the Engineer Corps advising us of their decision.

In the Douglas task force report received from you the other day in item 4(f) Other Public Works, we see that the initiation of such projects has been recommended to the administration. In view of the recognition given to the need for projects such as this, we respectfully enlist your support for consideration of badly needed public works projects for our community.

Sincerely yours,

LUTHER C. SWANSON,
Mayor.

U.S. ARMY ENGINEER DISTRICT,
ST. PAUL CORPS OF ENGINEERS,
St. Paul, Minn., January 25, 1961.

In reply refer to: NCPRP.

Hon. LUTHER C. SWANSON,
Mayor of the City of Ironwood,
Ironwood, Mich.

DEAR MAYOR SWANSON: This is to advise you of the results of the study for flood control on the Montreal River at Hurley, Wis., and Ironwood, Mich.

As a result of the severe flood on the Montreal River during April 1960, a study was undertaken to determine if an economically feasible project could be developed to provide flood protection for the cities of Ironwood and Hurley. Various plans of improvement were given consideration including clearing and snagging, a channel cutoff, channel enlargement, provision of a floodwall, modification of the Norrie Street and Silver Street bridges and various combinations of these plans. Taking into account the most favorable evaluation of benefits and realistic estimates of costs, it was determined that an economically feasible project could not be developed.

I am very sorry to inform you that for this reason the Corps of Engineers cannot participate in a flood control project at Hurley-Ironwood at this time. However, if a significant change in flood conditions should develop at a future date, I should be pleased to review the findings of this study.

Sincerely yours,

W. B. STRANDBERG,
Colonel, Corps of Engineers.

CITY OF DETROIT,
February 24, 1961.

Hon. PHILIP A. HART,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HART: Attached is a schedule of needed public works projects which could be undertaken by the city of Detroit if Federal assistance were made available.

These capital expenditures would provide needed employment for a large segment of the unemployment load but are beyond the ability of the city to finance at this time.

Your assistance in making available Federal funds for local public works projects at this time would be greatly appreciated.

Yours very truly,

LOUIS C. MIRIANI, *Mayor.*

Summary, public works projects, February 1961

	Projects for immediate or near-future start		Projects in long-range public works program
	Estimated cost	Estimated man-hours of labor	
Airport	$1,045,000	105,000	
Civic center			$3,162,000
Firefighting facilities	40,000	4,000	291,000
Flood control	10,000,000	613,000	
Hospital improvements	814,000	94,000	281,000
House of correction improvements	165,000	18,000	565,000
Highway, street, and alley improvements	43,449,000	7,324,000	421,149,000
Lighting system improvements and extension	9,940,000	1,520,000	15,023,000
Parking facilities			4,900,000
Parks and recreation	7,933,000	800,300	53,253,000
Public building	$7,994,200	956,000	$22,228,000
Public transportation system	3,100,000	310,000	
Rapid transit	133,369,400	20,000,000	
Sanitation	5,614,000	429,000	
Sewage treatment system	1,970,000	200,000	10,281,658
Sewers	15,612,000	1,664,200	60,279,000
Water supply system	8,846,539	915,000	
Zoo	383,047	40,200	846,000
Grand total	250,275,246	35,052,700	592,258,658

CONSUMER REPRESENTATION ON COMMODITY COMMITTEES

Mr. HART. Mr. President, last week, I addressed a letter to Secretary of Agriculture Freeman following the receipt of the President's excellent message to the Congress on agriculture. It is my belief that the President's suggestions in letting commodity groups work directly on the initial formulation of their commodity programs has great merit.

The President indicated clearly his concern that "no farm program should exploit the consumer. But neither can it subsidize the consumer at the cost of subnormal incomes to the farmer." In this regard, it is my feeling that every effort should be made to build in a reasonable method of consumer representation as the plans are developed for executive and legislative proposals to establish these farmer commodity committees.

I ask unanimous consent to have the text of my letter to the Secretary printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 17, 1961.

Hon. ORVILLE FREEMAN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: The farm message which the President sent to the Congress this week is imaginative and challenging. A very vital point in the message was that "no farm program should exploit the consumer. But neither can it subsidize the consumer at the cost of subnormal conditions on the farm any more than we can in industry."

In my book the development of commodity-by-commodity programs through consultation with farmers is a very sound approach. It is moreover my belief that each of these farmer commodity groups or committees which the President proposes to establish there should be a representative to give the viewpoint of the consuming public. Such a representative would, I believe, provide an important contribution at the first stage of development of a specific commodity program.

It is my hope that in the drafting of legislation or executive actions to carry out this commodity-by-commodity approach, you will find it possible to build in this suggested consumer representation.

With every best wish,

Sincerely,

PHILIP A. HART.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, March 22, 1961, he presented to the President of the United States the following enrolled bills:

S. 307. An act to authorize certain beach erosion control of the shore in San Diego County, Calif.

S. 449. An act to extend the time in which the Outdoor Recreation Resources Review Commission shall submit its final report;

S. 1028. An act to amend the transitional provisions of the act approved August 7, 1959, entitled "Nematocide, Plant Regulators, Defoliant, and Desiccant Amendment of 1959"; and

S. 1116. An act to authorize the sale, without regard to the 6-month waiting period

prescribed, of certain calcines and matte proposed to be disposed of pursuant to the Strategic and Critical Materials Stock Piling Act.

ADJOURNMENT TO FRIDAY

Mr. HART. Mr. President, if there is no further business to come before the Senate, I move, pursuant to the order previously entered, that the Senate adjourn until 12 o'clock noon on Friday next.

The motion was agreed to; and (at 5 o'clock and 11 minutes p.m.) in accordance with the previous order, the Senate adjourned until Friday, March 24, 1961, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 22, 1961:

NATIONAL AERONAUTICS AND SPACE COUNCIL

Edward C. Welsh, of Virginia, to be Executive Secretary of the National Aeronautics and Space Council.

GOVERNOR OF GUAM

William P. Daniel, of Texas, to be Governor of Guam for a term of 4 years.

IN THE MARINE CORPS

Lt. Gen. Thomas A. Wornham, U.S. Marine Corps, to be placed on the retired list in the grade of lieutenant general in accordance with title 10, United States Code, section 5233.

Having designated, in accordance with the provisions of title 10, United States Code, section 5232, Maj. Gen. Alan Shapley, U.S. Marine Corps, for commands and other duties determined by the President to be within the contemplation of said section, I nominate him for appointment to the grade of lieutenant general while so serving.

CONFIRMATION

Executive nomination confirmed by the Senate March 22, 1961:

PEACE CORPS

Robert Sargent Shriver, Jr., of Illinois, to be Director of the Peace Corps.

HOUSE OF REPRESENTATIVES

WEDNESDAY, MARCH 22, 1961

The House met at 12 o'clock noon.

Rev. Baxton Bryant, minister, Elmwood Methodist Church, Dallas, Tex., offered the following prayer:

We thank Thee, O God, for this body of government so close to the people. The press of needy mankind's problems weighs heavily upon them today.

When we are moved with compassion to lift the load of our fellow man's individual responsibility, whisper to us, "For every man shall bear his own burden." Restrain us from doing for another the thing one can and must in dignity do for himself.

Yet, save us from being priests and Levites, blinded to and unconcerned for our fellow men who have burdens too heavy to bear—burdens that will crush all dignity and respect from their lives. In these areas, whisper to us, "Bear ye one another's burden." Give us the wisdom to discern between the two.

Hear us as we confess our sins, for we meet and make our prayer in Thy name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 205. An act to expedite the utilization of television transmission facilities in our public schools and colleges, and in adult training programs.

S. 712. An act authorizing the Secretary of the Treasury to coin and sell duplicates in bronze of a gold medal presented to Robert Frost by the President of the United States.

The message also announced that pursuant to the provisions of Public Law 650 of the 86th Congress the Chair had appointed the Senator from Pennsylvania [Mr. CLARK], the Senator from North Carolina [Mr. ERVIN], and the Senator from Pennsylvania [Mr. SCOTT] members of the United States Constitution 175th Anniversary Commission.

SUBCOMMITTEE ON COMMUNICATIONS AND POWER, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Communications and Power of the Committee on Interstate and Foreign Commerce have permission to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

TEMPORARY EXTENDED UNEMPLOYMENT COMPENSATION ACT OF 1961

Mr. MILLS. Mr. Speaker, I call up the conference report on the bill (H.R. 4806) to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. No. 183)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4806) to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 3, 12, 13, and 14.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 4, 5, 6, 7, 8, 9, 10, and 11, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

"COMPENSATION TO BE REDUCED BY CERTAIN RETIREMENT PENSIONS AND ANNUITIES

"(e)(1) Any agreement under this Act shall provide that temporary extended unemployment compensation payable to an individual with respect to a week shall be reduced, under regulations prescribed by the Secretary, by any amount received with respect to such week as a retirement pension or annuity under a public or private retirement plan or system provided, or contributed to, by any base period employer. An amount received with respect to a period other than a week shall be prorated by weeks. No reduction shall be made under this paragraph for (A) any retirement pension or annuity received by reason of disability, or (B) any amount received under title II of the Social Security Act.

"(2) For purposes of this subsection, the term 'base period employer' means, in the case of any individual, any person who paid such individual any remuneration for employment which was taken into account in computing the amount or duration of any State unemployment compensation which was payable to such individual at any time during the compensation period.

"(3) For purposes of section 3(c), so much of any State law as provides a disqualification for, or a reduction in, State unemployment compensation for amounts received as retirement pensions or annuities (or for amounts received under title II of the Social Security Act) shall be deemed to be inconsistent with the provisions of this Act relating to the payment of temporary extended unemployment compensation."

And the Senate agree to the same.

Amendment numbered 15: That the House recede from its disagreement to the amendment of the Senate numbered 15, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

"SEC. 15. Notwithstanding section 901(c)(1)(A) of the Social Security Act, the limitation on the amount authorized to be made available for the fiscal years ending on June 30, 1961, and 1962, for the purposes specified in such section 901(c)(1)(A) is hereby increased to—

"(1) $385,000,000 for the fiscal year ending June 30, 1961, and

"(2) $415,000,000 for the fiscal year ending June 30, 1962."

And the Senate agree to the same.

W. D. MILLS,
CECIL R. KING,
THOS. J. O'BRIEN,
N. M. MASON,

GEORGE SMATHERS,
FRANK CARLSON,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4806) to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

Amendment No. 1: Section 7 of the bill as passed by the House provides that (except as provided in section 8 of the bill) temporary extended unemployment compensation under the bill is to be paid only pursuant to agreements entered into with the States. Under section 3(c) of the bill as passed by the House, the terms and conditions of the State law (or title XV of the Social Security Act, relating to Federal employees and ex-servicemen) under which an individual most recently exhausted his rights are to apply to his claim for, and the payment of, temporary extended unemployment compensation, except where those terms and conditions are inconsistent with the provisions of the bill.

Senate amendment No. 1 adds a new subsection (e) to section 7 of the bill. It requires any agreement entered into under the bill to provide that temporary extended unemployment compensation payable to an individual with respect to a week will be reduced by the amount of the following payments received with respect to such week: (1) a primary insurance benefit under title II of the Social Security Act, (2) a retirement annuity (other than a survivor annuity) under the United States Civil Service Retirement Act of 1930, (3) any other retirement system established by or pursuant to State or Federal law, if the employer contributes to such system, or (4) a retirement pension under a private retirement plan provided, or contributed to, by an employer. A payment for a period other than a week is required to be prorated by weeks in accordance with regulations prescribed by the Secretary. Notwithstanding the foregoing provisions no reduction is to be made from the temporary extended unemployment compensation to which any individual is entitled if (A) the entitlement of such individual to any such insurance benefit, pension, annuity, or other retirement benefit is based on disability, or (B) such individual is at least 65 years of age and the benefit to which he is entitled is payable under laws administered by the Veterans' Administration and such pension is based on service performed by such individual.

The House recedes with an amendment. Under the action recommended in the accompanying conference report, each agreement under the bill will provide that temporary extended unemployment compensation payable to an individual with respect to a week will be reduced, under regulations prescribed by the Secretary of Labor, by the amount of any retirement pension or retirement annuity received with respect to such week under a public or private retirement plan or system provided, or contributed to, by any base period employer. An amount received with respect to a period other than a week is to be prorated by weeks. No reduction is to be made under this provision (1) for any retirement pension or retirement annuity received by reason of disability, or (2) for any amount received under title II of the Social Security Act.

For purposes of this provision, the term "base period employer" means, in the case of any individual, any person who paid such individual any remuneration for employment which was taken into account in computing the amount or duration of any State unemployment compensation (as defined in paragraph (3) of section 2 of the bill) which was payable to such individual at any time during the compensation period (as defined in paragraph (1) of section 2 of the bill).

This provision also makes it clear that so much of any State law as provides a disqualification for, or a reduction in, State unemployment compensation for amounts received as retirement pensions or retirement annuities (or for amounts received under title II of the Social Security Act) is not to apply for purposes of the payment of temporary extended unemployment compensation under the bill.

As in the case of the Senate amendment, section 7(e) of the bill is to apply only to the payment of temporary extended unemployment compensation. It does not apply in respect of State unemployment compensation paid by a State for which the State is reimbursed under section 4 of the bill.

It is to be noted that the conference agreement applies in respect of retirement pensions and retirement annuities received under public or private retirement plans or systems provided, or contributed to, by any base period employer. Thus, a retirement annuity under the U.S. Civil Service Retirement Act of 1930 will reduce the amount of temporary extended unemployment compensation payable to an individual if the United States was a base period employer of such individual. On the other hand, workmen's compensation payments and payments made under laws administered by the Veterans' Administration will not be taken into account under the new section 7(e)(1) since these payments are not received as retirement pensions or retirement annuities. The treatment of the payments described in the preceding sentence will be determined under the applicable State law.

Amendment No. 2: Section 10 of the bill both as passed by the House and as amended by the Senate requires the agency administering the State unemployment compensation law to furnish the Secretary of Labor such information as he may find necessary or appropriate in carrying out the provisions of the bill. Senate amendment No. 2 provides that such information shall include data (which may be procured on a sampling basis) relating to the personal characteristics, family situation, employment background, and experience under the bill of individuals found to be entitled to temporary extended unemployment compensation. The House recedes.

Amendment No. 3: Under section 13 of the bill as passed by both the House and the Senate, a new section 905 would be added to the Social Security Act establishing in the Unemployment Trust Fund a Federal extended compensation account. Subsection (b) of the new section 905 has the effect of requiring the Secretary of the Treasury to transfer the additional tax imposed by the bill to this account. Under the House bill, these transfers would be made at the close of each month in the calendar years 1963 and 1964. Under Senate amendment No. 3, these transfers would be made at the close of each month in the calendar years 1962 and 1963. In conformity with the action on Senate amendment No. 13, the Senate recedes.

Amendments Nos. 4 to 11, inclusive: Under section 13 of the bill as passed by the House, a new section 905(c) would be added to the Social Security Act which (1) requires the Secretary of the Treasury to transfer (as of December 31, 1964), from the Federal extended compensation account to the accounts of the States in the Unemployment Trust Fund, the balance in the Federal extended compensation account as of such date, and (2) provides the method of determining each State's share of the balance to be so transferred. Senate amendments Nos. 4 to 11, inclusive, changed the December 31, 1964, date to December 31, 1963, and made other changes in dates to conform to this action. The House recedes.

Amendment No. 12: The bill as passed by the House contained a new section 901(d) of the Social Security Act providing that, except as provided in the new section 901(c), no transfer to or from the Federal extended compensation account is to be made after December 31, 1964. Senate amendment No. 12 changed this date to December 31, 1963. The Senate recedes.

Amendment No. 13: Section 14(a) of the bill both as passed by the House and as amended by the Senate amends section 3301 of the Internal Revenue Code of 1954 (relating to rate of tax under the Federal Unemployment Tax Act) to temporarily increase the rate of the excise tax paid by employers from 3.1 percent of wages to 3.5 percent. Under the bill as passed by the House this increase applies in the case of wages paid during the calendar years 1962 and 1963. Under Senate amendment No. 13 this increase applies in the case of wages paid during the calendar years 1961 and 1962. The Senate recedes.

Amendment No. 14: Section 14(b) of the bill, both as passed by the House and as amended by the Senate, relates to the preservation, without change, of the existing credits against the Federal unemployment tax. Senate amendment No. 14 made this preservation of credits applicable for the calendar years 1961 and 1962 (in lieu of the calendar years 1962 and 1963). In conformity with the conference action on Senate amendment No. 13, the Senate recedes.

Amendment No. 15: Section 901(c)(1)(A) of the Social Security Act provides a limitation of $350,000,000 on the amount authorized to be made available each fiscal year for the purpose of—

(1) assisting the States in the administration of their unemployment compensation laws as provided in title III of the Social Security Act (including administration pursuant to agreements under any Federal unemployment compensation law),

(2) the establishment and maintenance of systems of public employment offices in accordance with the Act of June 6, 1933, as amended (the Wagner-Peyser Act), and

(3) carrying into effect section 2012 of title 38 of the United States Code (assignment of employees to local employment offices to discharge duties prescribed for veterans' employment representatives).

Senate amendment No. 15 adds a new section 15 to the bill which provides that notwithstanding this $350,000,000 limitation the Congress may make available for grants to States under section 901(c)(1) of the Social Security Act, for fiscal years ending June 30,

1961, and June 30, 1962, an amount which shall not exceed $425,000,000 for each such fiscal year.

The House recedes with an amendment. Under the conference agreement, the aggregate amount which the Congress may make available for grants to States under section 901(c)(1)(A) of such Act shall not exceed $385,000,000 for the fiscal year ending June 30, 1961, and $415,000,000 for the fiscal year ending June 30, 1962. The $350,000,000 limitation continues to apply for each fiscal year ending on or after June 30, 1963.

W. D. MILLS,
CECIL R. KING,
THOMAS J. O'BRIEN,
N. M. MASON,
JOHN W. BYRNES,
Managers on the Part of the House.

Mr. MILLS. Mr. Speaker, I yield myself 10 minutes.

Mr. Speaker, this is the conference report agreed upon yesterday by the conferees to accompany the bill H.R. 4806, the bill that you will recall passed the House some days ago establishing a temporary program of extended unemployment compensation.

Mr. Speaker, as the bill passed the House, we established a program of temporary unemployment compensation benefits not to exceed 50 percent of the benefits paid by the State up to a maximum of 13 weeks on the basis of the State program of eligibility and in other respects, without changing any provision of the State laws. In order to finance these extended benefits, which would be administered entirely by the States, we provided originally for advances from the general funds of the Treasury for benefits or reimbursement to States to be repaid on taxable wages in the year 1962 and the year 1963 through an increase in the net Federal rate of taxation upon the employers of all the States of the Union. The amount of money to be collected from this additional temporary increase in the unemployment compensation tax rate will provide the Treasury with sufficient funds to repay the grants that are provided under the program that will lapse under the terms of the conference report as well as the bill on June 30, 1962.

The other body made certain amendments to the bill, Mr. Speaker. In the first place, the other body decided it would be advisable for this increase in tax rates to go into effect with respect to wages paid in the calendar year 1961. So that under the Senate version, the tax would have been imposed upon wages in the calendar years 1961 and 1962 in lieu of the provision in the House bill for calendar years 1962 and 1963.

The conference committee agreed to retain the provision of the bill in this respect, as it passed the House, so that the conference report provides for this tax increase on the employer to go into effect with respect to wages paid in 1962 and 1963.

In discussing the thinking in the other body which prompted the change it made, it was pointed out in the conference that to impose the tax with respect to 1961 wages would constitute, for at least a quarter of this year, retroactive taxation and also impose a tax upon employers at a time when we thought that, perhaps, they were in least position to pay increased taxes due to the current downturn in economic activity.

Mr. Speaker, there was another amendment adopted by the Senate that we did accept in conference, with modifications. This amendment has to do with the question that was raised before the House with respect to what to do in the case of an individual who is drawing retirement and who is also eligible under State law to unemployment compensation benefits under the State law. The conference agreement provides that, for purposes of this extended program, a person will generally not be entitled to draw both amounts. That is, the amount of his temporary extended unemployment compensation will be reduced by the amount of any employer-provided retirement benefits he receives under any Federal, State, or private retirement system, unless his entitlement to benefits under the extended unemployment compensation program is generated by working for some employer other than the one that has made contributions to his retirement program. This conference agreement is at some variance with the provision adopted by the Senate. It was agreed to in conference as being an improvement we thought of the basic idea that had been adopted in the Senate. So we did take that amendment with modification and we bring it back to you. There is to be no reduction in these extended benefits on account of social security benefits, disability benefits, or veterans payments.

Mr. Speaker, a lot has been said about the fact that, in connection with this program, in some States employers will be taxed more than the employees of that State will receive. We had information to that effect in our committee, although we did not have the details of its application among all the States. That information was provided by the Department of Labor to the Senate Finance Committee and was included by the Senate Finance Committee in its report. I believe it is on page 9 of the report of the Senate Finance Committee.

In some 10 States it is estimated that the employees will receive more in the way of benefits than the employers in those States would pay in, and that the employers in the other 40 States would, in effect, pay in not only the amount that their employees would receive under the program, but perhaps more than their employees would receive under the program. This was thought by some of us to be the case. Actually, when the matter was in the Committee on Ways and Means, we did not have the details as to the application of the situation among all the States.

Mr. Speaker, there is no doubt that as in 1958 we could have provided loans to States that would have been repayable later on by the imposition of taxes upon employers within the States that received the loans. However, I think that those States that had to borrow under the 1958 law are in enough trouble and already there is talk, not in the Congress, I hope, but outside of the Congress, that it may be advisable for us to forgive those loans rather than have the employers of those States pay them back.

For that reason and for several other reasons, Mr. Speaker, it was decided in the Ways and Means Committee that perhaps it would be better for us to take the approach that is in the bill and in the conference report in order to provide a sounder basis of repaying advances made from the general funds of the Treasury to finance this program, so that the argument will not be made with respect to this program that I think is being made with respect to the 1958 program, that we ought not, in the final analysis, collect back into the Treasury the advances made from the general fund to cover the costs of that program.

If you look down this list of the various States you will find that some States are going to pay more in taxes than they get back in benefits. Why is that, Mr. Speaker? Because the relative degree of unemployment is not the same in all the States. However, this unemployment that we have today, we are told, is not only a problem of the State where it may exist, but is a national problem. Otherwise, we would not be concerning ourselves with trying to do things that would eliminate the unemployment we have and give impetus to an economy that has been in some type or degree of recession for some months.

I do not feel too badly, Mr. Speaker, about the fact that under the bill that we have before us today, the employers of all the States are to be called upon to pay taxes in proportion to the number of employees they have in order to take care of the burden that is being imposed to provide extended unemployment benefits. As I said when this bill passed the House, employers told us that if we adopted this program they would prefer the approach in the bill to the wage base approach proposed by the administration.

We could have gone the other way, as I say, but, if we had gone the other way and imposed a tax only upon the employers of the States that would have used the funds that were made available, as we did in 1958, I have no doubt that we would be faced again with the possibility of not having this money paid back into the General Treasury of the United States as is being argued with respect to the 1958 program.

Mr. Speaker, there is one thing we did in this conference report I must admit nullifies a provision that passed the House. It is anticipated that about $55 to $56 million will be collected under this increase in tax provided under the bill in excess of the amounts that will be paid out as benefits under the program. Under the House bill and under the bill as it passed the Senate, we provided for that this $55 or $56 million was to be prorated among the States and paid back to the State unemployment funds on the basis of the amount of the taxable wages within the State as compared with the taxable wages of the country as a whole.

It developed if we did that we would be giving to certain of the States some

of this excess even though they were already receiving more benefits than their employers were paying in. So, actually, we have nullified that, not by any subterfuge, but merely by agreeing to an amendment that the Senate added. This Senate amendment accelerated the date for determining this redistribution to the States from December 31, 1964, as it was in the House bill, to December 31, 1963. Cognizant of the fact that there would be no moneys in this special account on December 31, 1963, that could be distributed to the States, but that there would be moneys there in 1964, your conferees agreed to this Senate amendment with full knowledge that these moneys would remain in this special fund undistributed to any State or to any fund, and that it would be necessary if they are to be distributed for the the Congress to enact subsequent legislation. Conference rules precluded our enacting provisions for putting these moneys in the need fund, for example, or our sending it back to the States that were overpaying in relation to the benefits they received. This way subsequent action can be taken with respect to the surplus moneys and overcome any objection that may develop to the financing of the program such as was discussed on the floor of the other body.

There is one other amendment we made that has to do with the change in the limitation upon the amount that can be spent for administrative expenses. Recognizing the additional costs that accrue to these employment offices within the States, we agreed to increase the $350 million ceiling that is presently in the law to $385 million for fiscal year 1961, and to $415 million for fiscal year 1962. A part of that increase may be attributed to increased costs incident to the administration of this program, but not all of the increase. We have, however, satisfied the needs that exist for additional moneys for the administration of the overall State programs, plus this program.

We also accepted the amendment of the other body calling for the collection of certain information relating to this program.

I urge adoption of the conference report. The conference report is as near to the House version of the bill as it was possible for us to obtain in conference. I know some Members are pleased because we did take a modified version of one of the Senate amendments. Frankly, I do have some doubt about the administrative headaches that will be caused by the acceptance of this amendment dealing with the retired individual. It is a very knotty problem, and I hope that the conference agreement places this problem area on a basis that is most conducive to best administration by the States.

Mr. Speaker, I urge adoption of the conference report.

Mr. JONES of Missouri. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Missouri.

Mr. JONES of Missouri. With reference to this amendment in the Senate, you did accept the amendment regarding the situation that the gentleman discussed with me on the floor?

Mr. MILLS. Yes. This is in that direction.

Mr. JONES of Missouri. You adopted the principle?

Mr. MILLS. That is right. The reduction of benefits does not apply to social security nor to disability payments, workmen's compensation, or veterans' payments.

Mr. JONES of Missouri. But it does apply to retirement benefits?

Mr. MILLS. That is right.

Mr. Speaker, I yield 1 minute to the gentleman from Illinois [Mr. MASON].

Mr. MASON. Mr. Speaker, a few weeks ago when the legislation that is now before us as a conference report was originally before the House I stated that I was opposed to the legislation because I was convinced that the States could adequately deal with the economic security of the unemployed and because of my conviction that if a system of Federal aid were necessary, H.R. 4806 would be the wrong way to provide that aid. Mr. Speaker, nothing has happened since that time to change the legislation sufficiently to cause me to change my attitude toward the legislation.

I am very concerned over the way the tax burden is to be shared among the States in comparison with the way that benefits will be paid in the respective States. It is a shocking thing to me that some States with the largest reserves and the highest ratio of reserves to taxable wages should be deficit States and have the cost of their benefit payments under this program partially defrayed by other States. For example, Mr. Speaker, Illinois employers are scheduled to pay $68.6 million in taxes for an estimated $40 million in benefit payments with the surplus of $28 million going to defray benefit costs in the nine deficit States including New York, Michigan, New Jersey, Ohio, and Pennsylvania. Is there any logical way that I can convince the employers in my State that they are more able to bear the cost of benefit payments in other States than the employers in those other States?

Mr. Speaker, our Federal-State unemployment compensation program has always operated on the principle that taxes taken from employers in a State were used to pay benefits in that State. This was true even of the 1958 program providing for extended unemployment compensation benefits. It is not true of the proposal contained in H.R. 4806. Under the proposal before us today taxes in one State will be used to pay benefits in another State. This fundamental change threatens to impair the continued effectiveness of the regular unemployment compensation program. I admonish my colleagues that this departure in principle that is proposed today will rise to plague us in the future.

Mr. Speaker, I participated in the conference on this legislation and joined in signing the conference report because I believe this is a matter on which the House should have opportunity to work its will. I will not dwell at any length on the conference agreement other than to acknowledge that in small detail the program proposed in the conference agreement is better than the bill which passed the House. Examples of improvement include provisions for the disallowance of unemployment compensation benefits under certain circumstances where an individual is receiving retirement benefits and the deletion of the provision providing for the allocation of surplus to deficit as well as surplus States. Another example of the improvement is the requirement that the Secretary of Labor undertake to obtain information from State administrative agencies as to the characteristics of the unemployed with respect to family status, employment background, and other pertinent factors.

Mr. Speaker, despite this slight improvement that the conference agreement represents, I am still opposed to the legislation and urge against the adoption of the conference report.

Mr. MILLS. Mr. Speaker, I yield 10 minutes to the gentleman from California [Mr. UTT].

Mr. UTT. Mr. Speaker, I continue to oppose the adoption of the conference report on the same grounds that I opposed the original passage of the bill. There was nothing in conference in disagreement between the two Houses that could possibly eliminate the parts of this bill to which I object, and that is definitely that we have turned an unemployment-compensation bill into a relief bill. That fact may be found on table No. 9, page 30, in the Senate report.

Mr. Speaker, I have extracted from that report some very interesting information for the Members who come from various States whose employees and employers are going to be "clobbered" for some $200 million. And I will start out with the State of Arizona.

The State of Arizona will pay $5.7 million into the fund and they will receive back $2.1 million, or a deficit of $3.6 million, which the State of Arizona is going to contribute to some of the States who have not maintained their compensation-insurance rates as they should have done. Now, the State of Arizona has a surplus of $62.4 million which they can pay in an extended-compensation program. Should the State of Arizona decide that they want to increase employment payments for 13 weeks or, in fact, another 26 weeks, they have a sufficient amount of money.

Now, going to the State of California, my own State, it will contribute $99.4 million and they will receive back $80 million, or a net deficit of $19.4 million that California employers are going to be "clobbered" with to help out certain other States, and I shall name those States later.

Hawaii will pay $3.1 million and get back $0.7 million, so that Hawaii is going to contribute $2.4 million to some of the other States.

Illinois will pay $68.6 million and they will receive back $40 million, so Illinois is going to "cough up" $28.6 million in relief for nine States in the Union who are short in their unemployment funds.

Now let us take the great State of Iowa. They are going to collect from

their employers $10.8 million and they are going to receive back $3.5 million. They are going to contribute $7.3 million to the State of New York and the State of New Jersey. My question here is this: Are the employers of the State of Iowa in such good shape that they can afford to dig up this relief money for the wealthy States of New Jersey and New York, or is it that the States of New Jersey and New York are in such terrible shape that they have to come to Congress with their hats in their hands for a few hundred million dollars to maintain their unemployment fund when, in fact, the State of New York has $999 million in reserves and they can continue to pay unemployment compensation for 2 years, if they want to, without depleting their unemployment reserve account?

Now we come to the great State of Missouri, from whom we are going to collect $23.6 million and give them back $11 million. So, to you people from Missouri I will say that you are going to contribute about $11 million to these other States.

Mr. ALGER. Mr. Speaker, will the gentleman yield?

Mr. UTT. I yield to the gentleman from Texas.

Mr. ALGER. I think the membership would be interested to know the page of Monday's RECORD where they can check their own State standings in this matter of unemployment compensation benefits and payments. That page, I believe, is 4311; is that correct?

Mr. UTT. That is correct. Continuing with some of these other States, North Carolina we are going to tax $19.9 million and give them back $7.9, a difference of $12 million that they are going to contribute to these other nine States in the Union. The State of North Carolina has $186 million surplus in its account. If the North Carolina Legislature, which is in session today, decided that it was good for them to continue unemployment payments, they have the right to continue them and they have the surplus out of which to pay that amount. The Legislature of South Carolina is in session today. We are going to collect from them $9.1 million and give them back $7.3 million. So they would be contributing $1.8 million to the States of New Jersey and New York and these other nine States. They have a surplus of $75 million in their account. They have a ratio of 6.9 percent in their surplus account to wages paid.

Mr. Speaker, I end up this list with the State of Virginia from whom we are going to collect $16.1 million and give them back $5.5 million. So the State of Virginia is going to contribute about $10 million to these nine States whose unemployment fund is nearly exhausted, although not quite; because, as I said before, the State of California has about $800 million in its reserve. California is paying this extended unemployment compensation at the rate of 50 percent of their base rate and we have continued it for 13 additional weeks. We are paying it and we have the surplus out of which to pay it.

The State of Kentucky is going to receive about $15 million from this fund, $5 million more than they will contribute. Yet they have $104 million surplus in their fund from which they could pay, if they wanted to adopt such a program.

The State of Ohio is going to contribute $62.4 million and will get back $85 million. Yet they have a surplus of $310 million in their account. Are the people in Ohio so hard up that they have got to come to California, Iowa, and Virginia to get a handout in order to continue their unemployment reserve or can they take it out of their own reserve of $310 million?

The State of Pennsylvania has a problem. They are going to pay $70.7 million and get back $82 million. They have a surplus of only $174 million, about 10 times the amount that is absolutely necessary to carry on this program.

Mr. Speaker, as I have said, we have turned unemployment insurance into a relief bill and we are going to tell those States who happen to have good employment to pay for those States who have poor employment, or at least have not maintained their rate sufficiently high to maintain reserves to continue this program.

As I said when this bill was on the floor of the House before, the whole purpose of it is to nationalize, to federalize the unemployment compensation program so that Federal standards will be imposed on every State. And when you come screaming back here next year and say that the Department of Labor has put in some rules and regulations that you do not like, all I can say is, look at the RECORD and see who voted for it. You have voted to give the Department of Labor the absolute right to cancel the payment benefits but not the right to cancel the tax. The Secretary of the Labor Department will continue the tax of four-tenths of 1 percent on all of your employers, but he can cancel the benefits under the program and terminate them any time he wishes, if you disobey the rules and regulations he proposes to set up.

Estimated additional tax collections compared with expected benefit payments by States under H.R. 4806

[Amounts in millions]

[1] Includes contributions and penalties from employers, and both employer and employee contributions in States (Alabama, New Jersey, and Alaska) which tax workers.

[2] Reserves include advances from Federal unemployment account to Alaska, $2,630,000 in January 1957, $2,635,000 in February 1958, $3,000,000 in July 1958, and $500,000 in January 1960; Michigan, $113,000,000 in August 1958; Pennsylvania, $96,440,000 in April 1959, $1,504,000 in May 1960, and $4,056,000 in July 1960.

Mr. MILLS. Mr. Speaker, I yield 10 minutes to the gentleman from Texas [Mr. ALGER].

Mr. ALGER. Mr. Speaker, I want to join with my colleague from California who just preceded me and tell the membership present once again where you can find the totals relative to your own State, so that you can take a look at the tax and the benefits, if not the reserves you have on hand for your own particular State. In Monday's RECORD, at page 4311, you will find a list showing the tax collections and the benefit payments by States.

I have with me also something which I wish each of you had, if not in your hands certainly in your files for further reference, showing the reserves on hand for each of the States, from which the gentleman from California quoted liberally.

I want to preface anything I say here by these factual statistics, which I am certain Members present and others do not realize to be the facts with regard to the financing of this program.

I am not speaking now in behalf of defeating temporary unemployment compensation for some of the basic flaws that I happen to feel are present, such as the fact that it is jeopardizing the experience rating, that it is a mandatory tax and yet a voluntary benefit, so that you are going to pay whether you get the return or not. That is not my argument today. You decided in your wisdom earlier against that particular viewpoint, which you will find in the minority views in the report accompanying the bill. Rather, I join with the gentleman from California, and I am sure a number of others of you who now know the financial dangers that exist that I feel we in the committee certainly did not know completely, at least I know some of the Members in our committee did not know, that some of the States are being taxed to cover the expenses of other States. This might be well to have if it were such a national program that the States could not handle it, but such is not the case. Each of our States has been doing a fine job in the matter of setting up and administering its own unemployment program. Individual programs have been so successful that the experience rating in many of the States is very low. Why? Because of extended employment; that is, where employers instead of laying off their employees, tide them over keeping them on. You are jeopardizing the basic soundness of the program by now spreading the risk in the thought that someone else pays. I think we are getting away from the more direct responsibility we have under the existing program.

I appeal to you to look at these figures so you may know what we are voting on today. It is my feeling that if the membership knew the financial setup that accompanies this bill, wherein 40 of the States, maybe your State, are being asked to pay more than they could possibly draw down, we would defeat this conference report and take this up again and write a bill of which we would be a lot more proud.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from Illinois.

Mr. MASON. The State of Illinois will pay in $20 million more than it will get back. The State of Illinois has in its fund enough to pay to operate this extra time. Why should the State of Illinois pay into a fund to help Kentucky, that has plenty in its fund to pay out for this extra time?

Mr. ALGER. I appreciate the gentleman's comment. I think we might be able to help Kentucky if Kentucky needed that help, but Kentucky does not need that help in view of Kentucky's situation and Kentucky's own reserves, which are substantial.

In the case of Texas, Texas will pay out in tax collections since it is mandatory $42 million, and the benefits Texas will get back are $30 million. Texas on the other hand has a reserve of $249 million in its unemployment compensation fund. So it is with most of the States of our Union

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from West Virginia.

Mr. BAILEY. I noted in some recent news story that the Republican Party wants to broaden its appeal for the coming congressional elections in 1962 and 1964. One of the things they said they were aiming to do was gain the support of organized labor. May I ask the gentleman if what he proposes here today is going to strengthen his party with the labor groups in the country?

Mr. ALGER. I believe the gentleman is picking the wrong time, the wrong issue, and the wrong gentleman to direct his question to, but I assure him I will gladly discuss this on the gentleman's time at the proper time with the proper issues on the floor.

If there are any questions, I will be glad to answer them if I am able to. But, I appeal to you once again, to check the RECORD of Monday on page 4311 to see where your State stands. I have here the reserves in balance for each of the States and how much money there is on hand. This is not the voluntary program of 1948. This is mandatory and you are going to pay. I am warning you now. Maybe you want Federal standards. You should face up to it. The reimbursement under this program is a step toward Federal standards. When the Secretary of Labor comes to us, as I understand he will come very shortly, with Federal standards on a permanent basis, those of you who say you believe in States rights and that the States are administering this program well, I am warning you, you are going to have Federal standards if you go ahead and take this kind of financing.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. In answer to the question raised by the gentleman from West Virginia [Mr. BAILEY], trying to inject politics into this thing and lay the blame on the Republican Party, you know over in West Virginia, according to your story, you are in a very bad situation, according to that libelous story, as we heard, which was in the Saturday Evening Post about your State—things are bad and you need help. I wonder if you have forgotten your boss, John L. Lewis, I mean the boss of your party over there and the fellow who organized CIO in Michigan in 1937—I wonder if you have forgotten what he has been doing and how he has been grabbing for his particular little group all the cream so that the other fellows are even hungry, according to your story and now just last week two of John's locals agreed before the Labor Board that they would no longer threaten to hang—do you get it?—hang the owner of the mine if he would settle according to the terms the two unions impose. Perhaps, the blame for some of your trouble is on those folks.

Mr. BAILEY. Mr. Speaker, will the gentleman yield so that I may reply to the gentleman from Michigan.

Mr. ALGER. I hope the gentleman will be brief so that we can get back to unemployment compensation.

Mr. BAILEY. We do not need any defense from the gentleman from the Third District of Michigan. It is true we have a situation in West Virginia where this proposal today will be beneficial. I am not advised as to what we have unexpended in our reserve in West Virginia, but it must be close to the bottom. Will the gentleman give us that information?

Mr. ALGER. No; I do not have that information at this time.

Mr. Speaker, may I simply close once again by saying whatever your State, whether it is the State of West Virginia or any other State that feels they need help in unemployment compensation, why not leave it to your State, which is doing such a fine job, instead of once again turning to the Federal Government and paying out more than you can possibly get back. Look at page 4311 of Monday's RECORD and see how your State stands.

Mr. Speaker, I yield back the balance of my time.

Mr. MILLS. Mr. Speaker, I yield 5 minutes to the gentleman from Wisconsin [Mr. BYRNES].

Mr. BYRNES of Wisconsin. Mr. Speaker, I think we must recognize what the question is before us. The question here is on the adoption of the conference report.

I think we faced many of the basic issues that have been discussed by my colleagues from California and Texas during the general consideration of the bill in the House a few weeks ago. Really, what we are talking about now is whether the report, as submitted by the conferees, should be accepted.

I respect the viewpoint of the gentleman from Texas and the gentleman from California in opposing the general proposition. But, let me say to the House, as this bill comes back to the House from conference, I think it is a better bill than the form in which it passed the House. Some improvements have been made.

First, I think an improvement was made in the compromise that was agreed to on the Senate amendment limiting the receipt of TUC benefits by a person who is receiving benefits under a retirement program. We have improved the bill in that area so that TUC benefits for an individual will be reduced by the amount of certain pension or annuity income he may receive. This change does not completely safeguard against the possibility of dual benefits being received but it does represent an improvement over the House bill.

A second improvement is that we recognized or discovered there was a problem in relation to the distribution of any surplus that might develop when we come to a termination of the program. Under the House version of the bill the surplus was to be distributed back to the States in the proportion that a State's taxable payroll has to the national taxable payroll. This would have meant that the so-called deficit States as well as the surplus States, would have shared in the distribution of the surplus. The conference agreement provides that the surplus will not be paid out under the bill and the Congress will be able to act at a later time in regard to the distribution of the surplus. Although further action will have to be taken, we have tightened up insofar as it pertains to distribution of surplus.

A third way in which the conference agreement represents an improvement over the House-passed version of the bill is concerned with a Senate amendment requiring the Secretary of Labor to develop information relating to the unemployed including data pertaining to personal charactertistics, family situation, employment background, and other relevant information. The House conferees accepted this amendment.

So. Mr. Speaker, fundamentally, as far as the conference is concerned we have, in my judgment, a better proposition before us now than the one on which the House passed judgment in the affirmative on March 1.

Mr. MILLS. Mr. Speaker, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield.

Mr. MILLS. I wish to ask the gentleman whether this bill, basically improved as it has been as a result of further action in the conference, is not about the same in two major respects at least as the bill which passed the House?

Mr. BYRNES of Wisconsin. Oh, yes.

Mr. MILLS. And that this program is the same program for the imposition of the tax as the bill which passed the House?

Mr. BYRNES of Wisconsin. Fundamentally we have made no radical changes in the bill so far as it passed either the Senate or the House. It remains basically the same. But we have made some improvements as a result of action taken by the Senate and the conferees.

So, I submit that the choice that we now have, namely, the vote on the conference report should be decided in the affirmative. The report should be accepted so far as the House is concerned. I would think we should accept it because, as far as I am concerned, it is an improvement over the House-passed bill.

Mr. MILLS. Mr. Speaker, will the gentleman yield further?

Mr. BYRNES of Wisconsin. I yield.

Mr. MILLS. I would point out that we retained the basic concept and accepted amendments that tighten up the overall bill.

Mr. BYRNES of Wisconsin. That is correct.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield.

Mr. GROSS. It still means that of the approximately $11 million tax collected in the State of Iowa there will be returned only $3,500,000 in benefits.

Mr. BYRNES of Wisconsin. I am not suggesting that the bill as changed is perfect and meets all objections. Basically it is the same legislation as passed the House, but in the mind of the conferees if we accept the conference report we certainly have made an improvement.

Mr. MILLS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on the conference report.

The question was taken, and the Chair announced that the ayes appeared to have it.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 363, nays 31, not voting 37, as follows:

[Roll No. 20]

Granahan	O'Konski	

So the conference report was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Martin of Massachusetts for, with Mr. Smith of California against.

Until further notice:

Mr. Rabaut with Mr. Halleck.
Mr. Rooney with Mr. Arends.
Mr. Diggs with Mr. Cahill.
Mr. Thompson of Louisiana with Mr. Tupper.
Mr. Wright with Mr. Scranton.
Mr. Davis of Tennessee with Mr. Scherer.
Mr. Buckley with Mr. Baker.
Mr. George P. Miller with Mr. McDonough.
Mr. Cohelan with Mr. Hall.
Mrs. Granahan with Mr. Jensen.
Mr. Feighan with Mr. Mathias.
Mr. Macdonald with Mr. O'Konski.
Mr. Holifield with Mr. Whalley.

Mr. RIVERS of South Carolina changed his vote from "nay" to "yea."

Mr. RHODES of Arizona changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

SPECIAL MESSAGE ON FOREIGN AID—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 117)

The SPEAKER laid before the House the following message from the President of the United States, which was read, referred to the Committee on Foreign Affairs, and ordered to be printed:

To the Congress of the United States:

This Nation must begin any discussion of foreign aid in 1961 with the recognition of three facts:

1. Existing foreign aid programs and concepts are largely unsatisfactory and unsuited for our needs and for the needs of the underdeveloped world as it enters the sixties.

2. The economic collapse of those free but less-developed nations which now stand poised between sustained growth and economic chaos would be disastrous to our national security, harmful to our comparative prosperity, and offensive to our conscience.

3. There exists, in the 1960's, a historic opportunity for a major economic assistance effort by the free industrialized nations to move more than half the people of the less-developed nations into self-sustained economic growth, while the rest move substantially closer to the day when they, too, will no longer have to depend on outside assistance.

I

Foreign aid—America's unprecedented response to world challenges—has not been the work of one party or one administration. It has moved forward under the leadership of two great Presidents—Harry Truman and Dwight Eisenhower—and drawn its support from forward-looking members of both political parties in the Congress and throughout the Nation.

Our first major foreign aid effort was an emergency program of relief—of food and clothing and shelter—to areas devastated by World War II. Next we embarked on the Marshall plan—a towering and successful program to rebuild the economies of Western Europe and prevent a Communist takeover. This was followed by point 4—an effort to make scientific and technological advances available to the people of developing nations. And recently the concept of development assistance, coupled with the OECD, has opened the door to a united free world effort to assist the economic and social development of the less-developed areas of the world.

To achieve this new goal we will need to renew the spirit of common effort which lay behind our past efforts—we must also revise our foreign aid organization, and our basic concepts of operation to meet the new problems which now confront us.

For no objective supporter of foreign aid can be satisfied with the existing program—actually a multiplicity of programs. Bureaucratically fragmented, awkward and slow, its administration is diffused over a haphazard and irrational structure covering at least four departments and several other agencies. The program is based on a series of legislative measures and administrative procedures conceived at different times and for different purposes, many of them now obsolete, inconsistent and unduly rigid and thus unsuited for our present needs and purposes. Its weaknesses have begun to undermine confidence in our effort both here and abroad.

The program requires a highly professional skilled service, attracting substantial numbers of high-caliber men and women capable of sensitive dealing with other governments, and with a deep understanding of the process of economic development. However, uncertainty and declining public prestige have all contributed to a fall in the morale and efficiency of those employees in the field who are repeatedly frustrated by the delays and confusions caused by overlapping agency jurisdictions and unclear objectives. Only the persistent efforts of those dedicated and hard-working public servants who have kept the program going, managed to bring some success to our efforts overseas.

In addition, uneven and undependable short-term financing has weakened the incentive for the long-term planning and self-help by the recipient nations which are essential to serious economic development. The lack of stability and continuity in the program—the necessity to accommodate all planning to a yearly deadline—when combined with a confusing multiplicity of American aid agencies within a single nation abroad—have reduced the effectiveness of our own assistance and made more difficult the task of setting realistic targets and sound standards. Piecemeal projects, hastily designed to match the rhythm of the fiscal year are no substitute for orderly long-term planning. The ability to make long-range commitments has enabled the Soviet Union to use its aid program to make developing nations economically dependent on Russian support—thus advancing the aims of world communism.

Although our aid programs have helped to avoid economic chaos and collapse, and assisted many nations to maintain their independence and freedom—nevertheless it is a fact that many of the nations we are helping are not much nearer sustained economic growth than they were when our aid operation began. Money spent to meet crisis situations or short-term political objectives while helping to maintain national integrity and independence has rarely moved the recipient nation toward greater economic stability.

II

In the face of these weaknesses and inadequacies—and with the beginning of a new decade of new problems—it is proper that we draw back and ask with candor a fundamental question: Is a foreign aid program really necessary?

Why should we not lay down this burden which our Nation has now carried for some 15 years?

The answer is that there is no escaping our obligations: Our moral obligations as a wise leader and good neighbor in the interdependent community of free nations—our economic obligations as the wealthiest people in a world of largely poor people, as a nation no longer dependent upon the loans from abroad that once helped us develop our own economy—and our political obligations as the single largest counter to the adversaries of freedom.

To fail to meet those obligations now would be disastrous; and, in the long run, more expensive. For widespread poverty and chaos lead to a collapse of existing political and social structures which would inevitably invite the advance of totalitarianism into every weak and unstable area. Thus our own security would be endangered and our prosperity imperiled. A program of assistance to the underdeveloped nations must continue because the Nation's interest and the cause of political freedom require it.

We live at a very special moment in history. The whole southern half of the world—Latin America, Africa, the Middle East, and Asia—are caught up in the adventures of asserting their independence and modernizing their old ways of life. These new nations need aid in loans and technical assistance just as we in the northern half of the world drew successively on one another's capital and know-how as we moved into industrialization and regular growth.

But in our time these new nations need help for a special reason. Without exception they are under Communist pressure. In many cases, that pressure is direct and military. In others, it takes the form of intense subversive activity designed to break down and supersede the new—and often frail—modern institutions they have thus far built.

But the fundamental task of our foreign aid program in the 1960's is not negatively to fight communism: Its fundamental task is to help make a historical demonstration that in the 20th century, as in the 19th—in the southern half of the globe as in the north—economic growth and political democracy can develop hand in hand.

In short we have not only obligations to fulfill, we have great opportunities to realize. We are, I am convinced, on the threshold of a truly united and major effort by the free industrialized nations to assist the less-developed nations on a long-term basis. Many of these less-developed nations are on the threshold of achieving sufficient economic, social and political strength and self-sustained growth to stand permanently on their own feet. The 1960's can be—and must be—the crucial "Decade of Development"—the period when many less-developed nations make the transition into self-sustained growth—the period in which an enlarged community of free, stable, and self-reliant nations can reduce world tensions and insecurity. This goal is in our grasp if, and only if, the other industrialized nations now join us in developing with the recipients a set of commonly agreed criteria, a set of long-range goals, and a common undertaking to meet those goals, in which each nation's contribution is related to the contributions of others and to the precise needs of each less-developed nation. Our job, in its largest sense, is to create a new partnership between the northern and southern halves of the world, to which all free nations can contribute, in which each free nation must assume a responsibility proportional to its means.

We must unite the free industrialized nations in a common effort to help those nations within reach of stable growth get underway. And the foundation for this unity has already been laid by the creation of the OECD under the leadership of President Eisenhower. Such a unified effort will help launch the economies of the newly developing countries "into orbit"—bringing them to a stage of self-sustained growth where extraordinary outside assistance is not required. If this can be done—and I have every reason to hope it can be done—then this decade will be a significant one indeed in the history of freemen.

But our success in achieving these goals, in creating an environment in which the energies of struggling peoples can be devoted to constructive purposes in the world community—and our success in enlisting a greater common effort toward this end on the part of other industrialized nations—depends to a large extent upon the scope and continuity of our own efforts. If we encourage recipient countries to dramatize a series of short-term crises as a basis for our aid—instead of depending on a plan for long-term goals—then we will dissipate our funds, our good will, and our leadership. Nor will we be any nearer to either our security goals or to the end of the foreign aid burden.

In short, this Congress at this session must make possible a dramatic turning point in the troubled history of foreign aid to the underdeveloped world. We must say to the less-developed nations, if they are willing to undertake necessary internal reform and self-help—and to the other industrialized nations, if they are willing to undertake a much greater effort on a much broader scale—that we then intend during this coming decade of development to achieve a decisive turnaround in the fate of the less-developed world, looking toward the ultimate day when all nations can be self-reliant and when foreign aid will no longer be needed.

However, this will not be an easy task. The magnitude of the problems is staggering. In Latin America, for example, population growth is already threatening to outpace economic growth—and in some parts of the continent living standards are actually declining. In 1945 the population of our 20 sister American Republics was 145 million. It is now greater than that of the United States, and by the year 2000, less than 40 years away, Latin American population will be 592 million, compared with 312 million for the United States. Latin America will have to double its real income in the next 30 years simply to maintain already low standards of living. And the problems are no less serious or demanding in the other developing areas of the world. Thus to bring real economic progress to Latin America and to the rest of the less-developed world will require a sustained and united effort on the part of the Latin American Republics, the United States and our free world allies.

This will require leadership, by this country in this year. And it will require a fresh approach—a more logical, efficient and successful long-term plan—for American foreign aid. I strongly recommend to the Congress the enactment of such a plan, as contained in a measure to be sent shortly to the Congress and described below.

III

If our foreign aid funds are to be prudently and effectively used, we need a whole new set of basic concepts and principles:

1. Unified administration and operation: A single agency in Washington and the field, equipped with a flexible set of tools, in place of several competing and confusing aid units.

2. Country plans: A carefully thought through program tailored to meet the needs and the resource potential of each individual country, instead of a series of individual, unrelated projects. Frequently, in the past, our development goals and projects have not been undertaken as integral steps in a long-range economic development program.

3. Long-term planning and financing: The only way to make meaningful and economical commitments.

4. Special emphasis on development loans repayable in dollars: More conducive to business-like relations and mutual respect than sustaining grants or loans repaid in local currencies, although some instances of the latter are unavoidable.

5. Special attention to those nations most willing and able to mobilize their own resources, make necessary social and economic reforms, engage in long-range planning, and make the other efforts necessary if these are to reach the stage of self-sustaining growth.

6. Multilateral approach: A program and level of commitments designed to encourage and complement an increased effort by other industrialized nations.

7. A new agency with new personnel: Drawing upon the most competent and dedicated career servants now in the field, and attracting the highest quality from every part of the Nation.

8. Separation from military assistance: Our program of aid to social and economic development must be seen on its own merits, and judged in the light of its vital and distinctive contribution to our basic security needs.

IV

I propose that our separate and often confusing aid programs be integrated into a single administration embracing the present Washington and field operations of—

A. The International Cooperation Administration (ICA) and all its technical assistance (point 4) and other programs;

B. The Development Loan Fund (DLF);

C. The food-for-peace program (Public Law 480) in its relations with other countries, while also recognizing its essential role in our farm economy;

D. The local currency lending activities of the Export-Import Bank;

E. The Peace Corps, recognizing its distinctive contribution beyond the area of economic development;

F. The donation of nonagricultural surpluses from other national stockpiles of excess commodities or equipment;

G. All other related staff and program services now provided by the Department of State as well as ICA.

The fieldwork in all these operations will be under the direction of a single mission chief in each country reporting to the American Ambassador. This is intended to remove the difficulty which the aided countries and our own field personnel sometimes encounter in finding the proper channel of decision-making. Similarly, central direction and final responsibility in Washington will be fixed in an Administrator of a single agency—reporting directly to the Secretary of State and the President—working through Washington directors for each major geographical area, and through the directors of the constituent resource units whose functions are drawn together in each national plan: a development lending organization, food for peace, the Peace Corps, and a unit for technical and other assistance stressing education and human resources—initiating a program of research, development, and scientific evaluation to increase the effectiveness of our aid effort; and, in addition, the Secretary of State will coordinate with economic aid the military assistance program administered by the Department of Defense, the related operations of the Export-Import Bank, and the role of the United States in the Inter-American Fund for Social Progress and activities of international organizations.

Under the jurisdiction of both the Secretary of State in Washington and the Ambassadors in the field, foreign aid can more effectively play its part as an effective instrument of our overall efforts for world peace and security. The concentration of responsibilities and increased status will both require and attract high-caliber personnel. Programs such as the Peace Corps and food for peace, far from being submerged, will be used more effectively and their distinctive identity and appeal preserved—and food for peace will continue to be based on availabilities determined by the Department of Agriculture.

But I am not proposing merely a reshuffling and relabeling of old agencies and their personnel, without regard to their competence. I am recommending the replacement of these agencies with a new one—a fresh start under new leadership.

V

But new organization is not enough. We need a new working concept.

At the center of the new effort must be national development programs. It is essential that the developing nations set for themselves sensible targets; that these targets be based on balanced programs for their own economic, educational and social growth—programs which use their own resources to the maximum. If planning assistance is required, our own aid organization will be prepared to respond to requests for such assistance, along with the International Bank for Reconstruction and Development and other international and private institutions. Thus, the first requirement is that each recipient government seriously undertake to the best of its ability on its own those efforts of resource mobilization, self-help and internal reform, including land reform, tax reform and improved education and social justice, which its own development requires and which would increase its capacity to absorb external capital productively.

These national development programs—and the kind of assistance the free world provides—must be tailored to the recipients' current stage of development and their foreseeable potential. A large infusion of development capital cannot now be absorbed by many nations newly emerging from a wholly underdeveloped condition. Their primary need at first will be the development of human resources, education, technical assistance and the groundwork of basic facilities and institutions necessary for further growth. Other countries may possess the necessary human and material resources to move toward status as developing nations, but they need transitional assistance from the outside to enable them to mobilize those resources and move into the more advanced stage of development where loans can put them on their feet. Still others already have the capacity to absorb and effectively utilize substantial investment capital.

Finally, it will be necessary, for the time being, to provide grant assistance to those nations that are hard pressed by external or internal pressure, so that they can meet those pressures and maintain their independence. In such cases it will be our objective to help them, as soon as circumstances permit, make the transition from instability and stagnation to growth; shifting our assistance as rapidly as possible from a grant to a development loan basis. For our new program should not be based merely on reaction to Communist threats or short-term crises. We have a positive interest in helping less-developed nations to provide decent living standards for their people and achieve sufficient strength, self-respect and independence to become self-reliant members of the community of nations. And thus our aid should be conditioned on the recipients' ability and willingness to take the steps necessary to reach that goal.

To meet the varied needs of many nations, the new aid administration will have a flexible set of tools, coordinated and shaped to fit each national development program: the grant or sale (for either local currency or dollars with special repayment terms) of surplus foods, equipment and other items; technical assistance; skilled manpower from the Peace Corps; development grants; transitional, sustaining, or emergency grants; development loans repayable in local currency; and development loans repayable in dollars, with special terms of repayment that will meet the needs of the recipient country. These tools will be coordinated with the activities of the Export-Import Bank, and with loan and investment guarantees to private enterprise.

The instrument of primary emphasis—the single most important tool—will be long-term development loans at low or no rates of interest, repayable in dollars, and designed to promote growth in those less-developed nations which have a real chance for ultimate self-reliance but which lack the ability to service loans from normal lending institutions. The terms of repayment will vary from as long as 50 years for those countries just starting on the road to development, to a much shorter period of time for those countries that are nearing the stage of self-sufficient growth.

Such long-term loans are preferable to outright grants, or "soft loans" repayable in local currencies that are of little benefit to the American taxpayer.

The emphasis on low or interest-free loans is not designed to undercut other institutions. The objective is to rely on flexibility in the repayment period and the requirement of ultimate dollar repayment for insuring strict accountancy while meeting individual needs in an area not met by suppliers of capital on normal terms.

Lending on these terms is not normal banking practice. We are banking on the emergence over coming years and decades of a group of independent, growing, self-reliant nations.

VI

A program based on long-range plans instead of short-run crises cannot be financed on a short-term basis. Long-term authorization, planning and financing are the key to the continuity and efficiency of the entire program. If we are unwilling to make such a long-term commitment, we cannot expect any increased response from other potential donors or any realistic planning from the recipient nations.

I recommend, therefore, an authorization for the new aid agency of not less than 5 years, with borrowing authority also for 5 years to commit and make dollar repayable loans within the limits spelled out below. No other step would be such a clear signal of our intentions to all the world. No other step would do more to eliminate the restrictions and confusions which have rendered the current foreign aid program so often ineffective. No other step would do more to help obtain the service of topflight personnel. And in no other way can we encourage the less-developed nations to make a sustained national effort over a long-term period.

For, if we are to have a program designed to brighten the future, that program must have a future. Experience has shown that long-range needs cannot be met evenly and economically by a series of 1-year programs. Close consultation and cooperation with the Con-

gress and its committee will still be essential, including an annual review of the program.

And we will still need annual appropriations of those amounts needed to meet requirements for which dollar repayable loans would be unsuitable. These appropriations should be available until spent in order to avoid any wasteful rush to obligate funds at the end of a fiscal year.

The new continuity and flexibility this kind of long-term authority will bring cannot help but result in more productive criteria, a greater effort on the part of the developing nations, greater contributions from our more prosperous allies, more solid results and real long-run economy to the taxpayers. The new emphasis on long-term plans and realistic targets will give both the Congress and the Executive a better basis for evaluating the validity of our expenditures and progress.

VII

A long-term program and borrowing authority, even though limited, will enable us to demonstrate the seriousness of our intentions to other potential donors and to the less-developed world. Over the next 5 years, the economic program here proposed, together with an expanded food-for-peace program as recommended in my agricultural message, and project loans by the Export-Import Bank, will constitute direct U.S. economic assistance activity of considerable magnitude.

It will, however, take time to institute the new concepts and practices which are proposed. Thus, during this initial year, while we will need to make the necessary long-term commitments for development lending, it is unnecessary to ask the Congress for any additional funds for this year's program.

Consequently, while the funds requested by my predecessor will be sharply shifted in terms of their use and purpose, I am asking the Congress for a total foreign aid budget of new obligational authority no greater than that requested in the rockbottom budget previously submitted ($4 billion) despite the fact that the number of new nations needing assistance is constantly increasing; and, though increasing such authority for nonmilitary aid while reducing military assistance, this budget provides for a level of actual expenditures on nonmilitary aid no greater than reflected in the previous budget ($1.9 billion). (These figures do not, of course, reflect Public Law 480 operations.)

In deciding on this program, I have also carefully considered its impact on our balance of payments. We are now putting maximum emphasis, in both our development lending and grant aid programs, on the procurement of goods and services of U.S. origin. As I pointed out in my message on the balance of payments, under present procedures not more than 20 percent of foreign economic aid expenditures will affect our balance of payments. This means that approximately $2 billion out of the requested $2.4 billion in economic aid will be spent directly for goods and services benefiting the American economy.

This is important. For not only do we have the highest gross national product, both total and per capita, of any country in the world, thus making clear both our obligations and our capacity to do our full part, but we are currently underutilizing our great economic capacity because of economic recession and slack. Less than 80 percent of our industrial capacity is now in use, and nearly 7 percent of our labor force is unemployed. Under these circumstances, cutbacks in the foreign aid program would be felt not only in loss of economic progress and hope abroad, but in loss of markets and income for business, labor, and agriculture at home.

In short, this program will not in whole or in part unbalance the previous budget in any fashion. Its impact on our balance of payments will be marginal. And its benefits for our domestic economy should not be overlooked.

The $4 billion previously requested for fiscal year 1962 will be reallocated under this new program as follows:

Military assistance will be reduced from the $1.8 billion requested to $1.6 billion, as discussed below.

Economic assistance, with a much greater portion going to development loans, a small increase in development grants, and a reduction in sustaining grants, will total $2.4 billion.

Of this, $1.5 billion will be contained in the usual annual appropriation of new obligational authority to finance the part of the program that is not suitable for dollar development loans: grants for education, social progress and institutional development, the Peace Corps, and sustaining aid. Nine hundred million dollars will be available for long-term, low, or interest-free development loans to be repaid in dollars, financed through an authorization of public debt borrowing authority which would also provide no more than $1.6 billion for each of the succeeding 4 years. Also to be made available for such loans under the new system of full coordination will be the unappropriated dollar funds now coming in in repayment of the principal and interest on certain previous loans to foreign governments (United Kingdom, ECA, GARIOA, and others—but not the Export-Import Bank).

VIII

The economic programs I am recommending in this message cannot succeed without peace and order. A vital element toward such stability is assurance of military strength sufficient to protect the integrity of these emerging nations while they are advancing to higher and more adequate levels of social and economic well-being.

I shall, therefore, request the Congress to provide at this time $1.6 billion for provision of military assistance. This figure is the amount required to meet the U.S. share in maintaining forces that already exist, and to honor firm existing commitments for the future.

I am frank to say that we cannot now say with precision whether this amount will meet the minimum level of military aid which our basic security policy might demand this year. The emergence of new crises, or new conflicts, may require us to make an even greater effort.

However, while I have mentioned in this message the amount to be allocated to military assistance, those funds, while coordinated with the policies of the new Agency, will not be administered by it and should not be included in its appropriation. In order to make clear the peaceful and positive purposes of this program, to emphasize the new importance this administration places on economic and social development quite apart from security interests, and to make clear the relation between the military assistance program and those interests, I shall propose a separate authorization for military assistance with appropriations as part of the Defense budget. Moreover, to the extent that world security conditions permit, military assistance will in the future more heavily emphasize the internal security, civil works and economic growth of the nations thus aided. By this shift in emphasis, we mean no lessening of our determination to oppose local aggression wherever it may occur. We have demonstrated our will and ability to protect free world nations—if they so desire—from the type of external threat with which many of them are still confronted. We will not fall short on this.

IX

The levels on which this new program is based are the minimum resulting from a hard reappraisal of each type of assistance and the needs of the less-developed world. They demonstrate both to the less-developed nations and to the other industrialized nations that this country will meet its fair share of effort necessary to accomplish the desired objective, and their effort must be greater as well. These are the rockbottom minimum of funds necessary to do the job. To provide less would be wasteful, perhaps more wasteful, than to provide more. Certainly it would be wasteful to the security interest of the free world.

But I am hopeful that the Congress will not provide less. Assistance to our fellow nations is a responsibility which has been willingly assumed and fashioned by two great Presidents in the past, one from each party—and it has been supported by the leaders of both parties in both Houses who recognized the importance of our obligations.

I believe the program which I have outlined is both a reasonable and sensible method of meeting those obligations as economically and effectively as possible. I strongly urge its enactment by the Congress, in full awareness of the many eyes upon us—the eyes of other industrialized nations, awaiting our leadership for a stronger united effort—the eyes of our adversaries, awaiting the weakening of our resolve in this new area of international struggle—the eyes of the poorer peoples of the world, looking for hope and help, and needing an incentive to set realistic long-range goals—and, finally, the eyes of the American people, who are fully aware of their obligations to the sick, the poor and the hungry, wherever they may live. Thus, without regard to party lines, we shall take this step not as Republicans or as

Democrats but as leaders of the free world. It will both befit and benefit us to take this step boldly. For we are launching a decade of development on which will depend, substantially, the kind of world in which we and our children shall live.

JOHN F. KENNEDY.

THE WHITE HOUSE, *March 22, 1961.*

COMMITTEE ON BANKING AND CURRENCY

Mr. ALBERT. Mr. Speaker, on behalf of the Committee on Banking and Currency, I ask unanimous consent that they may have until midnight tonight to file a report on the bill S. 1.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

COMMITTEE ON PUBLIC WORKS

Mr. McFALL. Mr. Speaker, I ask unanimous consent that the Committee on Public Works have permission to sit during general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

AUTHORIZING CONSTRUCTION FOR MILITARY DEPARTMENTS

Mr. VINSON. Mr. Speaker, I move that the House 1 solve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5000) to authorize certain construction at military installations, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Georgia.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5000, with Mr. ELLIOTT in the chair.

The Clerk read the title of the bill.

By unanimous consent the first reading of the bill was dispensed with.

Mr. VINSON. Mr. Chairman, I yield myself 15 minutes.

Mr. Chairman, this bill, H.R. 5000, is known as the military construction authorization bill for fiscal year 1962.

Enactment of this legislation is necessary to provide construction and other related authority for the military departments and the Department of Defense for fiscal year 1962.

The construction program contained in this bill is, of course, based on the military forces which we plan to have over the next several years.

In the case of the Army, the program is based on 870,000 men. In the case of the Navy, the program represents the Shore Establishment necessary for 817 ships in actual commission and 625,000 personnel.

For the Air Force, we will have 88 wings by the end of fiscal year 1961 and 822,000 personnel. During the next several years, in the process of developing missile units, some decrease in this number of wings will occur. The committee was told, however, that this decrease will be offset somewhat by an increase in missile-squadron strength.

In summary, the program contained in this bill reflects the new construction authorization required by the military departments to maintain our current military posture.

As the House is aware, the administration is now in the process of reviewing our entire defense posture.

Representatives of the Department of Defense have assured the committee that, although this review has not been completed, it will not result in any decrease in construction requirements but may result in a possible supplemental request for new construction authorization above that contained in this bill.

The preparation of this program, as you undoubtedly know, involves a compilation of all the construction requirements originally presented by the various field offices to the military departments in Washington. These original requests received from the field offices amounted to in excess of $2 billion. This total, in turn, was cut by the military departments in Washington to a reduced figure of $1,352 million. The Office of the Assistant Secretary of Defense then scrutinized this request of the individual service departments and reduced this figure once again to $785 million.

COMMITTEE REDUCTION

The Committee on Armed Services made a very close and detailed scrutiny of every item in this bill, and as a consequence we have further reduced the construction authorizations for the Active Forces another $65 million. Therefore, the bill being presented to the House of Representatives contains a total of $708 million of new authorization requests for the active forces of the Army, Navy, and Air Force.

Let me at this point deal with the grand total of the bill and the fashion in which it is broken down.

The grand total of the bill that the House is considering today is $808,375,000.

Of this amount, $708 million is for new construction for the Active Forces. This is broken down into $144,238,000 for the Army; $132,547,000 for the Navy; and $431,015,000 for the Air Force.

As I have said, these total $708 million. This is for the Active Force.

To this, however, we must add $47,801,000 for deficiency authorization and $52,801,000 for the Reserve components—that is to say the National Guard and the Reserve forces—for a grand total of approximately $808 million.

The budget this year for military construction is $985 million, and it is this sum which the Appropriations Committee has before it at this time for consideration. The difference between the amount of authorization and the requested amount of appropriations is explained by the fact that some authorization which still remains from prior years is also being funded this year.

In this connection, I am glad to point out that this year's program for the Active Forces is substantially below that of last year's. New construction authority for the Active Forces is approximately $290 million less than last year's authorization.

This drastic reduction in military construction requirements points up the fact that a substantial portion of the new construction requirements of the departments have now been met.

Construction of Strategic Air Command dispersal bases and alert facilities and basic air defense installations will be virtually completed this year. However, decreases in these areas of military construction requirements have been partially offset by some increase for missile base construction.

LAND ACQUISITION

During consideration of this bill the committee has again this year, as in the past, emphasized the importance of utilization of existing real estate held by the military departments in accomplishment of the proposed military construction program.

Therefore, it was pleased to note that the construction program recommended by the departments involves the acquisition of less than 817 acres of new land requiring specific congressional approval.

The committee carefully scrutinized these new acquisitions and was satisfied that these additional acquisitions requested in the bill were essential to the continued modernization of our military installation and weapon systems.

NEW BASES

Other than the Navy's proposed Atlantic Underwater Test and Evaluation Center, there are no new bases, in the true sense of the term, authorized by this bill. There are some other installations which contemplate new and different activities but which are located immediately adjacent or close to existing bases and will receive their support from these existing bases.

HOSPITALS

The bill contains authorization for the construction of 8 new service hospitals ranging in size from 4 facilities, each having a 50-bed capacity, to 1 with a 500-bed capacity.

The Air Force will have a total of six of these new medical facilities and the Army and Navy one each.

The authorization provided to accomplish these projects is approximately $31 million.

NUMBER OF INSTALLATIONS AND ITEMS IN THE BILL

There are 358 named installations in the bill, and 432 installations not specifically designated, making a grand total of 790 installations covered by the bill.

There are approximately 1,370 individual items in the bill, and as the printed hearings will reveal, these were dealt with by the committee in the closest detail.

HIGHLIGHTS

At this point, I would like for a moment to deal with the highlights of the Army, Navy, and Air Force programs contained in titles I, II, and III of H.R. 5000.

ARMY

First, the Army. As I have mentioned, the Army would get $144,238,000 in this bill for new construction. The bulk of this is divided into the following major categories:

About $22 million, or 15 percent, for research and test facilities, including support of the Nike-Zeus program.

About $48 million, or 33 percent, for operational and training facilities. This category comprises one-third of the total Army program and includes system improvements for air defense, both within the United States and in oversea areas; improved communications facilities; and training facilities.

About $17 million, or 12 percent, for supply facilities. This category includes new fuel storage facilities all within Korea; ammunition storage facilities overseas; cold storage facilities at Fort Hood, Tex., and a new storage building for the National Security Agency at Fort Meade, Md.

About $10 million, or 7 percent, for hospital and medical facilities all of which, for practical purposes, is for construction within the United States, except for a hospital addition on Okinawa. The most significant single project within this category is that for the U.S. Army health facility at Fort Sill, Okla., in the amount of $7.7 million.

There are a number of other smaller categories representing relatively minor increments in the total program. However, those which I have just described represent the major portions of the Army program.

NAVY

In the case of the Navy, the program, amounting to $132,574,000, is broken down as follows:

About $42 million, or 31 percent, for items directly required to support operations of the active fleet in projecting its fighting strength to control the sea.

About $17 million, or 13 percent, to provide submarine warfare support facilities. This category of facilities provides the capability of the Navy submarine force, including Polaris, to train for and wage oversea warfare in ocean areas generally far removed from our shorelines.

About $12½ million, or 9 percent, for facilities in support of the antisubmarine warfare forces. These facilities will support the Navy's air, surface, and subsurface forces for antisubmarine warfare.

Almost $22 million, or 15 percent, for facilities in support of Marine Corps combat forces. These items are required for the training and effective utilization of the Marine Corps ground and air force in support of national objectives, including instant readiness for deployment to oversea areas of local unrest.

About $12½ million, or 9 percent, for research, development, and test facilities required by the Navy in connection with its continual effort to remain abreast of new technological developments.

Again, there are a number of smaller items representing portions of the program which are relatively minor in their dollar amounts.

AIR FORCE

The Air Force would receive construction authority in the amount of $431,015,000 under this bill.

As has been the case in prior years, the Air Force program again represents the largest single category of any of the three services. This situation is largely the result of the substantial authorizations required for missile base construction. Again, this bill contains $251,900,000 of new authorization for ballistic missile site construction. This figure represents almost 59 percent of the total of new authorizations provided the Air Force in H.R. 5000.

Other authorizations include:

Approximately $30 million, or 7 percent, for research, development, and test facilities. This authorization is necessary to provide the new facilities required by the Air Force to continue its scientific and technical studies on aeronautical and aerospace and missile developments.

About $60 million, or 23 percent, in support of operational and training facilities required by the Air Force in connection with both its heavier than air and missile activities.

About $14 million, or approximately 3 percent, required for the construction of necessary hospital and medical facilities. The largest single project in this area is a 200-bed hospital at March Air Force Base, Calif., in the amount of $3½ million.

No other category within the Air Force program exceeds 7 percent, and some of them represent considerably less.

MISSILE BASE CONSTRUCTION

The committee received considerable testimony from Air Force representatives concerning various alleged deficiencies in the missile site construction program. There is ample evidence to indicate that various shortcomings do exist in the program. However, it would be strange indeed if a review of an unprecedented program of this magnitude did not reveal deficiencies of a technical and procedural nature.

The Committee on Armed Services has been assured that everyone involved in this program is aware of these deficiencies and appropriate corrective action is being taken.

In this connection, it is important to note that representatives of the Air Force acknowledged excessive delays in the adjudication of contractor claims made on change orders to the original contracts. These delays have, in turn, caused financial difficulties for many contractors and their subcontractors engaged in missile base construction. However, responsible authorities in the Air Force have already initiated action to accelerate this adjudication process and therefore the impact of this problem on missile base construction should be minimized in the future.

MAJOR COMMITTEE CHANGES TO THE DEFENSE BILL

H.R. 5000 is, of course, a clean bill. During consideration of the original bill, H.R. 2743, the committee made numerous amendments. These amendments account for a deletion of approximately $65 million from the original amount requested by the departments. However, the cuts made by the committee were, for the most part, cuts in projects which were not scheduled for construction appropriation requests. Consequently, the cuts made by the committee should not weaken the planned construction program developed by the military departments.

The committee, however, made some significant changes in connection with the original housing authorization requested by the departments. The bill originally transmitted to the Congress requested only 2,025 Capehart units. Testimony received by the committee indicated the departments actually had requested 22,000 units for inclusion in the bill. After attempting to reconcile this wide variance in estimated needs for additional Capehart authorizations, the committee decided to include the amount of Capehart authorizations recommended by the Department of Defense in the bill before it was reduced by the Bureau of the Budget. This figure amounted to 7,074 units and represents a new addition of approximately 5,000 units.

The committee, in making this change, also authorized a corresponding increase in the ceiling on Capehart units so as to permit the departments to construct those units previously authorized and the additional units authorized in H.R. 5000. Thus, the committee increased the 25,000 unit ceiling, which previously applied, to 37,000. The change was necessary to accommodate approximately 5,000 units previously authorized and not initiated because of the statutory ceiling and the approximately 7,000 additional units authorized by this bill.

DEFICIENCY AUTHORIZATION

Now, in addition to the new authorizations provided the Active Forces, the bill provides additional deficiency authorizations for projects previously authorized the Active Forces.

This deficiency authorization amounts to $47,355,000. The bulk of this figure is the result of a Navy deficiency request to accomplish the completion of the Navy radio research station at Sugar Grove, W. Va. The remaining $3,100,000 is necessary to provide the balance of the authorization necessary for the building of a graving drydock at the Naval Shipyard, Charleston, S.C.

This latter deficiency authorization will simply complete the authorization to accomplish this previously approved project at Charleston.

Although the Navy deficiency authorization request for Sugar Grove, W. Va., is a most substantial item, the committee is of the opinion that it is amply justified. The project at Sugar Grove involves many new and advanced electronic techniques for which prior experience is not available, and consequently the cost estimates of this project previously provided the committee were insufficient and necessitated the current request of the Navy for this additional authorization.

The balance of the deficiency authorization is less than $8 million, and this is understandably attributable to inaccurate estimates in original construction

costs on a total program of approximately $1 billion.

In summary, the committee considered the request of the Departments for deficiency authorization in the amount indicated to be justified and accordingly approved the request without change.

Now basically that is the bill for the Active Forces.

Title V of the bill covers the Reserve forces and represents a request for new authorizations in the amount of $52,801,000.

This figure breaks down as follows:

Army National Guard	$15,737,000
Army Reserve	11,209,000
Navy and Marine Corps Reserve	7,771,000
Air National Guard	13,827,000
Air Force Reserve	4,257,000

These figures, together with $392,000 in deficiency authorizations, reflect the total authorization provided the Reserve forces.

At this point, I would like to emphasize that Members can identify the various locations at which these Reserve facilities are being constructed by examining the line items in title V of the bill and also by consulting the individual State breakdown of all construction authorizations which appear at the very end of the report on this bill.

CONCLUSION

I know you realize that it would be impossible for me to go into any greater detail with respect to a program of this size within the limitation of the time allotted for the consideration of this bill.

Indeed, it would take almost as long for me to explain it in that fashion as it had taken the committee in actually reviewing these items.

Therefore, I have confined my discussion to a broad outline of the main features of H.R. 5000 so as to give the Members of the House a more meaningful and worthwhile picture of what the legislation is intended to accomplish.

Thank you for your kind attention.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield to the gentleman from Iowa.

Mr. GROSS. I will say to the gentleman, I am surprised that the Committee on Armed Services would triple the number of Capehart housing units in view of the investigation now being carried on into the operations of this man Hayes.

Mr. VINSON. We have complete information about Mr. Hayes.

Mr. GROSS. As I say, I am surprised the Committee on Armed Services would triple the number of Capehart housing units in view of the investigation now being carried on into the operations of this man Hayes, and his testimony that the military demanded and caused to be installed equipment and furnishings in Capehart units that greatly increased costs. I just do not understand why, in the face of the investigation presently going on in the other body, that the number of units should have been tripled.

Mr. VINSON. Investigation is being carried on by the Committee on Armed Services of the other body, with reference to the letting of the contract to Hayes of some seven or eight different projects over the country. Now a mistake probably was made by the Department in letting the contract. The law is very explicit that in letting these contracts, they must be let to a bona fide contractor. The facts have developed that Hayes seems to have been a broker, and for that reason he, in the first instance, perhaps should not have been awarded the contract. But, suppose they did make a mistake. Suppose Hayes did not meet his obligation. Is that any justification for a complete curtailment of the Capehart housing program?

Mr. GROSS. You had 2,000 or better than 2,000 units; did you not?

Mr. VINSON. Of course, we had 2,000 in the original proposal, but it is not enough. All of this has been carefully thought out. Under the law, we have today 98,729 Capehart units. To finance this program we have incurred a principal obligation of $1,649 million which is amortized over a 25-year period. All of this is dealt with by the statute which establishes the limitation and provides a ceiling on the total amount of principal obligation which can be incurred. Simply stated, it provides how large a mortgage can be issued against the credit of the United States in building these Capehart houses.

At this point I would like to call the attention of the House to the fact that, all military personnel in addition to basic pay are also entitled to quarters provided by the Government. Therefore, in those instances in which public quarters are not provided, the military man is then entitled to an actual quarters allowance.

This quarters allowance varies with the rank, et cetera, of the individual and ranges between a low of $51.30 per month to a high of $171 per month.

When military personnel occupy Capehart housing, which is public quarters, they forfeit their quarters allowance. This money is therefore, in effect, available to pay off the mortgage loan on Capehart housing.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield.

Mr. ROGERS of Colorado. The gentleman has explained that in the Capehart housing these units are constructed by private individuals. Does the gentleman know of a program that was passed which would authorize the purchase by the Government of those houses and in many instances they purchased them far in excess of the cost of construction? My question is and what I want to know is: Is that program still in force and effect?

Mr. VINSON. My good friend from Colorado is a little confused. His question related to Wherry houses. The Wherry houses and the Capehart houses are separate things. I may say to the gentleman that there are approximately 70,000 Wherry units that have been acquired by the Government. There are a few that we have not been able to acquire.

Mr. ROGERS of Colorado. Do I understand that is the Capehart housing or Wherry housing.

Mr. VINSON. What you have reference to is Wherry housing.

Mr. ROGERS of Colorado. The Capehart houses which the gentleman has been talking about have nothing whatsoever to do with the authorization—only where we actually are permitting private enterprise to make about $50 million.

Mr. VINSON. It has nothing whatsoever to do with the Wherry houses. We are trying to get all of them in the inventory of the services.

Mr. ROGERS of Colorado. Do I understand that the so-called Capehart housing is constructed on military reservations?

Mr. VINSON. That is right, and it belongs to the Government all the time after the mortgage is issued.

Mr. ROGERS of Colorado. And regardless of who may put up the money for the construction, in no instance will it cost the Government anything other than the construction, and they will not be required to pay far more than the Government has placed in it.

Mr. VINSON. That is correct.

Mr. Chairman, if there are no further questions I will reserve the balance of my time. I will say there is only one controversy.

Mr. SMITH of Virginia. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield.

Mr. SMITH of Virginia. I do not want to prolong the gentleman's statement, but we had quite a discussion on Capehart housing in the Rules Committee, in which the gentleman undertook to explain to my satisfaction, but did not, what it was all about. I would like to discuss that at some length with the gentleman either now or if the gentleman will yield me sufficient time in my own right. I have a very critical report here from the General Accounting Office showing the waste, according to the General Accounting Office, of hundreds of millions of dollars on this project, and I hope the gentleman will give me time.

Mr. VINSON. I will be more than delighted to discuss it with the gentleman now for 15 minutes and yield him 15 minutes later on.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. VINSON. Mr. Chairman, I yield myself 10 minutes. I would like to discuss this with the gentleman now.

Mr. SMITH of Virginia. I would like to have a little time in my own right.

Mr. VINSON. And I will give the gentleman later on 15 minutes time in which to discuss it. I hope we can clear it up.

Mr. SMITH of Virginia. That is very fair of the gentleman; he is always fair.

My attention was called to this matter when the Hayes incident occurred over in the Senate. I will say to the Committee that the Hayes incident and the whole subject is under close investigation in the Senate.

This report, Mr. Chairman, is very elaborate. It goes into detail. It gives facts and figures. I am wondering why the gentleman is not willing, in view of the fact that the Army only requested 2,000 of these houses, and your committee of its own volition increased that to

7,000 houses at an additional cost of $100 million, why there is such a rush to push this thing through right now, and why the gentleman is not willing to lay it aside and take it out of the bill and bring it up at a future time when this large expenditure may be investigated and the matter can be cleared up.

Mr. VINSON. I will say in reply to the question, which is very proper and fair, the reason why it should be definitely taken care of now is because the departments have actually requested 22,000 units, which the budget did not grant, notwithstanding the fact that there is, for practical purposes, no charge in connection with Capehart houses directly against the budget. The object and purpose of the Capehart houses is to assure the military that they will have suitable quarters and amortize the cost over a period of years.

What is the existing situation? Let me give you this to show what a deplorable condition military housing is in. Page 12 of the report reflects a complete breakdown of the family housing assets of the military: 122,536 public quarters, 81,941 Wherrys, 106,000 Capeharts, 21,000 miscellaneous. That is what the inventory shows. In addition, local communities provide another 276,011 units. Notwithstanding that fact the remaining net deficit in military housing is conservatively estimated at more than 275,000 units.

So, if you want to put it off, it is putting it off day by day, year by year, forcing these men in the services to live in substandard quarters.

Now, what happens? They get $75, $90, $100 or more. They go to Fort Belvoir and come to the city of Washington. They will get quarters that are so substandard they can rent them for $25, $30 or $40 a month. The difference goes into the serviceman's pocket. We think the morale of the member's family requires adequate quarters for them. With this Capehart program, we take that money, and we put it against this. It is only using the credit of the Federal Government and no appropriation whatsoever except approximately $800 or $900 per unit for building the streets, and facilities, and so forth.

That is my answer to the gentleman. I do not know whether it covers his question or not. I could not convince him the other day, and I am doubtful as to whether I can convince him today.

Mr. SMITH of Virginia. The gentleman is most convincing usually. I do not know whether he can convince anybody on this proposition or not.

One more question: The thing that first brought this to my attention was the fact that Capehart housing is one of those things that we call appropriations by the back door, that never comes under the scrutiny of the Appropriations Committee or the scrutiny of the House, and does not affect the budget on the basis of it as a contingent liability. I have been trying for many months to get that subject of back-door approach to the Treasury brought to the floor of the House and let the House consider it, but I have not been successful in doing so. Now, is the gentleman aware that in the report of the Comptroller General there is the statement that houses built through the regular system of appropriations rather than the back-door approach, as in this case, are built much cheaper than they are under the Capehart formula?

Mr. VINSON. I stated before the Committee on Rules and I stated to the House a moment ago that the difference between a Capehart house and an Army house was $1,970. It cost $1,970 more over a 25-year period to have a Capehart house than it does direct appropriated houses.

Mr. SMITH of Virginia. But we spent over $2,000 on each one of these houses.

Mr. VINSON. Does not the gentleman know and do I not know that it would be absolutely impossible for me to secure the support of the distinguished gentleman from Virginia if I came in here today with a bill involving $120 million for houses for the services? I am realistic about this thing. I do not fool myself. I know this House is not going to do it. I have tried it in the past and I know they are not going to do it today.

Mr. SMITH of Virginia. If you are sure that it is against the will of this House and that the House will not do it, then why are you advocating it?

Mr. VINSON. I must do the very next best thing. I will say this to the gentleman. We have an open rule. The gentleman can do two things. He can move to strike out every Capehart house in this bill and let the House vote on it, or he can offer an amendment to build 7,000, or whatever number, direct appropriated houses and put the money in here. That is the way to do it.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield further?

Mr. VINSON. I yield.

Mr. ROGERS of Colorado. What assurance can you give that upon the construction of a Capehart house the builder thereof will maintain it to a decent standard, so that when the military man is compelled to occupy it he will at least have windows, at least have decent facilities?

Mr. VINSON. Well, of course, the Government maintains them. They belong to the Government, in the first instances, just as soon as the mortgage is put on them. The gentleman is a little confused. Private capital starts it off. They put up their money. Just as soon as they put their money up and finish it, then the Army and the Navy and the Air Force step in, and by prior arrangement float a mortgage authorized by the Federal Housing Administration, and then they pay back the principal over 25 years. Then the Government takes charge of that. The title is in the Government and the military keeps it up and keeps it occupied.

Mr. ROGERS of Colorado. Well, does the Government take title and take complete operation of it?

Mr. VINSON. Of course it does. It has the title from the day it accepted the mortgage liability.

Mr. ROGERS of Colorado. Why do you not let the Government build them in the first place?

Mr. VINSON. We are, except we are letting the Government build them through these contractors that we were assured, when they put up their capital later on, would meet the plans and specifications approved by FHA and then write a mortgage against it.

Mr. Chairman, I reserve the balance of my time, and I trust that the gentleman from Virginia or any other Member who does not like this bill will offer an amendment and let the House vote on it. It is entirely up to the House, whatever you do about it. If you want Capehart houses, say so. If you want direct appropriated houses, say so. But, let us do one thing or the other and make up our minds to take these substandard military houses out of inventory as fast as possible.

Mr. GAVIN. Mr. Chairman, I yield myself 6 minutes.

Mr. Chairman, the chairman of the Armed Services Committee has, once again, done his usual masterful job of explaining to the House the subject matter of the annual military construction program.

It is not my intention to repeat this explanation. However, it is my desire to call attention to a few matters which are of particular interest to me as a ranking minority member of the Armed Services Committee.

At the outset, I would like to point out that this bill, H.R. 5000, was reported out of committee by a unanimous vote.

During the course of hearings, individual differences of opinion did inevitably arise on specific authorizations. But, after the smoke cleared, our members, on both sides of the aisle, agreed we had a good bill. A bill that accurately reflects the needs of the military and of our country.

Therefore, it was not surprising that the committee endorsed this legislation without reservation.

The military construction program reflected in this bill is a bipartisan program. It was developed prior to the 20th of January and has been supported and defended since that time by representatives of the present administration.

The authorizations for new construction have been carefully developed to keep pace with our rapidly expanding technology in weapons and weapon systems.

Thus, of the more than $451 million of new authority provided the Air Force, almost 60 percent of that figure is specifically earmarked for site construction of our ballistic missile systems.

Putting it another way, we have, generally speaking, completely developed our system of dispersal and deployment of our manned bomber system, and consequently five-sixths of the total in this bill for the strategic forces, or $281 million, will be utilized for the construction of facilities for ballistic missiles.

Included in this program is the additional authorization necessary to add two more Titan squadrons and six additional squadrons of Minuteman. Pages 19 to 23 of the committee report on this bill present a complete summary of the status of both the Air Force and Army programs involving missile site construction.

This bill contains the authorization necessary to permit the Army to increase

the defense capabilities of the Nike-Hercules system. Approximately $8 million is allocated for this purpose for system improvements and support within the continental United States and Alaska.

At the same time the bill provides more than $10 million for additional construction and adjustments to technical facilities and support facilities in conjunction with the Nike-Zeus test program. It is this program which promises to provide, in the near future, a genuine defense against the intercontinental ballistic missile.

Research, development, and test facility construction started for Nike-Zeus in fiscal year 1958. Practically all of the construction requirements for completing test facilities on this program will have been satisfied with the authorizations provided in this bill.

Numerous items are contained in this bill in support of the Navy's Polaris program. Approximately $14 million are directly attributable to support of nuclear fleet ballistic submarines, while another $13 million will be utilized to construct additional research and test facilities in support of these various programs.

All of these authorizations reflect the dynamic nature of the current military construction program.

We are sharpening our defensive armor, and, our offensive strength and, at the same time, striving mightily to achieve new successes in weapon technology.

In summary—we have in the bill a solid, balanced program of new construction authority for the armed services that is essential to the defense of our country.

The committee has, in my judgment, properly eliminated certain marginal projects requested for authorization.

We had attempted to observe the relative priorities placed on the various projects by the Department of Defense and therefore, for the most part, limited reductions to those items which were not scheduled for a parallel appropriation request.

I believe in this bill. I support it wholeheartedly and hope that it will receive the unanimous approval of this body.

Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. VAN ZANDT].

Mr. VAN ZANDT. Mr. Chairman, I welcome the opportunity to speak briefly in favor of enactment of the military construction authorization bill, H.R. 5000. The chairman of our committee has done his usual splendid job on this bill. With the help of his wise counsel and able leadership, the committee has produced a very tight program for each of the services. The program for each of the military departments this year gives clear evidence of intelligent and forward-looking planning. I believe each program merits your approval.

For a reason which I shall develop in a moment, I invite your particular attention to the Navy's program, title II of the bill. It is for the relatively small amount of $132,574,000. The majority of the proposed facilities are for installations inside the United States, with only about one-eighth being for oversea bases. Before commenting on my point at issue, I should like first to highlight a few significant facts about this program.

As you well know, our Navy has, for a number of years, been engaged in a vigorous fleet modernization program. The greatest effectiveness of a modern fleet cannot be realized, however, unless, at the same time, the supporting shore establishment can be kept abreast of the fleet improvements. This is due to the rapidly changing operational concepts and the increasing technical complexities of the new ships, aircraft, and weapons systems being developed and introduced into the fleet today. The Navy's mobile, combat-ready operating forces must be assured adequate, up-to-date shore facilities to back them up. These facilities must be capable of providing the logistic support necessary for the fleet to be instantly responsive to any situation which may arise in hot, cold, or limited warfare.

Each individual line item in this Navy program supports one or more of several military objectives to achieve this ultimate purpose. A third of the program is for facilities supporting the vital role of fleet striking force operations. This area, for example, includes facilities for improved operation of jet aircraft; for modern fleet piers; and for support of the Navy's educational and highly specialized technical training program. Nearly a fifth of the program will provide facilities needed by our combat-ready Marine Corps air and ground forces, such as hangars for marine aircraft wings at home and overseas bases; and personnel facilities for combat ground units of the fleet marine force deployed at Okinawa. One-eighth of the program, dollarwise, will provide facilities serving the general objective of command forces support, such as the sorely needed 500-bed hospital at Long Beach, Calif. A tenth of the total dollars will be used for urgently needed facilities of a classified nature to insure improved readiness for our antisubmarine forces.

Another tenth will provide new and improved supporting facilities for the Navy's research and development effort in various fields of naval operations. The final eighth of the program directly supports the Navy's submarine warfare operations. This brings me to the area which, I believe, deserves emphasis.

For the past several years I have followed with special interest the evolution of a new weapon system—the Polaris missile. It was developed in the remarkably short space of less than 5 years to its present operational status. The Navy has mated this fleet ballistic missile with the nuclear-powered submarine to provide a powerful, relatively invulnerable deterrent against the start of all-out nuclear war by an unscrupulous foe. It provides a submerged, mobile, extremely difficult-to-detect platform from which the atomic-tipped missile may be fired at a valuable enemy target on very short notice.

Less than $18 million are in the Navy program for facilities supporting this new and revolutionary missile system upon which, in the near future, the defense of our Nation will so heavily depend. This small amount belies the importance of this amazing weapon system. It does, however, speak well for the adaptability of the Navy's existing facilities which will continue to be useful, in large measure, for this new system. A capability will be required within the next year at several eastern seaports for the logistic support and the overhaul and repair of the Polaris submarine and its missile system. Facilities for this purpose have previously been authorized for the Naval Shipyards at Portsmouth, N.H., and Charleston, and at the Naval Submarine Base, New London, Conn. Some of these facilities are already in use and the rest will soon be available. The bill you are now considering would authorize additional facilities for this need at the Portsmouth and Charleston Yards. It would also authorize additional classified research facilities for the continued development and test of improved Polaris missiles.

There are other projects in this bill which, although not bearing the Polaris label, nevertheless do directly support the Polaris system. These include family and troop housing, personnel training facilities, and facilities to meet operational and maintenance requirements for nuclear-powered submarines. Such proposed facilities are, again, to be built at Charleston and at Norfolk, Philadelphia, New London, Vallejo, and a classified location.

In concluding my remarks, I wish to assure you that it is my firm conviction that the Navy's military construction program has been soundly conceived, is well balanced, and represents the minimal facilities which will insure the essential supporting needs of the Navy's operating forces. I recommend that you approve, not only title II, but the entire bill.

Mr. KILDAY. Mr. Chairman, I yield 15 minutes to the gentleman from Virginia [Mr. SMITH].

Mr. SMITH of Virginia. Mr. Chairman, I wish to consume this time talking on the subject of Capehart housing and the tremendous waste of money involved in it. I was astonished when the chairman of the Committee on Armed Services said the reason they used Capehart housing instead of conventionally appropriated money housing and used the back door to the Treasury to get funds was because they did not think this House of Representatives, which is supposed to control our expenditures, would give it to them otherwise under the appropriation system. That is the most remarkable statement I have heard made on this floor in many a day.

This was brought to my attention first because Capehart housing was using the back-door approach for its funds. I have tried time and time again, but was voted down in the Rules Committee, to bring out a resolution here to do something about these billions—I am not talking about little millions of dollars, but billions of dollars—this Government and these taxpayers are being obligated for by means other than the regular constitutional appropriations system. They never go to the Appropriations Commit-

tee; they are never reviewed by this House, and yet there are billions of dollars involved—and I cannot even get my own Committee on Rules to permit the House to vote on it, although I have a petition upstairs of over 125 Members of Congress asking the Rules Committee to bring this subject before the House so we can talk about the back-door drain on the Treasury of the United States; and the committee will not do it.

So the fact that it was a back-door approach brought this to my attention. I examined it in some detail. I have found that the terrific waste of money in this program has become so noticeable that the General Accounting Office made a complete review and investigation of the Capehart program. Here is their report covering some hundred pages. At the time the Capehart program was created, need for the construction of these houses was proven and the act contained a provision that the FHA should oversee it. The bill, however, contained another provision which said that the FHA could designate someone else; so they designated the Army to oversee it. In other words, they designated the fellow we did not want them to designate. So this program has gone on and grown under the auspices and direction of the Armed Forces without supervision by the FHA.

As a result, the General Accounting Office investigated the functions of the FHA and how they had been performed, and they turned in a report criticizing the FHA's handling of this program, a report of some 50 pages. That made me wonder why we should maintain an agency which is the agency of the Congress, such as the Comptroller General's Office, why we should maintain and expend the taxpayers' money on it when they go to all the trouble and expense of investigating and preparing a report like this which is sent to the Speaker of the House, referred by the Speaker to the committee involved, and apparently nothing is done about it.

What happened? For some reason or other the Budget Bureau cut the Army's request for this housing down to 2,000 units. The Army came before the Armed Services Committee and recommended the construction of 2,000 units. The Committee on Armed Services raised that figure of 2,000 houses to 7,000, which would cost approximately $100 million more. If that matter is of any moment to Members of the House I would think it would be well to postpone this expenditure until we can get at the real truth in this thing.

I will not have the opportunity to go fully into this report with you—of course not—but it ought to be thoroughly studied, it ought to be verified whether the Comptroller's Office is telling the truth about this thing or not.

I will have time, however, to call your attention to two or three brief comments in the letter of transmittal addressed to the Speaker of the House from the Comptroller General. It says:

> We found at 15 of the 40 installations we reviewed that about 5,900 houses estimated to cost over $147 million were being built, or programed in excess of actual or apparent needs. One of the primary reasons for overbuilding was the failure of the Department to recognize that many members of the service preferred to live in personally owned or rented homes. On the other hand, a large number of housing units are being built or programed at a number of locations where conditions do not justify it. The overbuilding and other abuses in the program have resulted in substantial and unnecessary expenditures.

In the report it goes on to say that these things would not have occurred and do not occur where housing is built by direct appropriations from the Treasury instead of by this back-door approach to them:

> The impact on the local economy of the overbuilding of Capehart housing cannot yet be evaluated because the projects either have been completed fairly recently or are still in process.

They do give in here an item—I am sorry I cannot lay my hands on it—where in one area—and it gives the full details on it—some 300 FHA houses have been put out of commission; in other words, left vacant as a charge on the Treasury of the United States, because they built Capehart houses and took away the need for the FHA houses. This report is replete with those sorts of things.

I saw in the paper this morning, and it is being investigated thoroughly on the Senate side in connection with the housing debacle, where this man Hayes testified yesterday that he could build these houses, not for $18,000, $19,000, or $20,000, but he could build them for $12,000 if he were permitted to do so in the conventional way, under FHA. He said—and I do not know whether it is true or not, but that is his testimony—that, with the Army supervising instead of FHA supervising, an officer will be building a house. He goes out to look at it, and he says his wife does not want the blue paint; she wants pink paint. So the newly painted house has to be done all over again. Here is another case where a fellow wanted a bay window in the house; so they had to tear down part of the house and put in a bay window. There goes a few more thousand dollars. All those things are brought out in here. I do not testify to the truth of them, but I do say they are worthy of an investigation by the Congress of the United States; they are worthy of the consideration that we would give to making appropriations direct. Let the Congress know what is going on; let the Appropriations Committee know what is going on. Do not go to building these houses and taking a contingent liability through the back door because some people are afraid that the majority of this Congress does not want to do the thing that this report complains about.

I had not intended to offer an amendment to this bill, and I do not know whether I will or not because, you know, offering an amendment to one of CARL VINSON'S bills is a right smart undertaking, and I have been kicked around up here enough for one session of Congress. I am getting a little soft. So maybe I will leave this thing to go over to the Senate.

I now yield to my delightful friend the gentleman from South Carolina [Mr. RIVERS].

Mr. RIVERS of South Carolina. I do not like to disagree with my distinguished friend on this subject. That report to which the gentleman refers in my country is exactly 100 percent wrong; exactly 100 percent wrong. And, I say this: I do not care any more about the Capehart program than does the gentleman from Virginia. I hope the day will come in my lifetime when there will be no more Capehart houses. But, it is a fact of life which I have to recognize. When they put them in in my part of the country, I asked my chairman to investigate the matter, and he did investigate it. I not only did that, but I got these boys from the GAO, who seem determined to get into policy, in my office and set them straight. Now, mind you, the real estate lobby put things in the newspapers every day, not in boxcar letters, but letters the size of boxcars about how we were squandering the taxpayers' money. We made an investigation, and when I got the GAO cornered, and I had my lawyers with me, both of them, they said, "We don't mean to say you do not need houses in your area. We mean that there is not enough liaison between the military and the FHA." I am sure things will be better now. I agree with Judge SMITH that if we find waste, we ought to stop it. But, when that report refers to my country, it is exactly 100 percent wrong. Now, as far as appropriated houses, if you start it, you will still have the gentleman from South Carolina, Representative RIVERS, right on your side.

Mr. SMITH of Virginia. I am sure of that, and I am sure of this, I do not know of any criticism in Charleston.

Mr. RIVERS of South Carolina. Oh, yes. There was.

Mr. SMITH of Virginia. But if the gentleman you refer to in the GAO knew the gentleman from South Carolina as well as I do, he would never have dared to have gone down to Charleston in the first place.

Mr. RIVERS of South Carolina. They will not repeat this sort of thing in my lifetime, but if they do, I will meet them here. I will make sure the GAO do what they are supposed to do, audit books and keep their nose out of the policy business. Of criticizing the military; the military cannot talk, and I am, for one, getting sick and tired of it.

Mr. SMITH of Virginia. They talk about the FHA.

Mr. RIVERS of South Carolina. Well, in my area that may be true.

Mr. SMITH of Virginia. But you would not contend that the Army were experts on how to build houses, would you?

Mr. RIVERS of South Carolina. From what I saw of that report I would say the Army is about as good in their field as the GAO is in policy. I think that report was not a good representation of what the GAO was supposed to do. I think they were wrong in that report. And, in my country, if I have anything to do with it, I will set them straight. I do not care who presents it.

But, I think criticism ought to be objective, and I thank the gentleman for yielding to me, because I wanted to get that on the RECORD.

Mr. KILDAY. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, it has become evident that there is a great deal of confusion and misunderstanding with reference to various classes of housing that we are discussing here today. I think first we must recall that it has always been the policy in our Military Establishment to provide housing for the dependents of the military personnel. This grew up many, many years ago. Perhaps it got started in the days when our military established camps on the frontier. But, at any rate, it has been the system we have followed through many years; well over 100 years. Our pay system is based upon pay and allowance for quarters and an allowance for subsistence, so that the man in the Military Establishment is entitled to a house in which his dependents may live.

Formerly we built these quarters with appropriated funds. It is true that the chairman of the Committee on Armed Services, the gentleman from Georgia [Mr. VINSON], who had to leave temporarily to attend an emergency meeting, made the statement that we could not get the appropriated fund housing. I want to say to you that I believe that everyone connected with the handling of legislation affecting the military prefers appropriated fund housing. We would much prefer to authorize by line item each housing unit to be built, and to appropriate the money and go ahead with it that way. The point is, not that this House will not approve it, not that the other body will not approve it, but that having approved it you get into competition for the dollar for housing from the Bureau of the Budget and the Committee on Appropriations, and anything so ordinary and commonplace as a house in which the wife and children of the military are to live cannot compete with such spectacular things as missiles, supersonic airplanes, and things of that kind. So that you are continually shoved out of the appropriation bill, and you are shoved out of budgetary consideration.

So that if you are to provide housing for our Military Establishment you have got to get it another way. As evidence of what I said, I call your attention to page 13 of the report on this bill. There you will see that—

> In 1956 an additional 3,790 units were authorized in Public Law 84-968, making a total of 32,339 for fiscal years 1955, 1956, and 1957. Of these and subsequent authorizations, only about 18,000 units were actually funded and built.

There is confusion here between Capehart and Wherry housing. The Wherry housing program, of course, was named for the late Senator Wherry of Nebraska because he was the author of the bill. There have been a number of questions asked here about Capehart. The questions all clearly indicated that they were aimed at Wherry housing. True, Wherry housing was owned by the sponsor. He maintained it, he operated it, he collected the rent, paid on the mortgage and, of course, he made some profits. But that program is over; it is dead; it is gone. We have got rid of it. The Capehart program comes along, named, of course, for Senator CAPEHART of Indiana, the author of the bill. The things talked of about Wherry do not apply to CAPEHART.

The gentleman from Virginia [Mr. SMITH] stated a moment ago that he became interested in this matter because of back-door spending. We all realize that there has been a contest in the House and in the Senate over a period of many years about back-door spending, about those programs which do not require specific action each fiscal year by the Committee on Appropriations. This is, of course, a highly controversial issue and probably there is merit on both sides. But let me ask you this: When this applies to dozens of programs in the United States, are you going to outlaw so-called back-door spending only as it affects dependents of your Military Establishment? Are you going to take out of this bill the Capehart units because this is one phase of the so-called back-door spending issue and you have not been able to cure it?

The gentleman of Virginia stated he had not been able to get it out of his own committee over a period of several years. This does not refer to the more recent situation in the Committee on Rules, to which the gentleman from Virginia referred, but over a period of many years he had not been able to get it out of his committee. It applies to many, many activities of the Government.

So, Mr. Chairman, I hope you are not going to take out your wrath on the dependents of military men because of some general program you have not been able to adopt over a period of many years. Every survey that has been made with reference to retaining military men on a career basis has pointed to the lack of adequate housing for their dependents as one of the principal difficulties, and until you solve that you are going to be in difficulty in retaining career men.

This year the services asked for 22,000 units. The Department of Defense approved only 7,000 units. The Director of the Budget reduced it to some 2,000 units.

I submit to you that the Director of the Budget is not the one who is to formulate military policy. He is not the one to determine how many families of servicemen are in urgent need of quarters for them to occupy while their men folks perform their military obligations.

What this committee did was to take only those items which had been approved by the Department of Defense, so that we have brought here a reasonable program on this.

I call your attention specifically to the report of the Comptroller General, to which the gentleman from Virginia referred. You will find it is based primarily on a contention that Capehart houses have been built in excess of requirements. In excess of requirements for the people on the base? No, but the community could have supported more.

Then there is some fine reasoning by the Comptroller General that because of building Capehart houses, some FHA houses went into default to the extent of 300 units. I submit the Capehart housing might have had something to do with that because of the vacancies. There might have been some other reasons why the privately built FHA financed houses went into default. There is mention of excess Capehart housing at a station in my district because there was housing available in the community. Probably so. But this is a highly restricted base, its mission secret. There is a group of those stations in the United States. The committee has recognized them, the Congress has recognized them. We have built quarters, clubs, and things, for these men because they are on duty 24 hours a day every day of the week. Houses in the community were no good for them. They had to live on the base. They were on duty 24 hours a day, 7 days a week.

There could have been 125,000 houses off the base, but they would not have been any use to these servicemen. They must live on the base.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. ROGERS of Colorado. Directing the gentleman's attention to the so-called Capehart housing, as I understand from the report the testimony taken by the committee on pages 255 to 258, inclusive, is an explanation of what constitutes Capehart housing. Do I correctly understand that under the Capehart housing law a corporation is organized, and that after the organization of that corporation bids are received and the lowest bidder gets the contract for the construction of that unit, and that the corporation then proceeds with the approval and supervision of the developer and the FHA? They then cause to be issued a mortgage for the full amount of the construction by the mortgagee, who advances the money, and after that is done the stock of that corporation is then delivered to the U.S. Government?

Mr. KILDAY. It becomes a Government-owned corporation.

Mr. ROGERS of Colorado. All of the corporation?

Mr. KILDAY. One hundred percent.

Mr. ROGERS of Colorado. Further, when the construction is completed, the Government then has complete control of it, and all they do then is to pay off the mortgage and keep the property covered?

Mr. KILDAY. They pay off the mortgage in accordance with its terms, yes.

Mr. ROGERS of Colorado. This explanation on page 258 states that the "capital stock of the mortgagor-builder (corporation) is delivered to the military by the mortgagee (lender) as escrow agent."

Mr. KILDAY. The gentleman is on the Committee on the Judiciary and a very distinguished lawyer. I am going to ask him to figure out all of the legal technicalities of this thing. I understood from conversations with the gentleman before that he wanted me to yield to him to determine whether this corporation could profit in addition.

Mr. ROGERS of Colorado. That is true.

Mr. KILDAY. As to the escrow agent, I am going to send that over to you and you gentlemen can figure it out.

Mr. ROGERS of Colorado. May I say so far as the legal proposition is concerned, I always understood that if you bought anything and got it into your possession, then it was yours. But here it outlines that the Government becomes an escrow agent.

Mr. KILDAY. Let me show the gentleman what happens. The Government becomes the owner of the corporation. Ninety-one dollars per month for every military man who occupies a Capehart housing unit goes toward the amortization of the mortgage. These are Government quarters. They are owned by the Government subject to the mortgage. Men are assigned to these units whereas in the case of the Wherry housing, they did not have to live in them unless they wanted to. But, in Capehart housing, they are assigned to them, and once they are assigned to them, that means they do not draw any quarters allowance. So if you put a warrant officer in there, you keep $85.50 every month from him. With a chief warrant officer, the amount is $94—chief warrant officer W–3 $102 and then $109 and so on. So that when you put them in here, you do not pay them the quarters allowance. You retain in the Federal Treasury more money than you pay out for the amortization of the mortgage. In addition, of course, you are the owner of the property so the operation and maintenance of the property falls on you. You have to keep it up. If you did it by an appropriation, you would have to keep it up.

Mr. ROGERS of Colorado. You have outlined that this money would be withheld from the men for the purpose of paying off the mortgage. Suppose in one instance a unit cost $12,000 and in another instance another unit cost $16,000, and they are occupied by the same men. When you withhold this for a period of 20 or 25 years, and when you pay off the mortgage, does the Government then continue to withhold that money and keep that as a profit from the men?

Mr. KILDAY. May I say to the gentleman, the pay system of the Military Establishment is that a man draws base pay and he is entitled to quarters and he is entitled to rations. If he gets quarters in kind he does not get the money. So as long as he is assigned to Government quarters, he does not draw that money. As long as he remains on active duty in the Military Establishment, he will either occupy Government quarters or draw commutation of Government quarters as provided for his rank by the Congress of the United States.

Mr. ROGERS of Colorado. So it makes no difference then, whether the unit cost is $12,000 or $16,000 so far as the man is concerned because the mortgage may be $12,000 or $16,000 in another instance.

Mr. KILDAY. The man is entitled to adequate quarters. Adequate quarters are defined in the regulations. The regulations take into consideration the grade that each man holds, and other material matters.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield further?

Mr. KILDAY. Mr. Chairman, I yield myself 2 additional minutes and I am sorry I cannot yield further to the gentleman because I believe we are consuming too much time on this problem.

Mr. Chairman, I was very much interested in the statement of the gentleman from Virginia that Mr. Hayes said he could build these houses for less than what they cost under the mortgage. He could not build them for the amount that was in the mortgage. That is his whole trouble. He is in default and this is the fellow who said how much cheaper they could be built, and he could not build them at the higher price. I do not know why Mr. Hayes got this contract. I take it that anybody in the building business big enough to carry on this sort of project and a project of this size should be known by the officials in the Department who are letting out these contracts as to whether he is a broker or a constructor.

Evidently he was a broker and not a contractor.

Mr. GAVIN. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. Mr. Chairman, I make no pretense of speaking for the gentlemen from Virginia [Mr. SMITH]. I am sure that no one can speak for him, but I thing I can safely say that the gentleman from Virginia [Mr. SMITH] and the gentleman from Iowa presently addessing you want adequate housing for our servicemen. The question is: How do we get it?

The gentleman from Virginia—and I wholeheartedly agree with him—wants to put an end to back-door financing in the matter of military housing. We ought to put an end to all back-door financing. But I go farther than that. Apparently we have a big scandal on our hands in connection with Capehart housing, yet the Members of the House of Representatives are called upon today to triple the number of units, from 2,000 to 7,000 approximately, with an investigation now being carried on by the other body to try to get to the bottom of the scandal. The gentleman from Georgia, chairman of the committee, says the builder was a broker, not a builder. The gentleman from Texas [Mr. KILDAY] says he was a broker. The gentleman from Texas further says he does not know how this man got the contract.

Before I vote another $100 million for Capehart housing and an additional 5,000 units I want to know who in the Defense Department entered into this contract with a broker, not a builder. If there is someone prepared to tell the Members of the House how this broker got the contract, who was responsible for giving him the contract and on what basis, I would be pleased to have the information.

Mr. KILDAY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. KILDAY. The contract came under the Assistant Secretary for Properties and Installations for the Military Department. It was he who was primarily responsible for the contract. This was back 2 or 3 years ago. That assistant secretary is no longer with us.

Mr. GROSS. That does not help us very much now. We have no assurance that the contracting would be carried out any better now.

Let me turn to the hearings. On page 342 I find in the fine type under the subhead "Gunter Air Force Base," that it is planned to put there a school of aviation medicine. Then I turn to page 337 and in the fine print under "Brooks Air Force Base" I see an item for a school of aviation medicine. How many schools of aviation medicine are we going to have? Can somebody on the committee tell me?

Mr. KILDAY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Texas.

Mr. KILDAY. The School of Aviation Medicine is located in my district. Brooks Field is in my district.

Mr. GROSS. Yes; so I understand.

Mr. KILDAY. The segment that is at Gunters Field, Ala., is for the training of medical corpsmen. This item is for a chapel at Gunters Field, Ala. That is where the enlisted men, the medical corpsmen, are trained. The School of Aviation Medicine where we train the technicians and doctors and flight surgeons, and so forth, is at Brooks Field, Tex.

Mr. GROSS. I do not see at either of these places in the hearings any reference to a chapel or anything faintly resembling a chapel.

Mr. KILDAY. At page 342?

Mr. GROSS. Yes. It says "Its planned use is for the School of Aviation Medicine."

That is preceded by this sentence: "Gunter Air Force Base is located approximately 6 miles northeast of Montgomery, Ala."

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. GAVIN. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. GROSS. Mr. Chairman, so that is for a chapel, and not for a school of medicine or for any part of a school of medicine?

Mr. KILDAY. Of course, during the Korean emergency the Aviation School of Medicine in Texas was not large enough to accommodate all of them, so we moved over to the Gunter Air Force Base. This is simply to build a chapel at that segment of the School of Aviation Medicine.

Mr. GROSS. Then we do have two schools of aviation medicine. Is it not a rather costly operation to have one at San Antonio and another at Montgomery, Ala.?

Mr. KILDAY. I doubt that. They are entirely different. These are the enlisted Medical Corps men who serve as hospital attendants or in the field, taking care of the wounded in the field, attending the men in the field, and so forth. The other is for research in

space medicine, field medicine, and that sort of thing.

Mr. GROSS. Alabama, of course, also likes some of the good things of life, I assume. Incidentally, I notice Iowa gets about $900,000 in this bill, and I think the State of Texas gets some $13 million.

Mr. KILDAY. I do not know. They took out everything from my district.

Mr. GROSS. I did not say anything about the gentleman's district. I said the State of Texas.

I would like to know whether there is any money in this bill for continued spending for construction in Saudi Arabia or Morocco since we are being kicked out of both countries.

Mr. KILDAY. I am not able to inform the gentleman. I think that is probably in the foreign aid bill.

Mr. GROSS. There is no money at all in this bill for that purpose?

Mr. KILDAY. No, sir.

Mr. GROSS. I thank the gentleman.

I understand there is $165,000 for a brig to be built at the naval training station in Washington. I would like to know if $165,000 is not a pretty fancy price tag to put on a brig—a jail, hoosegow, call it what you want. This is not a maximum-security jail because it is stated in the hearings that as soon as prisoners are sentenced they are to be taken down to Quantico or to Norfolk. So there is no maximum security involved.

I wonder whether it is proposed to air condition the brig that is to be built?

Mr. KILDAY. I am sorry. I will have to look that up and let the gentleman know.

Mr. GROSS. By the way; I notice there are some buildings to be cleared out at the naval air station. Does this mean we are indirectly subsidizing the Anacostia Freeway by demolishing some buildings and turning over Government property to the District of Columbia? Does the gentleman know?

Mr. KILDAY. No. I think actually the military is using it, and it belongs to the Department of the Interior. It is going back to them, as I understand it.

Mr. GROSS. So it goes back to the Department of the Interior, and Interior makes the property available for purposes of roadbuilding, is that correct?

Mr. KILDAY. It will go back to park use. That is explained at page 39 of the report.

Mr. GROSS. I thank the gentleman. Mr. Chairman, I am opposed to this bill for the reason, among others, that the huge increase in Capehart housing units should await full justification and the results of the investigation presently being conducted.

Mr. KILDAY. Mr. Chairman, I yield 5 minutes to the gentleman from Georgia [Mr. JAMES C. DAVIS].

Mr. JAMES C. DAVIS. Mr. Chairman, I am interested in the Capehart housing feature of this bill because I have a constituent in my district who some time ago, as a matter of private enterprise, constructed 650 apartment units at the front gate of Fort Benning near Columbus, Ga. It is proposed in this bill to construct 500 Capehart units at Fort Benning. Now, that is going to create a situation with reference to the privately owned apartments in which my constituent is interested, I am afraid, somewhat similar to the three instances which are given in the report of the General Accounting Office on page 62, where attention is called to the fact that mortgage loans are in default on a total of 300 housing units in Colorado Springs, Colo., Beaufort, S.C., and Del Rio, Tex.

These privately constructed and privately owned apartments there at the front gate of Fort Benning are now having vacancies which run from 185 in February to as high as 217 last December. Now, if 500 Capehart project units are constructed there, it is going to have a devastating and disastrous effect on this privately owned and privately constructed apartment project.

It is rather difficult to understand why the Committee on Armed Services has seen fit in presenting this bill to increase the number of Capehart units from 2,025, which were recommended by the Bureau of the Budget, by 350 percent, up to 7,074 and not give some detailed explanation of why this tremendous increase is being brought about in this bill.

Now, I have searched through the committee report to try to find the reason for it, and I have talked to some members of the committee in an effort to try to find the reason why the number of units requested by the Bureau of the Budget has been increased by some 350 percent, from 2,025 up to 7,074. I do not find any explanation of it on page 9 where the subject is taken up. I do not find it in any other section of the report in which the Capehart housing project is dealt with.

Now, my constituent has sent me photographs showing the condition of the housing units in this project. They are well built. They are attractive in appearance. They are well kept, and the grounds are well kept, and everything about it is attractive. And yet, with all of that, in the 650-unit project they had in the month of February 185 vacancies.

The apartments consist of two-bedroom units, four and one-half rooms all told. They are air conditioned. They have tile baths. They are all equipped with stoves, refrigerators, natural gas furnaces, and even venetian blinds. The rental rates are very reasonable, indeed, I think.

Their rental rates for unfurnished apartments are $75 and $85; and for furnished apartments $96 and $107.50. Here is an instance where private industry has provided adequate apartments for rent, and they did it on the theory that the Government would treat them fairly and justly. Now, with no notice whatsoever, the ground is about to be cut out from under them.

Mr. Chairman, I want to bring to the attention of the committee and to the attention of the House this situation. It strikes me, in view of the fact that this great increase appears to have been rather hastily contrived, and there are no detailed explanations of the reason for it in the committee report, that it would be entirely reasonable and would have no bad effects whatsoever if these Capehart units were withdrawn from this bill and an adequate investigation made of the real need for them. Then, if a need is found later on, after an investigation has been made, certainly legislation could be enacted to meet it.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. JAMES C. DAVIS. Of course, I yield to the distinguished chairman of the committee.

Mr. VINSON. I am sorry I was not here at the beginning of the gentleman's remarks, but I am quite familiar with Fort Benning. The gentleman and I are very close to that area.

As a matter of fact we provided 500 units in this bill for Fort Benning, Ga. FHA actually cleared and approved 1,126. The gross requirement at Fort Benning is 8,879. The total number of units of military housing owned by the Government at this great base is 2,684. Community support provides another 4,305 units. Only 36 percent of the personnel at Fort Benning have accommodations in Government quarters. The balance of the personnel have to go out into Columbus, Ga., and through that section to find a place to live.

Mr. JAMES C. DAVIS. I would say to the distinguished chairman of the committee that these 650 units are at the front gate of Fort Benning. There are now 185 vacancies. What reason can the gentleman give for those vacancies and why is there a need now for 500 additional Capehart units which very likely will result in considerably more vacancies?

Mr. VINSON. Of course, I cannot say why there are so many vacancies. Perhaps it is due to the high rental.

Mr. JAMES C. DAVIS. As I pointed out to the gentleman, these are not high-priced apartments. The rental for these apartments, 4½-room apartments, unfurnished, is $75 and $85; and furnished $96 and $107.50. How does that compare with the amount which is charged the serviceman for Capehart units?

Mr. VINSON. It is about $92 average over the country.

Mr. JAMES C. DAVIS. What is $92—the Capehart unit?

Mr. VINSON. Yes, the average housing allowance which is forfeited by personnel who occupy Government quarters is about $92.

Mr. JAMES C. DAVIS. Is that unfurnished?

Mr. VINSON. That is for Government quarters.

Mr. JAMES C. DAVIS. Unfurnished?

Mr. VINSON. Unfurnished.

Mr. JAMES C. DAVIS. In both instances the rents I gave come under that figure; one is $75 and one is $85. As I said, I think it is a reasonable rent. They are suffering now, and with 500 more Capehart units it probably means that they will be put out of business.

Mr. VINSON. I also wish to point out that of the 500 units the committee has authorized, 385 are to take the place of inadequate housing units on the base.

Mr. JAMES C. DAVIS. Mr. Chairman, I do not question the good judgment of the chairman of the committee or of the committee. But I do want to make this

suggestion to the chairman and to the committee, that under these circumstances, take another look at it and see if this situation cannot be satisfactorily adjusted.

Mr. GAVIN. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. Mr. Chairman, I have listened with great interest to this debate, especially that part of the debate which applies to the cost of houses. I was in the building game for 24 years before I came to the Congress, and I learned something about the cost of the different types of homes.

We, of course, all know that many architects like to build a home, as well as other type buildings, differently than anyone else ever built one, because they feel it is sort of a living monument to the architect.

A house can be built oblong or square type for at least 25 percent less than a house with the same square feet of floor space can be built with 12 or 16 inside and outside corners. It is the corners on a house that really cost money to construct. I have harped on that subject in the Interior Department and the Reclamation Bureau Subcommittee on Appropriations of which I am a member. Those agencies now are building houses for their employees almost completely on the oblong or square type construction.

Here are the facts: You can buy stock millwork, which is composed of doors, windows, trim, baseboards, casings, and outside trim of every nature, for about one-third the cost of specially made millwork. It is very easy to understand why. A special made door or window, millwork, or trim requires that they take a few men off the stock-producing line and put them at work building these specially made windows, doors, and trim.

I have seen federally constructed homes with as many as 16 inside and outside corners, starting from the foundation. Then it is necessary to build your frame to correspond with the foundation. Then every inside and outside corner of a side wall requires a hip or valley for the roof construction, so you have the same number of hips and valleys to work around as you have in the foundation and frame. On the inside of the house you have the same number of corners.

You have to work around these many corners in the lathing of that house. The same is true of the plastering. Your trim is cut up in short pieces, much shorter than they are in oblong or square construction that has only four corners. Then, also the maintenance of that building with all these corners and the special trim, windows and doors, will be at least twice as much over a period of years than is required to maintain a house built with stock windows and doors and trim, of the oblong or square shaped house and the painting, labor costs, likewise, is much more. I can assure you and every builder in America who knows anything about the business will tell you that a house with as many as 12 inside and outside corners will cost at least 25 percent more than a house that is oblong or square with only 4 corners. I wonder who on this committee is going to ride herd on the architects and on the department heads responsible for building these homes to see to it our taxpayers' money is not wasted as is too often the case on federally built buildings, not only of homes but on all other building constructions. Sure, we want adequate, comfortable modern homes for our fighting men and their families, but no unnecessary wasteful construction at the whims of some architects and approved by the Department of Defense.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield to the gentleman from Georgia, the chairman of the committee from which this bill originated.

Mr. VINSON. I shall be glad to transmit to the Assistant Secretary of Defense tomorrow the CONGRESSIONAL RECORD with your comments and ask for a complete study of the subject.

Mr. JENSEN. I thank my esteemed colleague. I am not on the Military Appropriations Subcommittee, but I would suggest that someone should ask the architects and the departments to bring to your committee the plans and specifications for these homes, which they propose to build, then take a good look at them. If you will do that I'm sure you will be surprised to learn the huge amount of money you can save by riding herd on some of these architects and department heads.

The CHAIRMAN. The time of the gentleman has expired.

Mr. VINSON. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from South Carolina [Mr. RIVERS].

Mr. RIVERS of South Carolina. Mr. Chairman, I did not want to get mixed up in this debate on this housing, but since this famous GAO report has spoken with such authority and with such impact on the committee and on the Nation as a whole, and since my district has been mentioned, I want to tell you what we did in my part of the country.

We had a base being built for the Marines. The Marines have gotten what is left over for many years. The Marines built a base in Beaufort, S.C., the place that was named by the distinguished gentleman from Georgia [Mr. DAVIS]. The minute people got wind that there was going to be a Marine base there many speculators went out and built houses all over everywhere. Anybody who could finance them would build them. Many were not worth half of what was asked for. When I got wind of this I went to the FHA and told them not to lend any money on that sort of construction, that they were not good for the Marines, and the FHA did exactly that. They knew we were going to have decent representative housing on a project costing millions of dollars. That is what happened in Beaufort.

We built 1,200 houses for this Marine air wing. In the meantime people got financing wherever they could, but the FHA stopped insuring private construction for the most part.

Then the military came in and built this $60 million base for these Marines. Good housing was built there. They got a contractor from California, and he did a mighty good job. They are fine houses, and I do not think anything happened there such as the gentleman described earlier in the day.

Somebody has got to stop these fly-by-night builders taking advantage of servicemen. The real estate lobby got busy and began putting pressure on, taking full-page ads in my paper. The real estate lobby said that 300 houses were on foreclosure. I tell you that is more foreclosures then there have been since old Jean Rabaut sailed in there in 1562. There have not been 300 foreclosures in the 100 years since old Jean Rabaut sailed in. It is wrong for the selfish speculators to make such inaccurate reports.

Another thing to bear in mind is that this housing is for the marines. Those marines are my marines, they are your marines. Your people and my people want them housed in decent quarters. I have worked with CARL VINSON since I have been here, 20 years. He does not have any sentiment in the matter of saving Uncle Sam's money when it comes to providing decent housing for the boys who protect us. I know what I am talking about. I have been carrying coals for CARL VINSON for 20 years, and that is not an easy way to make a living.

Mr. JENSEN. If the gentleman will yield, I may say that is true of the rest of us.

Mr. RIVERS of South Carolina. Positively.

As far as Charleston is concerned the real estate lobby took paid ads in the newspapers. There is where is located the only Polaris base, as the gentleman well knows. Whether you like it or not that is the only base we have. It is a good base and the people who run it have got to be taken care of. As I say, the real estate lobby put these partial, ridiculous, slanderous page statements in the newspapers. I asked the gentleman from Georgia to make a full-fledged investigation and if the investigation showed they did not need the houses down there for them not to be built, not to build them if they could not justify them. That is what he did. That investigation took place, and the report came out, and here is what it says in substance: We gave them 500 Capehart houses. Only part of them were built. The next year they asked for 200 more.

So this report came to be 500 Capehart units approved, plus the 1,000 which the Navy asked for. They requested 1,500 total, comprising a little more than half of the projected shortage of adequate housing in this area. They did not get the 1,500. They got 500, the Navy gave them 200 more, or the Bureau of the Budget, and we upped that to 500 in this bill. If they had gotten what they asked for they would have gotten 1,500. The entire 1,500 units is only 35 percent of those now eligible and 38 percent of those scheduled on board next year, and 25 percent of those projected for June 30, 1964. It is 25 percent of what is going to be there when these submarines will be operational in 1964. That is, if they get the 1,500. We gave them a total of 1,000—not 1,500—which

is less than 25 percent of what they needed. Less than 20 percent.

What has the private building industry done? Nothing. They alleged 1,800 vacancies in Charleston; then 1,200; then 1,000. We made an investigation and we found less than 500, and many were not worth living in; that is, many of them. That is my community, and that is what our coldblooded investigation showed.

You know, there is a funny thing about military personnel: they propagate. A lot of them need a one-bedroom house; a lot of them need two bedrooms; some of them three bedrooms; and some four bedrooms. These apartments, or whatever they were, were not adequate for their needs.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. VINSON. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. RIVERS of South Carolina. Mr. Chairman, we have the FBM—SSNB—fleet personnel there, and I am not talking about destroyers. We have those, too; so does Norfolk, so does New London. They have destroyers and submarines, too. Those are the fleet nuclear ballastic submarines, and they have the most highly trained men in the world. They have robbed the destroyer fleet; those boys can make more money living on the outside.

If we do not give them houses they will quit. They are highly trained, and they will not live in ridiculous shacks called apartments.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. RIVERS of South Carolina. I yield to the gentleman from Iowa.

Mr. JENSEN. I hope the gentleman did not take from what I said in any of my remarks that I was opposed to good houses for our fine men in the services.

Mr. RIVERS of South Carolina. The gentleman has been in the forefront in this matter of providing for our servicemen.

Mr. JENSEN. I do not want the taxpayers of America to spend up to 25 percent more for these houses than is necessary.

Mr. RIVERS of South Carolina. Neither do I. They should have adequate, comfortable houses, and we are going to try to get that. We represent you on that committee, and we do the very best we can. I hope the day will come in my time that we will not have these Capehart houses. As the gentleman from Virginia [Mr. SMITH] said, I want houses coldbloodedly appropriated by the House, making them come up here and justify it, and then appropriate the money. But this is a fact of life, as my chairman has said. We either get it the Capehart way or you will not get it the other way. You are not going to get a half-billion dollars for housing any other way. That is why we raised it. We are going to get these nuclear submarines, and you have to have the housing, or you will not have your defense force. We welcome the gentleman's contribution. He made a splendid contribution to this matter.

Mr. BECKER. Mr. Chairman, will the gentleman yield?

Mr. RIVERS of South Carolina. I yield to the gentleman from New York.

Mr. BECKER. May I say to the gentlemen on the Committee on Armed Services as I picture the program of housing for our servicemen adequately and well, there is not a single Member of this House or the other body who will disagree with the statement that we must have adequate and decent housing for our military personnel. One thing that seems to disturb all of us is the cost of these houses, the diversified cost in various places, and of the various types. If we go back in history when we did build houses with appropriated money, we found we were paying great prices for those houses.

We paid great sums, far and beyond that which private business demanded. That is what my colleague from Iowa is talking about. That applies to this housing that is going on now. All we are getting in Government is our money's worth for the kind of housing we build in competition with private housing. I say to you that it is a well-known fact that we are not getting comparable housing for the same cost that you build private housing. This is, I think, the issue that is being raised today. I think that was in the mind of the gentleman from Colorado when he talked about increasing the number of investigations going on. I do not quarrel with this, but I think and I am sure that our chairman is going to look into this fully and well in the years to come when we are authorizing and have the responsibility to see that we get housing comparable with private housing.

Mr. RIVERS of South Carolina. The reason we put in these houses, they did not get enough out of the late administration. The Department asked for these houses. In my case the Navy asked for 1,000. The budget gave them 200. We gave them 300, making 500 in all. In New London they did not get any, and they need them terribly bad. We did not discriminate about these things. These houses that we add to this are sorely needed, and the fact of life which we face is that if we do not get them the Capehart way, we do not get them at all. It is as simple as that.

Mr. VINSON. Mr. Chairman, I yield 8 minutes to the gentleman from Louisiana [Mr. MORRISON].

Mr. MORRISON. Mr. Chairman, since I am not a member of the House Committee on Armed Services or the Defense Subcommittee on Appropriations, I do not presume to speak as any expert on military matters. But some 385 other Members of this body are not members of either of those committees, and I am sure many of them have convictions about our national defense which are as sincerely held as my own. It is because of the sincerity of my own conviction that I appreciate the opportunity which the distinguished chairman of the House Committee on Armed Services has now given me to express that conviction.

Those of us who were in the Congress in the early part of World War II will recall the situation which confronted us. To be quite honest about it, we were on the allies side whose condition was most grave and dark, and I shall not soon forget it. Fortunately, in those days our great industrial capacity was safe from attack, and the time we needed to convert from peacetime to wartime production could be bought. Our allies bought it for us, paying dearly in blood and life.

But the one great fact that faces us today is that we can no longer buy, at any price, a period of grace in which to put our defenses in order. It is certain that if war is to be prevented, the strength of American military might will do it. It is equally clear that if war should come in spite of our strength, our very survival will depend upon the degree and balance of our strength.

So, military strength can no longer be a last-minute affair. It must be in being, and sufficient beyond doubt, to either deter or win a war.

I requested a communication from Mr. James R. Wilson, Jr., in behalf of the American Legion. He enclosed a copy of a resolution adopted by the 1960 National Convention of the American Legion, advising that the Legion still fully supports that resolution. The final paragraph of the resolution states:

Now, therefore, be it

Resolved by the American Legion in national convention assembled in Miami Beach, Fla., on October 20, 1960, That we urge the Congress and the administration to provide maximum fiscal support and urgent development of the B–70 weapon system, in its entirety and in quantities which would make it available to our operational forces at the earliest possible time.

Of my own volition, and on my own responsibility, I hold the same view.

In order that my own position may not be misunderstood, let me say to my colleagues that there are no military installations in the Sixth Congressional District of Louisiana, which I have the honor to represent. In addition, I am unaware of the existence of any major defense industry in my district. Nor do I expect that any military installation or defense industry will be established in my district as the result of anything I may say here today. I simply speak my own conviction in behalf of more than 500,000 constituents whose interest in survival or victory is second to none.

Beginning in 1956, Federal appropriations were made available to begin the development of an intercontinental bomber which would fly 2,000 miles per hour. Since that time the Congress has continued to support that development. But that support has seriously waivered in other elements of the Government.

The development program was well underway in December of 1959, when the emphasis was shifted in the executive branch from the full development of this weapon system to a single vehicle. Under that change we would have developed a single prototype air vehicle capable of flying 2,000 miles per hour but without the subsystems which are mandatory if this vehicle is to be a bombing weapon system.

All of the military subsystems' contracts were canceled. All of the pro-

graming and scheduling were revised, and the projected date for the first flight slipped by about 1 year.

In spite of this action, the Congress remained firm in its position. Last year we insisted that the full program be reinstated and provided $265 million for that purpose. The Appropriations Committee made an additional $100 million available if that amount should not be needed for additional fighter planes. But I am fearful that the will of Congress is again being subverted. Events have proved that the extra $100 million is not required to procure additional fighter aircraft. Neither is it being used for the development of the B–70, as provided by this body.

A recent issue of Newsweek stated:

> The B–70 superbomber again is in bad trouble. A planner who sat in on a recent budget revision cost hearing said the project was clobbered. If this is so, it is not inaccurate to say that the will of the Congress was also clobbered.

During each succeeding year that I have been privileged to serve in this body, both in war and peace, the distinguished chairman of the House Committee on Armed Services has brought to the floor important legislation in behalf of our national defense. He has never waivered in his insistence that our defense must be second to none. There is one thing that stands out in my mind from the many outstanding presentations he has made on this floor in behalf of national defense. That is his continuing philosophy that we must have a balanced defense, be certain it is sufficient, and steadfastly support it. I well recall the numerous occasions on which he has denounced half-hearted or waivering efforts in behalf of our national defense. He has described such actions as "peaks and valleys" and clearly pointed out how futile, wasteful, and dangerous it is to proceed in such a manner. I would like to say to the distinguished chairman that I wholeheartedly embrace his philosophy on our defense effort and to add that it is my fervent hope that he will apply it in this case.

Why should we be concerned about developing the B–70 at a cost which, admittedly, will be large? We need only read the newspapers to get one answer.

Within this month we were advised in the press that the great airbase which we built in Dahran, Saudi Arabia, will not be available to us, as a wartime asset, beyond April 1, 1962, when our treaty arrangement expires. We are put on notice that the strategic airbases that we built in Morocco, at such great cost, will pass from U.S. control in 1963. This simply means that we must move to the SAC bases in Spain. While I hold great hope that our relationship with Spain will insure the continuing availability of the Spanish bases, not one among us can insure that result.

Throughout the world today we find no letup in the will or actions of the Communist forces to bring about our downfall. At the same time, both nationalism and neutralism are on the march. It is becoming increasingly clear that whether we face the militant opposition of communism or the spirit of nationalism or neutralism, the adequacy and balance of our military forces face an unceasing challenge. If we are denied the use of five SAC support bases because of neutralism or nationalism, and we are told that is true, the important military fact is that they are lost—not why they were lost.

The more we suffer such restrictions, the greater becomes the need to improve our strategic weapons. Certainly it is important to continue our efforts to improve our strategic missile capability. But, I do not foresee the day when a missile, once launched and beyond recall, will ever take the place of the skills and human judgment embodied in the crews of modern aircraft. Bombers cruising at 2,000 miles an hour or more, from sea level to 70,000 feet, capable of reaching any spot on the globe from the United States in 5 hours, would tell friend and foe alike that our determination to win is backed with the strength to win.

So, Mr. Chairman, the Congress must raise its voice again, loud enough to be both heard and respected, in support of the full development of the B–70.

I repeat what I said at the outset. I simply express my feeling as one Member of this body, representing over 500,000 constituents who desire nothing but freedom with dignity. The full development of the B–70 means nothing to them economically. There are no bases in my district where it could land, and no plants in which to produce it. I expect none to be built. If my constituents ever see one, it will be on TV, in a newsreel, or through travel to some distant airbase where it may be stationed.

Since I speak from a matter of personal conviction and not as a military expert, I want to say to the distinguished chairman of the House Committee on Armed Services that I look to him and the able members of his committee to provide the leadership which is needed in this matter. I look to him to apply to the B–70 program the same philosophy which he has advanced and which I have followed throughout the years. Take this program out of the peaks and valleys and put it on the level road to success. And may I say to the distinguished gentleman that if he will lead the way, here stands one Member who will support him all the way.

Mr. VINSON. Mr. Chairman, I move the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ELLIOTT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5000) to authorize certain construction at military installations, and for other purposes, had come to no resolution thereon.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. McGown, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4510) entitled "An act to provide a special program for feed grains for 1961."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 4806) entitled "An act to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes."

AUTHORIZING CONSTRUCTION FOR MILITARY DEPARTMENTS

Mr. VINSON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 5000) to authorize certain construction at military installations, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 5000, with Mr. ELLIOTT in the chair.

The Clerk read the title of the bill.

Mr. GAVIN. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. WILSON].

Mr. WILSON of California. Mr. Chairman, I would like to say just a word on behalf of the Capehart housing program, as advocated by the chairman of our committee, Mr. VINSON. Everyone who has spoken here today has stated, first of all, that they recognize the need for housing for the military—even those who have been opposed to this Capehart program. I think there has been some confusion as to just what Capehart housing is and how it works. I can understand it, and if I can understand it, I think anyone in this body can understand it. We are paying out hundreds of millions of dollars every year on housing allowances for service personnel. The Government instead of paying out these housing allowances to service personnel applies it to pay off mortgages for houses available to the service personnel who live in them. It is an easy way for the military to acquire housing without additional capital expenditures and additional tax revenues. I wonder if you realize how much money we pay out in tax money every year for these housing allowances. I went to the Committee on Appropriations a few minutes ago and found out. It will be of interest to all of you. We pay out for the Army every year $322 million in housing allowances. We pay out for the Air Force $351 million. In the Navy the figure is $321 million. That is $994 million, almost a billion dollars, that we are paying right now for housing allowances. We give the housing allowance to the service personnel. They use it to try to get decent housing. The object of Capehart housing is to make decent houses available.

I want to point out that these houses are financed with individual mortgage money. They are built by contractors under a bid system that allows the Government to get the best possible house for the dollars invested. It just makes commonsense to support this program.

There is no question about the necessity for additional houses. We have tried to get it through capital expenditure but never could get the money to do it. Throughout the years whenever this has been tried, the armed services have always had more important critical projects in the military construction program that have necessitated the use of the money, so we did not get the housing in that way.

A program such as this will in the end save money, for it will make reenlistment more attractive and will save the spending of hundreds of thousands of dollars in the training of personnel to replace those who rotate through our military system. When they know they can get decent housing under the Capehart housing program we are going to have a greatly reduced turnover of personnel, for they know that they and their families will be well taken care of. That is a very cogent reason, in my opinion, why we should support this program.

Another thing to remember is that it can be done without the expenditure of another tax dollar; 7,000 units is a very small number. That means that only 7,000 service families are going to be adequately housed. It does not mean an additional dollar of tax revenue will have to be raised. We have heard many expressions of support for housing for the military. Is it sincere or is it just lipservice? Our vote today will tell.

I urge the Members to support this program.

Mr. GAVIN. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. GUBSER].

Mr. GUBSER. Mr. Chairman, it is my understanding that there will be some controversy later in the debate on this bill regarding the transfer of the Food Container Institute from Chicago to the State of Massachusetts. This transfer is being opposed by a number of industries on the west coast which furnish food to the Army. However, this objection was not made known by these industries during the hearings of the Committee on Armed Services, of which I am a member. Therefore, I feel that I am morally bound, because I did not raise an objection during the committee hearings, to support the committee version of the bill.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from Illinois.

Mr. YATES. The gentleman will recall that I appeared on behalf of the city of Chicago before the Armed Services Committee to protest the transfer of this institute to Natick, and as a result of my opposition the chairman, I believe, struck out the item and suggested that a special subcommittee would be appointed to look into it.

Mr. GUBSER. I commend the gentleman for his diligence. I am merely stating my own position, that my own constituents did not raise an objection during the hearings.

Since this transfer has been pointed to as a means of saving a great deal of money by the Quartermaster Corps, I wanted to speak of it.

It seems to me that by the application of commonsense instead of strict adherence to inflexible regulations the Quartermaster Corps could save millions of dollars. I am somewhat familiar with the produce industry and Quartermaster Corps practices. Let me give you just two examples. Let us take first the case of frozen strawberries. Frozen strawberries are graded in terms of 4 plus 1 or 5 plus 1; 4 plus 1 means 4 parts berries and 1 part sugar; 5 plus 1 means 5 parts berries and 1 part sugar. Now, God Almighty in maturing the strawberries puts a different amount of sugar in different lots of strawberries.

So in order to adhere exactly and precisely to 4 plus 1, or 5 plus 1 grade, you have to have continuous inspection of each and every package that comes off the production line and, Mr. Chairman, that costs money.

Just recently in my own congressional district a company happened to have a vast quantity of frozen strawberries which graded, let us say, 4.5 to 1. In other words, there were more berries in them than the 4 plus 1 grade. They offered to sell those berries at the price of 4 plus 1, in other words, they were offering a superior product for less money. But the Army Quartermaster said, "No, it must be exactly 4 plus 1." That is silly when through strict adherence to a rule instead of the law of commonsense the U.S. Government passes up an opportunity to get a better product for less money. It means that the producers of frozen strawberries absolutely cannot produce the grade that is required under Quartermaster procurement regulations.

Here is the second example. I am familiar with a produce company which ships sweet corn to the Army. You can sell corn in a used crate which costs about 12 or 13 cents, or you can ship it in a new crate which costs about 40 cents. The common practice of all grocery stores and all retail outlets which are close to the production point is to buy in a used crate. But the U.S. Army, if they are going to use that corn just 15 or 20 miles from the point of origin, requires that it be in a new crate which is opened up and thrown out in the ashcan. This results in an increase in the price of that product of from 15 to 25 percent. Most retail outlets like Safeway Stores, and all of your better grocery stores that are experienced in merchandising, will buy in used crates. But, no, the Quartermaster book says it has to be new. So the Army buys in a new crate, throws it out in the ashcan and wastes your money and mine.

So I suggest, without taking a position for or against the transfer of this Institute to Massachusetts, that if the objective is to save money the Quartermaster Corps might well examine its practices on procurement and start administering them with commonsense instead of adhering to the letter of the regulation.

Mr. GAVIN. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. YATES].

Mr. YATES. Mr. Chairman, I thank the gentleman from Pennsylvania for his graciousness in yielding me this time, which I take for the purpose of advising the House that I propose to offer an amendment, when the bill is read in committee for amendment, to strike from it that portion which would authorize the expenditure of $3.8 million for the establishment of the Food and Container Institute in Massachusetts.

I want, too, to state at the outset that I was treated with the greatest courtesy and cooperation by the distinguished chairman, Mr. VINSON, last year when I appeared before the committee at that time in opposition to the move. As I indicated a few moments ago, on that occasion the chairman was gracious enough to strike the item from the bill and appoint a subcommittee for the specific purpose of checking into the matter. That subcommittee did a fine job within the limitations of the information that was afforded to it by the Army. I believe, however, that all of the information which could have been available was not given to the subcommittee by the Army. At no time did the Army ever attempt to present the issue fairly—it never made available a fair comparative cost study showing the costs of a building in Chicago of the same size as that it wanted in Natick. The comparison was made between a new building at Natick and the obsolete edifice in which the building is now located.

It appears to me from my investigation of the case that the Army always had in mind moving this Institute from Chicago to Natick, Mass., to the point where it refused to give the committee any information about the cost of constructing a new building in Chicago, Ill., to house this Institute. As a matter of fact, in the hearings before the House Military Construction Appropriations Committee for 1961, this interchange took place between the gentleman from California [Mr. SHEPPARD] and General Seeman of the Quartermaster Corps. This is on page 646 of the hearings:

Mr. SHEPPARD. In presenting to the Congress your program for the consolidation at Natick in 1952, the Secretary of the Army stated that the food and container research must remain in Chicago and no future request would be made to Congress for supporting facilities for it at Natick unless there should be a complete change in the character of the laboratory. What complete change in the character of the laboratory has taken place since 1952 to justify the difference in concept between what was testified then and what is now presented?

General SEEMAN. That is correct, Mr. Chairman. In 1952 the Army had no intention of moving from Chicago. However, that was 8 years ago. As I mentioned, this 1,800,000-square-foot building now is a chain around the neck of the Food and Container Institute.

The Quartermaster Corps was referring to the building in which it is now

housed in the city of Chicago and told Congress that this is an uneconomical building to run, but the Quartermaster Corps never told this committee nor did it ever tell the subcommittee that a comparable building could be built on the campus of the Illinois Institute of Technology cheaper than it could be built in Natick, Mass.

And, I say to the House now that we can build in Chicago the same kind of a building that the Army proposed to this committee, better and cheaper than the Army can do it in Natick, Mass. And, I say to the House that constructing this building in Chicago will permit the Quartermaster Corps to perform the mission of the Food and Container Institute better in Chicago than it can perform it in Natick, Mass.

I ask you to consider for a moment the mission of this Institute, which is to find the best way to provide food for the Armed Forces of our country, and I ask you, where is it better to have this Institute located, in the heartland of the agricultural section of our country or in the beautiful foothills of some secluded spot in Massachusetts? I think the answer is obvious.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Massachusetts.

Mr. BOLAND. I just want my beloved and distinguished friend to know that this is not a secluded spot in the foothills of New England. As a matter of fact, it is probably in the midst of one of the greatest research centers in all the world.

Mr. YATES. Of course it is a research center, but it cannot compare with those in the city of Chicago. My description of its location in the beautiful foothills of Massachusetts was according to what some of the Members from Massachusetts told me last night. And, I say, no matter where it is located, the fact still remains that a better location would be in the great granary of America, in the center of our agricultural riches, and not in one of the eastern tips of our country.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Pennsylvania who was a member of the subcommittee. And may I ask the gentleman this question: Did the Quartermaster Corps ever make available to you as a member of the subcommittee any information for the construction of a new building in the city of Chicago, Ill., or did it insist upon comparing the building which it proposed to build in Natick with the existing location in the city of Chicago?

Mr. VAN ZANDT. In reply I will say that the Army did make available to us an estimate as to the cost of construction of a new building on the campus of the Illinois Institute of Technology and also a new building on the grounds of Fort Sheridan, Ill.

Mr. YATES. But may I ask the gentleman this: Did the Army give you a comparison based on the same size? It did not. The offer that was made by the Institute of Technology in Chicago was predicated upon square footage of 1.8 million, which is the exact footage today of the center in Chicago. The new building at Natick will contain only 120,000 square feet, and I say to the gentleman that based upon this square footage the building can be constructed more economically in Chicago.

Mr. VAN ZANDT. Of course, I will have to disagree with the gentleman. The gentleman from California [Mr. DOYLE], and I had no interest either in Chicago or Natick. Our objective was to make a decision that would be in the best interests of the taxpayers of this country. We took a very careful look at both sides of this matter and found that the taxpayers would be saved $900,000 a year; and this was the basis of our decision.

Mr. YATES. But the basis of that comparison was the building to be constructed in Natick and the building located at the present site in Chicago which is admittedly uneconomical.

The CHAIRMAN. The time of the gentleman from Illinois [Mr. YATES] has expired.

Mr. GAVIN. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I

SEC. 101. The Secretary of the Army may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities, and equipment, for the following projects:

Inside the United States

Continental Army Command

(First Army)

Fort Devens, Massachusetts: Operational facilities, $626,000.

(Second Army)

Camp A. P. Hill, Virginia: Training facilities, $284,000.

Fort Knox, Kentucky: Operational and training facilities, and utilities, $492,000.

Fort Meade, Maryland: Maintenance facilities, supply facilities, medical facilities, and administrative facilities, $2,211,000.

Camp Pickett, Virginia: Training facilities, $396,000.

Fort Ritchie, Maryland: Troop housing, $305,000.

(Third Army)

Fort Benning, Georgia: Operational and training facilities, $10,524,000.

Fort Bragg, North Carolina: Operational facilities, and maintenance facilities, $521,000.

Fort Campbell, Kentucky: Utilities, $618,000.

Fort Rucker, Alabama: Operational and training facilities, and maintenance facilities, $1,571,000.

Fort Stewart, Georgia: Operational and training facilities, maintenance facilities, and administrative facilities, $1,240,000.

(Fourth Army)

Fort Bliss, Texas: Supply facilities, administrative facilities, troop housing, and utilities, $455,000.

Fort Hood, Texas: Operational and training facilities, maintenance facilities, and supply facilities, $3,054,000.

Fort Sill, Oklahoma: Operational and training facilities, maintenance facilities, hospital and medical facilities, and utilities, $8,695,000.

(Fifth Army)

Fort Riley, Kansas: Troop housing, $99,000.

Fort Leonard Wood, Missouri: Troop housing, community facilities, and utilities, $4,081,000.

(Sixth Army)

Camp Irwin, California: Ground improvements. $350,000.

Fort Lewis, Washington: Operational facilities and maintenance facilities, $524,000.

Fort Ord, California: Maintenance facilities and supply facilities, $1,357,000.

Yuma Test Station, Arizona: Maintenance facilities, administrative facilities, and utilities, $388,000.

(Military District of Washington)

Fort Myer, Virginia: Troop housing and utilities, $2,120,000.

Technical services facilities

(Chemical Corps)

Army Chemical Center, Maryland: Research, development, and test facilities, and medical facilities, $4,029,000.

(Corps of Engineers)

Fort Belvoir, Virginia: Operational and training facilities, research, development, and test facilities, and maintenance facilities, $1,973,000.

(Ordnance Corps)

Aberdeen Proving Ground, Maryland: Research, development, and test facilities, and utilities, $1,127,000.

Point Mugu, California: Research, development, and test facilities, $100,000.

Redstone Arsenal, Alabama: Research, development, and test facilities, $5,038,000.

Savanna Ordnance Depot, Illinois: Utilities, $382,000.

White Sands Missile Range, New Mexico: Research, development, and test facilities, $2,000,000.

(Quartermaster Corps)

Atlanta General Depot, Georgia: Maintenance facilities, $231,000.

Columbus General Depot, Ohio: Administrative facilities, $988,000.

Fort Lee, Virginia: Utilities, $84,000.

Quartermaster Research and Engineering Center, Natick, Massachusetts: Research, development, and test facilities, and troop housing, $3,812,000.

Richmond Quartermaster Depot, Virginia: Administrative facilities and community facilities, $600,000.

Sharpe General Depot, California: Operational and training facilities, $202,000.

(Signal Corps)

Fort Huachuca, Arizona: Operational facilities, $2,228,000.

Lexington Signal Depot, Kentucky: Utilities, $33,000.

(Medical Service)

Walter Reed Army Medical Center, District of Columbia: Medical facilities, $45,000.

(Transportation Corps)

Fort Eustis, Virginia: Training facilities, $1,253,000.

United States Military Academy

United States Military Academy, West Point, New York: Training facilities, $4,222,000.

Defense Atomic Support Agency

Clarksville Base, Tennessee: Utilities, $238,000.

Sandia Base, New Mexico: Operational facilities and community facilities, $1,744,000.

Army Component Commands

(United State Army Air Defense Command)

Various locations: Operational facilities, supply facilities, administrative facilities, and utilities, $1,743,000.

(Alaska Command Area)

Various locations: Operational facilities and utilities, $5,951,000.

(Pacific Command Area)

Aliamanu Military Reservation, Hawaii: Utilities, $36,000.

Schofield Barracks, Hawaii: Maintenance facilities and supply facilities, $918,000.

Various locations: Operational facilities, $814,000.

Outside the United States

(Ordnance Corps)

Kwajalein Island: Research, development, and test facilities, supply facilities, community facilities, utilities, and ground improvements, $7,034,000.

Ascension Island: Research, development, and test facilities, $1,000,000.

(Army Security Agency)

Various locations: Operational facilities, maintenance facilities, supply facilities, medical facilities, and community facilities, utilities, $2,586,000.

Army Component Commands

(Pacific Command Area)

Korea: Operational facilities, maintenance facilities, supply facilities, medical facilities, troop housing, community facilities, utilities, and ground improvements, $15,461,000.

Fort Buckner, Okinawa: Operational facilities, supply facilities, hospital facilities, and community facilities, $6,676,000.

Camp Tomlinson, Japan: Operational facilities, $50,000.

Guam: Real estate, $80,000.

(European Command Area)

France: Operational facilities, supply facilities, and utilities, $4,230,000.

Germany: Operational and training facilities, troop housing, and utilities, $7,106,000.

Classified locations: Operational facilities and utilities, $3,105,000.

(Caribbean Command Area)

Fort Allen, Puerto Rico: Utilities, $381,000.

Fort Clayton, Canal Zone: Community facilities and utilities, $582,000.

SEC. 102. The Secretary of the Army may establish or develop classified military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $6,245,000.

SEC. 103. The Secretary of the Army may establish or develop Army installations and facilities by proceeding with construction made necessary by changes in Army missions, new weapons developments, new and unforeseen research and development requirements, or improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next military construction authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $10,000,000: *Provided*, That the Secretary of the Army, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire as of September 30, 1962, except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to that date.

SEC. 104. In accordance with the provisions of title IV of the Housing Amendments of 1955 (69 Stat. 646), as amended, the Secretary of the Army is authorized to construct family housing for occupancy as public quarters at the following locations:

Inside the United States

Fort Belvoir, Virginia, 250 units.
Fort Benning, Georgia, 500 units.
Fort Stewart, Georgia, 160 units.
Fort Sam Houston, Texas, 200 units.
Camp Irwin, California, 240 units.
Fort Myer, Virginia, 525 units.
Rocky Mountain Arsenal, Colorado, 40 units.
Picatinny Arsenal, New Jersey, 34 units.
Sharpe General Depot, California, 50 units.

Outside the United States

Canal Zone, Atlantic Side, 200 units.
Canal Zone, Pacific Side, 500 units.

SEC. 105. (a) Public Law 85–685, as amended, is amended under the heading "INSIDE THE UNITED STATES", in section 101 as follows:

Under the subheading "FIELD FORCES FACILITIES (Sixth Army Area)", with respect to Fort Lewis, Washington, strike out "$1,085,000" and insert in place thereof "$1,257,000".

(b) Public Law 85–685, as amended, is amended by striking out in clause (1) of section 502 the amounts "$110,625,000" and "$310,535,000" and inserting in place thereof "$110,797,000" and "$310,707,000", respectively.

SEC. 106. (a) Public Law 86–149, as amended, is amended under the heading "INSIDE THE UNITED STATES", in section 101 as follows:

Under the subheading "TECHNICAL SERVICES FACILITIES (Chemical Corps)", with respect to Dugway Proving Ground, Utah, strike out "$532,000" and insert in place thereof "$600,000".

(b) Public Law 86–149, as amended, is amended by striking out in section 102 the amount "$81,830,000" and inserting in place thereof "$83,876,000".

(c) Public Law 86–149, as amended, is amended by striking out in clause (1) of section 402 the amounts "$73,652,100", "$81,830,000" and "$189,692,100" and inserting in place thereof "$73,720,100", "$83,876,000" and "$191,806,100", respectively.

SEC. 107. (a) Public Law 86–500 is amended under the heading "INSIDE THE UNITED STATES" in section 101 as follows:

Under the subheading "FIELD FORCES FACILITIES (Fifth Army Area)", with respect to Fort Leonard Wood, Missouri, strike out "$9,087,000" and insert in place thereof "$11,731,000".

(b) Public Law 86–500 is amended by striking out in clause (1) of section 502 "$76,631,000" and "$143,561,000" and inserting in place thereof "$79,275,000" and "$146,205,000", respectively.

TITLE II

SEC. 201. The Secretary of the Navy may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities, and equipment for the following projects:

Inside the United States

Shipyard Facilities

Naval Shipyard, Charleston, South Carolina: Operational facilities, and supply facilities, $700,000.

Naval Shipyard, Norfolk, Virginia: Maintenance facilities, $211,000.

Naval Shipyard, Philadelphia, Pennsylvania: Maintenance facilities, $4,000,000.

Naval Shipyard, Portsmouth, New Hampshire: Maintenance facilities, administrative facilities, and utilities, $1,774,000.

Naval Shipyard, Mare Island, Vallejo, California: Operational facilities, $417,000.

Fleet Base Facilities

Naval Station, Charleston, South Carolina: Medical facilities, troop housing, and utilities and ground improvements, $5,951,000.

Naval Station, Long Beach, California: Operational facilities and utilities, $720,000.

Naval Station, Mayport, Florida: Medical facilities, $570,000.

Naval Weapons Facilities

(Training stations)

Naval Air Station, Glynco, Georgia: Training facilities, $639,000.

Naval Air Station, Memphis, Tennessee: Community facilities, $94,000.

(Field support stations)

Naval Air Station, Brunswick, Maine: Training facilities, $211,000.

Naval Air Station, Cecil Field, Florida: Operational facilities, $68,000.

Naval Auxiliary Air Station, Fallon, Nevada: Utilities, $772,000.

Naval Air Station, Lemoore, California: Supply facilities and ground improvements, $279,000.

Naval Air Station, Miramar, California: Operational facilities, maintenance facilities, and utilities, $2,591,000.

Naval Air Station, Norfolk, Virginia: Maintenance facilities, $435,000.

Naval Air Station, North Island, San Diego, California: Operational facilities, $1,480,000.

Naval Air Station, Oceana, Virginia: Maintenance facilities, $161,000.

(Marine Corps air stations)

Marine Corps Air Station, Beaufort, South Carolina: Operational facilities, $190,000.

Marine Corps Air Station, Cherry Point, North Carolina: Operational facilities, maintenance facilities, supply facilities, administrative facilities, and utilities and ground improvements, $4,864,000.

Marine Corps Air Station, El Toro, California: Operational facilities, $463,000.

Marine Corps Air Facility, New River, North Carolina: Training facilities, maintenance facilities, and utilities and ground improvements, $2,731,000.

(Fleet readiness stations)

Naval Ammunition Depot, Concord, California: Research, development and test facilities, $345,000.

Naval Propellant Plant, Indian Head, Maryland: Supply facilities, $460,000.

(Research, development, test and evaluation stations)

Naval Ordnance Test Station, China Lake, California: Utilities, $1,086,000.

Naval Air Station, Lakehurst, New Jersey: Operational facilities, $1,628,000.

Pacific Missile Range, Point Mugu, California: Utilities; at Point Arguello, supply facilities, medical facilities, and utilities and ground improvements; and, on San Nicolas Island, operational facilities, research, development and test facilities, and utilities, $2,791,000.

Naval Ordnance Laboratory, White Oak, Maryland: Research, development and test facilities, $240,000.

Supply Facilities

Military Industrial Supply Agency, Philadelphia, Pennsylvania: Administrative facilities, $825,000.

Marine Corps Facilities

Marine Corps Base, Camp Pendleton, California: Operational and training facilities, supply facilities, administrative facilities,

troop housing and community facilities, and utilities and ground improvements, $6,101,000.

Marine Corps Schools, Quantico, Virginia: Administrative facilities, $118,000.

Marine Corps Base, Twentynine Palms, California: Hospital facilities, $1,100,000.

Service School Facilities

Naval Academy, Annapolis, Maryland: Operational and training facilities, and troop housing, $9,687,000.

Naval Station, District of Columbia: Operational facilities, troop housing and community facilities, and utilities, $6,000,000.

Naval Training Center, Great Lakes, Illinois: Medical facilities, and troop housing, $4,952,000.

Naval Schools, Mare Island, Vallejo, California: Training facilities, administrative facilities, troop housing, and utilities, $2,213,000.

Naval Post Graduate School, Monterey, California: Training facilities, $2,463,000.

Atlantic Fleet Anti-Submarine Warfare Tactical School, Norfolk, Virginia: Training facilities, $868,000.

Medical Facilities

Naval Hospital, Long Beach, California: Hospital facilities, and utilities, $8,763,000.

Naval Hospital, Portsmouth, New Hampshire: Hospital facilities, $60,000.

Communication Facilities

Naval Radio Station, Annapolis, Maryland: Operational facilities, $900,000.

Naval Security Group Detachment, Charleston, South Carolina: Supply facilities, $240,000.

Naval Radio Station, Cheltenham, Maryland: Operational facilities, $151,000.

Naval Radio Station, Dixon, California: Troop housing, $165,000.

Naval Communication Station, Kodiak, Alaska: Operational facilities, $77,000.

Outside the United States

Naval Weapons Facilities

Naval Magazine, Cartagena, Spain: Utilities, $115,000.

Marine Corps Air Facility, Futema, Okinawa: Operational facilities, and administrative facilities, $1,527,000.

Marine Corps Air Facility, Iwakuni, Japan: Operational facilities, $1,375,000.

Naval Air Facility, Naha, Okinawa: Maintenance facilities, $1,791,000.

Naval Station, Roosevelt Roads, Puerto Rico: Operational facilities, $90,000.

Naval Station, Rota, Spain: Maintenance facilities, and hospital facilities, $3,165,000.

Marine Corps Facilities

Camp Smedley D. Butler, Okinawa: Operational facilities, medical facilities, administrative facilities, troop housing and community facilities, and utilities and ground improvements, $3,238,000.

SEC. 202. The Secretary of the Navy may establish or develop classified naval installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $30,719,000.

SEC. 203. The Secretary of the Navy may establish or develop Navy installations and facilities by proceeding with construction made necessary by changes in Navy missions, new weapons developments, new and unforeseen research and development requirements, or improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next military construction authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $10,000,000: *Provided*, That the Secretary of the Navy, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire as of September 30, 1962, except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to that date.

SEC. 204. In accordance with the provisions of title IV of the Housing Amendments of 1955 (69 Stat. 646), as amended, the Secretary of the Navy is authorized to construct family housing for occupancy as public quarters at the following locations:

Naval Base, Charleston, South Carolina, 500 units.

Naval Air Station, Lemoore, California, 500 units.

Naval Facility, Fort Miles, Lewes, Delaware, 30 units.

Naval Station, Mayport, Florida, 500 units.

Naval Submarine Base, New London, Connecticut, 800 units.

Naval Base, Norfolk, Virginia, 600 units.

Naval Construction Battalion Center, Port Hueneme, California, 400 units.

Naval Security Group Activity, Winter Harbor, Maine, 30 units.

SEC. 205. (a) Public Law 85–685, as amended, is amended by striking out in section 202, "$93,101,000", and inserting in place thereof "$129,701,000".

(b) Public Law 85–685, as amended, is amended by striking out in clause (2) of section 502 the amounts $93,101,000" and "$351,294,000", and inserting respectively in place thereof "$129,701,000", and "$387,894,000".

SEC. 206. (a) Public Law 86–500 is amended in section 201 under the heading "INSIDE THE UNITED STATES" and subheading "SHIPYARD FACILITIES", with respect to the Naval Shipyard, Charleston, South Carolina, by striking out the amount "$14,855,000", and inserting in place thereof "$17,955,000".

(b) Public Law 86–500 is amended by striking out in clause (2) of section 502, the amounts "$83,975,000" and "$127,566,000", and inserting respectively in place thereof "$87,075,000" and "$130,666,000".

TITLE III

SEC. 301. The Secretary of the Air Force may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities, and equipment, for the following projects:

Inside the United States

Air Defense Command

Grand Forks Air Force Base, Grand Forks, North Dakota: Operational facilities, maintenance facilities, supply facilities, and community facilities, $888,000.

K. I. Sawyer Municipal Airport, Marquette, Michigan: Operational facilities, maintenance facilities, and troop housing and community facilities, $1,468,000.

Kincheloe Air Force Base, Sault Sainte Marie, Michigan: Maintenance facilities, supply facilities and community facilities, $1,256,000.

McChord Air Force Base, Tacoma, Washington: Operational facilities, maintenance facilities, and utilities, $404,000.

Minot Air Force Base, Minot, North Dakota: Operational facilities, maintenance facilities, supply facilities, community facilities, and utilities, $2,677,000.

NORAD Headquarters, Colorado Springs, Colorado: Operational facilities, $12,400,000.

Otis Air Force Base, Falmouth, Massachusetts: Operational facilities, $373,000.

Suffolk County Air Force Base, Westhampton Beach, New York: Real estate, $43,000.

Air Materiel Command

Gentile Air Force Station, Dayton, Ohio: Administrative facilities, $420,000.

Griffiss Air Force Base, Rome, New York: Operational facilities and maintenance facilities, $305,000.

Hill Air Force Base, Ogden, Utah: Operational facilities, maintenance facilities, supply facilities, and utilities, $1,820,000.

Hill Air Force Range, Wendover, Utah: Maintenance facilities, suppy facilities, troop housing, and utilities, $7,289,000.

McClellan Air Force Base, Sacramento, California: Operational facilities, maintenance facilities, supply facilities, and utilities, $1,280,000.

Olmstead Air Force Base, Middletown, Pennsylvania: Operational facilities, and maintenance facilities, $1,639,000.

Robins Air Force Base, Macon, Georgia: Operational facilities, supply facilities, administrative facilities, community facilities, and utilities, $1,107,000.

Tinker Air Force Base, Oklahoma City, Oklahoma: Operational facilities, maintenance facilities, supply facilities, and utilities, $881,000.

Wright-Patterson Air Force Base, Dayton, Ohio: Operational facilities, maintenance facilities, research, development, and test facilities, supply facilities, and medical facilities, $1,653,000.

Air Research and Development Command

Arnold Engineering Development Center, Tullahoma, Tennessee: Research, development, and test facilities, $18,500,000.

Edwards Air Force Base, Muroc, California: Research, development, and test facilities and utilities, $1,885,000.

Eglin Air Force Base, Valparaiso, Florida: Operational facilities, $345,000.

Laurence G. Hanscom Field, Bedford, Massachusetts: Research, development, and test facilities, community facilities, and utilities, $2,819,000.

Patrick Air Force Base, Cocoa, Florida: Operational facilities and community facilities, $630,000.

Various locations, Atlantic Missile Range: Operational facilities, and research, development, and test facilities, $8,982,000.

Air Training Command

Brooks Air Force Base, San Antonio, Texas: Community facilities, $296,000.

Chanute Air Force Base, Rantoul, Illinois: Troop housing, $342,000.

James Connally Air Force Base, Waco, Texas: Community facilities and utilities, $427,000.

Keesler Air Force Base, Biloxi, Mississippi: Medical facilities and community facilities, $693,000.

Lackland Air Force Base, San Antonio, Texas: Training facilities, and administrative facilities, $1,040,000.

Lowry Air Force Base, Denver, Colorado: Medical facilities, $371,000.

Mather Air Force Base, Sacramento, California: Training facilities, and maintenance facilities, $1,075,000.

Perrin Air Force Base, Sherman, Texas: Supply facilities, $203,000.

Randolph Air Force Base, San Antonio, Texas: Operational facilities, $1,256,000.

Reese Air Force Base, Lubbock, Texas: Operational facilities, $135,000.

Sheppard Air Force Base, Wichita Falls, Texas: Troop housing and utilities, $553,000.

Air University

Gunter Air Force Base, Montgomery, Alabama: Community facilities, $86,000.

Maxwell Air Force Base, Montgomery, Alabama: Operational facilities, maintenance facilities, troop housing, and utilities, $2,413,000.

Alaskan Air Command

Eielson Air Force Base, Fairbanks, Alaska: Community facilities, $354,000.

Elmendorf Air Force Base, Anchorage, Alaska: Maintenance facilities, and community facilities, $240,000.

King Salmon Airport, Naknek, Alaska: Operational facilities, $684,000.

Various locations, Alaska: Maintenance facilities, supply facilities, and troop housing, $1,837,000.

Headquarters Command

Andrews Air Force Base, Camp Springs, Maryland: Maintenance facilities, administrative facilities, and utilities, $2,692,000.

Military Air Transport Service

Dover Air Force Base, Dover, Delaware: Maintenance facilities, $145,000.

McGuire Air Force Base, Wrightstown, New Jersey: Operational facilities, and supply facilities, $125,000.

Travis Air Force Base, Fairfield, California: Maintenance facilities and medical facilities, $441,000.

Pacific Air Forces

Hickam Air Force Base, Honolulu, Hawaii: Operational facilities, $122,000.

Strategic Air Command

Barksdale Air Force Base, Shreveport, Louisiana: Operational facilities and medical facilities, $1,217,000.

Beale Air Force Base, Marysville, California: Operational facilities, maintenance facilities, and utilities, $373,000.

Bergstrom Air Force Base, Austin, Texas: Operational facilities, $74,000.

Blytheville Air Force Base, Blytheville, Arkansas: Operational facilities and community facilities, $475,000.

Bunker Hill Air Force Base, Peru, Indiana: Operational facilities and maintenance facilities, $411,000.

Carswell Air Force Base, Fort Worth Texas: Maintenance facilities and utilities, $236,000.

Castle Air Force Base, Merced, California: Operational facilities, $487,000.

Clinton-Sherman Air Force Base, Clinton, Oklahoma: Maintenance facilities, $193,000.

Columbus Air Force Base, Columbus, Mississippi: Community facilities, $197,000.

Dow Air Force Base, Bangor, Maine: Operational facilities, maintenance facilities, and troop housing, $962,000.

Dyess Air Force Base, Abilene, Texas: Maintenance facilities, and troop housing, $568,000.

Ellsworth Air Force Base, Rapid City, South Dakota: Operational facilities, community facilities and utilities, $1,207,000.

Francis E. Warren Air Force Base, Cheyenne, Wyoming: Hospital facilities, $2,050,000.

Glasgow Air Force Base, Glasgow, Montana: Operational facilities, maintenance facilities, supply facilities, administrative facilities, and community facilities, $2,716,000.

Homestead Air Force Base, Homestead, Florida: Operational facilities and troop housing, $509,000.

Larson Air Force Base, Moses Lake, Washington: Operational facilities, maintenance facilities, supply facilities, and medical facilities, $956,000.

Lincoln Air Force Base, Lincoln, Nebraska: Operational facilities and medical facilities, $934,000.

Little Rock Air Force Base, Little Rock, Arkansas: Hospital facilities, $1,900,000.

Lockbourne Air Force Base, Columbus, Ohio: Operational facilities, $67,000.

Loring Air Force Base, Limestone, Maine: Maintenance facilities, $257,000.

March Air Force Base, Riverside, California: Operational facilities, maintenance facilities, supply facilities, hospital facilities, and utilities, $6,280,000.

McConnell Air Force Base, Wichita, Kansas: Operational facilities, $66,000.

McCoy Air Force Base, Orlando, Florida: Operational facilities and maintenance facilities, $163,000.

Offutt Air Force Base, Omaha, Nebraska: Utilities and ground improvements, and real estate, $541,000.

Pease Air Force Base, Portsmouth, New Hampshire: Operational facilities and maintenance facilities, $762,000.

Plattsburgh Air Force Base, Plattsburgh, New York: Operational facilities and maintenance facilities, $577,000.

Schilling Air Force Base, Salina, Kansas: Operational and training facilities and supply facilities, $930,000.

Tampa Fuel Annex, Tampa, Florida: Utilities, $48,000.

Turner Air Force Base, Albany, Georgia: Operational facilities, maintenance facilities, and troop housing and community facilities, $3,481,000.

Vandenberg Air Force Base, Lompoc, California: Operational facilities, community facilities, and utilities, $466,000.

Walker Air Force Base, Roswell, New Mexico: Maintenance facilities and utilities, $205,000.

Westover Air Force Base, Chicopee Falls, Massachusetts: Operational facilities, maintenance facilities, supply facilities, and real estate, $8,876,000.

Whiteman Air Force Base, Knobnoster, Missouri: Community facilities and utilities, $458,000.

Wurtsmith Air Force Base, Oscoda, Michigan: Operational facilities, maintenance facilities, supply facilities and community facilities, $2,421,000.

Tactical Air Command

Cannon Air Force Base, Clovis, New Mexico: Operational facilities, maintenance facilities, and community facilities, $1,544,000.

Langley Air Force Base, Hampton, Virginia: Hospital facilities, $3,150,000.

Luke Air Force Base, Phoenix, Arizona: Maintenance facilities and supply facilities, $1,441,000.

Myrtle Beach Air Force Base, Myrtle Beach, South Carolina: Operational facilities, $98,000.

Nellis Air Force Base, Las Vegas, Nevada: Operational facilities, maintenance facilities, and community facilities, $2,433,000.

Seymour-Johnson Air Force Base, Goldsboro, North Carolina: Operational facilities, maintenance facilities, and utilities, $512,000.

Aircraft Control and Warning System

Various locations: Operational facilities, maintenance facilities, supply facilities, troop housing and community facilities, utilities, and real estate, $3,159,000.

Special Facilities

Various locations: Operational facilities, $142,000.

Outside the United States

Caribbean Air Command

Howard Air Force Base, Canal Zone: Operational facilities, $117,000.

Military Air Transport Service

Various locations: Operational facilities, supply facilities, and troop housing, $977,000.

Pacific Air Forces

Various locations: Operational facilities, maintenance facilities, supply facilities, troop housing and community facilities, and utilities and ground improvements, $9,468,000.

Strategic Air Command

Andersen Air Force Base, Guam: Operational facilities, $181,000.

Ramey Air Force Base, Puerto Rico: Operational facilities, $80,000.

Various locations: Operational facilities, $1,988,000.

United States Air Forces in Europe

Various locations: Operational facilities, maintenance facilities, supply facilities, administrative facilities, troop housing and community facilities, and utilities, $9,800,000.

United States Air Force Security Service

Various locations: Operational facilities, maintenance facilities, supply facilities, administrative facilities, troop housing, community facilities, and utilities, $5,949,000.

Aircraft Control and Warning System

Various locations: Maintenance facilities, supply facilities, and utilities, $1,768,000.

Special Facilities

Various locations: Operational facilities, $651,000.

SEC. 302. The Secretary of the Air Force may establish or develop classified military installations and facilities for ballistic missiles by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $251,900,000.

SEC. 303. The Secretary of the Air Force may establish or develop Air Force installations and facilities by proceeding with construction made necessary by changes in Air Force missions, new weapons developments, new and unforeseen research and development requirements, or improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next military construction authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $10,000,000: *Provided*, That the Secretary of the Air Force, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire as of September 30, 1962, except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to that date.

SEC. 304. In accordance with the provisions of title IV of the Housing Amendments of 1955 (69 Stat. 646), as amended, the Secretary of the Air Force is authorized to construct family housing for occupancy as public quarters at the following locations:

Lowry Air Force Base, Colorado, 135 units.

Andrews Air Force Base, Maryland, 300 units.

Lawrence G. Hanscom Air Force Base, Massachusetts, 200 units.

Hill Air Force Base, Utah, 380 units.

SEC. 305. Section 9 of the Air Force Academy Act, as amended (68 Stat. 49), is further amended by striking out in the first sentence the figure "$139,797,000" and inserting in place thereof the figure "$141,797,000".

SEC. 306. (a) Public Law 86-149, as amended, is amended under the heading "INSIDE THE UNITED STATES" in section 301, as follows:

(1) Under the subheading "STRATEGIC AIR COMMAND", with respect to Barksdale Air Force Base, Shreveport, Louisiana, strike out "$110,000" and insert in place thereof "$169,000".

(b) Public Law 86–149, as amended, is amended under the heading "OUTSIDE THE UNITED STATES" in section 301, as follows:

(1) Under the subheading "PACIFIC AIR FORCES", with respect to Hickam Air Force Base, Honolulu, Hawaii, strike out "$1,299,000" and insert in place thereof "$1,500,000".

(c) Public Law 86–149, as amended, is amended by striking out in clause (3) of section 402 the amounts of "$299,576,800", "$73,058,000", "$850,175,800" and inserting in place thereof "$299,635,800", "$73,259,000", and "$850,435,800", respectively.

SEC. 307. (a) Public Law 86–500 is amended under the heading "INSIDE THE UNITED STATES" in section 301, as follows:

Under the subheading "AIR DEFENSE COMMAND"—

(1) with respect to Oxnard Air Force Base, Camarillo, California, strike out "$732,000" and insert in place thereof "$864,000".

(2) with respect to Richards-Gebaur Air Force Base, Kansas City, Missouri, strike out "$240,000" and insert in place thereof "$266,000".

(3) with respect to Suffolk County Air Force Base, Westhampton Beach, New York, strike out "$411,000" and insert in place thereof "$628,000".

Under the subheading "STRATEGIC AIR COMMAND"—

(1) with respect to Plattsburgh Air Force Base, Plattsburgh, New York, strike out "$80,000" and insert in place thereof "$170,000".

(b) Public Law 86–500 is amended by striking out in clause (3) of section 502 the amounts of "$204,735,000" and "$727,305,000" and inserting in place thereof "$205,200,000" and "$727,770,000", respectively.

TITLE IV. GENERAL PROVISIONS

SEC. 401. The Secretary of each military department may proceed to establish or redevelop installations and facilities under this Act without regard to sections 3648 and 3734 of the Revised Statutes, as amended (31 U.S.C. 529; 40 U.S.C. 259, 267), and sections 4774(d) and 9774(d) of title 10, United States Code. The authority to place permanent or temporary improvements on land includes authority for surveys, administration, overhead, planning, and supervision incident to construction. That authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended (40 U.S.C. 255), and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use), by gift, purchase, exchange of Government-owned land, or otherwise.

SEC. 402. There are authorized to be appropriated such sums as may be necessary for the purposes of this Act, but appropriations for public works projects authorized by titles I, II, and III shall not exceed—

(1) for title I: Inside the United States, $79,702,000; outside the United States, $48,291,000; section 102, $6,245,000; section 103, $10,000,000; or a total of $144,238,000.

(2) for title II: Inside the United States, $80,554,000; outside the United States, $11,301,000; section 202, $30,719,000; section 203, $10,000,000; or a total of $132,574,000.

(3) for title III: Inside the United States, $138,136,000; outside the United States, $30,979,000; section 302, $251,900,000; section 303, $10,000,000; or a total of $431,015,00.

SEC. 403. Any of the amounts named in titles I, II, and III of this Act, may, in the discretion of the Secretary concerned, be increased by 5 per centum for projects inside the United States (other than Alaska) and by 10 per centum for projects outside the United States or in Alaska, if he determines in the case of any particular project that such increase (1) is required for the sole purpose of meeting unusual variations in cost arising in connection with that project, and (2) could not have been reasonably anticipated at the time such project was submitted to the Congress. However, the total costs of all projects in each such title may not be more than the total amount authorized to be appropriated for projects in that title.

SEC. 404. Whenever—

(1) the President determines that compliance with section 2313(b) of title 10, United States Code, for contracts made under this Act for the establishment or development of military installations and facilities in foreign countries would interfere with the carrying out of this Act; and

(2) the Secretary of Defense and the Comptroller General have agreed upon alternative methods of adequately auditing those contracts;

the President may exempt those contracts from the requirements of that section.

SEC. 405. Contracts for construction made by the United States for performance within the United States and its possessions, under this Act shall be executed under the jurisdiction and supervision of the Corps of Engineers, Department of the Army, or the Bureau of Yards and Docks, Department of the Navy, unless the Secretary of Defense determines that because such jurisdiction and supervision is wholly impracticable such contracts should be executed under the jurisdiction and supervision of another department or Government agency, and shall be awarded, insofar as practicable, on a competitive basis to the lowest responsible bidder, if the national security will not be impaired and the award is consistent with chapter 137 of title 10, United States Code. The Secretaries of the military departments shall report semiannually to the President of the Senate and the Speaker of the House of Representatives with respect to all contracts awarded on other than a competitive basis to the lowest responsible bidder.

SEC. 406. As of July 1, 1962, all authorizations for military public works to be accomplished by the Secretary of a military department in connection with the establishment or development of military installations and facilities, and all authorizations for appropriations therefor, that are contained in Acts approved before August 11, 1959, and not superseded or otherwise modified by a later authorization are repealed, except—

(1) authorizations for public works and for appropriations therefor that are set forth in those Acts in the titles that contain the general provisions;

(2) the authorization for public works projects as to which appropriated funds have been obligated for construction contracts or land acquisitions in whole or in part before July 1, 1962, and authorizations for appropriations therefor;

(3) the authorization for the rental guarantee for family housing in the amount of $100,000,000 that is contained in section 302 of the Act of July 14, 1952 (66 Stat. 606, 622);

(4) notwithstanding the provisions of section 506 of the Act of June 8, 1960 (74 Stat. 166, 184), the authorization for—

(a) administrative facilities in the amount of $5,666,000 at Detroit Arsenal, Michigan, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "TECHNICAL SERVICES FACILITIES (Ordnance Corps)" of the Act of August 20, 1958 (72 Stat. 636);

(b) troop housing and utilities in the amount of $3,749,000 at Fort Dix, New Jersey, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "FIELD FORCES FACILITIES (First Army Area)" of the Act of August 20, 1958 (72 Stat. 636, 637);

(c) troop housing in the amount of $584,000 at Fort Benning, Georgia, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "FIELD FORCES FACILITIES (Third Army Area)" of the Act of August 20, 1958 (72 Stat. 636, 637);

(d) administrative facilities and troop housing in the amount of $2,839,000 at Fort Hood, Texas, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "FIELD FORCES FACILITIES (Fourth Army Area)" of the Act of August 20, 1958 (72 Stat. 636, 637);

(e) troop housing in the amount of $713,000 at Fort Leavenworth, Kansas, that is contained in title I, section 101, under the heading "INSIDE THE UNITED STATES" and subheading "FIELD FORCES FACILITIES (Fifth Army Area)" of the Act of August 20, 1958 (72 Stat. 636, 637);

(f) medical facilities in the amount of $4,136,000 for Selfridge Air Force Base, Mount Clemens, Michigan, under the heading "CONTINENTAL UNITED STATES" and the subheading "AIR DEFENSE COMMAND" that is contained in title III, section 301, of the Act of July 15, 1955 (69 Stat. 324, 338), as amended;

(g) operational facilities, and real estate in the amount of $4,352,000 for Marine Corps Auxiliary Air Station, Beaufort, South Carolina, under the heading "INSIDE THE UNITED STATES" and subheading "AVIATION FACILITIES (MARINE CORPS AIR STATION)" of the Act of August 20, 1958 (72 Stat. 643).

SEC. 407. Section 803(a) of the National Housing Act, as amended, is amended by striking out the last proviso and inserting in lieu thereof the following: "*And provided further,* That no more mortgages shall be insured under this title after October 1, 1962, except pursuant to a commitment to insure before such date, and not more than thirty-seven thousand family housing units shall be contracted for after June 30, 1959, pursuant to any mortgage insured under section 803 of this title after such date."

SEC. 408. Section 515 of the Act of July 15, 1955 (69 Stat. 324, 352), as amended, is further amended to read as follows:

"SEC. 515. During fiscal years 1959 through and including 1964, the Secretaries of the Army, Navy, and Air Force, respectively, are authorized to lease housing facilities at or near tactical military installations for assignment as public quarters to military personnel and their dependents, if any, without rental charge upon a determination by the Secretary of Defense, or his designee, that there is a lack of adequate housing facilities at or near such military installations. Such housing facilities shall be leased on a family or individual unit basis and not more than seven thousand five hundred of such units may be so leased at any one time. Expenditures for the rental of such housing facilities may be made out of appropriations available for maintenance and operation but may not exceed $150 a month for any such unit."

SEC. 409. Section 407 of the Act of August 30, 1957 (71 Stat. 531, 556), as amended, is amended (1) by striking out the words "July 1, 1961" in subsection (e) and inserting "July 1, 1962" in lieu thereof; and (2) by striking out the words "July 1, 1962" from subsection (g) and inserting "July 1, 1963" in lieu thereof.

SEC. 410. Section 409 of the Act of August 3, 1956 (70 Stat. 991, 1016), is repealed.

SEC. 411. None of the authority contained in titles I, II, and III of this Act shall be deemed to authorize any building construction project inside the United States (other than Alaska) at a unit cost in excess of—

(1) $32 per square foot for cold-storage warehousing;

(2) $8 per square foot for regular warehousing;

(3) $1,850 per man for permanent barracks;

(4) $8,500 per man for bachelor officer quarters;

unless the Secretary of Defense determines that, because of special circumstances, application to such project of the limitations on unit costs contained in this section is impracticable.

SEC. 412. Titles I, II, III, and IV of this Act may be cited as the "Military Construction Act of 1961".

TITLE V. RESERVE FORCES FACILITIES

SEC. 501. Subject to chapter 133 of title 10, United States Code, the Secretary of Defense may establish or develop the following facilities for Reserve Forces:

(1) For Department of the Army:

Army National Guard of the United States
(Armory)

Altavista, Virginia: Training facilities, $134,000.

Altus, Oklahoma: Training facilities, $152,000.

Anacortes, Washington: Training facilities, $150,000.

Atchison, Kansas: Training facilities, $93,000.

Austin, Minnesota: Training facilities, $210,000.

Baraboo, Wisconsin: Training facilities, $171,000.

Batavia, New York: Training facilities, $234,000.

Baxley, Georgia: Training facilities, $90,000.

Bay Springs, Mississippi: Training facilities, $72,000.

Beaufort, South Carolina: Training facilities, $96,000.

Beaver, Utah: Training facilities, $111,000.

Bedford, Indiana: Training facilities conversion, $52,000.

Bluefield, West Virginia: Training facilities, $225,000.

Bonham, Texas: Training facilities, $87,000.

Boone, Iowa: Training facilities, $225,000.

Boston (West Roxbury), Massachusetts: Training facilities, $249,000.

Brantley, Alabama: Training facilities, $72,000.

Bridgeport, Alabama: Training facilities, $72,000.

Brooklyn, New York: Training facilities conversion, $50,000.

Caldwell, Idaho: Training facilities, $125,000.

Campbellsville, Kentucky: Training facilities, $124,000.

Charleston, South Carolina: Training facilities, $128,000.

Charleston, South Carolina: Training facilities, $96,000.

Clackamas, Oregon: Training facilities expansion, $150,000.

Columbia, South Carolina: Training facilities, $400,000.

Columbus, Ohio: Training facilities, $540,000.

Dallas (number 2), Texas: Training facilities, $74,000.

Decatur, Mississippi: Training facilities, $72,000.

Deer Lodge, Montana: Training facilities, $69,000.

Dermott, Arkansas: Training facilities, $45,000.

Devils Lake, North Dakota: Training facilities, $135,000.

East Providence, Rhode Island: Training facilities, $366,000.

Edgeley, North Dakota: Training facilities, $150,000.

Elizabethtown, North Carolina: Training facilities, $105,000.

Enfield-Thompsonville, Connecticut: Training facilities, $169,000.

Fairmont, West Virginia: Training facilities, $210,000.

Fallon, Nevada: Training facilities, $101,000.

Fort Atkinson, Wisconsin: Training facilities, $171,000.

Geneseo, New York: Training facilities, $233,000.

Glasgow, Kentucky: Training facilities, $136,000.

Glasgow, Montana: Training facilities, $69,000.

Great Bend, Kansas: Training facilities, $93,000.

Hamlet, North Carolina: Training facilities, $99,000.

Holly Springs, Mississippi: Training facilities, $81,000.

Honolulu, Hawaii: Training facilities, $282,000.

Hopkinsville, Kentucky: Training facilities, $134,000.

Huntington, West Virginia: Training facilities, $250,000.

Kerens, Texas: Training facilities, $74,000.

Kingwood, West Virginia: Training facilities, $170,000.

Lake Village, Arkansas: Training facilities, $54,000.

Lincoln, Arkansas: Training facilities, $45,000.

Lock Haven, Pennsylvania: Training facilities expansion and rehabilitation, $156,000.

Marion, Kentucky: Training facilities, $124,000.

Mexia, Texas: Training facilities, $74,000.

Monroe, Louisiana: Training facilities, $191,000.

Monticello, Indiana: Training facilities, $152,000.

Morgantown, West Virginia: Training facilities, $198,000.

Mount Holly, New Jersey: Training facilities, $169,000.

Myrtle Beach, South Carolina: Training facilities, $87,000.

Newark, New Jersey: Training facilities rehabilitation, $234,000.

Newton, Mississippi: Training facilities, $81,000.

Newport, Vermont: Training facilities, $136,000.

Nogales, Arizona: Training facilities, $83,000.

North Vernon, Indiana: Training facilities, $152,000.

Oak Ridge, Tennessee: Training facilities, $117,000.

Palmetto, Florida: Training facilities, $120,000.

Panama City, Florida: Training facilities, $120,000.

Parsons, Tennessee: Training facilities, $102,000.

Philadelphia, Mississippi: Training facilities, $81,000.

Phoenixville, Pennsylvania: Training facilities expansion and rehabilitation, $125,000.

Port Gibson, Mississippi: Training facilities, $81,000.

Pueblo, Colorado: Training facilities, $135,000.

Punxsutawney, Pennsylvania: Training facilities expansion and rehabilitation, $102,000.

Raleigh-Durham Airport, North Carolina: Training facilities, $158,000.

Rupert, Idaho: Training facilities, $75,000.

Saint Albans, West Virginia: Training facilities, $190,000.

Saint George, South Carolina: Training facilities, $99,000.

Saint Louis, Missouri: Training facilities, $122,000.

Seguin, Texas: Training facilities, $74,000.

Sparta, Georgia: Training facilities, $90,000.

Spindale-Forest City, North Carolina: Training facilities, $113,000.

Starkville, Mississippi: Training facilities, $120,000.

Stockton, California: Training facilities, $254,000.

Tamaqua, Pennsylvania: Training facilities, $210,000.

Truth or Consequences, New Mexico: Training facilities, $67,000.

Turlock, California: Training facilities, $115,000.

Van Nuys, California: Training facilities, $202,000.

Wagner, South Dakota: Training facilities, $165,000.

Warrenton, Missouri: Training facilities, $150,000.

Wayne, Nebraska: Training facilities, $116,000.

West Orange, New Jersey: Training facilities rehabilitation, $243,000.

Wheatland, Wyoming: Training facilities, $109,000.

Worcester, Massachusetts: Training facilities, $328,000.

Various locations: Training facilities, minor conversions and additions, $150,000.

Army National Guard of the United States
(Non-Armory)

Camp Blanding, Florida: Supply facilities, $177,000.

Camp Grayling, Michigan: Troop housing, $300,000.

Camp Riley, Minnesota: Troop housing, $300,000.

Camp Roberts, California: Maintenance facilities, $52,000.

Camp Shelby, Mississippi: Troop housing, $300,000.

Fort Stewart, Georgia: Troop housing, $300,000.

Fort William H. Harrison, Montana: Troop housing, $258,000.

Montgomery, Alabama: Maintenance facilities, administrative facilities and supply facilities, $235,000.

Point Pleasant, West Virginia: Maintenance facilities, $340,000.

Various locations: Minor projects, $110,000.

Army Reserve

Brownsville, Pennsylvania: Training facilities, $190,000.

Burlington, Vermont: Acquisition and rehabilitation of training facilities, $79,000.

Butte, Montana: Training facilities, $185,000.

Chicago (number 4), Illinois: Training facilities, $778,000.

Cincinnati (number 2), Ohio: Training facilities, $601,000.

Durham, North Carolina: Training facilities addition, $58,000.

Erie, Pennsylvania: Training facilities, $323,000.

Fall River, Massachusetts: Training facilities, $386,000.

Fort Lauderdale, Florida: Training facilities, $321,000.

Gulfport, Mississippi: Training facilities, $321,000.

Huntington, West Virginia: Training facilities addition, $64,000.

Jamaica, Long Island, New York: Training facilities expansion, $237,000.

Johnson City, Tennessee: Training facilities, $465,000.

Kalamazoo, Michigan: Training facilities, $389,000.

Kansas City, Kansas: Training facilities, $572,000.

Lafayette, Louisiana: Training facilities expansion, $202,000.

Little Rock (Adams Field), Arkansas: Training facilities addition, $48,000.

Lynchburg, Virginia: Training facilities, $218,000.

McAllen, Texas: Training facilities expansion, $197,000.

Ontario-Laverne-Rialto, California: Training facilities, $372,000.

Paris, Texas: Training facilities, $166,000.
Phoenix, Arizona: Training facilities, $572,000.
Springfield, Massachusetts: Training facilities expansion, $111,000.
Terminal, Texas: Training facilities, $273,000.
Terre Haute, Indiana: Training facilities addition, $67,000.
Waycross, Georgia: Training facilities, $163,000.
Yakima, Washington: Training facilities, $236,000.
Yauco, Puerto Rico: Training facilities, $226,000.
Various locations: Training facilities, minor additions, and rehabilitation, $3,038,000.
Land acquisition: Training facilities, $351,000.

(2) For Department of the Navy:

Naval Reserve (Aviation)

Naval Air Station, Dallas, Texas: Operational facilities and maintenance facilities, $1,285,000.
Naval Air Station, Glenview, Illinois: Maintenance facilities, $54,000.
Naval Air Station, Grosse Ile, Michigan: Operational facilities, $575,000.
Naval Air Station, Los Alamitos, California: Operational facilities, $347,000.
Naval Air Station, New York, New York: Operational facilities and maintenance facilities, $200,000.
Naval Air Station, Olathe, Kansas: Utilities, $100,000.
Naval Air Station, South Weymouth, Massachusetts: Operational facilities and maintenance facilities, $392,000.
Naval Air Station, Willow Grove, Pennsylvania: Operational facilities, troop housing, and maintenance facilities, $841,000.

Naval Reserve (Surface)

Naval Reserve Electronics Facility, Belleville, Texas: Acquisition and rehabilitation of training facilities, $47,000.
Naval Reserve Training Center, Brooklyn, New York: Training facilities rehabilitation, $50,000.
Naval Reserve Training Center, Erie, Pennsylvania: Training facilities, $622,000.
Naval Reserve Electronics Facility, Galesburg, Illinois: Training facilities, $62,000.
Naval Reserve Electronics Facility, Midland-Odessa, Texas: Training facilities, $55,000.
Naval and Marine Corps Reserve Training Center, Mobile, Alabama: Training facilities, $550,000.
Naval Reserve Master Control Radio Station, Norfolk, Virginia: Operational and training facilities, $84,000.
Naval and Marine Corps Reserve Training Center, Omaha, Nebraska: Training facilities, $648,000.
Naval Reserve Training Center, Sioux Falls, South Dakota: Training facilities, $364,000.
Naval Reserve Training Center, Vallejo, California: Training facilities rehabilitation, $151,000.
Naval Reserve Master Control Radio Station and Electronics Facility, Waukegan, Illinois: Operational and training facilities, $96,000.
Naval Reserve Training Center, Whitestone, New York: Training facilities addition, $91,000.

Marine Corps Reserve (Ground)

Marine Corps Reserve Training Center, Midland-Odessa, Texas: Training facilities and land acquisition, $373,000.
Naval and Marine Corps Reserve Training Center, Mobile, Alabama: Training facilities, $207,000.
Naval and Marine Corps Reserve Training Center, Omaha, Nebraska: Training facilities, $237,000.
Marine Corps Reserve Training Center, Tallahassee, Florida: Training facilities addition, $200,000.
Marine Corps Reserve Training Center, Waukegan, Illinois: Training facilities, $140,000.

(3) For Department of the Air Force:

Air National Guard of the United States

Baer Field, Fort Wayne, Indiana: Operational facilities, $588,000.
Berry Field, Nashville, Tennessee: Maintenance facilities, $300,000.
Congaree Air Base, Columbia, South Carolina: Operational and training facilities, $230,000.
Des Moines Municipal Airport, Des Moines, Iowa: Operational facilities, $770,000.
Foss Field, Sioux Falls, South Dakota: Operational facilities rehabilitation, $516,000.
Fresno Airport, Fresno, California: Operational facilities, $794,000.
General Mitchell Field, Milwaukee, Wisconsin: Operational facilities and maintenance facilities, $923,000.
Hector Field, Fargo, North Dakota: Operational facilities, $372,000.
Hickam Air Force Base, Honolulu, Hawaii: Supply facilities, $252,000.
Hubbard Field, Reno, Nevada: Operational facilities, $287,000.
Hulman Field, Terre Haute, Indiana: Operational facilities, $888,000.
Naval Air Station, Dallas, Texas: Utilities, $200,000.
Naval Air Station, Willow Grove, Pennsylvania: Operational and training facilities, maintenance facilities, supply facilities and utilities, $1,965,000.
New Castle County Airport, New Castle, Delaware: Maintenance facilities, $300,000.
O'Hare International Airport, Chicago, Illinois: Operational facilities and supply facilities, $774,000.
Olmstead Air Force Base, Middletown, Pennsylvania: Maintenance facilities, $300,000.
Ontario International Airport, Ontario, California: Operational facilities, $352,000.
Rosecrans Field, Saint Joseph, Missouri: Operational facilities rehabilitation, $360,000.
Salt Lake Municipal Airport, Salt Lake City, Utah: Maintenance facilities, $300,000.
Schenectady County Airport, Schenectady, New York: Operational facilities, $620,000.
Toledo Express Airport, Toledo, Ohio: Operational facilities, $654,000.
Travis Field, Savannah, Georgia: Operational facilities, $526,000.
Truax Field, Madison, Wisconsin: Operational facilities rehabilitation, $300,000.
Tulsa Municipal Airport, Tulsa, Oklahoma: Operational facilities, $360,000.
Volk Field, Camp Williams, Wisconsin: Operational facilities, $536,000.
Will Rogers Field, Oklahoma City, Oklahoma: Operational facilities, $360,000.

Air Force Reserve

Andrews Air Force Base, Camp Springs, Maryland: Supply facilities, $138,000.
Barksdale Air Force Base, Shreveport, Louisiana: Supply facilities, $185,000.
Carswell Air Force Base, Fort Worth, Texas: Operational and training facilities and supply facilities, $619,000.
Davis Field, Muskogee, Oklahoma: Operational facilities, $992,000.
Ellington Air Force Base, Houston, Texas: Operational facilities, $908,000.
Homestead Air Force Base, Homestead, Florida: Maintenance facilities, $350,000.
March Air Force Base, Riverside, California: Maintenance facilities, $350,000.
Portland International Airport, Portland, Oregon: Operational facilities, $715,000.

(4) For all reserve components: Facilities made necessary by changes in the assignment of weapons or equipment to reserve forces units, if the Secretary of Defense or his designee determines that deferral of such facilities for inclusion in the next law authorizing appropriations for specific facilities for reserve forces would be inconsistent with the interests of national security and if the Secretary of Defense or his designee notifies the Senate and the House of Representatives immediately upon reaching a final decision to implement, of the nature and estimated cost of any facility to be undertaken under this subsection.

SEC. 502. (a) Public Law 86–149, as amended, is amended under the heading "ARMY RESERVE" in clause (1) of section 501 with respect to Chicago Heights, Illinois, by striking out "Chicago Heights" and inserting in place thereof "Harvey".

(b) Public Law 86–149, as amended, is amended under the heading "AIR FORCE RESERVE" in clause (3) of section 501 with respect to General Mitchell Field, Milwaukee, Wisconsin, by striking out "$43,000" and inserting in place thereof "$72,000".

(c) Public Law 86–149, as amended, is amended by striking out in clause (3)(a) of section 504 "$4,093,000" and inserting in place thereof "$4,122,000".

(d) Public Law 86–500 is amended under the heading "ARMY RESERVE" in clause (1) of section 601 with respect to Pittsburg, California, by striking out "Pittsburg" and inserting in place thereof "Concord".

(e) Public Law 86–500 is amended under the heading "AIR NATIONAL GUARD OF THE UNITED STATES" in clause (3) of section 601 with respect to Foss Field, Sioux Falls, South Dakota, by striking out "$675,000" and inserting in place thereof "$1,038,000".

(f) Public Law 86–500 is amended by striking out in clause (3)(a) of section 604 "$13,797,000" and inserting in place thereof "$14,160,000".

SEC. 503. The Secretary of Defense may establish or develop installations and facilities under this title without regard to sections 3648 and 3734 of the Revised Statutes, as amended, and sections 4774(d) and 9774(d) of title 10, United States Code. The authority to place permanent or temporary improvements on land includes authority for surveys, administration, overhead, planning and supervision incident to construction. The authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended, and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use), by gift, purchase, exchange of Government-owned land, or otherwise.

SEC. 504. Appropriations for facilities projects authorized by section 501 for the respective reserve components of the armed forces may not exceed—

(1) for the Department of the Army:

(a) Army National Guard of the United States, $15,617,000;

(b) Army Reserve, $11,209,000;

(2) for Department of the Navy: Navy and Marine Corps Reserves, $7,771,000;

(3) for Department of the Air Force:

(a) Air National Guard of the United States, $13,827,000;

(b) Air Force Reserve, $4,257,000.

SEC. 505. Any of the amounts named in section 501 of this Act may, in the discretion of the Secretary of Defense, be increased by 15 per centum, but the total cost for all projects authorized for the Army National Guard of the United States, the Army Reserve, the Navy and Marine Corps Reserve, the Air National Guard of the United States, and the Air Force Reserve, may not exceed the amounts named in clauses (1)(a), (1)(b), (2), (3)(a) and (3)(b) of section 504 respectively.

SEC. 506. As of July 1, 1962, all authorizations for specific facilities for reserve forces to be accomplished by the Secretary of Defense, and all authorizations for appropriations therefor, that are contained in the Reserve Forces Facilities Act of 1959, and not superseded or otherwise modified by a later authorization, are repealed, except the

authorizations for facilities for the reserve forces as to which appropriated funds have been obligated in whole or in part before July 1, 1962, and authorizations for appropriations therefor.

SEC. 507. This title may be cited as the "Reserve Forces Facilities Act of 1961".

Mr. VINSON (interrupting the reading of the bill). Mr. Chairman, I ask unanimous consent that we dispense with further reading of the bill, that it be printed in its entirety in the RECORD, and that it be open for amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

On page 45, between lines 14 and 15, insert the following:

"Panama City, Florida: Training facilities, $120,000."

The committee amendment was agreed to.

Mr. YATES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. YATES of Illinois: On page 5 strike out lines 4, 5, and 6, and insert a new section on page 11 following line 15, reading as follows:

SEC. 108. The Secretary of the Army is authorized to obtain by contract or otherwise such studies as may be necessary to enable him to determine the feasibility and advisability of relocating in new quarters within the city of Chicago, Illinois, or elsewhere in the United States, the Quartermaster Food and Container Institute now located in Chicago, Illinois, and an expenditure of $10,000 out of appropriations available to the Department of the Army is authorized for this purpose. In connection with such studies the Secretary of the Army shall communicate with the Advisory Board on Quartermaster Research and Development of the National Academy of Sciences—National Research Council, and shall request its recommendations. Upon conclusion of such studies which shall be completed as promptly as possible, the Secretary of the Army shall report to the Committee on Armed Services of the Senate and House of Representatives the conclusion of such studies, together with such recommendations as he shall consider appropriate.

Mr. YATES. Mr. Chairman, originally I had intended to offer an amendment which would strike out the words "Quartermaster Research and Engineering Center, Natick, Massachusetts" and insert "Quartermaster Food and Container Institute, Chicago, Illinois" because I believe the building should be constructed in Chicago, Ill. However, after discussing the matter with the distinguished chairman of this committee, he suggested to me that it would be well to provide for a study, rather than for the type of amendment I originally intended to offer, because there have been no hearings or investigations on the question of constructing a new building in Chicago to house this Food and Container Institute. He said that the committee would like to be advised of all the facts in that connection. As a result, I offered the amendment which is now pending.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. YATES. Of course, I yield to the chairman.

Mr. VINSON. Of course, I advised the gentleman that I was very much opposed to the amendment.

Mr. YATES. Of course, the gentleman did. But the gentleman said he was more opposed to the original amendment I suggested than the one now pending.

Mr. VINSON. I think the gentleman had no facts to justify his original amendment at all; it was a mere conclusion.

Mr. YATES. That is not true, Mr. Chairman at all, but let us pass it. Mr. Chairman we have in this issue what is actually another war between the States. Massachusetts wants to take a Chicago installation away from Illinois, almost in the same manner as Mosby's Raiders used to operate in Virginia in the war between the States.

We were assured by the Secretary of the Army in 1952 that the Food and Container Institute would remain in Chicago, even though a research center was being constructed in Natick. Those from Massachusetts now conveniently forget that assurance. And there have been no changes in circumstances to alter the decision reached at that time. At that time, in 1952, the Secretary advised the Congress that under no circumstances would the Food and Container Institute be moved from the city of Chicago, because Chicago was the logical place for it. Chicago is the heartland metropolis. It is the hive of the busy food and agriculture activities. It is not isolated nor established in an out-of-the-way location. It is in the geographical center of the country; and most of the great food industries of the country are located within easy distance of it.

Let me point out that in 1960 the Research and Development Associates membership, which is an industry-supported nonprofit organization established as a link between the research and development activities of the food and container industry and the Food and Container Institute of the Quartermaster Corps, was made up as follows. These are the large food industries which cooperate with the Quartermaster Corps in carrying out the mission of the Food and Container Institute.

In the Greater Chicago area there were 51 such industries. In the Greater Boston area there were 10. In the Institute of Food Technologists in the Chicago area there were 900 of them. In Boston there were 200 of them.

As to the dairy industry, Chicago is the center of the distribution of the dairy industry, poultry and eggs. There are more poultry and eggs shipped out of Chicago than any other place in the country.

Fruits and vegetables: More fruits and vegetables go through Chicago than any other place in the world, let alone the country.

Chicago is well known as being the center of the grain industry. Chicago is well known as being the center of the meat industry.

When then should this Institute, which has been operating very well, growing and assuming more responsibility, be uprooted and moved to a new location in Massachusetts?

I have a great deal of respect for the members of the subcommittee, but I say frankly that their conclusions were not based on all the facts. All the facts were not made available to them by the Army, because the Army wants Natick—it has always had its eye on this move.

I myself have spoken to a number of employees of the Food and Container Institute. They will not move if this Institute is moved. This Institute, if established, will have to be reorganized and reconstituted. A smooth-running team will be broken up.

This bill proposes an allocation of $3,800,000 for the construction of appropriate quarters at Natick containing 150,000 square feet. A similar building constructed at the Illinois Institute of Technology in the city of Chicago could be built for $3,500,000. I say it can be done cheaper in the city of Chicago, it can be done better in the city of Chicago, and there is no reason why this Institute should be moved. Let the Secretary of the Army make a study that has not yet been made. Let him report upon the feasibility of constructing a new building in Chicago.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. The gentleman is not asking for another study. Let me point out to the committee that already the Department of Defense has made a study, the Department of the Army has made a study, the General Accounting Office has made a study, and the Congress of the United States has made a study. How many more studies do we have to make?

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. YATES. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. YATES. I will say to the gentleman that all of the studies have been inadequate in not containing essential data. I will say to the gentleman that all of the studies he refers to were predicated upon an inappropriate comparison. The Army asked the committee to compare a new building at Natick, Mass., consisting of 120,000 square feet, and the present building of the Food and Container Institute in Chicago which contains 1,800,000 square feet.

I talked to the General Accounting Office yesterday and I spoke to the people who have made the study referred to by the gentleman. They indicated that the savings outlined in that study were based upon the deactivation of the administration center in Chicago, and would not be applicable to the construction of a new building. I agree with the

gentleman that a new building should be built. The present location is decidedly uneconomical and should not be used, but the function of the Food and Container Institute can be carried out much better in a Midwest location rather than at Natick.

Mr. VAN ZANDT. Does the gentleman realize that if this activity is continued in Chicago a similar activity is going to be continued at Natick, Mass.?

Mr. YATES. I read the hearings and I saw no reference to such a possibility. I ask the gentleman, was any representation made to his committee in the hearings that if this Institute was to be continued in Chicago in a new building it would nevertheless be carried out in Natick, too?

Mr. VAN ZANDT. It was our understanding as to the Natick Research Center in Massachusetts that the entire program of the Food and Container Institute would be part of their activity.

Mr. YATES. Even if the Congress votes against it?

Mr. VAN ZANDT. How can it be?

Mr. YATES. Of course, it cannot be. I say to the gentleman that the Congress must have another study made to see where this Institute should be before we spend the money to do it.

Mr. VAN ZANDT. Let me go a step further. You cannot deny the fact that today we have a new factor in research and development commonly known as radiation. At Natick we have an accelerator which is a source of radiation. At the present time there is under construction a reactor which will be another source of radiation. In processing and experimenting with food today and with clothing and medicine and other materials for the military, you have to employ radiation.

Mr. YATES. If the gentleman will permit me to answer him, and he knows this as well as I do, because he is a very hard working member of the Joint Committee on Atomic Energy, that one of the finest radiation laboratories in the country is located at Argonne within 20 miles of the location of the new Institute. Any studies that require radiation can be carried on just as well at the Argonne Laboratory. That is true; is it not?

Mr. VAN ZANDT. Yes; that is true. Then, why not do away with Natick and send it all to Chicago and let Chicago use the Argonne facilities even though we have $13 million invested at Natick and it means that Chicago will have to send all the material to Natick, Mass., and the physicists and scientists have to travel likewise, which will mean an additional expense on the shoulders of the American taxpayers.

Mr. YATES. I say to the gentleman, it is not true at all, as he has just admitted a few moments ago.

I say to the gentleman further that all the evidence in the case indicates that the new building should be built in Chicago, not in Natick. If the gentleman is correct that this is to be a centralized operation every quartermaster installation from all over the country will be moved to the State of Massachusetts. Well, I, for one, do not favor that.

Mr. VAN ZANDT. No; that is not the intention of the Army.

Mr. YATES. You just indicated that it was.

Mr. VAN ZANDT. The Army has concentrated the research and development activities as far as the Quartermaster Corps is concerned at Natick, and at Natick they have a source of radiation. These materials that they are experimenting with have to be brought to Natick for the purpose of exposing them to radiation.

Mr. YATES. May I point out to the gentleman that Natick does not, as yet, have that radiation laboratory. That is still located in Stockton, Calif. Let me point out again that the Argonne Laboratory which is located within 20 miles of this Institute could be used as well for radiation purposes.

Mr. VAN ZANDT. First, let me correct my friend from Illinois. We have no source of radiation that is fitted for this type of work at Argonne. We have an accelerator at the present time at Natick which is a source of radiation and the Army decided not to locate this new research reactor or special type of reactor at Stockton. It is going to be located at Natick, Mass.

Mr. YATES. The fact still remains, it could be done at Argonne. I suggest to the gentleman, over the years Chicago as the center and as the principal city in the agricultural Midwest has been found to be the best location for this operation, and I say to the gentleman it would be wrong to disrupt this excellent organization to break it up by moving it to Natick rather than to let it continue at Chicago.

Mr. DOYLE. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from California, the other member of the subcommittee, Mr. DOYLE.

Mr. DOYLE. I hardly need to say so far as the subcommittee is concerned, we are quite conscious of the fact that it has been a difficult matter to present this very complex matter without a good deal of apparently personal feeling or feeling on the part of some Members of the House that this transfer should not even take place if it would save a million dollars a year. We are only interested in the economy and efficacy of the proposition. We are not interested in any war between the States. I wish to make that clear.

Now, answering the distinguished gentleman from Chicago as to whether or not the northeast corner of Massachusetts is a suitable place to transfer this facility, let me read from the hearings which I have before me.

The gentleman from Pennsylvania [Mr. VAN ZANDT], asked another question, as to whether he was going to cut himself off from access to any particular source of knowledge in the Chicago area, and Dr. Sieling on page 66 of the mimeographed hearings said he was not.

Mr. VAN ZANDT then said:

It is available at Natick?

And Colonel Flanders said:

Yes, sir. Right now the Natick command manages the contract administration on the various contracts for Food and Container.

I wish to say to the House that Food and Container is the facility we are talking about in Chicago. They are managing now as far as contracts are concerned from Natick.

This they will continue to do, but will have closer liaison with the technical people who also work on the contracts. These contracts are spread over the country right now. They are not restricted to the Chicago area. As a matter of fact, relatively few of them are in the local Chicago area. They are throughout the country now.

Mr. YATES. I sincerely believe that the Chicago location is better for the Food and Container Institute. It is better for the Army, for the Quartermaster Corps, and for our country. This study called for by my amendment is essential so that we can act on the basis of all the facts in the matter. I urge adoption of my amendment.

Mr. BATES. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, we have just listened to the very able and resourceful gentleman from Illinois. He is a clear thinker when he wants to be. He is a master of confusion when that would serve his purpose.

This is the third presentation that the gentleman has made on this subject. Today without any concrete reasons he is asking for a new study. Last year he came before our committee and implored the committee to have what he then called a survey by the General Accounting Office. In addition to that the committee accommodated him even further, and assigned a special subcommittee to investigate the matter. Today the gentleman comes here again without a plan and only with dilatory tactics. His approach, of course, is provincial; we all understand that.

I would have the Committee keep this one thought in mind: There is not one of us in this Chamber who has not talked about waste and inefficiency in the Federal Government. Here, Mr. Chairman, is an opportunity to save $1 million a year.

The Department of the Army is asking us to save $1 million a year, and the taxpayers of the country are going to be interested in our answer.

I am not going to take a regional approach. I am not going to convey my own thoughts. I am going to quote what the experts who have studied this matter down through the years have said.

The gentleman from Pennsylvania [Mr. VAN ZANDT], and the gentleman from California [Mr. DOYLE], went out to Chicago, they also went to Natick, and this is their conclusion:

Suffice it to say it appears there will be an annual saving of at least $900,000 if the transfer is made to Natick, Mass.

Here is an unprejudiced, unbiased subcommittee of the Committee on Armed Services, which was assigned to make this study. The gentleman from Illinois was very grateful when the committee was assigned. They recommended it be sent to Natick, and even if it did not save any money, they said, the bringing together of this child out in Chicago with the parents up in

Natick, Mass., is the sensible thing to do from the point of view of management.

Last year the Secretary of the Army, Wilber Brucker, said:

> The Army decision favoring relocation of this facility to the Quartermaster Research and Engineering Center of Natick, Mass., is still valid. It is our desire to make this move just as soon as possible.

The Director of Research and Development of the Army, Richard S. Morse, said this in a letter:

> We in the Army have extensive data demonstrating both the economic and management advantages which would accrue from consolidating our activities at Natick.

This is not what I am saying. This is what responsible authorities of government are saying to the Congress.

On yesterday I spoke to the gentleman from Illinois, at which time he told me he was going to bring up this amendment today so that the Secretary of the Army could have another "study" made. I think that was the word which the gentleman used.

Mr. YATES. To have a study made for the first time of the possibility of leaving it in Chicago.

Mr. BATES. We have been down this road many times. The gentleman is looking for a will-o'-the-wisp, someone to agree with him, and I expect as long as this is around the Capitol he will try to find somewhere, somehow, someone who might concur in his thinking.

So to make absolutely certain the present Secretary of the Army still shared the same view that every other Secretary has shared, I got in touch with him on the telephone. I said: "The Congress is going to be interested today in your present thinking. Will you write me a letter and have it hand delivered to me today? The Members are interested."

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

(By unanimous consent Mr. BATES was allowed to proceed for 4 additional minutes).

Mr. BATES. Mr. Chairman, this is the letter I received today, dated March 22, 1961, from the Secretary of the Army:

> DEAR MR. BATES: This letter is in response to your telephone request to Mr. Richard S. Morse, Assistant Secretary of the Army (R. & D.) for current information on the transfer of the Quartermaster Food and Container Institute from Chicago, Ill., to Natick, Mass.
>
> The planned move has been the subject of extremely careful review and analysis. Last year the Army proposal was studied by the Department of Defense, the Bureau of the Budget, and extensively by the General Accounting Office. In addition, a special subcommittee of the House Armed Services Committee was established to visit both sites and to determine the desirability of the proposed move. This subcommittee, with due consideration to the technical, managerial, and operational aspects, concluded that the move should be made, even were the costs at Chicago and Natick identical. They concluded, in agreement with the Department of Defense, Bureau of the Budget, and General Accounting Office studies, that there would, in fact, be substantial savings.
>
> The possibility of relocating the facility at the Illinois Institute of Technology has been carefully considered throughout. The Army determined that even apart from economic considerations, good management demands the choice of Natick, in agreement with the findings of the House subcommittee.
>
> Thus the Army's position is sound, and has been reaffirmed by the most searching review. I hope you will do everything you can to assure final passage of necessary appropriations at this session of Congress.
>
> Sincerely,
>
> ELVIS J. STAHR, Jr.,
> *Secretary of the Army.*

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. BATES. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. The amendment we are considering contains this language:

> In connection with such studies the Secretary of the Army shall communicate with the Advisory Board on Quartermaster Research and Development of the National Academy of Sciences.

In this connection I would just like to read a very interesting news article taken from the Chicago Daily News, Saturday, March 11, 1961. It states:

> City losing fight for Army Institute.

Then it goes on to quote my colleague, the gentleman from Illinois [Mr. YATES]:

> YATES said that Chicago simply had failed to come up with an adequate counterproposal to the proposed move.
>
> He had been counting on a study prepared at the Illinois Institute of Technology to reinforce his arguments to keep the Institute in Chicago.
>
> But he said the study was "something of a disappointment" to him.

The article continues by saying:

> It is 100 pages long, he said, and does not seem to contain a clearcut counterproposal.
>
> Among other things, the study suggests that the National Academy of Science make a study of the situation.

Then the article quotes the gentleman saying this:

> YATES said he checked with the National Academy of Science and was told that the academy does not make studies of this kind.

Mr. YATES. Mr. Chairman, will the gentleman yield, in view of the fact that my name was mentioned many times by the gentleman in this article?

Mr. BATES. I yield.

Mr. YATES. Let me say that since that article was written I have received a proposal that is satisfactory from the Institute of Technology so that it serves to correct the situation. Let me say further that since that article was written I checked again with the National Academy of Sciences and found that they did have an advisory committee that is instituted to do exactly that kind of work.

Mr. BATES. So, in brief, Mr. Chairman, as the smoke drifts away, it is obvious what the situation is. The amendment provides that the Secretary of the Army shall study this matter. Here is the reply from the Secretary of the Army:

In addition, our people are interested in economy.

Mr. Chairman, let us not be provincial. Let us defeat the amendment and get along with the Nation's business.

Mr. DOYLE. Mr. Chairman, I move to strike out the last word, and I ask unanimous consent to proceed for 5 additional minutes and to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. DOYLE. Mr. Chairman, the hearings held before our subcommittee have been mentioned by the gentleman from Illinois, Mr. YATES. I think perhaps the best evidence of what those hearings disclose is to read from the hearings themselves where they are pertinent.

Mr. Chairman, up until a few days ago the subcommittee believed and was informed that the effort today, if it was taken, would be to retain and modernize the Chicago building. Manifestly that idea has been waived, because it would be ridiculous to spend any sizable sums of money on that 6-story warehouse that was built over 40 years ago and where we had the hearings. Mr. Chairman, I wish to repeat that the only factor which has been mentioned so far in this discussion as the reason why this transfer from Chicago to Natick, Mass., should be made, is the factor of the saving of money. The reason we can be sure of saving $900,000 at least annually is because it has been virtually stipulated, and the evidence shows, that there was a sum of $600,000 which was fixed overhead by the Army to act as landlord in Chicago. The reason we can state to the Members on the floor that there can be $900,000 minimum saved by this proposed transfer is that it was shown clearly that there was at least $600,000 being expended by the Army Quartermaster Corps in Chicago for overhead of this former warehouse building. That was a charge against the Army which they wished to get rid of. There is no question about that being a minimum amount; it probably is much more.

In addition to that, it is as clear as crystal that there is another sum, between $300,000 and $500,000, which will be saved by the transfer, if it is made, because of the transfer of activities from Chicago to Natick and the resulting elimination of personnel and duplication between Chicago and Natick.

Mr. VAN ZANDT. Mr. Chairman, will the gentlemen yield?

Mr. DOYLE. I yield to the gentleman from Pennsylvania, a member of my special subcommittee.

Mr. VAN ZANDT. Is it not true that we took a look at the estimated cost of a building at Fort Sheridan, as well as a building on the campus of the Illinois Institute of Technology and when we added the extra costs of Army support facilities such as dispensary, post office, etc., we found the estimated costs of

each building was in excess of the cost of the building at Natick?

Mr. DOYLE. That is substantially correct.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. DOYLE. I yield to the gentleman from Illinois.

Mr. YATES. Was the subcommittee apprised of the cost of constructing on the campus of the Illinois Institute of Technology a building comparable to that which is suggested for the installation at Natick?

Mr. DOYLE. I would say no.

Mr. YATES. Of course, it was not.

Mr. DOYLE. I would say no, because the Institute of Technology, according to the Army, never made a definite proposition, which could be considered as comparable.

Mr. YATES. That is correct.

Mr. DOYLE. That shows from the hearings, that the Institute of Technology had been asked for a proposal, but it never submitted a complete one. The record of the hearings shows that, so we had no way of comparing the costs, nor program of construction, of any new building for the Army use.

Mr. YATES. Mr. Chairman, will the gentleman yield further?

Mr. DOYLE. I yield.

Mr. YATES. Let me say to the gentleman that I checked with the officials of the Institute of Technology and they said that they had asked the Army for its requirements, but they had never received them. They said they had asked for them time and time again. I say that the Army wants to put the installation at Natick and it is not interested in giving anybody else a fair chance.

Mr. DOYLE. Of course, the gentleman realizes that I am only able to refer to the evidence which came to my subcommittee. I do not know what was the gentleman's conversation with the Institute. I am relying on the evidence as it appears of record. Mr. Chairman the second factor which must be taken into consideration by this House—and I have never been so accurately or fully informed as to the operations of scientists as I was at this hearing—is this: They made it crystal clear that an element, a basic element, a basic necessity, between scientists is that they have the opportunity to confer, to work together, not to be scattered, not to have to depend upon telephone calls and upon extensive travel to meet with and compare notes. So the second factor that the distinguished scientists of the Army and of the Institute proved to us, was the ability of the scientists to be bunched at one headquarters where they could have the advantage of developing their scientific research and giving it practical application as a team.

The evidence before us showed, and it was uncontroverted, that the great mass of scientific work done by the Chicago Container Institute, as compared with the present Army installation at Natick, Mass., was strongly in favor of the Massachusetts facility. They have already expended almost $12 million. In other words, the great mass of the work is now being done in Massachusetts, with only a limited portion of it being done in Chicago.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. DOYLE. I yield to the gentleman from Massachusetts.

Mr. BOLAND. I think the gentleman makes a very important point here. It is not the money alone with which we are concerned, the matter of liaison is important, and the liaison is more effective today. That is an important point that ought not to be overlooked by the Members.

Mr. DOYLE. There is this important fact that must not be overlooked. The Chicago Container Institute has in its employ or direction over 200 personnel. To a large degree that personnel would be eliminated if there were a transfer, and thus the salary saved where it duplicates. I think it is quite true, and the evidence showed, as the gentleman from Illinois [Mr. YATES] stated, that if a transfer is made a certain percentage of the Chicago residents will not move to Massachusetts; but the record also shows, that the number numerically that will not move even though they are invited to and have the opportunity to go there and hold their job ordinarily varies between 25 and 33 percent. But the saving should not be overlooked in the elimination of the duplication of personnel under the assignments.

This outfit at Chicago or Natick must employ military personnel and it must employ approximately 200 civilian personnel. That duplication will be eliminated, which is worth considering, I am sure.

I will not read here for your benefit the statements by the distinguished scientists showing it is an absolute necessity in order to get the most efficacy and economy in scientific matters, to have the scientists where they can pull together as a team. This hearing is full of that kind of testimony. It shows very clearly that not only will a considerable sum of money be spent as far as dollars are concerned, but that greater progress and efficacy in science can be made at considerably less cost.

In closing, may I read this from the hearings before my subcommittee which is a statement by Dr. Sieling, one of the famous scientists of our country in the employ of the country:

> The people working here at the Food and Container Institute primarily are in the food research program. We do not have a duplicate organization in this scientific research area in Natick. There are three divisions in the Food and Container Institute; there are five at Natick. We would add the three here in Chicago to the Natick organization, and we would utilize laboratory-type buildings that we already have there that are not now yet used for laboratories, for laboratory space.

Then at this hearing we were greatly helped by the gentleman from Illinois [Mr. YATES]. We were very glad we invited him to participate. The hearing record will show that he did very ably and helpfully participate in asking questions.

This record, if I had time to read it, would show that the gentleman from Illinois [Mr. YATES] questioned Colonel Flanders and the personnel quite extensively about the Illinois Institute, as a possibility. He brought out material evidence about that.

Without bias, without any personal interest in the outcome, without any feeling that there is a war between the delegations of the States as stated by Mr. YATES and inasmuch as I had the great honor of acting as the chairman of the subcommittee, in view of the evidence I heard, on which I rely, I recommend that the transfer be made and the amendment be defeated.

Mr. VINSON. Mr. Chairman, I ask unanimous consent that all debate on this amendment, and all amendments thereto, close in 40 minutes.

Mr. GROSS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. VINSON. Mr. Chairman, I move that all debate on this amendment, and all amendments thereto, close in 40 minutes.

The CHAIRMAN. The question is on the motion offered by the gentleman from Georgia [Mr. VINSON].

The motion was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. PRICE].

(By unanimous consent, at the request of Mr. GRAY, the time allotted to him was transferred to Mr. PRICE.)

Mr. PRICE. Mr. Chairman, I think the gentleman from California [Mr. DOYLE], a member of the special committee that made a special study for the House Committee on Armed Services, gave the best evidence for the necessity of adopting the amendment the gentleman from Illinois [Mr. YATES] has offered here this afternoon. Mr. DOYLE in the colloquy that has so far occurred on the floor has made two pertinent statements, each of which if you study them carefully indicates the necessity for further survey and study of this proposition.

First of all, Mr. DOYLE stated that up until a few days ago, in their study of this proposition, they were thinking of a program that would require the modernization of existing facilities at Chicago or the construction of a new building at Natick.

Mr. DOYLE. Mr. Chairman, will the gentleman yield?

Mr. PRICE. I yield.

Mr. DOYLE. I think the gentleman must have misunderstood what I said, because I said we had not been informed until a few days ago that we were studying the question of modernization.

Mr. PRICE. That is correct, until a few days ago you were not informed of what the real issue in this matter was, for it was the thought then that we were dealing with an old, obsolete structure in Chicago that did not lend itself to modernization except at exorbitant cost, against a new building that would be built on a new site at Natick, Mass. The real proposal here, of course, and the

necessity for this study, is that if you are going to move into a new building somewhere else why not give consideration to the construction of a new facility at the present location of the existing facility. By that I do not mean the exact spot on which the old building is located, but at, for instance, the site that is offered by the Illinois Institute of Technology or even Fort Sheridan, although I think the more likely spot and the more feasible location would be at the Institute of Technology in Chicago, on which a proposal has been made which in itself would result in a saving to the Federal Government.

The other pertinent statement that the gentleman from California [Mr. DOYLE] made was that when the gentleman from Illinois [Mr. YATES], made reference to the fact that a great deal of support for this facility originated in the Chicago area, the gentleman from California said that the major source of this work came from all over the country, and that is completely correct; it comes from every section of the country. Therefore, this institute should be in the central section of the country, as near to the center of the country as it can possibly be; and that is the reason the Midwest is an ideal location for this facility. In my opinion it would be very unwise to move it to the eastern seaboard or even to the western seaboard. Since the work does originate in every section of this country, it will be better to have this facility located in the most central place possible; and, of course, I suggest that the Midwest meets this particular criterion.

The people who deal with this particular Institute are the people in the food industry and in agriculture. The great majority of these people have their operations in the Midwest, not all in the immediate Chicago area, but certainly closer to the Chicago area than to the eastern seaboard. The great majority of those industrial concerns who do business with this particular Institute favor a location in the Midwest.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

The Chair recognizes the gentleman from Massachusetts [Mr. MARTIN].

Mr. MARTIN of Massachusetts. Mr. Chairman, I am a man of peace and do not desire to get into a sectional fight. But inasmuch as Natick is in my district, I feel I should express my opposition to the amendment.

In the first place, may I assure the distinguished gentleman from Illinois that Natick is not situated in the foothills of Massachusetts. It is a very busy, lovely town of 27,000 people with an historic past, located just outside of Boston.

This is not a partisan fight or a sectional fight; it is to decide what is best for the taxpayers of this country, what is best for the armed services of the country. The recommendations from the War Department, the Committee on Armed Services, both the subcommittee and the full committee, we should accept their judgment. When we find a department actually interested in efficiency and economy, let us back them up.

The decision to move the Quartermaster Food and Container Institute from Chicago to the Quartermaster Research and Engineering Center at Natick, Mass., was reached only after the most careful consideration by the Army authorities directly concerned and by the Armed Services Committee following an on-the-spot inspection trip of both areas by members of the committee. They concluded that the move should be made in the interest of the most economical and efficient operation.

We are informed that the existing facilities at Chicago are housed in a warehouse-type structure, which has become increasingly inadequate and obsolete for modern research and development work. By moving the Institute from its present unsuitable quarters to Natick, the best estimate is that the Army and the taxpayers will save $1,100,000 annually, $800,000 of which is in overhead costs to support the center. Additional savings of $300,000 will accrue from integration of the overhead and technical staffs which are now duplicated at Chicago and Natick. The estimate of savings was supported by a study of the General Accounting Office, which conducted an audit of the claimed economies. I am sure we can all agree that the General Accounting Office would have been completely impartial in its analysis and would have had no regional ax to grind.

I submit that these savings should not be lightly disregarded at a time when we are spending billions of dollars annually for the national defense and when every defense dollar should be put to its most effective use.

Over and above the monetary savings, the conclusion was reached by the Army authorities and by the Armed Services Committee that important scientific advantages will result from the consolidation of the laboratories.

The scientific work carried on at Chicago and at Natick are part of an Army program to promote the efficiency of our servicemen. Joint projects and related areas of effort exist between the people working in Chicago and those in Natick. For example, studies at the Institute at Chicago on the effects of food and water upon work performance directly tie in with similar work being carried on at Natick. Specialized equipment owned by the Government at Natick provides research facilities not now available at Chicago except by rental or contract.

Moreover, the separation of the scientists and technical people at Chicago from their colleagues at Natick deprives both groups of one of the most essential factors in research efficiency, which is close and intimate association on a daily basis on related problems.

This fact was clearly recognized by the special subcommittee of the House Armed Services Committee in its report of an investigation conducted in May 1960. The subcommittee concluded that while substantial economies would result from the move, they would favor it for its scientific advantages even if no economies were to result. The committee likened the move to "uniting of child and parent."

In six States within a 300-mile radius of Natick are 147 laboratories with a staff of 5,121 men and women engaged in food research. The high quality of industrial research laboratories and educational institutions in the Boston area insures adequate staffing at Natick.

The Army has requested in this bill $3,812,000 for construction of these laboratory facilities at Natick. This cost will be amortized in less than 4 years, based on the savings which consolidation will permit.

I hope this item will be retained for the best interests of the country, as the Army and the committee have recommended.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. KLUCZYNSKI].

Mr. KLUCZYNSKI. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Illinois. I ask unanimous consent to revise and extend my remarks at this point in the RECORD.

Mr. Speaker, the Quartermaster Subsistence School, a forerunner to the Food and Container Institute, was established in Chicago in 1921. Two factors dictated this location: First, proximity to a military procurement agency, and second, proximity to research facilities at nearby universities and food and packaging industries. In July 1936, a Subsistence Research Laboratory was established. Its general mission was to provide the Office of the Quartermaster General with technical advice on the merits of various food products it was required to purchase. The new Subsistence Research Laboratory began its operations with two civilian staff members and one officer. By September 1941, the technical staff numbered 13, and a rough division of responsibility was effected in terms of commodity groups. The tremendous increase in workload at the beginning of World War II, coupled with personnel shortages, necessitated the establishment of separate commodity branches and the delegation of responsibility and authority to them. Additional branches were established as the workload increased and personnel became available.

On December 14, 1942, the Subsistence Research Laboratory, which was initially a division of the depot and part of the supply division, Office of the Quartermaster General, became responsible to the Subsistence and Packaging Station, Research and Development Branch, following establishment of the recently created Military Planning Division. For such administrative matters as personnel, supply, travel orders, and janitor services, it remained under the jurisdiction of the Chicago Quartermaster Depot. To alleviate the overcrowded condition of the Subsistence Research Laboratory, a new laboratory was constructed on the sixth floor of building and dedicated on January 3, 1944.

Shortly after moving into these new quarters, the Subsistence Research Laboratory was redesignated the Quartermaster Subsistence Research and Development Laboratory. From the small, ill-equipped group it had been at the

start of the war, the Subsistence Research and Development Laboratory now conducted programs of broad scope and complexity, and these programs forced new organizational changes. In the fall of 1944 its Director became, in addition, Director of the Subsistence Section of the Quartermaster Corps, Washington, requiring him to divide his time between Chicago and Washington. Accordingly he appointed two assistant directors, one for commodity development and one for technical services, to coordinate activities of the development and technical branches, respectively.

In February 1945, a Project Control Board of Subsistence Research and Development Laboratory staff members was instituted to review and coordinate internal projects; at the same time, a Committee on Food Research was established by the subsistence section to organize and administer an external research program.

The Laboratory's wartime activity was at its peak in July 1945. Its personnel numbered 284, of whom 68 were military. It dealt directly with hundreds of food and packaging concerns, with university research groups, and experienced both formal and informal relationships with several other governmental agencies. In November 1945, it was made a class IV, later a class II, activity, and its wartime Director became its first commanding officer.

Early in the postwar period, additional missions were assigned to the Quartermaster Subsistence Research and Development Laboratory, among them the responsibility to provide research and development for containers for all Quartermaster supplies except fuels and lubricants. The Subsistence Section in Washington was deactivated, and its responsibilities were transferred to the Laboratory. In recognition of its increased duties, the Subsistence Research and Development Laboratory was renamed the Quartermaster Food and Container Institute for the Armed Forces in 1946.

There are many organizations in the Chicago area who are vitally concerned about the proposed move of the Quartermaster Food and Container Institute from Chicago to Natick, Mass.; among them is the Illinois Institute of Technology which is located just two blocks from the eastern boundary of my district. Specific information on events leading to the proposed move are not in their possession. Specific data used in the planning of the move are not available.

During the hearings on the military construction bill held by the Armed Services Committee on February 23, 1960, the requested authority submitted by the Army for the expenditure of $3,628,000 to build new facilities at the Quartermaster Research and Engineering Center, Natick, Mass., for use by the Quartermaster Food and Container Institute, was stricken from the bill.

The chairman of the Armed Services Committee appointed a Special Investigating Committee to study the matter and to survey the Chicago administration center, including the Institute. The committee was instructed to make its recommendations as soon as possible so that whatever action appeared proper could be taken during consideration of the military construction bill. On March 2, 1960, the House Armed Services Committee favorably reported on H.R. 10777, a so-called clean bill, without the authorization for construction of facilities at Natick. The House approved this bill by a 404 to 4 vote.

On April 27, 1960, the Subcommittee on Military Construction of the Senate Armed Services Committee considered Senate 3006, a bill identical to the original House measure. It deferred action on the Research and Engineering Center item, and the subcommittee's chairman granted opponents an opportunity to make additional comments after studying a new report, prepared by the General Accounting Office, which analyzed the costs of the "planned inactivation" of the Chicago Administration Center. Provisions were made for the subcommittee staff to gather additional evidence on three points.

First. The difference between the Army estimate of savings resulting from relocation and the estimated savings based on the study of the General Accounting Office.

Second. The "management savings" which can be effected by consolidating the Institute with the Research and Engineering Center.

Third. The cost of new construction in Chicago based upon the same space allowances as the proposal for the new construction at Natick.

The Special Investigating Committee for the House Armed Services Committee visited the Chicago Administration Center on May 7, 1960, and a written transcript of the hearings has been issued.

The most valuable asset to any operation is its personnel, and this is particularly true for a research and development operation. It is my understanding that the Army has not canvassed the personnel of the Food and Container Institute regarding their attitudes toward the proposed move of about 1,000 miles. The Army risks the loss of up to 70 percent of the F. & C.I. staff by such a move. Many of the employees are residents of my district. They are married and have families. They would be reluctant to have to dispose of their homes, to place their children in new schools and move away from the neighborhood where they were born and raised. It is these individuals with whom I am chiefly concerned. Parts of Chicago have been classified as critical areas and I would doubt very much whether the Administration wishes to add to the unemployment figures which are still very high.

The Army points to economies that would be effected by the use by the Food and Container Institute of facilities already in existence at Natick. The basic facilities for food research and for container research conducted by the F. & C.I. must be located at the Institute and controlled by Institute personnel. The next most important facilities are costly laboratories and equipment directly applicable to food and to container research. These facilities are not at Natick, but in the vast food and container industrial laboratories, universities, and independent research institutions, a great majority of which are centered in the Chicago area.

Technology Center is in the heart of Chicago and Chicago is in the Nation's undisputed center of food production and processing. Chicago is the center of distribution for the dairy industry. Poultry and eggs, both highly perishable commodities, are produced in quantity nearby, and shipped out of Chicago to markets around the world. A major portion of America's fruit and vegetables funnel through Chicago; in fact, more fresh produce passes through Chicago than through any similar center anywhere in the world because of its central location and the availability of refrigerated warehouse space. Chicago handles enough grain to be known as the Nation's third largest granary. The Chicago area manufactures more containers of all types than any other area in the Nation because, as in the case of food products, it is close to the sources of supply. Chicago is the headquarters of all major trade associations in the food industry and a large percentage of their national meetings and conferences are held there. It is the National Center of Industrial Food Research Laboratories. It is the National Center of Industrial Container Research Laboratories.

To the many civic and business organizations, to the officers and members of the Chicago Association of Commerce and Industry, I wish to express my genuine and sincere thanks for their efforts in endeavoring to retain the Food and Container Institute in Chicago.

In particular I wish to convey my gratitude and deep appreciation to the officials of the Illinois Institute of Technology for the part they have played and their active cooperation in the matter. They merit the plaudits of all the people of our city for their offer of land to hold the F. & C.I. in Chicago.

With all of the advantages which are available in Chicago, it is difficult to comprehend any sound or logical reason why the Army appears to be insistent on moving the Food and Container Institute to Natick, Mass., when they don't even have a building into which they can move and must await construction of one.

I sincerely trust that the House will support the amendment to strike the item to move the F. & C.I. item from the bill.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. PUCINSKI].

Mr. PUCINSKI. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Illinois [Mr. YATES]. It is indeed regrettable that the gentleman from Massachusetts [Mr. BATES] has characterized this amendment and our struggle to keep this research center in the Midwest as provincial. I do not see anything provincial in suggesting that the wealth of knowledge presently available from the University of Chicago, which produced the atomic

bomb, the Illinois Institute of Technology, the Armour Institute, which today is doing work for the Government in various critical fields of defense, Northwestern University, and the great food industry situated in Chicago, continue to be made available to the Food Container Institute. I do not see anything provincial in making a suggestion that the city of Chicago and the Midwest be permitted to keep this research center in that city so that the wealth of scientific knowledge concentrated in Chicago can continue to serve the best interest of our Nation. There is a fundamental question here which every Member of Congress will have to wrestle with. This $3.5 million is just the beginning, and do not let anybody kid you about economy. This $3.5 million building that is going to be moved to Massachusetts is only a beginning to move the Nation's entire research program to Natick. I for one resent the idea that the great Midwest, the South, and the western lands of America ultimately should not be permitted to make their contribution toward research for this country's survival by centralizing all food research in Natick, Mass.

Therefore, I say to my colleagues, when you ponder this question, think of your own area, think of your own community, and think of the contribution that it can make toward America's survival. Research and development are the magic words in this country today. You know it and I know it. I can see the trend now. This seemingly innocent beginning means that eventually all research will be centered in the East. It is patently apparent that the vast scientific knowledge now available at these universities in Chicago and in other universities throughout the Midwest, the West, and South will be denied to the Government by moving this institute to Natick, Mass.

Therefore, Mr. Chairman, I rise in support of the amendment offered by the gentleman from Illinois [Mr. YATES]. I think that we in the Midwest, who have produced the atomic bomb and done great research in every field of human endeavor certainly should continue to play a part in this field of food research. Food is going to be one of the most important elements of our survival in this atomic age, and I say that because we have the food industry located in Chicago along with these outstanding scientific facilities, the Army should be asked to review its decision. The decision to move the institute to Natick has been based on dollars and cents with no consideration given to the value of scientific assistance available in Chicago. I think the Army is wrong in doing this. I think that the question is fundamental as to whether or not the Midwest is going to play a part in this important research, and therefore I urge you very strongly to vote for this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. VAN ZANDT].

Mr. VAN ZANDT. Mr. Chairman, let me begin by pointing out that what we are talking about is a research and engineering effort. This is not an activity of Government that has to do with buying large amounts of food. I repeat, it is a research and engineering effort.

I shall first describe the Chicago Administration Center by reading from the special subcommittee's report and this is what it says:

Chicago Administration Center:

The Chicago Administration Center facilities were constructed over 40 years ago at a cost of approximately $6 million. The installation, designed as a warehouse, consists of three six-story reenforced, concrete and brick buildings with a total of 1,868,280 square feet. In addition to the Food and Container Institute, the installation provides space for 12 other quartermaster activities, 13 5th Army activities, four other Department of Defense activities, and six activities of other departments, primarily the Post Office. The annual facility operating costs are approximately $2 million. The current appraised value of the property is $4,800,000. It is pointed out that the recovery which the Government might make by reason of the sale of this building has not been considered as an economic element at any time in this report.

There are approximately 1,600 employees working in the facility. Of these, approximately 1,000 are civilian employees of the Department of Defense, 400 military employees of the Department of Defense, and 200 non-Department of Defense civilian employees.

The personnel of the Food and Container Institute, military and civilian, represents about 300 people. This is included in the above 1,600 gross.

Second, let me read what the report says about the Food and Container Institute, which is part of the Chicago Administration Center and I am now reading:

Food and Container Institute:

This is an element of the Quartermaster Research and Engineering Command which—

(1) Executes a research and development program for all elements of the Department of Defense covering—

(a) basic research in food nutrition, stability, and acceptance.

(b) design, improvement, and evaluation of military rations and food products;

(c) design, development, and evaluation of containers;

(d) research and development of food irradiation processes.

Now I would like to read to you what the report says regarding the Quartermaster Research and Engineering Center at Natick, Mass.:

Quartermaster Research and Engineering Center, Natick, Mass.:

The Quartermaster Research and Engineering Center at Natick was constructed between 1952 and 1954. It has a capital investment at this time of $11.8 million. It consists of seven major buildings and associated improvements, all specifically designed for scientific research, development, and engineering. The major scientific structures are a development building, a research building, and an engineering building. Supporting facilities include the climatic chambers and the solar furnace. In Maynard, Mass., at a distance of about 12 miles, there is a former ordnance facility now under the jurisdiction of the Quartermaster Corps comprising some 3,000 acres. This area has been and will continue to be used for certain research and test activities which require a large protective area.

Finally this is what the report says about this mission of the Natick Quartermaster Research and Engineering Center:

Quartermaster Research and Engineering Center, Natick, Mass.:

The laboratories of the QMR&EC performs basic research on the operational capability of the soldier under varying degrees of natural and military environmental stresses; basic research in the fields of biology, chemistry, and physics related to the development of items providing protection and effectiveness to the soldier; applied research and development of elastomeric, plastics, metallic, paper, chemical, or combinations though relating to health protection and military effectiveness of military personnel and equipment; applied research for the control and prevention of deterioration and damage in the area of corrosion, weather, fungus, insects, and rodents; applied research, design, development, improvement and evaluation of footwear, handwear, leather, clothing, tentage, and aerial delivery of equipment. Also, performs similar activity in materials handling, food service, heating, and oversnow equipment.

Now, Mr. Chairman, what I have read from the special committee report reveals this one fact, and that is, Natick is a centralized research and engineering center of the Army Quartermaster Corps and by transferring the Food Container Institute from the inadequate facilities at Chicago all programs will be under the roof of a modern and fully equipped research center. As I have said earlier in the debate the consolidation of the Food Container Institute with what is already at Natick will save the taxpayer some $900,000 a year, and may I add, amortize the cost of the transfer as well as the necessary buildings at Natick in the matter of 4 years.

Mr. Chairman, I am opposed to the Yates amendment, and urge the committee to join me in voting against same.

The CHAIRMAN. The Chair recognizes the gentlelady from Illinois [Mrs. CHURCH].

Mrs. CHURCH. Mr. Chairman, I do not know whether or not I qualify for the description given by the gentleman from Massachusetts [Mr. BATES] when he mentioned the possibility that a will-o'-the-wisp might rise in support of the amendment offered by the gentleman from Illinois [Mr. YATES]. But I assure you, however, I might be considered in that connection, I represent a very solid area of this country. I represent not only the Chicago area and Illinois, but that great, strong, firm Midwest which is not only the breadbasket of this country, but also is advanced in research and will feel itself ultimately deprived of a great activity, if through an act of what I would consider piracy, that activity, of which it has long been proud, is taken from it.

Mr. Chairman, in the few minutes allotted to me, permit me to say that I think there is more at issue here than the removal of an established agency that has been well tested by time. I think that every Member of this Congress might well stop and consider with what good faith we acted in 1952 when we were told that this Institute would not be moved; and when many of us from the Middle West supported happily the installation of facilities at Natick, on this assurance, I remind you, that the

Quartermaster Food and Container Institute would not be taken from Chicago.

Mr. Chairman, I repeat that in this instance there is every facility available in Chicago. Chicago is the heartland of the country. It is the center of industry; it is the center of communications by air, land and now, with the St. Lawrence Seaway, by sea.

I shall further confine my own plea to a brief statement of the reasons for my conviction that—in the interests of efficiency and service—the Quartermaster Food and Container Institute for the Armed Forces should remain in Chicago where its forerunner, the Quartermaster Subsistence School, was established in 1921.

The decision to place this activity in Chicago at that time was based on the proximity of the area chosen to the military procurement agency and its proximity, also, to nearby universities and food and packaging industries.

Accordingly, the Institute was set up in 1950 as an organization for research and development in foods and food packaging for the Department of the Army, reporting to the Quartermaster General. The Institute, which currently employs about 260 people, occupies a Government-owned building on Pershing Road in Chicago.

I would like, Mr. Chairman, to enumerate five advantages that Chicago offers for economical, efficient, and most successful operation of this Institute:

First. The center is near and maintains close liaison with great universities of our city—the University of Chicago, Northwestern University, Illinois Institute of Technology—and the Armour Research Foundation—the University of Illinois Medical Center, and, also, Mr. Chairman, with the Argonne National Laboratory. It has immediate access to the John Crerar Library, one of the greatest scientific libraries of the entire world.

Second. Likewise, because of its proximity to institutions of learning, it has been possible for the institution to employ and have access to technical personnel almost without equal. In addition to the colleges already mentioned, the Institute has contact with the University of Minnesota, the University of Wisconsin, Iowa State University, Kansas State University, University of Illinois at Urbana, Michigan State University, and Purdue University.

Third. Chicago is admittedly the center of the food production in America; and the Institute, while remaining in that city, has unparalleled contact with food industries—particularly those engaged in meat production and grain mill production. The laboratories of these industries are maintained in the Chicago area; and the saving to the Government in manpower hours each year from assistance by technologists furnished through industry advisory committees cannot be overestimated and certainly should not be overlooked.

Fourth. Because of the great number of food and container industries in Chicago, which is the center, indeed, of the container industry, the greatest number of food and container trade associations are likewise available for consultation by the Institute.

Fifth. As a great railroad center, as an important port on the St. Lawrence Seaway, and as the center of aviation in the country, Chicago is thus the logical place for continuance of the activities of the Quartermaster Food and Container Institute.

I certainly hope that the House in its good judgment will support this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. LANE].

Mr. LANE. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Illinois [Mr. YATES]. May I say that regardless whether the amendment prevails or not, I feel as all other Members here must feel, that our colleague from Illinois [Mr. KLUCZYNSKI] will remain a Member of the House of Representatives as long as he so desires.

Mr. Chairman, I know the House has listened very attentively to this debate for some period of time. There is not much that can be added to what has already been said. However, this item of $3,600,000 to authorize the construction of facilities for a Research and Engineering Center at Natick, Mass., to house the Quartermaster Food and Container Institute, was recommended by the Committee on Armed Services. This bill is not new to the House. We have had this matter before and due to some differences of opinion among Members of the Congress this item was deleted last year from the bill with the understanding that the chairman of the Committee on Armed Services, the gentleman from Georgia [Mr. VINSON], would appoint a committee of two members to investigate this subject matter. The members, one from California and one from Pennsylvania, did study this expenditure thoroughly. They studied it at great length and their report is now here for your benefit, Mr. Chairman—Report No. 70 from the House Armed Services Committee.

That committee was made up of the chairman, Clyde Doyle, that studious Representative from California, and the able gentleman from Pennsylvania, the Honorable JAMES VAN ZANDT.

Both members of the powerful Committee on Armed Services were impartial. They were sent out to investigate this matter most thoroughly. They did so. They visited Chicago and they went to Natick, Mass., and they reported back to the Committee on Armed Services in favor of this transfer. The House has already heard from some of the Members as to the reasons relied upon by the subcommittee for their recommendations. It has been stated over and over again that the Chicago Administration Center facilities were constructed over 40 years ago. The Quartermaster Research Center at Natick was constructed between 1952 and 1954.

Prior to the establishment of the Quartermaster Research and Engineering Center at Natick, this military installation was located during the second war years and for some years thereafter in my home city of Lawrence, Mass. At that time it was located in abandoned mill property of the Pacific Mills, a textile corporation which moved to the South. It is now located outside the city of Boston on the main highway from Boston to New York City.

Hearings have been held on this item before the full Armed Services Committee of the House, Senate Armed Services, House Appropriations Committee, study made by the Comptroller General, so that the matter has been thoroughly investigated. It comes to the House with the approval of all the various facets of the Army, the Office of the Secretary of Defense, and the Bureau of the Budget.

A conservative estimate by this transfer will be a saving of at least $900,000 a year to our Government.

Construction of facilities at the Illinois Institute of Technology and in other areas in the vicinity of Chicago have also been thoroughly studied.

I hope, Mr. Chairman, that the amendment will be defeated and this transfer of the Quartermaster Food and Container Institute from Chicago to Natick, as recommended by the Armed Services Committee, will be supported.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. Mr. Chairman, I was interested in the remarks of the gentleman from Massachusetts [Mr. BATES] who quoted letters from Secretaries of the Army, past and present. I can remember a couple of years ago when I quoted a letter from the then Secretary of the Army who was violently opposed to the sale of the San Jacinto Ordnance Depot, which he considered to be the best ammunition outloading facility in the United States. What the Secretary of the Army felt about that proposition did not seem to have very much effect on most of the members of the Committee on Armed Services. So I take with a grain of salt what the Secretary of the Army now says about the moving of this facility.

There is just no reason why Massachusetts or the Eastern Seaboard should run another raid on the Middle West. We have been raided often enough. Some people are getting expert on that sort of thing. We are in the heart of the greatest food-producing area of the world. You name it and we have it out in the Middle West in terms of food. If you have much more than cranberries and codfish in Massachusetts, I would like to know about it.

Mr. O'NEILL. In the field of science, you name it and we have got it.

Mr. GROSS. This installation ought to be left in Chicago. I support the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. O'NEILL].

Mr. O'NEILL. Mr. Chairman, I know of nothing that would sadden me more as a Member of the Congress than to see that lovable, smiling, effervescent charmer, the gentleman from Illinois [Mr. KLUCZYNSKI] of Chicago, who spoke a few minutes ago, leave the Congress

of the United States, except that I should leave myself. Meeting with Congressman KLUCZYNSKI on any given day is to make a dark or a bright day brighter. I consider him to be one of the most able Members of the Congress and I am happy to regard him as one of my close personal friends.

This does not come to a question of personalities, it does not come to a question of sectionalism. All of us today have made a lot of remarks about our sections of the country. The argument here is, this is a changing world we are living in, and every time something comes up that we try to change, an installation for the betterment of the defense of the Nation, the betterment of the work of the Nation, the betterment of the taxpayer, it is going to turn into a sectional fight. We have all kinds of reports on this matter. The reports all show that in the interest of the Government and the best interest of the country this should be moved to Natick. I trust that we will cast aside thoughts of the sections of the country we come from and think of the future of the legislation that is going to come before this branch. Let us not today set a precedent that every time the Defense Department wants to change an installation it is going to be a sectional fight.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. DERWINSKI].

Mr. DERWINSKI. Mr. Chairman, it is not my intention to add to the voluminous debate which has taken place on this amendment. I feel that the Members have been thoroughly exposed to the issues from both supporters and opponents of the amendment. My purpose is merely to clarify the entire debate and summarize the facts as follows:

In my humble opinion the Quartermaster Food and Container Institute should remain in Chicago rather than be transferred to Natick, Mass., for the following reasons:

The transfer would involve unnecessary expenditures for construction of new facilities. The proposed location in Natick obviously do not possess the central location which is Chicago's natural advantage. Furthermore, most of the basic industries which would be affected by this ill-advised move are located in the Midwest and the convenience of the Chicago location is therefore obvious. The Chicago area has a long record of cooperation and aid to the Food and Container Institute personnel and the entire program involved could be adversely affected by this move.

I believe this move would be detrimental to the national defense effort and feel that Congressmen YATES, PRICE, Congresswoman CHURCH, Congressman COLLIER, and the others who preceded me providing their detailed views should be sustained. I urge the Members to consider the obvious practicality of the Chicago location and support this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. CURTIS].

Mr. CURTIS of Massachusetts. Mr. Chairman, I would like to use a few moments of my time to ask a few questions of the distinguished chairman of the committee who brought in this report, the gentleman from Georgia, Mr. VINSON.

My first question is: The Army was very clear in recommending that this change would bring about substantial economies and better operation; is that not correct?

Mr. VINSON. The gentleman is absolutely correct, and notwithstanding that positive position of the Army, I designated two very distinguished members of the committee to make their own on-site investigation. They did so, and their report is before the committee, and it shows that at least an economy of $900,000 can be made.

The subcommittee was composed of the distingushed gentleman from Pennsylvania [Mr. VAN ZANDT] and the gentleman from California [Mr. DOYLE], and as a result when we went to conference, we asked that it be passed over until we could examine and analyze and study their recommendations. That we have done, and we brought it back and the department asked for it again. I certainly trust that the House will vote down the amendment offered by the gentleman from Illinois [Mr. YATES].

Mr. CURTIS of Massachusetts. I thank the distinguished chairman. So we have the Army and the subcommittee and, of course, we have the full committee, or the matter would not be here before us, saying that the real purpose of this change is to consolidate these two operations which are related, in the interest of greater efficiency.

Mr. VINSON. Exactly; the parent plant is in Massachusetts and this plant should be moved there to carry on this research activity. We have spent $11 million building the plant in Massachusetts, and this will eliminate a certain amount of duplication. We are trying to get rid of duplication because we are criticized all the time for indulging in it.

Mr. CURTIS of Massachusetts. I would also point out that, according to the report of your subcommittee, the Chicago plant employs 252 persons, while the Natick plant employs 1149. So if consolidation is necessary, it is only commonsense to combine the smaller unit with the larger one, rather than to move the Natick plant to Chicago.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. PHILBIN].

Mr. PHILBIN. Mr. Chairman, the quality of debate has been such up to this time that I feel anything I may say in opposition to this amendment would be like carrying coals to Newcastle, but I want to assure the House of my very deep regret in finding myself obliged to differ with my very good friends and esteemed colleagues from Illinois, for whom I have such great respect and deep affection.

I think it must be kept in mind by all of us these days that the national defense, particularly our facilities for research and development, are paramount considerations, and should never be determined or influenced by sectional questions alone.

The Quartermaster Research and Engineering Center at Natick, Mass., is engaged in a most essential, crucial activity. Much of its work is not only vital and most important, but highly classified, since it relates to indispensable new weapon systems, new methods, new techniques, having to do in many respects with making our fighting forces as a whole, more efficient and effective, and with saving human limb and life, providing good food and making the actual work of defending the country safer and more secure for many boys who may be engaged in it should war come and who are now engaged in highly perilous research aspects of the defense effort.

Obviously, there are many phases of this important work that I cannot discuss here, but it can be said that the mission of this center at Natick, just adjacent to Boston, is to achieve research, development, engineering and standardization programs that may be assigned by the Quartermaster General to translate development prototypes to mass production items, and to provide technical services and engineering support for all of this great work.

This particular authorization is for four items which have been given in detail before our House Armed Services Committee. They relate to an office and heavy laboratory building in the amount of something more than $2¼ million; a development building addition and conversion, in the amount of roughly $1,180,000; an animal laboratory facility in the amount of $317,000; an enlisted men's barrack addition in the amount of $33,000.

This proposal contains no reflection whatever on the great city of Chicago. If consummated, it would affect only a very limited number of personnel.

It is, primarily, a coordination, for purposes of efficiency and better research in very critical fields, of existing facilities in order to bring together activities that should be brought together, if we are going to have a truly cohesive, effective research and development system in this field and this time of crying need.

I need not remind the Members of this House how important this type of research is at the present time. Indeed, it is a key to many vitally necessary programs to safeguard personnel, to promote and advance modernization and improvement of our vital weapon systems and vital space programs, incidental to them.

For example, the animal laboratory facility, in itself, is of utmost, of greatest importance at this time.

The transfer of these other most essential and crucial activities to Natick will not only bring these essential activities together, but it will bring them together closer to the sources of the best possible national research and development facilities that are now present at, or near, the Natick location in the great scientific and research activities that are rendering such invaluable service to our national defense.

These items were in last year's bill, but for reasons well known to the Mem-

bers of this House, most unfortunately, they were deleted. But I will not here comment on the degree to which this deletion has cost us delay or setbacks in these important fields of research and development so vital to our space and missiles program and to the lives of our boys.

I want to suggest very strongly to this House that at this time of peril, the Nation cannot afford any more delays of this kind, nor can it afford not to have these essential activities coordinated and brought together in an effective manner so as to produce the results that are absolutely necessary for the security of this Nation and the welfare of the boys and the personnel who are, and will be, engaged in maintaining the security of the Nation. Foot soldiers, airmen, and space aeronauts alike all need the scientific skills and the help of the proposed Natick Center. To them it may be a matter of life or death.

To these boys who must have their food supply and their persons protected against great extremes of pressure, radiation, and temperature, the work of this center is a matter of survival, as well as success or failure, in their historic, crucial work.

I urge the House to defeat this amendment and stand behind the Defense Department, the Army, the Bureau of the Budget and the House Armed Services Committee in our efforts to strengthen the national defense and protect military personnel.

When these new facilities are available, they will provide laboratory and administrative space for the move of the Quartermaster Food and Container Institute from Chicago.

The economies and scientific gains that will be insured by this move were duly recognized in Report No. 70 of a special subcommittee of the House Armed Services Committee in May of 1960, after a very thorough study of the matter had been made.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. COLLIER].

Mr. COLLIER. Mr. Chairman, since I am not from Massachusetts and do not live in Chicago, you can recognize that my position is not one of sectional bias. Not only because the hour is getting late but because I do not believe I can add anything to the very persuasive arguments for this amendment in these few minutes, I shall extend my remarks and at the risk of being repetitious I say let us not be provincial; let us adopt the amendment.

Mr. Chairman, I would like at this time to register my strong opposition to the proposal to move the Armed Forces' Quartermaster Food and Container Institute from Chicago to Natick, Mass.

I will present evidence that the planned relocation of the institute not only would constitute a serious loss for Chicago and the entire Middle West, but would be unreasonably costly for the Government.

The two sites, Chicago and Natick, are scarcely comparable when one considers the completeness of all kinds of facilities already available in Chicago. These include unlimited food, food-container, food-freezer, other research facilities, and all types of installations that can be and have been of the greatest usefulness to the military. Unparalleled library reference works and laboratories at a number of universities in and near Chicago also are at the disposal of the Food and Container Institute.

Also, the recruitment of adequate technical personnel is simplified in Chicago because there are more institutions doing graduate food technology work in the Midwest than any other place in the United States.

Because Chicago is indisputably the Nation's center for food production and processing, such facilities are easily maintained there.

Before I cite some facts to support the foregoing data and before I pose some pertinent questions, let us see just what is the basic need of the Armed Forces when it comes to providing rations to troops operating, in these days, in entirely new theaters of war and using new modes of combat. A good answer is found in the assertion that it consists of "working with the food and packaging industries as partners," to quote Col. Rohland A. Isker, commanding officer of the Chicago Quartermaster Corps Food and Container Institute, from his article in a 1959 issue of the publication, Food Technology. Listening further to this officer, we find him explaining the problems of adjusting foods and packaging to the needs of military life when he asserts that it—

is more difficult in many ways than adjusting recruits to military ways of doing things. To do so requires a knowledge of the performance capacity of soldiers under stress, how ration systems fit into military operation systems, the potentials of the food and packaging industries for meeting the often exacting requirements of packaged rations—and a constant, day-after-day attention to the chemical, microbiological, physical, and psychological aspects of food. This is a large order as the outstanding group of men and women who made up my staff, and I, myself, have found out.

The requirements noted above already are available in the Chicago area, as I am about to show.

Chicago offers unrivalled transportation and communication facilities and, with the opening of the St. Lawrence Seaway, and establishment of direct flights to Europe, Chicago is no longer merely an inland city. This latter fact alone encourages food industries to hold their meetings here and helps to attract qualified personnel for the Institute.

A Chicago site would enable the Institute to maintain its close liaison with the Military Subsistence Supply Agency (MSSA) and the Army Subsistence Center. These groups meet frequently, often once a week, and make an estimated several hundred interagency telephone calls each week. It is of the utmost importance that the Institute be located near the MSSA because any improvement or development of rations results in new or revised specifications that are used by MSSA for procuring subsistence supplies for the Armed Forces.

Also, unless activities of the Institute are drastically curtailed, it can be operated in Chicago at less cost to the Government than if it were moved to Natick. The three main reasons for this are as follows:

First. The Illinois Institute of Technology already has land available and can arrange financing for a suitable facility in which to house this operation at comparable, if not considerably less, than at Natick.

Second. All heat, electricity, janitor and other housekeeping services now furnished by the Chicago Administration Center also would be required at Natick and the cost would be approximately the same wherever the institute might be located. Any savings claimed in this category are, in my opinion, purely fictitious; in fact, costs of telephone calls and administrative travel probably would be higher because of the need of the institute to maintain close liaison with MSSA. The Quartermaster Corps might save money, but overall Government expenditures would not be reduced by any appreciable amount.

Third. For relocation, the Government would have to spend directly and immediately about $6 million. This is because there is not now enough room at Natick for the research and engineering command to adequately house the institute. Also, it would cost about $4 to $5 million to move equipment and personnel—which now numbers about 246 workers.

While we are here considering relative costs, it seems highly relevant to request answers to some pretty pertinent questions that have come to my mind.

First, before the institute is moved, I would like to point out that the Illinois Institute of Technology—IIT—already has offered to erect a building or buildings that would be adequate to house the Quartermaster Food and Container Institute on its campus in the near south side of Chicago.

Officers and trustees of IIT feel such an arrangement would be mutually satisfactory and that such an agreement can be concluded. These people have made it clear that they are flexible in their thinking and are ready to cooperate with the Quartermaster General and others in developing a workable program.

I find ample precedent for accepting the IIT offer in the Duke University contract with Army Ordnance. It administers a $5 million basic research program annually. Duke has constructed a building on its campus which it leases to Ordnance.

It would be interesting to compare notes here and see whether the offer of IIT could or would be matched or approached at Natick. Examining the offer, I find that this technology school is willing to abide by Quartermaster specifications, agrees to erect such facilities under its direction, and will lease them either to the Institute or to another appropriate Federal agency for 10 to 15 years to allow for reasonable scheduling of amortization. It also would provide ample parking space and housing for the Institute staff on a preferential basis. Apartments in the vicinity of the campus owned by IIT would be made available, and IIT would provide essential services at cost, plus a small overhead fee.

I also find that unique and expensive equipment at IIT could be utilized by the Institute, including a nuclear reactor especially designed for industrial research; a nationally recognized computer center, and a source for gas-fission products.

Cost estimates include a building containing 180,000 square feet, $5,040,000, and installation of a laboratory and appropriate equipment, $900,000. The total cost would be approximately $5,940,000. I am informed that work probably could be completed about 18 months after final plans are submitted.

If the Quartermaster Institute were to locate at Illinois Tech, it would find that facilities now being installed on an entirely new campus, known as the Technology Center, in a few years will be among the world's best. In addition to the Illinois Tech's staff of 2,300, the new center already houses the Armour Research and Gas Technology Institutes, as well as offices of the Association of American Railroads.

What are the bases for alleged savings that purportedly would be effected if the Institute were to be relocated in Natick? Were alternatives to the proposed move adequately investigated? Were other agencies that would be a part of the relocation plan consulted regarding the proposed move? Were any benefits to the mission of the Institute alleged to be in the offing if the move were made?

Before any move such as the one contemplated is made, it is my strong conviction that adequate, complete, and mutually satisfactory answers to these questions should be provided by the responsible authorities. Even if these answers were acceptable, I still feel that, on the basis of evidence offered, the present Chicago location is by far the best for the Quartermaster Food and Container Institute. The mere fact that Institute each year spends its largest amount of money on contacts and consultations with food industries, all of which are either in or at a reasonable distance from Chicago amply justifies leaving the Institute where it is. To move it to Natick, Mass., would be to operate it by remote and unprofitable control.

The CHAIRMAN. The gentleman from Massachusetts [Mr. BOLAND] is recognized.

Mr. BOLAND. Mr. Chairman, I was very much touched by my friend Congressman KLUCZYNSKI. I would be the last here to ask him to sing his swan song and certainly not on a measure such as this. The gentleman from Illinois touches me; he has touched me in the past, and I expect he will touch me in the future.

Chicago. Chicago. Chicago. You could put those words to music. They roll out so mellifluously. The gentlemen from Chicago are most persuasive in this matter, as is the entire Illinois delegation. If it is not the diversion of Lake Michigan water it is the Calumet-Sag. The diversion of water from Lake Michigan, the St. Lawrence Seaway and today, the Food and Container Institute. So do not worry too much about Illinois or Chicago. They will survive very well if they lose the Food and Container Institute.

I think the thing this House ought to remember, and only this, is that there has been an impartial survey made by distinguished Members of this House, the gentleman from California [Mr. DOYLE] and the gentleman from Pennsylvania [Mr. VAN ZANDT]. This investigation was complete and impartial. They say this ought to be done, and it ought to be done because there will be a savings of $900,000 to the taxpayers of America. That is an important point.

But I think much more important is the fact that this is a repetition of a job that the institute is now doing in Chicago and in Natick. There is a related effort here. If we combine these two efforts we will save money, we will bring the scientists together, we will bring the men who are doing the work together and we will have a much more effective laboratory.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to my good friend, the gentleman from Illinois.

Mr. YATES. If the installation out in Chicago could perform the work, why do you want to build a new building?

Mr. BOLAND. This is to build the building. You will have to build a building in Chicago anyway.

Mr. YATES. We do not need a building in Chicago.

Mr. BOLAND. Not only the building of the building. It is combining the operations of both centers into an effective operation. That is exactly what the Department of Defense wants, that is exactly what the Quartermaster Corps wants, and that is exactly what the people of America ought to get.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, I wonder if my colleagues realize how late it is? I wonder if they realize that in the perilous times in which we live division is folly and national unity should be the objective of all our efforts. This is no time to arouse the passions of sectionalism. This is no time to say to the scientists of Chicago, and to the food producers and the container people in the great Middle West, "We are cutting you off. We do not need you." Have we not learned from our own experiences and our reading of history that strong nations are not built from the raiding of one section by another? That is exactly what is contemplated in the committee's proposal to take the Food and Container Institute from the one location where it should be, in the center of the Nation's food production and of the canning industry. There is not one logical argument to support such a suggestion.

I am not without high esteem and warm affection for my colleagues, the gentleman from Pennsylvania [Mr. VAN ZANDT], and the gentleman from California [Mr. DOYLE]. But it is carrying esteem and affection to the stretching point to ask that on the say-so of two colleagues from whom we have esteem and affection we should throw commonsense in the wastebacket and tell the scientists, and the researchers and the food producers and the canning industry to go jump in the lake.

The step that is proposed is altogether too important to be taken without the scientific study that is proposed in the amendment by my colleague from Illinois [Mr. YATES]. If war again unhappily should come, perhaps the Middle West, the center of the food production, the center of the container industry, the center of scientific research from whence came the atomic bomb, will not be needed. But let it not be said that the House of Representatives of the Congress of the United States acted on that presumption solely on the advice of two of its Members, who had visited Chicago and talked with a few Army officers.

It is ridiculous to claim that the matter already has been the subject of two or more studies. What was studied, and this could scarcely be called an exhausting study, was the relative cost of an operation in an old dilapidated and outmoded installation to one in a new modern installation. That was merely a matter of jotting down a few figures, and of course the answer makes us certain as the head or tails flipping of a coin with two heads.

What is proposed in Mr. YATES amendment is that a scientific study determine the cost and relative advantage of the continuance of the Food and Container Institute in Chicago, but in a new modern installation, with the cost and relative advantage of its relocation in Massachusetts. I do not see how any reasonable person can quarrel with such a proposal.

Mr. Chairman, in the interest of economy, efficiency and national security, the Food and Container Institute must remain in Chicago.

In 1921 the Quartermaster Subsistence School, a forerunner of the Food and Container Institute, was established in Chicago because of its proximity to a military procurement agency and because of the proximity of research facilities at nearby universities and food and packaging industries, and because Chicago was—and is—the center of food production and transportation.

During World War II as a result of the liaison established between the military, industrial and scientific research facilities in Chicago, American troops were the best fed in the world.

Where is the economy in throwing away the demonstrated value of 40 years of cooperative effort between the military, industry and research to transfer to a new location where this profitable liaison must be rebuilt?

WHY CHICAGO?

Unlimited research facilities have been and are immediately available. The Institute maintains close liaison with the University of Chicago, Northwestern University, Illinois Institute of Technology—and Armour Research Foundation—the University of Illinois Medical Center and the Argonne National Laboratory.

Two major research facilities much used by the Food and Container Institute are the Forest Products Laboratory

maintained by the Department of Agriculture located at Madison, Wis., and the Institute of Paper Chemistry at Appleton, Wis.

Recruiting technical personnel, always difficult in any location, is simplified in Chicago because institutions doing graduate work in food technology are more numerous in the Middle West than in any other section of the country. There are 11 easily within reach of Chicago: Institute of Meat Research, University of Chicago; Illinois Institute of Technology, Chicago; University of Illinois, Urbana, Ill.; Michigan State University, Lansing, Mich.; University of Wisconsin, Madison, Wis.; University of Minnesota, St. Paul, Minn.; Iowa State University, Ames, Iowa; Kansas State University, Manhattan, Kans.; Purdue University, West Lafayette, Ind.; Bradley University, Peoria, Ill.; Wayne State University, Detroit, Mich.

Not only do these educational centers provide training in food technology and container fields, their graduates are a source of supply of personnel for institutions operating in these fields. Moreover, the staffs of the universities serve as consultants and advisers.

FALLACY IN ARMY ARGUMENT

The Army has alleged that moving the Food and Container Institute from Chicago to Natick, Mass., is in the interest of economy and administrative smoothness. They point out that the inactivation of the center will save the Quartermaster Corps in the neighborhood of $1,150,000 a year. However, they are overlooking the fact that Illinois Institute of Technology has offered land and can arrange financing to provide facilities built according to Army specifications at comparable if not substantially less cost than can be provided and operated at Natick.

They overlook the investment in cooperation between industry, research, and the Army, one of the results of which has been that 60 percent of the research for which the Government does not pay a penny takes place in the Chicago area. Loss of contact with food manufacturers and source of packaging supply contribution to the work of the Institute would be a loss of incalculable cost to the Government and the taxpayers.

The location at Natick, a woods and stream area, 40 miles from the nearest cooperating facilities, would represent a further loss.

JOHN CRERAR LIBRARY

In contrast let me cite but one fact. One of the greatest research libraries in the world is the John Crerar Library. It is now planning to move to the campus of IIT. If the Institute takes advantage of the offer of IIT it will be on the same campus with this library, one of the greatest, the Armour Research Foundation, and the faculty at IIT. The research facilities at Technology Center include a 100,000-watt nuclear reactor, Univac 1105 high speed digital and many other such facilities, not merely accessible but immediately available. Their utilization could contribute significantly to the reduction of capital expenditures by the research establishments for similar installations and, at the same time make contributions of inestimable value to the research programs of the laboratories.

Illinois Institute of Technology is offering the Food and Container Institute the advantage of a technology center or research park location for a food and container research establishment which cannot be matched by any other location in the Nation. Major food and container organizations, located in the Middle West, have issued signed statements independently emphasizing the advantages of a Chicago location and opposing the proposed move from Chicago to Natick, Mass.

Armour's Research Foundation, an affiliate of IIT, has installed the first privately owned nuclear reactor in the world for irradiation research investigations, and is a recognized authority in this field. It is, at present, a contractor of the Food and Container Institute. It is well acquainted with the research projects of the Food and Container Institute and will cooperate with the Quartermaster Corps in the establishment of the facility at IIT's Technology Center.

Providing the actual nuclear processing and research capability for Food and Container Institute demands that recognition be given to the exceedingly important factor of technical backup and support. The vital importance of this backup cannot be overestimated, for experience in the Chicago area since 1954 has shown that without the existence and pledged availability of this support the program unquestionably would have made little progress.

ARGONNE LABORATORY NEARBY

I have mentioned the proximity of the Argonne Laboratory facilities. On several occasions special food sample irradiation was performed followed by immediate full-scale nucleonic evaluation of the samples for radiation by-products and inducer activities. This difficult feat—minimal time lag between processing and analysis—was accomplished solely because of the assistance, freely given, by Dr. Phil Gustafson of the Argonne Laboratory.

Not only does the Army research and development project on radiation preservation of food enjoy the advantage of being literally in the backyard of numerous radiation research and processing sites, but other projects conducted by the Institute profit by this circumstance. On five occasions in 2 months the services of radiation facilities were available and used to support special animal nutrition studies. These services included technical advice from Cook County Hospital and Michael Reese Hospital, as well as the actual irradiation between X-ray and gamma, from the University of Chicago Cancer Research Laboratory, Argonne National Laboratory Biology Division, and the Air Force Irradiation Center.

A specific example of the savings effected by accessibility of facilities can be cited in the occasion of the design of a very low level radio activity detector. This ordinarily would have required the services of highly paid consultants and advisers on electronic engineering. At no cost to the Government, Doctors Gustafson and May of Argonne National Laboratories, and Mr. Charleston, of the University of Chicago Cancer Research Laboratory, gave their services.

FOOD IRRADIATION RESEARCH

The logistic aspects of food irradiation research projects are seldom appreciated by anyone other than those directly involved. Movement of perishable foodstuffs in special experimental pack in a coordinated effort to meet a very rigid restrictive schedule is a constant problem to the Institute. These problems and many more are capable of quick solution not only because of the central, pivotal location of Chicago with respect to the rest of the country and the cooperative relations developed over a period of years with the representatives of the Nation's transportation agencies in this, the center of the U.S. communication net.

FOOD TECHNOLOGY BACKUP

On June 16, 1960, it was learned that a major change in experimental procedure would be required to support the Surgeon General's important study of the effect of irradiated food consumption on dog fertility. This change required the preparation on extremely short notice of 2,500 specially packed cans of food. Close liaison with competent and cooperative food companies in the area enabled the Institute to meet the deadline with time to spare. This deadline could not have been managed had the demand been placed on the Institute in any other than its present location.

Recent insistence on use of foods processed by 24-mev electrons in feeding studies has placed a requirement on the Institute to develop improved food handling facilities for use with the one source now available and capable of performing this type electron service. With the outstanding support of Continental Can Co. of Chicago an ingenious cartridge-type conveyor suitable for use with the General Atomics Linac—and the Quartermaster Linac when available—was developed, tested, and moved to source site in less than 2 weeks. Actually the project to develop the item was launched in a matter of hours and the agreement by Continental to support the work was received in less than 2 days. The resultant savings to Government in time and money from such well-established team-play are enormous.

CONTAINER TECHNOLOGY

As research continues, increasing amounts of information on microbiological kill and the relation of dose-distribution to bacterial survival have made it necessary carefully to examine the container field so as to insure maximum volume to surface ratio while at the same time keep overall dimensions within limits imposed by radiation dose-distribution and container material within the confines of zero toxicity, maximum seal strength, and so forth. The proximity of the Institute to the country's largest container manufacturers and to local research contacts at American Can

and Continental Can Co. has resulted in great progress in relatively little time at small cost.

Today, science and technology are expanding rapidly, and a dynamic food and container research establishment housed in appropriate space at a proper location is essential to keep our Nation abreast of new discoveries and developments. Such an establishment is vital to the welfare of the Armed Forces of the Nation.

Planning for facilities for research and development establishments is a complex matter. Such planning must include an analysis of current research and development programs and the development of long-range plans for research and development operations. Since the program of the Institute is so important, it is felt that the most competent authorities of the country should contribute to the planning. Chicago provides the climate for research and development work of the highest order in the food and packaging fields, and at the most competitive prices available.

INDUSTRIAL RESEARCH LABORATORIES

Industrial research laboratories today, no matter what their size, cannot possibly cover adequately all of the fields of science and engineering. This fact has resulted in an unprecedented number of industrial projects of both basic and applied nature in universities and independent research institutions. Illinois Tech, Armour Research Foundation, and the Institute of Gas Technology carry their share of such contract research. The laboratories of Research Park will have as colleagues and immediate neighbors the staffs of these organizations to supplement their own research efforts. The close proximity of the organizations will mean better professional liaison between the personnel, and, as a result, better integration of outside research with the research efforts of the laboratories.

On the faculty and research staff of IIT are many recognized authorities in the various fields of science and engineering. By institute policy, these science and engineering leaders are encouraged to contribute to the programs of industrial organizations as consultants.

Only minutes away are similar groups of authorities at the University of Chicago and Northwestern. Their faculties include some of the foremost leaders in science and engineering in the world.

At technology center for research Park Laboratories are many supporting services: machine and precision instrument shops, precision gage laboratories, glass-blowing facilities, reproduction services, and every conceivable type of nonprofessional service.

CHICAGO AS A SUPPLIER

Chicago is one of the foremost manufacturers and suppliers of scientific and engineering and laboratory equipment in the world. Precision equipment, electronic devices, chemicals, biological materials can be procured locally and immediately. Such availability means significant savings in time and money in the procurement of necessary items, but even more important, minimum interruption of research progress in the laboratories.

It is estimated that building new facilities at Natick will cost at least the $3,812,000 authorized by this bill. This cost represents the initial outlay: It will be practically doubled by the cost of transporting a personnel of 246 with their families. Moreover, it is anticipated that this change of location will inevitably result in loss of trained personnel, a loss which always is costly.

Moreover, the facility has been brought to its present point of efficiency not only because of the dedicated work of personnel, but by the patriotic participation of the research scientists, the universities, the medical centers, the industries of the area. While the work might eventually be duplicated in the East, that eventuality will be achieved with loss of time, efficiency, and at uncounted cost to the taxpayers.

Research, development and engineering in food and container disciplines are essential to the security and welfare of our Nation. The armed services cannot afford to gamble on the well-being of our troops now or in the future.

A proper concern for the security of our country and the welfare of the members of our Armed Forces, call for the adoption of the amendment of my colleague, the gentleman from Illinois [Mr. YATES].

Mr. DONOHUE. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. DONOHUE. Mr. Chairman, I most earnestly urge and hope the House will approve the proposal to transfer the Food and Container Institute in Chicago to the most efficiently operating and expanding facility at the Quartermaster Research and Engineering Center in Natick, Mass.

Although our Massachusetts industries and their employees are experiencing severe economic hardships because of the recession, which has caused the Labor Department to place many of our areas in the distressed category, I am not basing this appeal on those facts.

I am asking the Members here to support my appeal solely because the evidence presented demonstrates the transfer would be in the national economic interest and provide substantial savings of the hard earned dollars of the American taxpayers.

The record before us shows that this transfer proposal has been under long and continual study by congressional committees and the agencies of the executive departments concerned. After searching examination and exhaustive review of all the factors involved it appears to me impressively convincing that the Department of Defense, the Bureau of the Budget, the General Accounting Office and the Special House Armed Services Subcommittee unanimously agreed substantial savings would be accomplished by this transfer, as well as important scientific advantages.

Without prolonging this discussion, all I am asking my colleagues to do is to carefully scrutinize the overwhelming evidence before us and I am confident you will agree with me that when we have an opportunity to effect real economies and promote efficient operations, especially within the maze of military activities, we should seize, authorize, and approve that opportunity in the national interest.

The CHAIRMAN. The Chair recognizes the gentleman from Georgia [Mr. VINSON] to close debate.

Mr. VINSON. Mr. Chairman, I will not trespass upon your patience but for a few moments. This matter has been carefully considered by the Committee on Armed Services not once but twice, and by a rollcall vote it passed with only two dissenting votes and those were by the Members of the Illinois delegation.

The subcommittee headed by the distinguished gentleman from California [Mr. DOYLE], assisted by the gentleman from Pennsylvania [Mr. VAN ZANDT], went out to Chicago and then made a trip to Natick, Mass. They made a personal investigation. They had all the information that the Army had assembled. They analyzed it and they came up with the conclusion that the Army's position was absolutely proper and it was the right thing to do. Fundamentally it is the right thing to do, because it merges the activities in this research field in an establishment that has been built at an expense of over $11 million of the taxpayers' money for the purpose of centralizing as much as possible this research.

Mr. Chairman, I ask this Committee to stand by the Committee on Armed Services, stand by the report of these two distinguished Members, and vote down this amendment offered by the gentleman from Illinois [Mr. YATES].

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois [Mr. YATES].

The question was taken; and, on a division (demanded by Mr. VAN ZANDT) there were—ayes 95, noes 66.

Mr. BATES. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. YATES and Mr. DOYLE.

The Committee again divided; and the tellers reported that there were—ayes 102, noes 72.

So the amendment was agreed to.

Mr. VINSON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. VINSON. Are there any amendments at the Clerk's desk?

The CHAIRMAN. No.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I will take only a minute. The record would not be complete as far as I am concerned without asking the gentleman from Georgia the question I have asked every time, I believe, a military construction bill has come before the House. How is the Truman Airport at Grandview, Mo., doing these days?

Mr. VINSON. I knew the gentleman from Iowa would have to complete the record with that inquiry, so I am glad to say to him that there is nothing in the bill relating to it.

Mr. GROSS. There is nothing in it regarding that?

Mr. VINSON. Except deficiencies; nothing new at all. There is a deficiency item of $26,000.

Mr. GROSS. The Continental Air Command has not yet been moved to the Truman Airport at Kansas City?

Mr. VINSON. It has not.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ELLIOTT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 5000) to authorize certain construction at military installations, and for other purposes, pursuant to House Resolution 227, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment?

Mr. VAN ZANDT. Mr. Speaker, I demand a separate vote on the Yates amendment.

The SPEAKER. The question is on the other amendment.

The amendment was agreed to.

Mr. McCORMACK. Mr. Speaker, in accordance with an agreement we had with Members who are away attending the funeral of our late beloved colleague, I ask unanimous consent that the further consideration of this bill be postponed until tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

FAIR LABOR STANDARDS AMENDMENTS OF 1961

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 229 and ask for its immediate consideration.

The Clerk read the resolution as follows:

Resolved, That upon the adoption of this resolution, it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3935) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in production of goods for commerce, to increase the minimum wage under the Act to $1.25 an hour, and for other purposes. After general debate, which shall be confined to the bill and continue not to exceed seven hours, to be equally divided and controlled by the chairman and the ranking minority member of the Committe on Education and Labor, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider, without the intervention of any point of order, the substitute amendment recommended by the Committee on Education and Labor now in the bill, and such substitute for the purpose of amendment shall be considered under the five-minute rule as an original bill. At the conclusion of such consideration the Committee shall rise and report the bill to the House with such amendments as may have been adopted and any member may demand a separate vote in the House on any of the amendments adopted in the Committee of the Whole to the bill or committee substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN] and now yield myself such time as I may require.

Mr. Speaker, House Resolution 229 calls up for consideration H.R. 3935, providing a minimum-wage coverage for large enterprises engaged in retail trade or service, and of other employers engaged in commerce or in the production of goods for commerce. The resolution provides for open rule and 7 hours general debate.

Over 20 million workers in America in the past have been excluded by the Congress from any help or protection whatsoever in maintaining a wage income that will give needed necessities of life for themselves or their families. It is unnecessary to call to the attention of Congress the rapid rise in the cost of living during the last 10 years. In 1958 and 1959 the Bureau of Labor Statistics each month for 16 successive months, announced a rise in the cost of living. Millions of low-wage workers in our Nation are today trying to make a wage check stretch over the 1961 inflated prices with the same amount as they received in wages in the 1940's. These millions of workers are certainly entitled to economic justice on the part of the Congress when this bill is considered during the next few days.

One has only to talk to employees in retail establishments or service organizations anywhere in the Nation and you can learn firsthand the difficulty low wage employees have today in supporting themselves and their families.

This legislation does not in any way affect employees who are members of large labor unions for the reason that through the process of collective bargaining over the years, this class of workers through organization, have been able to keep pace with the high cost of living. This legislation comes to the aid of millions who are unable to maintain a large organization for their economic protection and are dependent on the Government of the United States to aid them in securing adequate income to meet the cost of living.

This bill seeks to accomplish the long delayed recognition of 20 million low-paid workers throughout the country by increasing the minimum wage of presently covered employees to $1.15 an hour for the first 2 years after the passing of this act and to $1.25 thereafter. It will also extend the benefits of the law to about 4,300,000 workers in large retail and service enterprises and other employees engaged in commerce or in the production of goods for commerce. For workers newly brought under the act the minimum hourly rate $1 during the first year; $1.05 during the second year; $1.15 during the third year and $1.25 thereafter.

The purpose of this act is not in any way to regulate or interfere with interstate commerce, but is to eliminate as rapidly as possible, substandard labor and living conditions throughout the Nation. Of the approximately 45 million salary and wage earners throughout the country, by excluding Government employees, only about 24 million are protected by the minimum wage provisions now in force.

Coverage in this bill, subject to specific exemptions, covers companies with one or more retail establishments if the annual value of sales of the company is not less than $1 million. It also covers any enterprise that has one or more establishments engaged in laundering, cleaning, or clothes repairing if the annual value of sales of the enterprise is not less than $1 million. Also local transit business, if the annual gross is not less than $1 million. Any business engaged in construction or reconstruction is also included if the annual gross is not less than $250,000. The bill also provides for a number of exemptions which are set out and will be discussed during the 7-hour period of debate pertaining to motion picture theaters, hotels, motels, caterers, hospitals, log operations, recreational establishments, fishing, and so forth.

Under the terms of the bill, the Secretary of Agriculture is directed to study the system of exemptions for the handling and processing of agricultural products and submit to the Congress next January, the results and recommendations from such study. The Secretary is also directed to investigate in any industry under the act, the problem of foreign competition if he has reasonable cause to believe that it is resulting in increased unemployment and report to the President and the Congress any such findings.

There are also provisions in this act for the elimination in industry engaged in commerce or the production of goods for commerce, labor conditions which are detrimental to the maintenance of the minimum standards of living necessary for health, efficiency and the general well-being of the workers.

The Labor and Education Committee is to be commended for the work it has done in preparing facts and statistics from various cities throughout the Nation, setting out the minimum budget for a family of four to provide its necessities of life during the present high cost of living bracket in these areas. The breakdown shows that in about 20 cities the average income of a family of 4 for the bare necessities of life, will run around $6,200 per year. On this basis, the head of the family at $1.25 hourly rate, would be compelled to work 2,000 hours a year to meet the minimum living budget in the average city.

Also provided in the act will be the creation of an administrator in the Department of Labor to supervise and conduct the Wage and Hour Division of the Department. This administrator will be

appointed by the President with the advice and consent of the Senate and receive an annual salary of $20,000 a year.

The Rules Committee provided 7 hours, an extraordinarily long period of time for debate and consideration of this legislation.

Recently the Gallup poll made a survey over the Nation on the necessity of the passage of increased minimum wage legislation and coverage. The results of this poll revealed that 70 percent of those covered in the Gallup poll canvas, signified the necessity to protect the millions of underpaid workers throughout the Nation. There is no doubt that the passage of this act will be a step toward increasing the purchasing power of millions througout the country and this fact will aid retailers and contribute toward the restoring of employment to a great number of millions who are now unemployed and work part time in the industrial areas throughout the Nation.

During the 5 years since the $1 minimum wage became effective the earnings position of most workers has improved markedly. In many industries, including both manufacturing and nonmanufacturing groups, average earnings increased by 25 percent or more. The increases in the earnings of most factory workers have been large enough to both offset the increase in the cost of living and to provide the average workers with an equitable share of the benefits of increased productivity.

Between March 1956 and January 1960, the Consumer Price Index rose by 11 percent. A minimum wage of $1.25 an hour, if made effective immediately, would provide low-paid workers the same real wage as did the $1 minimum in 1956, plus a proportionate share of the greater output of goods and services made possible through increased productivity.

Mr. Speaker, I urge the adoption of House Resolution 229.

Mr. BROWN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as the gentleman from Indiana [Mr. MADDEN], my colleague on the Rules Committee, has very ably explained, House Resolution 229 makes in order the consideration of the bill H.R. 3955, introduced by the gentleman from California [Mr. ROOSEVELT] the so-called minimum wage bill, under a special rule that makes the amendment to the original bill in order as though it were an original bill, waives points of order, and provides for 7 hours of general debate.

Mr. Speaker, this is a very, very controversial measure, as I am sure you are well aware. The Rules Committee held 2 long days of hearings on the measure, and we heard a great many Members of Congress express differing views on this particular subject, as to whether the minimum wage should be raised; and, if so, how much; and also whether the number of employees to be covered under the act should be increased; and, if so, in what vocations or occupations, and what employers should come under the provisions of the law.

It is my understanding that a number of substitute bills will be offered as amendments to the Roosevelt measure. One of these substitutes will be submitted by representatives of the minority, a bill which will differ considerably from the content of the Roosevelt bill, and will not provide for as broad coverage of employees or as large a pay increase as is carried in the Roosevelt bill.

There will also, I understand, be some special new legislation that has just been prepared perhaps because of the fact that there appears to be a realization that some sort of compromise may be necessary if this legislation is to be approved in any form. That bill may be introduced tomorrow and be considered tomorrow or the next day. There are some primary differences between most of these substitute measures and the Roosevelt measure.

Under the Roosevelt bill the minimum wage would be fixed at $1.15 an hour in covered industries, that is, covered employees, to begin 4 months after signature of the bill into law and to run for 2 years, following which the minimum wage would be automatically increased to $1.25 an hour.

There are those, of course, who feel that the first step might be in order but see no reason why it is necessary for Congress at this time to fix a higher minimum wage for some future year in view of the fact that Congress will be in session each year between now and the time that provision of the Roosevelt bill would become effective.

Seemingly the real nub of the argument between the proponents of the two types of bills that will be before us in substance is that the Roosevelt bill would bring into play for the first time in the history of minimum wage legislation the concept not that minimum wages be fixed for employees or employers engaged in interstate commerce such as we have always known interstate commerce to mean; that is, to wit, the manufacture and distribution of goods across State lines, but instead we would fix the measuring stick for retailers and for service establishments according to income. In other words, any store, for instance, retail establishment or service establishment that might do $1 million worth of business per year would automatically come under the interstate commerce clause of the Constitution and within the provisions of this bill and they would be required to pay the minimum wage.

The opposition to this theory says if they are properly a local establishment, volume of business should not control. On the other hand, the testimony before the Rules Committee shows that the Secretary—and if I am wrong I hope the gentleman will correct me—took the position that any business would be covered under the interstate commerce clause if it received or used in the business, although it might be purely local, any product shipped in interstate commerce to be used in their local service, or by the retail establishment and they would come under the provisions of this minimum wage law. In other words, if the little corner grocer sold Post Toasties shipped in interstate commerce he would come under the provisions of the law.

The fear was expressed, that if who should come in or who should not come under the interstate commerce clause and under the provisions of the Wages and Hours Act, on the basis of income, or a total volume of business of $1 million, it would be easy next year—in fact, some notices have been served by organizations that they would do so—to increase that to $5 million or $10 million or $100 million. That is the difference in the primary bills.

There will be other substitutes offered to establish the age-old concept that those engaged in interstate commerce must actually be engaged in the manufacture or production or distribution of goods across State lines.

There are certain exclusions that are rather peculiar. For instance, hotels are excluded under the original bill offered by the gentleman from California [Mr. ROOSEVELT]. In answer to an interrogation as to why they were excluded, it was stated that the hotel business—and it is true, nobody questions the veracity of the statement—is in the doldrums, and was not making any money. Which brings up this question, Should we decide who should come under the law on the basis of whether they are making a profit or not? And would it not be necessary to adjust every year those to be covered by the law because one concern might make money this year and lose it next, and vice versa, backward and forward.

So we have some real issues here, some real fundamental problems to settle in your own minds. First of all you must decide in your own mind whether or not you feel an increase in minimum wage is justified. The author of the original bill and the author of the primary substitute feel that there should be some increase in minimum wages. There are others who feel there should not be and, undoubtedly, amendments and substitutes to that effect will be offered.

So I want to urge, if I may, that you give very careful attention to this bill.

This is a rather large bill. It contains some 51 pages. It is necessary to give it careful consideration, because there are some peculiarities in this measure, some provisions, some sections of proposed law that are very difficult to understand; some that have not been explained thoroughly by the proponents of the legislation. Some provisions are, of course, opposed very violently by some Members of Congress. I do not believe I have seen in a long, long time any legislation coming before this House in which there was a greater divergence of opinion and belief, if I may use that phrase, among the Members of the House. Perhaps there are more different opinions as to just what should be included in this bill, on this particular measure, than any we have had before us for a long time. In other words, there are a great many sections and a great many places where there is not a clear-cut division, but yet you must remember that overall you must decide here as to what is to be the concept of interstate commerce as far as Congress is concerned in the years ahead; whether or not we are to change that concept of what interstate commerce really means that we have had throughout the years ever since the first Minimum Wage Act

became law in 1938, and even long before that, and adopt some new concept that will be predicated on the volume of business done or on the question of profits of the organization or the employer involved.

I want to urge, if I may, that you give thoughtful consideration to this measure. There are 7 hours of general debate. I am sure, as the sponsors of the two bills have indicated, that is, the original bill and the substitute, before the Committee on Rules, that there will be a fair division of time, and that was the thought and the intention of the committee in granting 7 hours, that each individual Member may have at least a fair opportunity to express his own views and opinions on this very important legislation.

Mr. MADDEN. Mr. Speaker, I yield 3 minutes to the gentleman from California [Mr. ROOSEVELT].

Mr. ROOSEVELT. Mr. Speaker, as the distinguished gentleman from Ohio clearly pointed out, there is very definitely an interesting constitutional question involved in this bill, and in order to make some contribution to it at an early date, I ask unanimous consent to include as part of my remarks a memorandum prepared by the Department of Labor regarding the constitutional question involved.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The matter referred to is as follows:

CONSTITUTIONAL AUTHORITY FOR EXTENSION OF MINIMUM WAGE TO RETAIL ENTERPRISES AS PROVIDED IN H.R. 3935

H.R. 3935 as reported by the Committee on Education and Labor would extend the coverage of the Fair Labor Standards Act to employees of a retail enterprise which (1) has one or more employees engaged in commerce or in the production of goods for commerce and (2) has an annual gross volume of sales, exclusive of separately stated retail excise taxes, of $1 million or more.

The constitutional authority of the Congress, in the exercise of the commerce power, to provide this coverage is abundantly clear.

Extension of retail coverage—the major thrust of the pending amendments—must be tied explicitly to the criterion of enterprises engaged in commerce. This is a restatement of the criterion used in the original Fair Labor Standards Act and its subsequent amendments. The Supreme Court in *U.S. v. Darby Lumber Co.* (1941) said, "The power of Congress over interstate commerce is not confined to the regulation of commerce among the States. It extends to those activities intrastate which so affect interstate commerce or the exercise of the power over it as to make the regulation of them appropriate means to the attainment of a legitimate end, the exercise of the granted power of Congress to regulate interstate commerce. * * * The Sherman Act and the National Labor Relations Act are familiar examples of the exertion of the commerce power to prohibit or control activities wholly intrastate because of their effect on interstate commerce."

Retail and service establishments now use the facilities of interstate commerce to procure merchandise by which they carry on local retail and service activities. This merchandise is sold by employees working for substandard wages or in substandard working conditions. Thus the facilities of interstate commerce are clearly agents in the perpetuation of working conditions which Congress has the responsibility—as guardian of interstate commerce—to correct. The sale of merchandise or the performance of services under these substandard working conditions—in the words of the original act—(1) causes commerce and the channels and instrumentalities of commerce to be used to spread and perpetuate such labor conditions among the workers of the several States; (2) burdens commerce and the free flow of goods in commerce; (3) constitutes an unfair method of competition in commerce; (4) leads to labor disputes burdening and obstructing commerce and the free flow of goods in commerce; and (5) interferes with the orderly and fair marketing of goods in commerce.

The dollar volume test is a reasonable determination of the size of enterprise able to support its employees at the levels set forth in the act. While this is, in some respects, arbitrary, it is no more arbitrary than any other specific legislative application of a general legislative principle, e.g., the selection of five establishments in the Kitchin-Ayres formula of "five or more stores in two or more States."

The opponents' case rests on a fundamental misunderstanding of the commerce clause as set forth in previous Congresses and as interpreted by the Supreme Court. First, they restrict their consideration of interstate activities to those occurring under the second major criterion found in the act, i.e., "enterprises engaged in the production of goods for commerce." For example, they no longer object to most manufacturers being included in the act. Second, they imagine that physical location is the determining factor of an enterprise's relation to interstate commerce. For example, they hold that an enterprise is not engaged in commerce unless its establishments are at least five in number and located in two or more States. Since their selection of five establishments is at least as arbitrary as the $1 million volume test, the burden of their case must rest with the "two or more States" provision. However, such enterprises do not demonstrably use the facilities of interstate commerce in the conduct of their retail or service activities to a greater extent than enterprises located within a single State. The fact of location neither increases nor decreases the dependence of these retail or service outlets on the facilities of interstate commerce. It is not the location of these establishments but their dependence upon interstate commerce for the merchandise without which they could not conduct their business activities, that is the determining factor. The proponents of the Kitchin-Ayres substitute confuse commercial location with commercial activity.

The constitutionality of the application of the present act to employees engaged in commerce or in the production of goods for commerce was upheld in *United States v. Darby* (312 U.S. 100), and the Supreme Court has emphasized in other cases under the act (e.g., *Kirschbaum v. Walling*, 316 U.S. 516; *Higgins v. Carr Bros. Co.*, 317 U.S. 572; *Walling v. Jacksonville Paper Co.*, 317 U.S. 564; *Mitchell v. Zachry Co.*, 362 U.S. 310) that the Congress in providing this coverage stopped considerably short of the full reach of its constitutional power under the commerce clause. In answer to the contention that an employer in an industry alleged to be "purely local in nature" should not be compelled to comply with the act, the Supreme Court has pointed out that "to the extent that his employees are 'engaged in commerce or in the production of goods for commerce', the employer is himself so engaged."

Second, coverage of only those retail enterprises having a gross annual volume of sales of $1 million or more provides more than ample assurance that the coverage will be limited to enterprises with a sufficiently substantial impact on interstate commerce to be well within the scope of the constitutional power.

Third, it has long been settled by the Supreme Court that "the power of Congress to regulate interstate commerce extends to the regulation through legislative action of activities intrastate which have a substantial effect on the commerce or the exercise of the congressional power over it" (*United States v. Darby, supra*).

Fourth, it is equally settled that the question whether "the conduct of an enterprise affects commerce among the States is a matter of practical judgment," and that the "exercise of this practical judgment the Constitution entrusts primarily and very largely to the Congress." *Polish Alliance v. Labor Board* (322 U.S. 643, 650).

Under these principles, there is no question that a practical judgment by the Congress that the enterprises covered by the bill have a substantial impact on commerce would be upheld by the courts.

The congressional findings in section 2 of the present act state that "the existence, in industries engaged in commerce or in the production of goods for commerce, of labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers" among other things "burdens commerce and the free flow of goods in commerce" and "leads to labor disputes burdening and obstructing commerce and the free flow of goods in commerce" as well as "interferes with the orderly and fair marketing of goods in commerce."

That the retailing industry is an industry engaged in commerce to which these findings are applicable should be beyond question. It is on the sales made and the orders placed by the enterprises in this industry that the production for commerce and the continuing flow across State lines of consumer goods depends. As stated in the report of the Committee on Education and Labor (H. Rept. No. 75, p. 8):

"Retailing today is no longer essentially local in nature. It has become a vital and indeed indispensable part of the interstate stream of commerce through which flows the huge volume of consumer goods produced, shipped, and distributed to meet the individual and family demands of our Nation's population. The efficiency with which the country's retail enterprises perform their function of getting these goods to consumers directly affects the vitality and growth of those segments of American industry which produce, handle, and transport through the arteries of interstate commerce from every corner of the land the commodities which supply our citizens in all the 50 States."

The exercise of Federal authority under the commerce clause with respect to employment in retailing and with respect to goods which have moved across State lines and are held for local disposition is not novel. Prior to the so-called no-man's land amendment to the National Labor Relations Act, made by the Labor-Management Reporting and Disclosure Act of 1959, the National Labor Relations Act was repeatedly held to provide exclusive procedures, and to bar State action, with respect to labor relations problems of retailers handling goods that had moved across State lines, even though all or most of their sales were within the State of location. (See *Meatcutters v. Fairlawn Meats*, 353 U.S. 20 (three retail meat markets, all of whose sales were intrastate, but whose annual out-of-State purchases totaled slightly more than $100,000 out of gross purchases of $900,000); *San Diego Unions v. Garner*, 353 U.S. 26 (two retail lumber yards whose out-of-State purchases totaled $250,000). See also *Howell Chevrolet Co. v. N.L.R.B.*, 346 U.S. 482 (retail automobile dealer purchasing from local warehouse of General Motors autos and parts manufactured out of the State).) The constitutional

power of Congress under the commerce clause to exercise authority with respect to "articles that have completed an interstate shipment and are being held for future sales in purely local or intrastate commerce" is also settled. (*United States* v. *Sullivan*, 332 U.S. 689 (druggist convicted of failure to comply with labeling requirements for sulfathiazole which was sold to customers after having moved in commerce).) A recent exercise by the Congress of this authority is the legislation (Public Law 85–506) requiring certain information for prospective purchasers to be kept posted on new automobiles prior to their sale to the ultimate consumer and providing penalties for any willful removal or alteration of the label containing the required information.

The committee bill, in limiting coverage to retail enterprises having a gross annual sales volume of at least $1 million, would provide even greater assurance that only enterprises with substantial impact upon commerce would be reached than did the enactment by the last Congress of legislation under which the National Labor Relations Board may not decline to assert jurisdiction in the case of a retail enterprise having annual gross sales of $500,000 or more (Public Law 86–257, sec. 701). When the Board adopted the $500,000 figure for its jurisdictional standard in such cases, it determined that this would "reasonably insure that jurisdiction will be asserted over all labor disputes involving retail enterprises which tend to exert a pronounced impact upon commerce." (See *Carolina Supplies & Cement Co.* (122 N.L.R.B. 88, 90).) The enactment of section 701 of Public Law 86–257 indicates that the 86th Congress also concluded that retail enterprises with this volume of business have sufficient impact upon commerce to justify a continuance of exclusively Federal regulation of labor-management relations.

The million-dollar limitation undoubtedly provides a coverage which falls far short of exercising the constitutional power to its fullest extent. It is now well settled by the Supreme Court decisions that the constitutional power extends to activities affecting interstate commerce in any amount or volume not so minimal and sporadic as to invoke the legal doctrine of de minimis non curat lex (which in lay terms means: so negligible as not to warrant the Court's attention). As stated in the Supreme Court's decisions under the National Labor Relations Act, "The power of Congress to regulate interstate commerce is plenary and extends to all such commerce be it great or small," since "commerce may be affected in the same manner and to the same extent in proportion to its volume, whether it be great or small." (See *Labor Board* v. *Fainblatt*, 306 U.S. 601, 606–607 (1938); *Labor Board* v. *Denver Bldg. Council*, 341 U.S. 675, 684–685 (1951); *Carpenters Union* v. *Labor Board*, 341 U.S. 707 (1951).)

Thus in *Guss* v. *Utah Labor Board* (353 U.S. 1 (1956)), the Supreme Court held that manufacturing operations involving the inflow from out-of-State sources of less than $50,000 of supplies sufficiently affected interstate commerce to invoke coverage of the National Labor Relations Act and to oust State jurisdiction even though the National Labor Relations Board had declined to assert jurisdiction. And in *Labor Board* v. *Stoller* (207 F. 2d 305 (C.A. 9), certiorari denied, 347 U.S. 919 (1954)), the National Labor Relations Act was held applicable to a local drycleaner who purchased $12,000 worth of supplies from outside the State, the Court holding that that amount "was not so insignificant as to come within the rule de minimis non curat lex."

Since the impact on interstate commerce of a retail enterprise having gross sales of a million dollars or more a year will be more rather than less than that of those retail enterprises now covered by the National Labor Relations Act which have annual gross sales of only half a million dollars, and since the Congress and the courts have approved the NLRB coverage as a proper exercise of Federal authority under the commerce power, there is no question that this moderate exercise of congressional power in H.R. 3935 would be upheld as constitutional, even if this basis of coverage stood alone. It does not stand alone, however, but the proposed coverage rests also on the employment in the activities of the enterprise of employees engaged in commerce or in the production of goods for commerce—which has been held a constitutional basis of coverage under the present act. The bill thus provides a double assurance against any extension of Federal regulation of retail enterprises under the act into areas of doubtful constitutionality.

Mr. MADDEN. Mr. Speaker, I yield such time as he may desire to the gentleman from Massachusetts [Mr. LANE].

Mr. LANE. Mr. Speaker, no nation, however prosperous, is economically sound or just, when tens of millions of its workers are not protected by fair labor standards, and many of those who are being paid the legal minimum wage find it does not provide a modest but adequate level of living.

If one fact is clear in the world today, it is that people at the bottom have a right to, and are demanding a fair return for their labor that will enable them to support themselves.

In the United States, the Bureau of Labor Statistics has developed a list of goods and services designed to estimate the dollar amount required to maintain such a family—consisting of an employed husband, a wife not employed outside the home, and two children—at a level of adequate living, according to prevailing standards of what is needed for health, efficiency, and nurture of children. According to this family budget, an employee in the city of Boston and its suburbs would have to be paid $3.15 an hour, working 2,000 hours a year, to reach this minimum standard of living.

Not only is the present minimum wage of $1 per hour less than one-third of that standard, but the proposed increase to $1.25 per hour—which would not become effective at that level until 28 months after the date of enactment—would still be 60 percent short of that standard. In fact, it will be more than 60 percent short because of the gains in productivity during the next 28 months.

The proposed legislation, even though it fails to bridge the gap, is consistent with previous upward adjustments in the minimum wage. It will do no more than restore the relationship to average earnings of the 75-cent rate and the $1 rate, when they were enacted. During the 5 years that the $1 minimum wage has been in effect, the average earnings of most workers have increased substantially. These increases have been enough to both offset the increase in the cost of living and to provide the average workers with a fair share of the benefits from increased productivity.

However, this has not helped those employees who have been held down to the legal minimum wage. And what about the 21 million wage and salary workers out of the 45-million total—excluding Government employees and executive, administrative, and professional employees—who are not protected by the present minimum wage?

After extensive hearings and a thorough consideration of all facts, the House Committee on Education and Labor has reached this conclusion:

> The $1.25 rate, even if imposed immediately, would have no greater cost impact than did the increase in the minimum wage from 75 cents to $1, to which a satisfactory adjustment was made. Therefore, there should be no question as to the ability of employers to make satisfactory adjustment to the $1.25 rate over a period of 28 months.

I am wholeheartedly in favor of the Fair Labor Standards Amendments of 1961. At the same time I realize that, in the complexity of our economy, a bill dealing with one phase, may require compensatory adjustments in other areas. For example, I have in mind the difficulties of our textile industry in trying to cope with the invasion of low-wage imports. Increased costs, passed along to the consumers, will further weaken this industry's ability to compete with foreign goods in our own home market. To offset this, I believe we should also provide the textile industry with protection by imposing import quotas.

Returning to the main issue before us, I want to emphasize that H.R. 3935 will raise the minimum standards for American workers and bring approximately 4,300,000 additional employees within its protection. It will also lead to the more widespread distribution of purchasing power that is essential to promote the growth of our economy.

As the provisions of this bill will become effective 120 days after enactment, they will give employers sufficient time to accommodate themselves to the changes.

Furthermore, the gradual improvement in the minimum wage will stimulate and strengthen the upturn in business, as we emerge from the recession.

The Fair Labor Standards Amendments of 1961 represent a reasonable and realistic adjustment to the increases in the cost of living and the increases in productivity that have occurred since the act was last amended in 1956.

Mr. BROWN. Mr. Speaker, I yield 5 minutes to the gentleman from California [Mr. HIESTAND].

Mr. HIESTAND. Mr. Speaker, we are here debating a rule. The rule makes in order the consideration of H.R. 3935 and does not provide for debate on any other subject or any other amendment. For that reason I shall direct my remarks to the bill before us and the rule permitting the consideration of this bill.

Mr. Speaker, in my judgment, this is a very bad bill. It would defeat the very object for which it is supposedly designed. The sponsors of this bill, including the President, are well informed and familiar with the mass of testimony we heard last year. The President was on the committee in the other body, and most of the members of our committee heard much testimony. Considering this, they could have only one of two objects in promoting the bill.

It is either a great vote-getting gadget, or a long step further to build big government.

It would be highly inflationary, since union leaders and others testified that the wage differential would have to be maintained all the way up the line, and would, by competition with other industries, eventually spread to all industries. This would raise the cost of living particularly cruel to low-income people whom it was designed nominally to help. They would quickly find that their raise was a delusion, eaten up by the increased cost of living.

It would increase the cost of production, putting us further out of competition with imports, thus increasing unemployment, about which the administration professes so much concern.

It would increase unemployment directly, especially among the many of thousands of marginal workers who are not equipped to earn more money and have little chance to get any other jobs. This spells tragedy to them.

But, very importantly, it would put an entirely new concept into the definition of interstate commerce. If enacted, it would enable the Federal Government to interject itself into every business, large or small, even to the corner bootblack stand.

Mr. Speaker, the Fair Labor Standards Act of 1938, designed to correct sweatshop practices, based its action on the legislative finding that the existence of certain labor conditions in the manufacturing industry constituted an unfair method of competition as between industries in the several States.

Supreme Court decisions have upheld the authority of Congress to legislate on substandard labor conditions producing this unfair competition.

The Court has never held that Congress may constitutionally prescribe minimum wages or maximum hours in enterprises having no substantial effect on interstate commerce.

This bill is a sharp departure from the historical application of Federal power as limited by the Constitution.

Mr. Speaker, every bill we pass broadening the power of big government weakens the federal republic concept of our Government, and it is a long step toward dictatorship. There are many people here in Washington intent on increasing the power of the Federal Government and decreasing the power of the States, communities, and individuals.

Even so, there is a joker in the bill which might be termed the Jimmie Hoffa "sweetheart clause." It exempts any employee employed as a driver or driver's helper making local deliveries in pursuance of an agreement made as a result of collective bargaining by representatives of employees certified as bona fide by the National Labor Relations Board.

As everybody knows, Jimmie Hoffa's Teamsters Union controls the vast majority of truckdrivers. Is not this unfair and discriminatory clause a clause forcing membership into Jimmie Hoffa's union?

Either the administration or the sponsors of the Roosevelt bill believe this bill would be a popular vote-getting gadget, or they are intent upon putting another nail in the coffin of the representative republic the Founding Fathers laid down for us. In either event, I feel it is a very bad, vicious bill, would doublecross the lower income workers, and must be defeated.

Mr. Speaker, I oppose the rule. I hope that the rule itself will be defeated.

Mr. BROWN. Mr. Speaker, I yield 5 minutes to the gentlewoman from New York [Mrs. ST. GEORGE].

Mrs. ST. GEORGE. Mr. Speaker, this bill has been explained slightly; but I think we will know all about it tomorrow and the day after, after listening to the general debate, which is limited to 7 hours.

Mr. Speaker, I would like to say one thing, that as the bill comes to us—that is, the committee substitute which will be considered—it is one of the best "yes-but" bills that I have ever seen debated on the floor of the House.

Mr. Speaker, first of all I was led to believe, and I think a great many other people throughout the country were, that this bill was going to be a $1.25 minimum wage bill. As I have explained to my friends and my constituents the bill, of course, is nothing of the kind. The bill is a $1.15 minimum and it may—and this is another one of the "if-but" clauses—it may be raised to $1.25 in the next Congress. Nothing of the kind will happen in the present Congress. Therefore I think it is well to advise our constituents and others that this bill is a minimum of $1.15.

Another very interesting thing, if you will refer to page 4 of the committee report, is the reference to those who are to be newly covered in the bill. I would suppose they would be coming in at $1.15 if this is to be a $1.15 minimum bill. But this is what you will read in the second paragraph on page 4 of the report:

> For workers newly brought under the act the minimum hourly rate would be: $1 during the first year; $1.05 during the second year; $1.15 during the third year; $1.25 thereafter.

So that it is not even a $1.15 minimum, it is a $1 minimum.

We were also informed by one of those testifying before us, and I have every reason to believe his testimony was entirely correct, that, strangely, we do not have a dollar minimum today, that in one of the largest hotels in Akron, Ohio, which I would think was a high-level wage center, a contract had been negotiated with the union for the help, and they had been given and had accepted 97 cents an hour. When I asked the question of how this was possible under any law existing in the country today or to be, I was informed it was because it was thought that that was all the traffic would bear.

Mr. Speaker, one of the things to which I think exception can be taken in this matter is the fact that it is entirely based, apparently, on dollar values and on what the traffic will bear. It is not based on interstate commerce at all. It is based on how much gross or net an enterprise takes in. If they can afford it they will have to pay more. If they cannot afford it, apparently they will even be able to settle for 97 cents an hour.

I am very sure that substitutes will be offered to the committee substitute; in fact, I know of one in particular that will be offered that will correct this situation and that will put this thing on a proper basis, on an interstate basis, and at a $1.15 minimum per hour, not more, not less, and not dependent on what the traffic will bear. It seems that that is the best we can get for the next 2 to 3 years. So that is something to be considered.

If you will refer to the committee report you will find that beginning at the bottom of page 4 and running through page 5 to the top of page 6 there is a list of exemptions. If you will go through that list you will find that there are 18 exemptions to this committee substitute as written. I can assure you that with 18 exemptions almost anyone with a good Philadelphia lawyer and pretty good brains can get pretty well out from under this piece of legislation.

It is a disappointment to me that such a bill has been brought in, and that such a bill is being promulgated on the basis that we are doing something, when we are not doing anything at all, as anyone who studies this legislation will see.

I will conclude, Mr. Speaker, by simply saying that it is my honest hope that this committee substitute will be defeated, and that some sound legislation with a minimum wage that everyone in this country can understand and know about, and with no exemptions, will be put through the House of Representatives.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentlewoman yield?

Mrs. ST. GEORGE. I yield.

Mr. HOFFMAN of Michigan. I did not quite understand that last statement. The gentlewoman hopes the substitute will be defeated?

Mrs. ST. GEORGE. There is a committee substitute that will be offered in place of the bill H.R. 3935. It will be presented as the bill to be debated.

Mr. HOFFMAN of Michigan. That is, the gentlewoman is in favor of the substitute that is going to be offered?

Mrs. ST. GEORGE. No, I am not in favor of that substitute. It is a good thing the gentleman brought this up. I am not in favor of the committee substitute, but there are other substitutes that I understand are to be offered from the floor. There is one I know the gentleman will approve, and I have no doubt there are others who will also approve it.

Mr. HOFFMAN of Michigan. I thank the gentlewoman.

Mr. MADDEN. Mr. Speaker, I yield 3 minutes to the gentleman from Massachusetts [Mr. McCORMACK].

Mr. McCORMACK. Mr. Speaker, as we approach the consideration of this bill, my mind goes back to the mid-thirties when the first minimum wage bill came up in the House of Representatives. That bill came out of the Committee on Labor. The chairman of that committee at that time was one of the greatest legislators and one of the most courageous legislators I ever served with, the late Mary T. Norton, of New Jersey. I can see her now as she stood in that well fighting for the passage of the original minimum wage bill to provide

for 25 cents an hour for those who were covered in that bill, and I can assure you the coverage was very slim because we had to give and give and give in order to get a bill through the Congress and on the statute books. I remember that bill very well because I presided as chairman of the Committee of the Whole in the consideration of that bill. The bill was debated for 11 days. After that bill got through the Committee of the Whole, it was so amended—so badly amended, that those who favored the passage of the bill voted to recommit the bill back to the legislative committee in order that 6 weeks or 2 months later Mrs. Norton and her committee would report out another bill, and so that we might have a chance to get some kind of decent minimum wage bill through this body. That is what happened. We had the same opposition then that you hear now. Then the minimum wage provision went to 35 cents and 40 cents and there was that steady climb upward.

In the last amendment to the minimum wage law, President Eisenhower recommended an increase from 75 cents to 90 cents, and the bill that came out of the committee provided for a $1 minimum wage. Now we have this bill providing for the next increase to $1.15 with a provision that 2 years later, it will be increased to $1.25. So, Mr. Speaker, I rise at this time more to pay tribute to one who has taken the journey into the great beyond, the late Mary T. Norton, and I want to refresh the memories of my colleagues of that great battle that we had at that time to try to establish the minimum wage of 25 cents an hour. Then when the bill was so riddled to pieces by the opponents and by those who were killing it with kindness, we who favored the bill voted to recommit the bill to the legislative committee in order that later on another bill could be reported out. That is what happened at that time. Now we have the same kind of opposition. We hear those who draw the thin line of demarcation and try to be in favor of the bill while, in fact, they are against it. You are going to see them parade down to the well of this Chamber in the next 2 days while this bill is being debated, the same as I saw them do when the original 25-cent minimum wage bill was being considered.

So, Mr. Speaker, I pay tribute to that great lady and to the progressive members of that committee. Here we see nothing but history repeating itself where those who are opposed to this kind of legislation are going to use every means they can indirectly to try to weaken the bill and to make it as ineffective as possible.

Mr. MADDEN. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the passage of the resolution.

The question was taken and the Speaker announced that the ayes appeared to have it.

Mr. HIESTAND. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

Mr. McCORMACK. Does the gentleman insist on his point of order?

Mr. HIESTAND. I do.

Mr. McCORMACK. While we have no agreement that there would not be a rollcall on a rule, nevertheless, having in mind that this is the last piece of business of the day and that Members are absent attending the funeral of a late colleague, I ask unanimous consent that further consideration of this rule be postponed until tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PERMISSION TO FILE SUPPLEMENTAL REPORT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from South Carolina [Mr. McMILLAN] may be permitted to file a supplemental report on the bill H.R. 258 (Report No. 173), to amend the D.C. sales tax.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

NIKE-ZEUS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. GEORGE P. MILLER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. GEORGE P. MILLER. Mr. Speaker, in my address to the House on February 7, I mentioned various leaders of American industry which have been devoted to the progress of this weapons system—among them the Sperry Rand Corp.

At my request, this company has now made available to me reprints of an article on the Nike-Zeus published in the fourth quarterly issue of 1960 of their fine magazine, Sperryscope.

This question-and-answer exchange with the Army's Chief of Research and Development, Lt. Gen. Arthur G. Trudeau, is very informative, short, and to the point.

I believe that each Member of the House will find it of value, in terms of our concern with the problems of national security, and I have today sent a copy to each Member—together with a copy of my address of February 7.

TEXTILES AT THE CROSSROADS

The SPEAKER. Under the previous order of the House the gentleman from South Carolina [Mr. HEMPHILL] is recognized for 1 hour.

Mr. HEMPHILL. Mr. Speaker, 2 weeks ago I rose to call the attention of my colleagues, and the attention of the Nation, and, I hope, the attention of those who soon will make a critical and far-reaching decision on our textile import problems, the critical and trouble-filled situation in this major and patriotic industry, on which the economy of my section, and many other sections of the country, depends. I have never been more serious in my life, nor have I been more concerned, and especially as from day to day I get reports of more people out of work, or more people reduced to part-time or part-week operations in the textile industry in my own home district. I am convinced that our unemployment, and lack of full employment, will be speeded up, unless something is done to either give relief, or assure relief to our textile people. I am not talking about management and investment alone, I am talking about the jobs of taxpayers of America.

These people expect this administration to be sympathetic. These people who are working in the textile mills of South Carolina and elsewhere believe the Democratic Party has a sympathy for every individual in the Nation. These people have been assured that this administration, and departments of this administration, are concerned with their problem, and will make every endeavor to give some relief. They already know the sympathy of many Members of the Congress, and I am proud of the record we in Congress have made to present their case to the Nation.

In the 4½ years that I have been here, it has been my sad privilege to witness almost a hardening of hearts against our textile people, and, in many areas, a lack of concern over these people who have always responded in time of war with their sons, in time of war with their production, in time of peace with hard work, in time of peace with their taxes, and at all times, as a part of the greatness of this Nation, their absolute patriotism. I recall with great nostalgia that during and after the war every part of the industry in my particular district received a certificate of excellence, signifying their contribution in the defense of this great country. Is it too little to expect consideration now that we are in the cold war? Are these people, and their jobs, only dear to this Government in the times of a hot war? Are these jobs so expendable, that during another hot war, having disappeared from the scene because of the policies of a hard-hearted Government, that their production capacity is deleted of the American industrial scene, and their efforts forgotten? I believe not.

During the campaign of 1960, I campaigned very hard for the Democratic ticket. I did so because I had been a front-row witness of the fact that the Republican Party of this Nation had given only lipservice to all the promises of relief, little concern to the needs for relief. That party had taken the attitude that the cry of the textile people was baseless, and had surrendered to the international policy of putting the international trade first before our domestic interests, and the needs of our people second. Each of the candidates of the Democratic Party came from areas which included textile areas, and I felt, and still feel, that they understood our problems and would listen with a sympathetic ear. I am now asking action.

As far back as 1956, representatives of the textile industry, and those of us in the Congress who are dedicated to the preservation of that industry, made certain prophecies about the imports. They said we did not know what we were talking about, and that the imports would level off, that the cotton and synthetic and wool textile industries were making plenty of money. It is true that the textile industry had some good years, but the signs of the future were present, and that administration, under Mr. Eisenhower, paid us no heed. We appealed to the State Department; we appealed to the Department of Commerce; we appealed to the White House, and our appeals fell on deaf ears. Meanwhile, there was no letup in the sharply rising increase of textile imports from countries whose workers' wages would be declared illegal, and far below the U.S. minimum.

In 1958, U.S. imports of cotton cloth were approximately 142 million square yards. These imports increased to 242 million square yards in 1959, and not quite doubled 1958. In 1960, cotton cloth imports reached 455 million square yards, which is three times that of 1958.

The increase in imports means increase in unemployment. Increase in imports means decrease in the numbers of spindles and the numbers of looms that are running throughout the textile areas of this country. If the trend continues, the entire market for domestic cloth will be supplied by foreign production.

One cannot blame the consumer of the United States. Except in those areas where the critical situation invokes an awareness of what the purchase of imported textiles does to our textile industry and the jobs of that industry, the average consumer buys the goods which he finds to be at the most advantageous price, and we must admit that some of those who export to our country are, with the help of American machinery which they have purchased, American patents which they have purchased the right to, American know-how that our State Department has insisted upon supplying, and low price cotton which they are able to buy, putting on the markets of the United States cloth textiles which are comparable, if not equal, in quality to those of the American industry. The people in the textile industry know this, and they also know that the person importing the foreign textiles can sell cheaper. If the domestic textiles do not sell, the mills of our country cannot afford to run, and if the mills do not run, it follows, ad hoc, that the people do not have jobs.

It is significant in the industry, and it should be significant to the country, that, as sharp as the trend of cloth imports were in past years, and after a rise which we, who are watching the trends, thought were extravagant, the 1.4 million pounds imported in 1955, the imports of yarn in 1960 rose to 15.1 million pounds.

Woven wool cloth rose from about 34 million square yards in 1958 to 62 million square yards in 1960, almost double.

Broad silk fabrics, at approximately 55 million square yards in 1958, rose to 81 million yards in 1959, and was 72 million yards in 1960.

Now think, any of you who are listening, or any of you who may read this speech, about the impact of the economic situation of the textile industry, and its people. During the same periods in which these imports have risen, the market for textile cloth and textile yarns has not increased.

During the same period, the United States has lost its historical position as a net exporter of textile manufactures.

During this same period, textile jobs have decreased in number, and textile unemployment has increased.

During the same period, virtually no effort has been made to insist that any imports shipped to this country be on a production basis, requiring the same wage level and wage scales which we insist upon in this country, and I believe in good wages.

Recently I received from the executive vice president of the Carded Yarn Association, Inc., which apparently has its headquarters in Charlotte, N.C., the following statement:

On March 8, 1961, the board of directors of the Carded Yarn Association met for the purpose of considering ways and means to combat the serious threat of yarn imports. Our segment of the industry is in a very precarious position and faces bankruptcy and eventual liquidation if we are not successful in getting relief from the unrestricted imports of foreign made textile products. In our first line position in the industry we are affected adversely not only by the imports of cotton yarns, but by the imports of the many end-use products into which our yarns are ultimately converted.

I have refused to believe it is the desire of the people of this country that the carded yarn industry be liquidated by bankruptcy or otherwise.

I include the examples which were given to me by this association, so that any may check, or reply, if there is any reply. I, for one, believe that this association points out, dramatically, the difficulties of treatment, governmental treatment, which this segment of the textile industry is now experiencing, and others have experienced, if not identically, in comparative ways:

THE CARDED YARN ASSOCIATION, INC.,
Charlotte, N.C., March 8, 1961.

To All Members:

The accompanying data constitutes a detailed presentation of the import situation as it is related to the cotton sales yarn segment of our industry. Considered together with explanatory sheet exhibit IV, the information covered in exhibits I, II, and III is self-explanatory.

Contrary to the condition in other segments of the textile industry, you will note the absence of Japan in the list of importers and the predominance of Brazil, Egypt, Portugal, and Spain, followed closely by Mexico and France.

Exhibit V states the reason for the absence of Japan as a yarn exporter. It also lists certain foreign export incentives with respect to Portugal, Spain, Brazil, and Egypt which in some instances completely nullify the impact of our tariff duties upon the exporter as an item of expense.

Exhibits VI and VII are self-explanatory reports to President Moretz by Werner Textile Consultants with respect to certain cost findings in mills located in Brazil and Spain.

Through reference to the illustration presented in exhibit IV you will readily see that the result of classifying carded cotton single natural yarns under tariff paragraph 901a, while pooling all other yarns of all descriptions under tariff paragraph 901b, results in 4½ percent lesser protection for all counts of carded cotton natural single yarns. This is true because the per count percent ad valorem tariff rates are the same for all yarn under paragraphs 901a and 901b. Since the tariff is imposed on an ad valorem percentage base there is no reason in theory or fact for excluding these yarns from the higher rate applicable to all other yarns. This practice has been carried forward from an historic era when there were practically no carded cotton yarns being imported. It presently constitutes a gross discrimination against one type of yarn, which can be translated into an unrealistic penalty in cents per pound.

Shall we continue to ignore this latter situation, when the end result is to totally disrupt the normal market relationship between two of the highest quality, most competitive types of cotton sales yarn—carded and combed single knitting yarns?

Cordially yours,

OWEN FITZSIMONS.

EXPLANATION

(Applicable to all accompanying exhibits, I through III. Where designations A, B, C, D, E, F, G, H, and I are used.)

IMPORTS, COTTON YARNS

A. All cotton sales yarn (B and C) and (D, E, F, G, H).
B. All carded sales yarn (D, E, F).
C. All combed sales yarn (G, H).
D. All carded natural single yarns.
E. All carded—single, bleached, dyed, or colored yarns.
F. All carded—plied, natural, bleached, dyed, or colored yarns.
G. All combed—single, natural, bleached, dyed, or colored yarns.
H. All combed—plied, natural, bleached, dyed, or colored yarns.
I. All cotton sales yarn subject to tariff paragraph 901b (E, F, G, and H).

CURRENT TARIFF RATES (AD VALOREM) [1]

(1) 901a: 4½ percent plus 0.225 percent per yarn count. (This lower rate applies only to D above.)

(2) 901b: 9 percent plus 0.225 percent per yarn count. (This higher rate applies to E, F, G, and H above.)

ILLUSTRATION—APPLICABLE TARIFF RATES

Under 901a (D)

	Percent
10/1	6.75
20/1	9.00
30/1	11.25

Under 901b (E, F, G, and H)

	Percent
10/S and P	11.25
20/S and P	13.50
30/S and P	15.75

The 21,000 pound total imports as shown on exhibit III from "all other" countries is made up of 8,000 pounds at $0.44 from Pakistan; 4,000 pounds at $0.35 from Hong Kong; 3,383 pounds at $1.56 from Canada, Newfoundland and Labrador; 2,515 pounds at $0.91 from Belgium and Luxembourg; 1,705 pounds at $2.03 from West Germany; 1,498 pounds at $2.90 from India; 100 pounds at $1.15 from Jamaica; and 25 pounds at $4.96 from Denmark. Total 21,226 pounds valued at $20,530.48.

---

[1] The dollar value which should be shown on the import statistics is defined generally as the market value in the foreign country and should exclude the U.S. import duties, ocean freight, and marine insurance.

[From the New York Daily News-Record, Feb. 9, 1961] [1]

FOREIGN EXPORT INCENTIVES A FACTOR IN U.S. IMPORTS

NEW YORK.—Portugal, Spain, Egypt, and Brazil have become leading cotton yarn exporters to the United States, aided in no small measure by export incentives granted spinners by their governments. The following listing contains inducements offered by these governments.

Portugal, the leading shipper, grants: (1) Exemption of cotton textiles manufactured for export from export duty, and import duty on colonial cotton, (2) a bonus for cotton textile exports at [2] 2 escudo per kilogram or 0.9 escudo per pound.

Spain grants: (1) Repayment of import duty on raw cotton [3] (16 pesetas per kilogram, or 7.27 pesetas per pound), (2) an exemption of cotton textiles manufactured for export from internal indirect taxation amounting to roughly 12 percent, (3) exporters the right to use the exchange accruing from their sales to buy an equivalent amount of foreign cotton cheaper than that grown in Spain.

Brazil grants: Plural exchange rates by commodities and a bonus for exports.

Egypt grants: A utilization of plural exchange rate, de facto, including discounts of 6 percent granted on sales payable in hard currency for raw cotton and cotton textiles.

In contrast, lack of government subsidy, coupled with packaging differences and a narrow price differential, has had a deterrent effect for Japan in its yarn sales to the United States.

Japanese cotton yarn traditionally is packaged in skein and cheese, whereas U.S. purchasers generally prefer yarn on cones and cheeses. To sell in the U.S. market Japanese spinners must place outside orders for packaging, adding to cost.

Recent price comparisons show Japanese carded 20s at 62.7 cents to 64 for United States yarn, 65 to 70 for 30s carded, and 30s combed 72 to 77 cents. Packaging, quick service, discounts, are not taken into consideration for Japanese prices appearing above.

Subject: Carded yarn production costs, Brazil.

Mr. LEONARD MORETZ,
Carolina Mills, Inc.

DEAR LEONARD: In response to your request for production costs of singles carded yarn in various countries, we have the information for Brazil and now present it to you. As soon as we have it for the other countries we shall forward that also to you.

The costs given you are those from one of the large, well managed mills in Brazil. The cotton used for the 10/1 and 16/1 is described as being "not equal to Middling American." At the present time this cotton costs approximately $0.2524 per pound but they expect that during 1961 it will increase to $0.2762 per pound. In Brazil the official allowance for moisture content is 11 percent and we are told that deliveries generally average about 10 percent.

The average wages per hour are $0.2381 but fringe benefits increase this figure by 50 percent. These average wages reflect a recent wage increase.

This mill's costs at the present time for 10/1 and 16/1 on cones are as follows:

Item	Cost per pound	
	10/1	16/1
Cotton	$0.2619	$0.2619
Direct wages	.0147	.0209
Indirect wages	.0233	.0364
Overhead	.0210	.0293
Total	.3209	.3485

At the present time this mill makes outside purchases of 10/1 on cones and it costs them $0.3905 per pound.

We have converted the cost in cruzeiros, the Brazilian currency, into U.S. dollars by using a rate of 210 Brazilian cruzeiros to 1 U.S. dollar. This is approximately the free rate and not the official rate. We understand that a Brazilian spinner would be allowed the free market rate when exporting yarn.

We quote the opinion of one of the Brazilian spinners regarding exporting yarn from Brazil to the United States.

"It is generally felt that the export price would not be competitive in the United States especially for yarns up to 30s. In any case there is a great demand inside Brazil for yarn especially in the 20s to 30s range, and there is no surplus for exporting.

"In my opinion only a few mills could supply yarn up to the standard which would be expected in the United States. I believe that some of the fine yarn mills spinning 60's and above have been doing good business in the States but the weights involved are not big.

"The general feeling here is that the Brazilian spinner of coarse and medium yarn numbers cannot compete in the export market with Hong Kong and Japan."

Leonard, I hope this gives you the desired information but if you require more please let me know.

With kindest regards,

Sincerely yours,

WERNER TEXTILE CONSULTANTS,
T. E. STRIBLING, Jr.

Subject: Carded yarn production costs in Spain.

DEAR LEONARD: Our success in obtaining reliable figures to the extent desired by you for the production costs of carded yarn in Spain has not been too great. However, we do have some information on two of the larger individual mills which may be of some help to you.

Item	Mill A	Mill B
Total spindles	27,500	68,800.
Number of 45-hour-per-week shifts	2	2.
Average production per week in pounds	63,800	176,000.
Average yarn count	23s	22s.
Percent combed	0	10 percent.
Range of counts	10s to 40s	5s to 40s carded, 28s to 80s combed.
Pounds per operator-hour [1]	4.4	3.52.
Labor cost per pound	4.94 U.S. cents	6.2 U.S. cents.
Average hourly earnings [2]	US$0.22	US$0.22.

[1] Spinning through winding, including all labor costs but not supervision or staff.

[2] Including all social benefits, vacations, etc.

I am sorry that we were not able to give you as much information on this country as we did on Brazil. However, I have confidence in the source and would rather give you reliable information even if it is insufficient in scope, than information covering a wider area but of which I am not too confident.

I assume that you received our letter on carded yarn production costs in Brazil dated January 24. If by any chance it did not reach you please let us know and we shall be glad to send you another copy.

With kindest personal regards,

Sincerely yours,

WERNER TEXTILE CONSULTANTS,
T. E. STRIBLING, JR.

Recently the U.S. Senate Textile Subcommittee made certain recommendations. I will not insert those recommendations here as they have been printed in the form of a report, but I am satisfied that that committee not only knew what it was talking about, but reflects not only the concern about the situation in the industry but the necessity of relief, and quick relief.

To show you what we are doing, although it is very difficult to explain, reasonably, why we are doing this, I quote from the front page article of the America's Textile Reporter, volume LXXV, No. 8, of February 23, 1961:

ADD TO THE KOREAN STORY

It grows more fantastic as it develops. Most of the American foreign aid moneys received by Korean cotton mills comes under the heading of nonproject assistance; that is with one major exception, it is used for the purchase of raw materials. Out of a total of about $150 million a year of such aid, roughly $25 to $30 million is earmarked for cotton imports. These giveaway dollars are sold at auction by the Bank of Korea. Formerly the Spinners and Weavers Association of Korea (SWAK) was the only bidder for the money. Within the last year the procedure has been changed and individual mills have been bidding for the funds. However, this is a legal fiction since the mills bid only the official exchange rate. And they have an agreement as to who gets what share of the funds. The effect is just the same as if SWAK were still the only buyer. Prior to the beginning of this year, the official exchange rate was 650 hwan to the dollar while the unofficial rate was about twice as much.

Adding an exchange tax of 150 hwan, this means the mills were buying the dollars at a 40-percent discount. On January 1, 1961, the ROK Government raised the exchange rate to 1,000 hwan to the dollar but absorbed the exchange tax. The average unofficial rate is now 1,300 to 1,400 hwan to the dollar. Thus the mills are still getting their dollars at a discount although not quite as large a one as previously existed.

There are now underway top secret negotiations between the United States and the Korean Government to devalue the hwan even more. The new exchange rate probably will be something between 1,200 and 1,400 hwan to the dollar. However, as in most undeveloped countries, the dollar will always command a premium, especially for the purchase of luxury goods. There is also the problem of inflation; in Korea, it averages between 16 and 35 percent a year.

The hwan earned from the sale of the dollars is used chiefly to support the ROK Government's defense budget, although part of it goes to defray the cost of administering the foreign aid program. In other words, it's strictly a giveaway proposition. It couldn't be otherwise because the hwan is nonconvertible and probably worth less than the paper on which it is printed. Without U.S. help, South Korea wouldn't have sufficient exchange to carry on even the basic minimum of foreign trade it needs to survive. The problem is the country's proximity to Communist invaders. This forces it to maintain a defense establishment far beyond its means and makes private investment extremely risky and highly unlikely. However, the aid program has been terribly wasteful and badly mishandled. A number of plants built with U.S. aid after the Korean conflict had to remain idle because there wasn't power to operate them.

After buying their dollars, the Korean mill owners turn them over to SWAK which acts as their central purchasing agent. SWAK can buy cotton anywhere in the world although it imports most, if not all, of its requirements from the United States. Under the U.S. Department of Agriculture's raw cotton export subsidy program, Korean mills can buy U.S. cotton at world prices (while American mill owners are forced to pay the higher domestic price). In effect, the Korean mill owners get a double subsidy—60-cent dollars and cut-price cotton—and the United States picks up the tab at both ends.

If the Korean mills use aid-financed cotton in textile exports, USDA requires them to replace the raw cotton content of the cloth with nonaid dollars. This partly removes the United States from the position of subsidizing Korean textile exports. They can buy this cotton out of dollars earned from exports or with dollars purchased from the ROK Government—if it has any for sale. The KFX (Korean Foreign Exchange) fund of the ROK Government is chiefly dollars earned from fees and taxes paid by the U.S. Army for various services provided by the Korean Government and for use of certain Korean facilities.

When the dollars earned from exports are returned to Korea, the ROK Government requires that they be disposed of within a stated period of time—6 to 8 weeks. This means that these dollars are used either to finance imports, sold at auction or sold to the Government. Although the average unofficial rate of exchange is about 30 to 40 percent higher than the official rate, because luxury goods command an extremely profitable return, some importers have been willing to pay a premium of up to 1,700 hwan to the dollar.

Under this setup, the key to earning money is not the lowering of production costs but currency manipulation. Obviously, a manufacturer who can buy dollars at a 40 percent discount and sell them at a premium can afford to price his goods at or below cost, especially if his production costs are out of line.

Nonproject aid is used chiefly to finance imports of basic materials. However, some capital equipment can be imported under a special section called "investment salables." The amount involved ranges between $8 and $20 million a year. These dollars, which are also sold at auction, may be used by private firms to finance replacement parts and some new equipment. Until 3 years ago, there was a $50,000-a-year limitation on the amount any one firm could get under this section but the limitation has been lifted. This is in addition to any major development assistance received from "project" aid funds.

(The above is the theorem.)

According to the information we have and reports we have received, Korean No. 2 enameling duck, as an example, can be obtained f.o.b. Mobile, Ala., from 6 to 8 cents per pound less than the going American prices which are practically at the break-even point.

(It seems to us that the theorem has been proven.)

Granted that we have much at stake in Korea, whether the textile workers, and their families, who lost men in Korea fighting to preserve our freedom, and who now must realize that the policies are of such impact as to be of danger to our textile industry.

We know what can happen to an industry in this country when the Government turns its back on it. Look at the situation in West Virginia and parts of Pennsylvania. Those people have my great sympathy.

Let me quote some articles from the America's Textile Reporter of March 2, 1961:

Eighty to ninety percent of South Carolina's textile industry job losses—some 4,800 last year—have been caused by imports. Governor Hollings said he "would resist all efforts of that kind as not what the industry needs or deserves." It should be allowed to expand rather than "have any relief handouts," he declared.

North Carolina's textile employment in December was down 3.2 percent to 219,200 from 226,400 a year earlier, the Labor Department reports. The drop was consistent with a decrease in total nonfarm employment (down 1,000), which was the first December decline since World War II. Average weekly mill earnings fell to $57.83 for 38.3 hours at $1.51 from $61.09 a year earlier for 41 hours at $1.49.

GATT talks concerning lower tariffs on textiles have been postponed until some time in March, pending proposed selection of industry representatives as advisers to the U.S. negotiating team. The delay gives added time to a drive, spurred by the industry, to put Congress on record as opposing any tariff cuts on some 2,500 textile items on the State Department's offer list.

I was concerned to read in that Reporter the following statement:

President Kennedy's formation of the new Cabinet-level committee to review the textile industry's ills may mean little to the industry in imports relief. One of his special assistants reassured one-worlders about the administration coolness to import restrictions, emphasizing that we must continue to expand our exports by being willing to accept imports and absorb them in an expanded U.S. market. This sounds like a program that might make sense—for sponges.

We can talk all we want to about America's triumphs in technology. The triumphs are of little consolation to those who do not have jobs, and who must realize that these technologies have been exported overseas to help our competitors.

To show that the situation is increasingly serious, let me quote some articles from the America's Textile Reporter of March 9, 1961:

Employees from North Carolina textile mills, excluding hosiery, filed an average of 13,525 unemployment claims weekly during January. This was 17.4 percent greater than in December and 57.8 percent greater than January, 1960. Hosiery mill workers filed claims at an average of 7,500 weekly—13.5 percent of the total of workers covered. This was 68.9 percent greater than in December and 22.8 percent more than the year-earlier level, the State employment security commission reports.

The Japanese cotton textile industry has asked its government to increase by 20 to 30 percent the export quota to the United States this year. Japanese manufacturers

complained that, while they use more American cotton, such areas as Hong Kong, Spain, Portugal and Egypt are not subject to a quota and have appeared on the American market in strength since late 1959. They also want the category limits pulled down so that unused yardage of one item can be shifted to another fabric or made-up item.

An official of a leading textile firm with two finishing plants in South Carolina says there is no indication that business is picking up. M. Lowenstein's Rock Hill (S.C.) Printing & Finishing Co. is operating on a day-to-day basis, according to President William H. Grier, also head of the finishing facility at Lyman, S.C. Reason: Imports, the lowest prices in 4 or 5 years, and top-heavy inventories.

I have in my file a textile resolution which has been adopted by The Combed Yarn Spinners Association, Inc., March 3, 1961, and I quote:

Whereas the total cotton yarns import for 1960 was 15,140,680 pounds; and

Whereas this total cotton yarn import has increased from a figure of 837,145 pounds in 1958; and

Whereas the great economic influence of the textile industry is felt by every U.S. citizen; and

Whereas this tremendous cotton yarn import increase in a large measure has been caused by the fact that tariffs on textile imports into the United States have been regularly and drastically reduced under the Reciprocal Trade Agreements Act and that foreign textile manufacturers, using cheaper cotton and cheap labor have capitalized on this advantage and flooded the United States with textiles which American manufacturers cannot meet in price; and

Whereas the continued prosperity and economic health of the United States, generally, the textile industry, and a vital component thereof, the combed yarn spinners in particular, all of those employed therein, and other thousands of Americans who depend upon this industry for their livelihood are critically and desperately threatened by the lack of protection against this unfair competition provided by foreign imports; and

Whereas the recent session of the Southern Governors' Conference at Hot Springs, Ark., recognized this problem and its solution by its unanimous adoption of a resolution asking our Federal Government to enact protective legislation and to provide all possible protection by exercise of the Presidential powers: Therefore be it

Resolved, That the Combed Yarn Spinners Association, Inc., herein urge that the U.S. Senators and the U.S. Representatives use their influence toward enactment of legislation so as to establish protective tariffs and quotas toward the end that thousands of Americans shall not suffer for the sake of giving advantage to foreign competitors; and further

Resolved, That a copy of this resolution be forwarded immediately to the President of the United States, to all U.S. Senators and Representatives, and to the Presidential Advisory Committee on Textiles, of which the Honorable Luther H. Hodges, Secretary of Commerce, is Chairman.

I want now to refer to specific figures:

Imports from Japan, have increased more than those of any other country since 1947, particularly in the last few years.

In dollar value imports from Japan amounted to $169.7 million in 1956; $162.8 million in 1957; $185.6 million in 1958; $241 million in 1959; and $131 million in the first half of 1960.

From India came imports valued at $79.3 million in 1956; $81.4 million in 1957; $75.1 million in 1958; $92.6 million in 1959; and $49 million in the first 6 months of 1960.

Textile imports shipped from Hong Kong were valued at $3.5 million in 1956; $10.3 million in 1957; $24.5 million in 1958; $61.4 million in 1959; and $50.2 million in the first half of 1960.

Imports from the United Kingdom were valued at $111.7 million in 1956; $102.2 million in 1957; $88.3 million in 1958; $100.2 million in 1959 and $57.5 million in the first half of 1960.

By 1957 the pattern had been set. Imports that year were up to $635 million and U.S. exports were down to $667 million. Then in 1958 imports exceeded exports for the first time. Imports amounted to $638 million against exports valued at $600 million.

By tape measure imports last year were estimated at 1.3 billion square yards, compared with 936 million square yards in 1959 and 304 million square yards in 1958.

In 1947 U.S. exports measured 1.5 billion square yards. For 1957 they were down to 553 million square yards and for 1960 they hit a low of 40 million yards.

That's the statistical story. There are other stories in textile towns and in the over-all effects on the Nation's economy.

The remedy, whatever it may be, is what the Cabinet Committee headed by Hodges, former Governor of North Carolina, would like to find.

Do 700,000 Americans mean anything to you, that is 700,000 Americans who lost their jobs because of the foreign trade shift since 1956. I quote from the Washington Post's business page, No. B–6 of Wednesday, September 7, 1960:

"Rising imports and lagging exports have forced 700,000 American workers out of jobs since 1956," Steel magazine said.

The industry weekly in a special issue said a shift in foreign trade caused a loss of $4 billion in sales for U.S. industry, dislocation of workers with 1,300,000 dependents, and the loss of millions of tax dollars.

As an example, Steel magazine estimated that the 560,000-unit increase in auto imports since 1956, coupled with the 70,511-unit decline in auto exports, cost the jobs of 39,400 U.S. workers.

Foreign competition explains in part, said the magazine, why U.S. business "is limping along at a disappointing pace while steel mills, auto plants, and other metal-working establishments in Western Europe and Japan are operating at near capacity.

"The United States has a tremendous stake in world trade, is the biggest international trader and investor of all time," said Steel, "but last year reached a postwar low in world trade superiority when only $1.1 billion separated us from an unfavorable trade balance."

The business magazine said the high cost of American labor was the main reason for a fight for survival in world market. United States wage and fringe benefits average $2.75 per manhour.

The figure is 3½ times that paid in West Germany and five times that paid in Japan.

Industrial expansion in Europe and Japan also was cited as a contributing factor in the trade struggle. The nations of the European coal and steel community had a steel ingot capacity of 38.8 million net tons in 1938. It is 69.5 million tons now and will be 97.7 million tons by 1965.

The magazine also said that foreign competitors have quality goods to sell, modern factories in which to produce them, and a "lean and hungry attitude."

To maintain its trade leadership, the magazine said management would have to adopt a world concept, know its markets, sharpen marketing, strengthen technology and improve service.

Steel also called on labor to become more concerned with productivity and on Government to revise tax policies, especially depreciation rules.

Seven hundred thousand jobs, affecting five people to a family, will affect over 3,500,000 Americans. Is their welfare expendable? Is their Government not able to reach some solution of their problem? Can our Government continue to be concerned about little countries whose populations are less than the 3,500,000 affected by the loss of jobs, and turn its back on the people who are affected by imports? If my Government does this, it does not reflect my wishes for my Government for these people.

I, therefore, ask any of you who listen, or who read, to join us in this struggle for survival. It is a struggle for survival, and, Mr. and Mrs. America, if the textile industry is sacrificed, who is next?

Let me close my remarks by again publically thanking the President of the United States for his interest in our problem. Let me thank each member of his special Cabinet-level committee for considering our problem. I realize they have many facets of national and international concern which they must consider. I close today in the hope, almost the desperate hope, that our textile people will get the relief that they must have.

BALANCE OF TRADE—FACT AND FICTION

The SPEAKER. Under the previous order of the House the gentleman from Pennsylvania [Mr. DENT] is recognized for 1 hour.

Mr. DENT. Mr Speaker, almost every day the newspapers and radio are telling us about imports and exports, trade balances, development loan funds and international banks, the flight of the dollar, the movement of gold reserves, the cutback of troops abroad, programs to increase foreign tourists to the United States, the loss of markets and jobs to foreign competition, buy-American programs, and many other complex and often confusing terms.

One might understandably conclude that all of these projects and programs do not add up. But as a matter of fact in one sense they do, and the tally is called the balance of payments.

The balance of—international—payments is not unlike your individual household balance, or the account at your local bank; it is a sum-up sheet of your gains and losses, or receipts and expenditures.

The balance of payments sheet sets down or records your Nation's transactions in goods and services, both private and public, with all other countries taken as a whole. For example, the United States spent a total $32 billion abroad last year while taking in $28 billion, for an unfavorable balance or deficit of almost $4 billion.

While this deficit may not appear to warrant unnecessary worry, the fact that our foreign transactions have been chronically in the red every year since 1949 with the sole exception of 1957 does clearly indicate a deep-seated malignancy.

If you were a stockholder or a member of the board of directors of a business which had been swimming in red ink for

12 years, I am sure commonsense would have dictated some course of action long before now, unless the firm existed on some other basis than the profit-motive system as we know it.

Now, while there have been changes in management in Washington, our policies regarding foreign economic affairs have unfortunately been allowed to perpetuate themselves, and recent events indicate that these policies will continue—as well as the deficits.

I mentioned that our total expenditures in our 1960 foreign balance sheet came to about $32 billion—our receipts, to $28 billion. About $15 billion, or approximately one-half of our expenditures, were in the form of payments for imports, while two-thirds of our income, or $20 billion, was in the form of payments by foreign customers for our merchandise. This portion of the balance-of-payments account which excludes such areas as private investment abroad, foreign aid, tourism, is called the balance of trade. It deals exclusively with physical goods or merchandise.

It would seem apparent that we sold more abroad last year than we bought, to the tune of about $5 billion. If this is true you might ask then, what is all the concern about? Why the clamor over foreign competition and complaints over the loss of jobs and markets?

The answer to these questions accounts for the title of my talk, "Balance of Trade: Fact and Fiction." The Government figures, if subjected to close scrutiny, break down into one part fact and one part fiction. This is hardly adequate for the student of national affairs, thirsty for the real meaning behind the figures.

Examine with me the export column of the ledger—the $20 billion. To begin with, you can deduct about a billion dollars of this amount for U.S. Government transactions such as economic grants for goods which cannot by any stretch of the imagination be called commercial exports. In addition, you subtract another half billion that you, the taxpayer, paid in subsidies for our wheat and cotton shipments because the price of our farm products is well above the world markets. In order to move these products we have to make up the difference between our domestic and the foreign price. In the case of wheat, raw cotton and rice this difference is paid by the U.S. Treasury.

American agricultural exports under Public Law 480, plus emergency relief, sheer donations, and barter are called exports only by definition; not by the dollar value of sales, because in many cases there was no sale in the true sense of the word. The genuine export figure reached about $16 billion last year instead of the highly questionable sum of $20 billion, if we strip these exports of the subsidized farm products, the sale for foreign currencies, the outright grants, foreign aid sales, and so forth.

The import side of our trade figures is equally misleading if taken at face value. First, the United States, unlike the other major trading nations of the world, uses a system of foreign evaluation of its imports rather than a domestic or landed cost. Some charges are, therefore, not included, such as ocean freight and marine insurance, and this omission minimizes the value of imports.

Secondly, the evaluation without a comparable physical volume figure is next to meaningless because in most cases, such as in semi- and finished manufactured goods, the foreign prices are 10, 20, and in frequent instances, as high as 40, 50 percent and more below the American prices for the same or similar products. All else being equal the foreign manufacturer can therefore send in here two items for what would be to us the cost of one domestic item.

An American firm in competition here with his Japanese or European counterpart will develop a false sense of security unless he knows how many in quantity of goods as well as how much in terms of dollars came into the domestic market last year, because without this knowledge, the dollar volume of imports may appear insignificant when in fact the quantity may be substantial. He may conclude if business is bad that the cause may be seasonal or a change in buyer's mood, or some other domestic cause, when in fact it may be that he has lost a large share of the market to foreign competition.

For instance, let us say that you were a manufacturer of artificial flowers and you wondered how much of the American market had been captured by the foreign producers in 1959. If you checked with the Census Bureau in Washington which keeps tabs on these things, they would tell you that in 1959 imports of this merchandise came to $15 million. Naturally you might conclude that was not too significant in terms of overall home consumption. But trace the route of these imports of flowers for a moment. This $15 million of flowers became $30 million in passing into the hands of the importer; jumped to $60 million with the wholesaler, and finally landed on the retail shelves of our local stores for sale to the customer at $120 million, according to the testimony given by the domestic producers before the U.S. Tariff Commission.

And yet, they easily undersold American flowers by a substantial amount. It can be seen that the original $15 million flower imports packed an import wallop far beyond anything the initial figure might indicate.

The point here is that $15 million worth of foreign-made flowers represents many more flowers than would $15 million worth of ours. To varying degrees the same situation applies to our balance-of-trade figure mentioned before. Government figures fallaciously compare the $20 billion export sum with the $15 billion import figure and deduce that we are $5 billion in the clear. These figures are not comparable any more than apples and oranges because the imports are pegged to a foreign valuation and a foreign economy far below ours, while the exports are in terms of what the dollar is worth here. Anyone who has had occasion to travel abroad knows this. The volume and value of goods or services which the American tourist can buy abroad with his dollar comes as a delightful windfall to the first-time traveler.

It is the same with our goods involved in the balance of trade. To claim, as our officials are doing, that we have a $5 billion surplus in trade is deceptive and dangerous. In terms of employment the import figure is well above the export figure.

In addition to the area of trade, the two other major components of the balance of payments, are foreign—including military—aid and investments abroad. All three interact one upon the other.

For purposes of demonstration let me slightly oversimplify this action. Shortly after World War II, we launched upon the foreign aid programs for the reconstruction of the economies of our friends and foes. However, when this task ceased, the flow of American dollars did not. To justify the latter it became necessary to rewrite the motives in order to rationalize continued heavy expenditures abroad. In the meantime the pump-primed industries of Europe and Asia boomed. Old European ways were junked in favor of America's methods of mass production, and mass distribution for mass markets. Wages on the other hand, moved up but slowly; productivity, rapidly.

Meantime, the United States had slashed its tariff defenses, thus permitting ready access here at home to the increasing outpourings of these industries from abroad. We are now one of the lowest tariff countries in the world, having reduced by about 80 percent the protective effect of our tariff.

To continue: As the products from foreign mills and factories increased in volume, our industries began to feel the competitive pinch, in some instances first in our export markets and then domestically. I think it is safe to say that all of us at one time or another have bought one kind of import or another. Also, perhaps most of us support, in principle at least, the idea or notion that truly reciprocal trade among nations is sound. On the other hand, no one wants to see such a policy pushed to the point where whole industries are crippled or liquidated.

Nevertheless, this is what already has happened in some cases. For example, less than 3 percent of all the watches used in this country are now actually manufactured here.

We also know that our five-company sewing machine industry has been reduced to one, imports being the principal factor in the demise of those that disappeared.

Out of 44 knit glove manufacturers only 12 continue to produce.

American typewriter firms which once supplied 63 percent of the world export market today supply but 7 percent.

The sporting goods industry is now being elbowed out of the fantastic postwar demand for athletic equipment. Who is filling this demand and growth? The foreign manufacturer, of course. Over one-half of the tennis rackets sold here now are imported, and, ironically, while consumption increased 22 percent in our domestic market, our domestic production dropped about 3 percent. The same phenomenon took place with baseball

gloves where imports have over 40 percent of the market. Again, while consumption increased 13 percent, American production decreased 15 percent.

In the case of steel tonnage we are importing more than we are exporting. We were formerly on a net export basis. This is also true of petroleum and of textile products. We are now importing nearly half as much again in textile products as we are exporting.

There is no great mystery about all this. We are on a high wage-price standard, our competitors on a low one. The only way to equalize the situation is through the employment of fair measures of trade regulation similar to that used by all our competitors. This the Department of State refuses to do. And so the deluge continues.

Let us now examine the direct byproducts of this inflexible policy of free trade. First, American firms unable to compete against the low-waged springboards of their competitors have been forced to invest overseas in hope of gaining the same advantages. Thousands have already done so, and hundreds more are in the process of doing so; or in lieu of this, many of the smaller firms are buying into existing foreign firms or licensing foreign manufacturers to use our patents.

While understandable, these unfortunate maneuvers will compromise our competitiveness yet further, especially if the oversea stampede continues. They will also reduce our exports and job-creating investments at home.

For your information. we have almost 10,000 American subsidiaries abroad which employ about 3 million workers at an annual wage of $7 billion. These firms pay taxes of about $5 billion in the lands where they have located.

This is the price of our tariff policies. For some unexplained reason, the word tariff conjures up all sorts of unpleasant thoughts, when in fact a tariff is nothing more than a tax levied by the receiving country upon the goods or services of another country, as a domestic tax is but a tariff levied upon ourselves for goods and services produced here. The only difference of tariff levying is one of origin.

As we are demonstrating the interaction of our aid policies upon our trade prospects as well as our trade policies upon our investment prospects, it may be wise to sum up our expenditures in these areas since the war.

This Nation has poured out over $100 billion to foreign lands between 1948, the first year of the Marshall plan, and 1959, as follows:

	Billion
1. Foreign aid	$88.5
2. Foreign investments	$20.0

Now examine the effects of these policies upon our gold reserves which were at a peak strength of almost $25 billion when the Marshal plan started in 1948. By 1955 they had descended to $22 billion, then $20 billion in 1959, $18 billion in 1960, and are currently nearing $17 billion.

On the surface it would seem that even $17 billion is a rather sizeable and comforting nest egg. Our editorial-writing economists assure us almost weekly that this is the case. But is the reserve free and clear?

We are required by law to backstop every 4 dollars in currency with a dollar in gold. Therefore, the forty-odd billion dollars which now exist in currency must have a foundation in gold of about $11 billion. Subtract $11 billion from $17 billion and the remaining $6 billion represent our surplus reserves—or do they?

Our trade and aid policies during the past decade have built up foreign claims on our reserves to almost $20 billion, of which we can honor only $6 billion, leaving us short the difference, or about $14 billion. For this reason we are hearing much comment today about confidence in the dollar; and in the light of what we have just described, this is very understandable. Without at least a thin line of confidence in the dollar, foreign governments may wish to activate their dollar claims and reinvest their funds in more fruitful investment climates elsewhere.

The new management in Washington seems to show an awareness of the balance-of-payments problem, but the current steps to deal with it so far touch only the fringes. Even if the gold outflow is stopped the claims against the dollar will continue to grow; and some day they will have to be met. The proposed reduction of duty-free purchases by our returning tourists, the economies made in restricting the expansion of officers' clubs and the like in our bases overseas, as well as a few other modest penny-like efforts in this direction will neither reduce the already outstanding claims against the dollar nor will they improve our competitive position. Actually it seems certain that our deficit will increase rather than decline.

This is not idle speculation. On February 14, at hearings before the Senate Foreign Relations Committee on the OECD treaty, Senator SPARKMAN asked of the new Under Secretary of State, George Ball:

> Might we reasonably hope that our burden in the field of foreign aid would be lessened?

Mr. Ball answered:

> I should say that the answer is probably "No," because I think that our foreign aid effort at the moment * * * must be increased rather than diminished.

It should be obvious to anyone that some investments that would be made in this country if the competitive situation with respect to imports were better, will instead be made outside of this country. Why, for example, did Mr. Ford send $360 million to England rather than investing it here? Evidently in his judgment the outlook was for a better return over there. Therefore this country lost the employment value of a $365 million investment.

This happens to be a dramatic example. It is, however, duplicated several times over in the aggregate. Foreign investment is fine so long as it does not mean that much less investment here.

There has been a great deal of talk about growth in this country and the great need of it. How otherwise will we put the nearly 6 million unemployed back to work? And yet how will we get this growth so long as the foreign investment pastures continue to look greener than those in the United States?

Is it not about time that we ourselves grow up and look the facts of our foreign trade program in the face?

PLIGHT OF THE CLAY PRODUCTS INDUSTRY OF OHIO

The SPEAKER. Under the previous order of the House the gentleman from Ohio [Mr. BOW] is recognized for 30 minutes.

Mr. BOW. Mr. Speaker, a situation which promises serious damage to the economy of my district in Ohio and similar consequences to other districts in many other States merits the immediate attention of the Congress.

It involves gross and unfair discrimination on the part of the Federal Government, both in legislation and executive department action, against the clay products industry. This industry is a key element in the prosperity of many local areas throughout the Nation and of the nation as a whole. The clay products industry is a large employer of labor in the mining and production of clay for building purposes. The products produced for this purpose create heavy additional employment in contracting, design services, engineering, and the union building trades. The result of this building activity bears directly upon the welfare of the consumer.

Ironically, the plight of the industry of which I speak has been brought about by governmental recognition of the fact that clay is a valuable mineral for which a proper depletion allowance should be provided to compensate for its exhaustion. It was for this reason that the Congress in 1951 included brick and tile clay and fire clay among those minerals for which tax depletion allowances are given. The reason for such allowances was taken note of in a Supreme Court decision of 1960 in which Justice Clark stated:

> In summary, mineral depletion for tax purposes is an allowance from income for the exhaustion of capital assets (citation omitted). In addition, it is based on the belief that its allowance encourages extensive exploration and increasing discoveries of additional minerals to the benefit of the economy and the strength of the Nation.

Yet today this important industry is severely penalized, and thousands of clayworker jobs put in jeopardy, by a 1960 amendment to section 613 of the Internal Revenue Code of 1954, the so-called Gore amendment, which effectively reduces the depletion allowance for clay to practically zero but retains a considerable allowance for the cement industry, which is markedly similar to the clay industry in its production processes and highly competitive in its uses.

The only differences which exist between the mining and production processes for clay and for calcium carbonate, the prime constituent element of cement, all favor granting an advantage to clay. Calcium carbonate, more simply known as limestone, exists in nature in much greater amounts and many times the frequency that clay can be found, according to expert mineralogists.

Further, the finished product, cement, differs little or not at all from one area to another; due to the fact calcium carbonate extracted from one deposit will serve a producer as well as that extracted from another. However, this is in total contrast to the situation of the clay producer.

As many Members of Congress are well aware, a producer of clay products is bound geographically and economically to the source of his mineral. When the clay is mined, ground, wetted, dried, and baked, the resultant brick has a unique color and texture which cannot be duplicated either chemically or from clays from other mines. When his source of clay is exhausted, the producer is out of business insofar as his specific product is concerned. He must go elsewhere, find a new source of clay, and develop a new clay product which must be promoted and sold if he is to stay in that business.

These facts might easily be used as an effective argument against equal treatment for the two industries. However, the situation is far from that. The incredible fact is that the miner of calcium carbonate is allowed a 15 percent tax depletion allowance at the production point at which the ground-up mineral is ready to be burned, while the clay producer receives only a 5 percent allowance at a much earlier stage in the production. At this stage where the depletion allowance is to be computed, brick and tile clay has no market value whatsoever, so the currently existing 5 percent allowance must be computed in some theoretical formula.

Consequently, the clay products industry, the thousands of people who are dependent upon it for their livelihood, the building owner who pays for the end product, and the Nation which seeks to protect its source of valuable minerals are all penalized by this unfair and discriminatory legislation.

Nor is this all of this unfortunate matter. By administrative action, the Internal Revenue Service has threatened to renege on its own ruling of 4 years ago and collect back taxes on open tax years of brick and tile manufacturers which in some cases date back to 1951. The clear inequity of this situation was pointed out recently to the Commissioner of Internal Revenue but he has yet to indicate he will heed the plea of those clay producers who made their tax adjustments based on the assurance of the Revenue Service.

The power and rigidity of the Internal Revenue Service can readily be seen in the history of this dispute. The original language of the law clearly stated that brick and tile clay producers should receive a 5-percent allowance on their first commercially marketable product. In all commonsense, the producers described this product as the burned brick. The Revenue Service claimed depletion should be allowed on the first commercially marketable product which was ground clay, which has no commercial market value.

In 51 Federal court cases, the clay industry had its viewpoint sustained. Finally, the Internal Revenue Service appealed one case, known as the Merry Bros. case, to the Supreme Court in 1957. The Court refused to review the Government's argument. As a result, the Revenue Service issued on October 18, 1957, Technical Information Release No. 62 which stated that the Government would "dispose of pending litigation and claims involving 'brick and tile clay' as required under these decisions, and to conform Treasury regulations and outstanding rulings accordingly. This should permit the expeditious disposition of the great majority of such cases."

This was good news to the clay industry. Its viewpoint now was sustained by the Internal Revenue Service itself after years of expensive litigation. It meant more jobs for clay workers. Many open tax cases were settled, and for nearly 3 years the Government did what it had promised in Tax Information Release No. 62 it would do. Then, on September 23, 1960, it abruptly revoked its rulings, basing its decision on a Supreme Court case known as the Cannelton case which decided that fire clay was marketable in a raw state. Though the Court in its decision stated clearly that this case had no relevance to the 51 earlier cases involving brick and tile clay, the Internal Revenue Service has chosen to consider both products as one when used for building materials and now threatens to collect back taxes on the basis of a 5-percent depletion allowance for raw clay. This administrative ruling was reinforced by another, issued January 16, 1961.

The threat still stands. If carried out, it will severely damage many producers in this essential and fundamentally localized industry and it will bankrupt many others. This is an extremely serious matter. My district of Ohio contains several clay plants which are vital to the economy of the district. In March 1960 public records for the Canton, Ohio, area show that there were 3,986 persons unemployed. For the same month 1 year later, in 1961, the number of unemployed was 11,088—nearly three times the March 1960 number. We simply cannot afford another blow of the severity promised by this threatened Government action, not to mention the continuing effect of discriminatory and crippling legislation. Many Members of Congress will find similar problems for the same cause in their districts.

There is more than a little irony in this executive department attitude, particularly since it comes at a time when the President himself speaks pessimistically about a recession and promises large-scale economic aid to restore our economic strength. It would appear from the facts I have cited here that such an effort would only succeed in some cases of robbing Peter to pay Paul.

Mr. Justice Holmes in his opinion in Olmstead against United States said eloquently that "it is less an evil that some criminals should escape than that the Government should play an ignoble part." Consider the additional force of this statement when those who are the victims of this ignoble part are not criminals at all, but responsible, industrious, and law-abiding businessmen—taxpayers who are now threatened with extreme hardships only because they relied on the good faith and word of the Government.

The fact is that both the Gore amendment which was enacted by Congress in 1960 and the abrupt and brutal reversal of its own word by the Internal Revenue Service in the same year constitute ignoble acts on the part of the Federal Government. The result cannot be tolerated on either moral or economic grounds. Speaking for the industry and their thousands of employees which have been victimized, I urge that steps be taken at the earliest possible moment in the legislative and executive departments of the Federal Government to rectify these wrongs.

Mr. BRAY. I have been advised that the Department of Justice has very recently filed a suit against a company in my district, Arketex Ceramics Co., for return of a refund. As I am informed, the Arketex Co. legally and properly relied on decided court cases and also on an information release of the Revenue Service itself in computing its tax liability. And the Internal Revenue Service concurred in the company's position and paid a very large refund. And now, 2 years later, the Revenue Service has changed its position and is demanding return of the money. Can the gentleman from Ohio tell me how businessmen can conduct their businesses in the face of such vagaries of the Government?

Mr. BOW. You have described the heart of the matter which causes me to rise. The plight of your constituent—of having relief on decided cases and Revenue Service announcements and of having made commitments for the future on the basis of such authorities—and then being faced with a ruinous about-face regulation of the Revenue Service at a later date—this same disastrous situation is faced by many small brick and tile companies in my district. Indeed, throughout the country.

Mr. NYGAARD. How is brick and tile clay treated with respect to the depletion allowance compared to other minerals?

Mr. BOW. Under the Gore amendment, enacted June 1960, miners of limestone, technically called calcium carbonate, were granted a 15-percent depletion allowance, whereas brick and tile clay, which is scarcer than limestone, only receives a 5-percent allowance. In addition, the processing point at which depletion is computed for limestone is more favorable than that allowed for clay. Many laymen in this field are not aware that clay is composed of slightly varying chemical components in every pit where it appears. It is these chemical components that impart unique colors and textures. Thus, an entrepreneur who establishes a brick plant at the site of a clay pit not only gradually depletes his natural resource, but is also depleting his entire business. For once the clay pit is used up he must build a new plant at a new site. He can never duplicate the color and texture of the brick he has been marketing. These are some of the peculiar disadvantages of brick and tile clay which merit consideration.

Mr. LIPSCOMB. What has been the history of legislation and regulations on this subject?

Mr. BOW. I have given the history in my remarks. It is sufficient to say, however, that the past history of legislation and regulations led the clay industry to take steps—such as expanding their plants, and so forth—which are now being seriously jeopardized by retroactive action by the Revenue Service.

Mr. VAN ZANDT. What impact could the legislation and regulation of which you speak have on employment in the clay industry?

Mr. BOW. The retroactive action of the Revenue Service—which the industry could not have been expected to anticipate because of the history of court cases and legislation supporting their position—will drain funds, which in some cases may put firms on the brink of bankruptcy. Some companies have borrowed money and undertaken expansion programs. The unexpected and unanticipated draining of funds from these companies inevitably will jeopardize expansion, and even continued operation, and thus present a formidable threat to employment in the industry.

I yield to my good friend the gentleman from Ohio [Mr. MOELLER].

Mr. MOELLER. Mr. Speaker, I would like to address my remarks to the gross and unfair discrimination against the clay products industry threatening from the continuation of the so-called Gore amendment as well as from a possible retroactive ruling by the Internal Revenue Service with respect to the depletion allowance on such products.

My district, the 10th Congressional of Ohio, is a depressed area. In fact, seven of the eight counties of my district are classified as such by the Department of Labor. One of the chief industries on which we rely is the clay products industry. It is of vital importance to the economy of southern Ohio, as well as many other sections of this country. If the policies of the Gore amendment are continued, and if the Internal Revenue Service comes out with their retroactive ruling, as all indications point to at the present time, my district stands to lose this vital industry. This would not only be disastrous for the southeastern part of Ohio, but it would be grossly unfair to treat the clay products industry differently from similar and intensely competing industries in other parts of the country.

Permit me to read a short section of the excellent presentation to the Internal Revenue Commissioner recently made in behalf of the structural clay products industry. I believe that every Member of this body should give this matter their most earnest consideration. It is, in the final analysis, a matter of simple justice and equity.

The presentation is as follows:

Our position here is (1) that the Internal Revenue Service made a formal written representation to the miners of the mineral brick and tile clay; (2) that for several years the brick and tile clay miners made major business decisions in reliance upon that representation, as they had every right to do, and (3) that if the Internal Revenue Service now reneges on that representation, such an indefensible course of action will cause the miners of brick and tile clay to suffer severe and irreparable hardships and will result in gross discrimination between taxpayers that are in keen competition with each other and that are similarly situated in all respects that ought to be controlling.

Mr. AYRES. Mr. Speaker, I concur in what the gentleman from Ohio [Mr. Bow] has said. A plant in my own district, the Robinson Clay Products, needs and is entitled to protection.

THE PEACE CORPS

The SPEAKER. Under the previous order of the House the gentleman from West Virginia [Mr. STAGGERS] is recognized for 5 minutes.

Mr. STAGGERS. Mr. Speaker, one of the most astonishing developments of recent years is the sudden inflorescence of the Peace Corps idea. Jonah's gourd, which grew up in a single night, had no stronger vegetative impulse to flower and bear fruit. Popular approval of the Peace Corps seems to be overwhelming. It gets more attention than a man-carrying capsule orbited into space. It is positively the only new and exciting item on the news market. Will it further emulate the gourd, by also perishing in a single night?

The proposal to send a number of our young people overseas to take part in the development of backward areas was given to the press just a month ago. It has as yet no official standing. No concrete measures for its implementation have as yet been set before the Congress for consideration, let alone for approval. Yet, judging by its publicity, it is a fait accompli. We are all ready to go. When do we start? It is reported that some 12,000 inquiries about it were received within a week of its announcement. An unofficial head of the movement and a staff to handle the correspondence had to be appointed. In the vernacular, how come such sudden enthusiasm for the welfare of our fellow man? The proposal deserves some critical examination. Surely it is not as yet a deliberate and carefully conceived part of our national purpose to improve living standards in the underdeveloped areas of the world.

A study of a Peace Corps project was authorized by the 86th Congress in 1960. The task of making the study was assigned to the Research Foundation of the University of Colorado. Very little publicity has been given to the procedures of the foundation in making the study, or to the discovered facts on which it based its report. However, the foundation approved the project, and offered an outline of how it might be organized and how it would operate. This is all we have to go on up to the present time. But it was enough to stir up nationwide interest and almost universal acceptance as a thing that must be done.

The plan for the Peace Corps, as mapped out by the University of Colorado Research Foundation, would put at least 500 people into selected foreign fields by the end of 1961, and several thousands more within a few years. It is assumed that most of these would be young people, in the main college graduates, though membership in the Corps would not be restricted to either the young or to college graduates. They would go only to countries which asked for them. Already Nigeria, Pakistan, India, the Philippines, Brazil, and Colombia have shown some interest in the program.

A training program would precede assignment of Peace Corps members. The training would include courses in the language and culture of the countries to which members are sent, together with instruction in the particular skills they would use. It is assumed that the training period would take from 6 weeks to 6 months. It would be given at the expense of the Federal Government. Assignees would serve 2 or 3 years in the field, and then be released. Their pay would be only enough to maintain basic needs, possibly $60 to $70 per month, plus board, lodging and transportation. A severance allowance, probably $1,000, is suggested. The total cost to the United States, payable out of Federal revenues, is estimated at $5,000 to $10,000 per year per member. Service in the Corps would not be a substitute for military service, although it is believed members would not be called for military service except in emergency.

The significant difference between the Peace Corps and other forms of aid offered to underdeveloped nations is that the members would work directly with people, instead of with officials. They would go into small villages as individuals, or at the most very small groups, instead of clustering in capital cities. There they would work and live alongside the nationals, doing the same work, eating the same food, talking the same language. Ideally, they would merge themselves completely with indigenous life, sharing the thoughts and the aspirations, as well as the experiences, of the people with whom they worked.

The basic purpose of the Corps would be to teach the natives to do things for themselves. They would not be concerned with projects promoted by either the native government or our own Government, such as dams, roads, and so on. However, the initial emphasis seems to be on teaching, presumably in organized or semiorganized schools. There is a demand for elementary and secondary teachers, particularly for teachers of English. Other teaching fields would be in malaria eradication, in public health and sanitation. The practical arts would be represented by teachers showing local farmers how to use modern implements and techniques. In villages, Peace Corps members would advise and assist in development projects, such as school construction.

For the near future, a great variety of other teaching activities have been suggested, such as child care, motor repair, electric wiring, welding, irrigation, improvement of livestock and crop yields, how to store grain, bookkeeping, weaving, how to make soap, how to cook and preserve foods, how to set up and run a community government. In all these matters, it is assumed that while

the accent is on teaching, instruction should not be confined to formal teachings, but extend to actual participation in the activities being taught. In other words, they will teach by doing.

These are the somewhat vague outlines of the program as it has been developed up to the present time. It is now necessary to peer into the crystal ball in an attempt to find out why it has generated so much popular enthusiasm.

In the first place, the proposal is new and different, and therefore newsworthy. The press, radio and TV have taken it up and discussed it at length. Interviewers flocked to every college campus to get student reaction. Student response, as might be expected under the circumstances, was somewhat impulsive and represented relatively unconsidered initial opinion. Making allowance for differences in the way of expressing themselves, students divided themselves into about four fairly well-defined groups, judging by reports in the press and on the air.

One group is made up of young people who instinctively viewed the program as an opportunity to render service to their Nation and to the world. A typical response from this group was to the effect that they would be happy to dedicate at least a part of their lives to helping other people. It was startling—and perhaps surprising—proof that idealism is not dead among our young people. If the Peace Corps does nothing else, it should revive our faith in ourselves, and our faith in the innate qualities of those who shall come after us. Thank heavens for such assurance that many things are still right in the world.

A second group might be formed of those who saw the program as an opportunity for adventure. They said that they would like to see new lands and work with strange people. This, too, is heartening. There has been too much talk about the tendency toward a dead conformity and a lack of enterprise in this country. It is inspiring to realize that many of our young people still delight to go on pilgrimages; that they have the spirit of adventure and daring. That is the stuff out of which a better world is destined to be made.

The third group is composed of quite a number who either overlooked or ignored the point that Peace Corps service is not necessarily a substitute for military service. They took the position that if they had to choose between one or the other, they would prefer Peace Corps service. Their attitude reflects the aversion of Americans to military life, and this is also reassuring. It is a fact of history that as nations militarized, they built the machinery for their own destruction. The more energy, imagination, money and time are spent in developing a superior military organization, the less is available for peaceful pursuits. Until recent years, America had little use for a large standing Army, and a military man was almost a curiosity. Since 1940, every boy has faced the prospect of at least a short period in the Armed Forces. The number of men in this country under the age of 40 or 50 who are ineligible for one or more of the veterans' organizations is negligible. Furthermore, we are spending half of our Federal budget, some $40 billion per year, on preparedness and defense. There are fears that the military will begin to dominate our Government, and perhaps our lives, as it has in other Nations. The distaste for the military shown by the students should be evidence that we are not degenerating into a military nation.

The fourth group may be somewhat smaller in numbers, but whose acumen may be superior. A few students expressed some doubt that they would be able to do the job as well as it must be done. The doubt rises not so much from distrust of themselves as from a realization of the enormous complexity and difficulty of the task. They see that they would need a comprehensive and extensive knowledge of the people with whom they would work in order to enter successfully into their habits of life, their aspirations, their total culture. To fail would do more harm than to do nothing at all. They are aware that other workers with equally good intentions and with much more experience have not succeeded in any significant degree. Could they do better? These boys have heads, and they know what to do with them. Somebody, parents or teachers, have taught them something. We should be proud of their foresight and wisdom.

But now it is time to lay aside any further attempt to probe into the motives of would-be members of the Peace Corps and consider the practical aspects of the matter with such logic as may be accorded us.

Assuming that the Peace Corps, together with other agencies which have been set into operation, should accomplish exactly what it is intended to accomplish, would that necessarily be in the best interests of the people concerned? What we are trying to do is to change the whole lives of whole nations. We inferentially take it for granted that our standards of value and of well-being are superior to those of other people. This requires considerable national arrogance, and unfortunately it is our arrogance which foreigners resent. All peoples tend to cling tenaciously to their cultures. Underdeveloped nations view with some envy our material well-being. Are they willing to pay the price for it? Prevailing conditions of existence may not seem as miserable to them as they seem to us. Dare we take the responsibility for industrializing the whole world? Many Americans suspect that our enterprise involves a "rat race" producing only a different kind of misery from that of less advanced people. The Germans made a virtue as well as a boast of being the most efficient people in the world—and they were. But the world could not endure the Germans, and went to some trouble to suppress them.

But assuming that better methods of production, of sanitation and of education would add to the happiness of alien nations, is it practicable for such a group as the Peace Corps to inculcate those better methods? Its members would be dispersed in remote isolation, a grain of mustard seed in a jungle of age-old custom. Native practices follow a pattern prescribed by experience, racial feeling, religion, and what we call prejudice. When they attempt to accept our efforts to help them, they first ask that we understand them. What does that word "understand" mean? In a practical sense, it means that we must accept their ways of thinking, and inevitably their ways of doing. Any teacher must understand the motivations and the capabilities of young children. But understanding does not imply acceptance. The purpose is to change reactions. In organized society, the teacher has the whole force of adult life behind him. In a foreign country, the whole force of public antagonism would work against the Peace Corps member.

Many of the religious sects in America have been sending missionaries to foreign lands for many years. Some of these missionary-minded churches have come forward with the claim that they have already been doing the same kind of work as that proposed for the Peace Corps. Extensive training extending over 2 or more years is given every prospective missionary. The proposed period of not more than 6 months for Peace Corps members seems quite inadequate for a task whose difficulties have not been surmounted by better trained missionaries.

Insofar as teaching is accompanied by actual participation in productive activity, tools and equipment must be available. If natives are to use tools and equipment, these must be simple. In some quarters it is claimed that a spade and a wheelbarrow would be of more use to a native than a tractor and a truck. It is a slow process to teach the proper use of complicated machinery, and until mastery is achieved, conspicuous improvement in production would be unimportant. Could the Peace Corps member start with equipment simple enough for his students and advance rapidly enough to create an impression?

The proposal to send Americans into remote sections of a backward country raises the question of the chance of survival. Conditions are necessarily primitive. In both quantity and quality, food is far below the standards to which an active American is accustomed. Reducing intake from some 3,000 or more calories per day to 1,000 calories might mean starvation. Digestion might rebel at the kind of food and the nature of its preparation. Micro-organic infection is prevalent, it is said, to a degree some seven times beyond the capacity of Americans to withstand. The experience of our Armed Forces abroad during the war illustrates this. Yet the purpose of the project is to share the daily life of the natives. It is doubtful that the Peace Corps members could survive. To maintain American standards of diet and sanitation would immediately alienate native sympathy and cooperation. The missionaries, in most cases, make at least this much concession to home conditions of living. It is no disparagement of their hardihood to say that they could not be expected to maintain their health and vigor under less favorable living arrangements.

The cost to the United States for each member of the Peace Corps is estimated

at $5,000 to $10,000 per year. It is difficult to see just where this cost would go, considering the pay given the member. If the lower figure turns out to be the correct one, 10,000 Peace Corps members would cost us $50 million per year; if the higher figure is accepted, it would be double that. This is, perhaps, not an unreasonable cost, if the results justify the expenditure. Otherwise, it is simply an additional contribution to an idealistic but impractical gesture.

The thought occurs that the Peace Corps might work better in reverse. Instead of sending 10,000 Americans overseas to be submerged in foreign traditions and practices, bring 10,000 reputable citizens of other countries here each year at our expense. Give the foreign governments which accept the program the responsibility of selecting suitable persons. Let these governments determine the occupations for which they will be trained and the specific mental activities in which they will be indoctrinated. Bring them to our shores and find them jobs in appropriate industries and occupations. Put them under the influence of our schools, our churches, and our social institutions. Give them an opportunity to study our way of life. Give them enough time to make a thorough test of their ability to adapt to what we deem necessary to carry out our system of organization and production, say 4 years or more. Then, when they return to their homes, if they have been truly reoriented, they will become effective teachers among their own people.

TRIBUTE TO THE LATE ADMIRAL FRANK T. KENNER, U.S. COAST GUARD, RETIRED

Mr. LANE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, Rear Adm. Frank T. Kenner, U.S. Coast Guard, retired, passed away at Honolulu, Hawaii, on March 9. He was rated tops by all who served under him.

Frank and his brother William were the famous twins who rose to commanding positions in the Coast Guard. Both graduated from the Coast Guard Academy in 1924. Frank was a rear admiral at the time of his retirement, and William won similar honors.

The Kenners have become a legend in the Coast Guard where their technical knowledge and their capacity for leadership were enhanced by an understanding of human nature.

There was a high standard of morale among all who were privileged to serve under the Kenners.

From the men in the ranks comes the perfect tribute: "We would follow them anywhere."

The death of Frank recalls the days when the twin brothers served together at Coast Guard headquarters in Washington.

In the course of their duties, many Members of Congress came to know them, and to admire the friendly efficiency of their cooperation.

Frank was born to be an officer, and he became one of the very best. The memory of him adds another chapter to the inspiring history and traditions of the U.S. Coast Guard.

During World War II he served in the South Pacific, and from 1956 to 1958 he was Chief of Operations. For his valorous service to the Nation, he was awarded the Legion of Merit.

I extend my sincere sympathy to his widow, and his brother, and to the fine woman whose example guided her sons toward distinguished careers as commanding officers of the Coast Guard, the bereaved mother, Mrs. Wilson Kenner, who resides with William in South Carolina.

May she be comforted by proud memories of Rear Adm. Frank T. Kenner, U.S. Coast Guard, retired, who has taken the last voyage out to his eternal reward.

SERIOUS CUTBACKS IN NATIONAL DEFENSE — SHOULD WE MAKE THEM IN AREAS OF HEAVY UNEMPLOYMENT, AT THE SAME TIME WE ARE TALKING ABOUT SPENDING VAST SUMS TO AID ECONOMICALLY DISTRESSED AREAS?

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD, to revise and extend my remarks, and include an article.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. STRATTON. Mr. Speaker, residents of the whole of New York State, especially those of the upstate area along the Mohawk Valley have been deeply disturbed in recent weeks by Air Force plans to eliminate certain operations at the Griffiss Air Force Base at Rome, N.Y., with a consequent decline—in an area already listed as an unemployment distress area—of some 6,200 jobs. This Air Force action, as I have already had occasion to point out on the floor, would turn this Rome-Utica area from a "distress" area into a "disaster" area. The proposal has aroused the wholehearted opposition of the New York delegation in Congress, irrespective of party. We simply cannot see how it makes sense to talk of taking action to aid unemployment areas—with increased Government contracts, and with a distressed areas bill and at the same time permit the Defense Department, one of the Nation's largest employers, to throw people out of work in these same areas and thereby aggravate with its action a situation some other agency of Government is supposed to be trying to correct.

The plans for the elimination of the air materiel area at Rome—Roama, as it is called—with this loss of 6,200 jobs is bad enough. Now I understand that the Defense Department is considering even further actions which would cut still more deeply into the economy of the upstate area around Rome, and in my own district. I sincerely hope these reports are inaccurate. I sincerely hope the Defense Department will take neither of these actions.

Yet I must say, Mr. Speaker, that I am not much encouraged by a column which appeared in the Washington Post this morning under the signature of Marquis Childs which appears to be based on an inspired leak of information designed to "soften up" the country for the announcement of still more of these economic dislocations in the country caused by actions of the Defense Department, and taken without any regard for the action of other agencies of the government in combating unemployment.

Mr. Speaker, because I believe this column will be of interest to other Members and under unanimous consent I include it at this point in the RECORD, and also an editorial following it from the Amsterdam Evening Recorder of March 18, which expresses more aptly than I could do myself some of the thoughts which have been in my own mind and which I know are in the minds of the people of New York State.

[From the Washington Post, Mar. 22, 1961]

J.F.K. CONFRONTING THE WEB OF POWER

(By Marquis Childs)

Except for those Presidents content to sit back and watch the drift of events there comes a moment in every administration when Executive power must be used no matter what the turmoil and the tumult that may follow. Such a moment has come in the Kennedy administration.

The President is rather like a swimmer poised on the bank. He is basking in the warm wind of personal popularity. The "image"—the ardent young President, his attractive family, his eloquent words—is an appealing one.

But, as he himself and those around him understand only too well, this cannot last forever if he is to do what he knows must be done. The moment of decision is coming in the message on national defense the White House will send to Congress probably next week. The long and often almost-anguished debate that has gone on between the President and his Secretary of Defense, Robert McNamara, is coming to an end.

Both men appreciate the radical alterations in the Defense Establishment that must be carried through in order to achieve economy and efficiency so long talked about in Senate debates and political campaigns. But they also appreciate that these alterations, which go along with recommendations for increased defense spending on conventional forces and in other areas, will arouse the determined opposition of some of the most powerful pressure groups in the country.

This is evident from a listing of some of the principal alterations under debate:

A cutback in airplane production where it is clearly demonstrable that certain projects have no further value.

Elimination of certain missile developments that have grown like Topsy largely because of pressures from industry, labor, and the local community. The waste in at least one instance is in the order of hundreds of millions, if not billions, of dollars.

A cutback in the production of fissionable material in view of an overflowing inventory of the raw material and of megaton hydrogen bombs.

Economies in the National Guard and the Air National Guard where the waste and the

dubious contribution to the Nation's defense are glaringly obvious.

Any one of these proposals would be enough in itself to start a roaring backfire generating powerful pressures applied to Congress to prevent any alterations. The President's political aids are recalling that the Republicans charged in the campaign last fall that airplane contracts in southern California would be cut back or transferred to New York and other areas. They believe this is why the Kennedy-Johnson ticket lost that State.

Confronting the moment of decision, what the President—any President finding himself in this situation—must ask himself is whether the sum total of all pressure groups will not in the end add up to complete stalemate. It has begun already. The powerful truckers' lobby, angered by tax proposals in the highway message, is doing everything possible to block any change in this department.

In national defense and the spending of more than $40 billion a year the President comes up against a whole complex of built-in interests. To challenge them now with a recession on is to invite the charge that any cutback will increase unemployment and deepen the recession.

Yet to fail to make the challenge is to sanction past inefficiency and waste and thereby make it far more difficult to revitalize America's defenses. But also it bears directly on the effort to make some small beginning on disarmament.

The President's message-writers are looking back at the warning uttered by former President Eisenhower in his farewell message on January 17. While he waited until the last minute of the last hour, he did speak fateful words of warning about the "potential for the disastrous rise of misplaced power" in the military-industrial complex and the danger "that public policy could itself become the captive of a scientific-technological elite."

That warning of the former President is a matter of deep concern to his young successor as he stands ready to take the plunge. He must commit himself to a greater degree, if one accepts the view of his biographer, James MacGregor Burns, than he has ever done before. And in grappling with the complex—the tangled interweaving of power and money about which Mr. Eisenhower spoke—he will inevitably sacrifice some of his personal popularity.

[From the Amsterdam (N.Y.) Evening Recorder, Mar. 18, 1961]

STRANGE SORT OF LOGIC

With the question of aid to distressed areas one of the hottest issues in Congress today, it is rather confusing to read the report of the Defense Department on business done during the final quarter of 1960.

While practically everybody agrees that depressed areas should be aided, the reduction in Government contracts awarded to these areas serves only to aggravate the problem. It does not make sense.

According to figures reported by Senator JACOB K. JAVITS, prime contracts awarded to New York State's 12 areas of "substantial unemployment" dropped 60 percent in the October–December 1960 quarter. This means they received $36,579,000 in defense contracts as against $91,187,000 in the previous quarter.

During this same period, Amsterdam's share of defense contracts dropped from $433,000 to $217,000. Albany-Schenectady-Troy received $9,687,000 as against $27,682,000 in the previous quarter.

With all the talk about alleviating the problems of unemployment in the hardest hit areas, it is difficult to understand why the Government does not channel as much defense work as possible into these troubled spots. At a time when the State's share of defense contracts increased, fewer of them were awarded to areas where the need is greatest.

Certainly a reduction in defense work is not going to help these distressed areas. Many citizens are beginning to wonder if Government officials are only paying lip-service when they continue to express concern over the plight of those in the areas of widespread unemployment.

When one takes a good, long look at certain official decisions, such as the removal of Scotia Depot facilities and the threatened closing of the Air Materiel Command at the Rome Airbase, it is difficult to think otherwise.

NUCLEAR FRONTIERS IN THE 1960's

Mr. PRICE. Mr. SPEAKER, I ask unanimous consent to extend my remarks at this point in the RECORD and include a statement by Mr. HOLIFIELD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PRICE. Mr. Speaker, I regret to say the U.S. domestic and international atomic energy programs have been faltering in the last several years. Many of us have been hopeful that the new administration will put some life back into these atomic energy programs.

As a charter for the new frontiers in atomic energy I would suggest that the Congress and the executive branch pay careful attention to a policy speech given by Congressman CHET HOLIFIELD, now chairman of the Joint Committee on Atomic Energy, which was given in San Francisco on December 14, 1960, before a joint meeting of the Atomic Industrial Forum and the American Nuclear Society. In this important speech the gentleman from California [Mr. HOLIFIELD] discusses the need for pressing forward with atomic power, the Rover nuclear rocket program, and the program for auxiliary atomic power for space and other vehicles—called the Snap program. He called for a fixed flight date for the nuclear-powered aircraft and other things. It was an excellent proposed program.

I regret to say that there does not appear to be much change as yet in the executive branch with regard to the need for pressing forward with pioneering atomic energy projects.

For sure, it is too early in the new administration to question programs and progress. But I see a small cloud no bigger than a man's hand. I only can wonder if it portends a future of little technical progress.

There is some basis for belief that many of the same people who were fighting atomic energy projects in the previous administration are still around, and may even be receiving aid and comfort from new arrivals.

I cannot help but observe that the same group of scientific advisers who have crippled advanced scientific development for the past 10 or 15 years are still around.

As chairman of the Subcommittee on Research and Development of the Joint Committee on Atomic Energy, I will continue to watch these trends and from time to time may feel impelled to report further on vital atom programs.

I submit herewith the remarks by Chairman HOLIFIELD for the RECORD.

NUCLEAR FRONTIERS IN THE 1960's

(By Congressman CHET HOLIFIELD)

I welcome this opportunity to meet with you at your joint session of the Atomic Industrial Forum and the American Nuclear Society. We are moving into a decisive decade in the atomic energy program and we can only benefit from these meetings and taking stock of our progress.

Until a month ago I had a lot to say about new frontiers of various sorts so your theme "Nuclear Frontiers—A Challenge to Industry," has a familiar ring. Your committee's suggestions as to topics for my speech were excellent although some may think that they violate the rules of frontiersmanship. For example, they have asked me to comment on possibilities for economic power and atomic safety, as well as space propulsion and other advanced projects. Are these frontiers? I am sure there are those among us, or elsewhere, who believe that even these subjects are on the frontiers, especially for the 1960's.

Quite seriously, any discussion of the "nuclear frontiers" must deal with varying time scales and degrees of urgency. It would be only too easy to read a list of "glamour" projects and call for crash programs or, conversely, we could extoll the values of existing programs and deny there is anything of value on the horizon.

POLICY CONSIDERATIONS ON ADVANCED APPLICATIONS

Actually evaluating the advanced developmental programs of the Atomic Energy Commission and making recommendations which affect them would seem to involve three fundamental questions.

What should be our national policy for advanced nuclear development?

What are the important advanced applications in nuclear technology?

What programmatic decisions must be made to move forward the programs identified as important?

First, we might examine this question of overall national policy on advanced applications. The first sentences of the Atomic Energy Act should provide our answer but there can be many interpretations of general phrases.

To my way of thinking, the national policy should be this: The United States must lead the world in advancing nuclear technology.

Our total position—our military, economic, scientific and political posture—demands such a policy and that we move this nuclear technology forward with deliberate wisdom and speed.

This interpretation suggests urgency and it should. Things move quickly in today's technical world. The nuclear age opened in the United States with incomprehensible speed. Only 3 years passed between the first understanding of fission and the achievement of the chain reaction. In another 3 years much of the development complex of the Atomic Energy Commission as we know it today was designed and completed. Only a few years separated the operation of the Mark I, the *Nautilus* reactor prototype in Idaho, and our nuclear submarine fleet.

Time is an important element in any policy. If we drift in these perilous sixties, leadership in important areas in nuclear technology will be lost to the United States.

AEC and industry have had warning on our problems of leadership and urgency.

For example, you may recall the dissent to the conventional wisdom of the report on the 1954 Atomic Energy Act, which MEL PRICE and I wrote. It pointed out that it was premature to give private industry primary responsibility for exploiting the atom. In my opinion, the experience of the past 6 years has confirmed our views.

And I could cite the Joint Committee's unanimous report on the Gore-Holifield bill in 1956 which called on the United States to reverse its policy of abdication of world leadership in atomic power development. I could also refer you to my statement in the 1958 AEC authorization hearings which once again pointed up the necessity for the act to exert leadership.

It is not preordained by nature that we lead the world in atomic energy. It is preordained, however, that in any competition the advantage rests with the swift.

Our policy, then, with respect to advanced applications, should dictate leadership and urgency but not recklessness—calculated speed but not waste. Above all, decisions must be faced and not delayed. There is no kind of waste as demoralizing as the waste of indecision.

TYPES OF ADVANCED APPLICATIONS

What are the important advanced applications?

The phrase "nuclear frontiers" covers a host of things. In tonight's discussion I will speak about some of the applications which were identified as important in the Joint Committee's public hearings on "The Frontiers of Atomic Energy Research." These hearings by the Research and Development Subcommittee, under the chairmanship of my friend and colleague MEL PRICE, were an important medium for identifying to the Joint Committee new and important programs. These hearings should continue in the years ahead.

We should make one important distinction in analyzing frontier applications. They fall into two main categories. In some programs like the controlled thermonuclear effort the absence of a fundamental concept, or demonstration of its technical feasibility, prevents definition of the job which must be done before you can meet a major end objective. In other programs, and I will dwell on some of these tonight, objectives can be attained by human decision rather than a further major technical breakthrough.

ATOMIC POWER DEVELOPMENT

An example of the second category is central station atomic electric power. Surely this is a kind of frontier in the latter sense—because the objective of competitive atomic electric power has not yet been attained.

I believe the widespread use of atomic power is inevitable. Sooner or later, a significant percentage of the electricity generated in the United States, and in the world, will come from nuclear plants. The problem, now, is mainly the inability to compete with the fossil fuels.

The question which has plagued us for years is: How do we assure economic nuclear power? Some answers are emerging but also new questions and decisions face us.

In the case of the water reactors—the pressurized and boiling water systems—it seems possible that with the completion of another generation of large-size plants, economically competitive power can be realized or be within close range in certain power areas of the United States. We should see that the plants are built. This is one step on which there should be little disagreement. But we should be careful and not assume that this type of reactor is our ultimate in progress.

The other reactor types under development in the 10-year program of the AEC hold less promise of economic power in one additional generation of plant development and construction.

The water reactors have benefited from close to a billion dollars' worth of Federal research and development and successive prototypes in the naval and AEC civilian programs. The other reactor types have had far less support. Private financial support can be found for the water reactors but private companies are less willing to risk money on the more unknown types.

Whether or not additional Federal financial assistance in these established reactor technologies will be needed, is something we will have to face during the next 2 years.

But we can be sure that additional Federal assistance will be required for other than the water type reactors, if these types are not to die on the vine. Thus, these questions must be faced on the nonwater reactors:

What nonwater reactors promise economic power in several developmental generations?

What additional prototypes are needed to assure this progress?

How can these prototypes be financed?

If these questions are faced and new starts are shown necessary, the money question will be dominant. Who will pay the bill?

Unless we abandon capitalism (and those of you who belong to the NAM and chamber of commerce should know that this isn't likely to happen) then such projects can go forward in one of two ways: Because a financial incentive exists for private parties or because the Federal Government decides to finance the job. I am not unaware of the controversy this question can spark. We went through all this in 1954–56. I, for one, am willing to be openminded. I only ask that the decisions be faced—not neglected. If new starts are in order, I only ask for sensible finance plans.

The important thing is that the Commission should not take a passive role in these things and waste time with a policy of "watch and wait." Let's face the problem of developing the nonwater reactors. If they have no promise—say it. If they do, we should exploit their promise and get on with the job.

ATOMIC SAFETY AND REGULATIONS

We all agree that the problem in atomic power is cost. One of the cost factors in atomic power is nuclear safety. How much this safety factor affects the overall capital and operating costs of atomic powerplants is subject to considerable difference of opinion.

It seems strange, then, that many who speak endlessly about economic power look upon safety as a "hush-hush" subject. They seem to say "Don't discuss it—you'll scare people," or suggest "If you must discuss it—give it the public relations treatment." This thinking doesn't make sense. Since economic power is tied to safety, and in no little part to public acceptance, we had better get safety questions out on the table and into candid public discussion.

In our modern society we have learned to engineer for safety. We are surrounded by fundamentally unsafe things like electricity, heating gas, automobile fuels, and jet aircraft. None of these were ever accepted by the public because of secrecy. They are accepted because safety had been engineered into the product and was consistently demonstrated.

In the atomic power program, it should be recognized more clearly that safety is an important part of research and development. Let's prove to the public that money is as willingly spent for safety engineering in our reactor projects as it is for lawyers and public relations experts.

Candor is sometimes incompatible with advocacy. The public might have had greater confidence in the safety findings of the Atomic Energy Commission if the Commission had avoided situations where it appeared to be an advocate for a particular interest in a safety contest. The Commission must sit in neutral judgment. Industrial interest can also hurt the cause of public understanding with unreasonable advocacy.

Today's licensing and regulatory procedures are complex and industry is properly concerned over the many step-by-step procedures. As more is known about a given reactor type, it is hoped that some of the step-by-step procedures can be eliminated. Procedures, like laws, are established for protection. When suspicion disappears and as more is learned about reactor design and operation, greater confidence presumably will develop and gradually procedures can be streamlined. As you know, the Joint Committee is now conducting a major study of this problem.

NUCLEAR SPACE PROPULSION

The next frontier we might examine is the nuclear space frontier. The late Dr. Louis N. Ridenour described the problems of space exploration quite concisely when he said:

"So intense has become the interest, and so accustomed have we become to daily announcements of scientific miracles, that it seems necessary to warn the reader that a substantial amount of technical development has yet to be achieved before true space flight, and especially manned space flight, will become fully practicable. The most serious of these technical problems are clustered about, first, the means of propulsion; second, a practicable method of maintaining an environment in which humans can live in space as well as on the surfaces of the moon and other planets; third, the development of reliable communication and navigation over the vast distances of interplanetary space; and finally, a practical means for returning to the earth."

Atomic power can aid in the solution of all of these astronautical problems Dr. Ridenour described. It can provide great propulsive force in nuclear rockets, power from lightweight nuclear-electric plants to sustain life and mechanisms in the outer space environment, and power for communication equipment. Low-thrust engines powered by nuclear electrical sources can aid navigation with orbital corrections and provide thrust for other uses such as return flights.

In January of 1958, in a speech in the House of Representatives, I called for the speedy development of a nuclear rocket by the United States. Since then, there has been progress in the Rover project, but the big job both administratively and technically lies ahead.

Testifying before the Joint Committee on Atomic Energy this year, Dr. Krafft Ehricke said that to ignore nuclear rockets is to flirt with obsolescence. He said this:

"Space will be conquered only by manned nuclear-powered vehicles. Planning anything else for the late sixties is, in my opinion, flirting with obsolescence almost from the start."

He continued:

"I would like to express my strong conviction that the nuclear engine is for astronautics what the combustion engine is for aeronautics. It is the only means of obtaining complete independence operationally from the earth to the extent to which it is necessary to explore the planets of our solar system. I am firmly convinced that the surest way to cripple the U.S. space capability in the seventies would be to cripple its nuclear engine development in the sixties."

Thus, Dr. Ehricke states the case, and it is supported by other expert testimony. In summary, we can accept that the nuclear rockets can put larger payloads into orbit and into space than chemical rockets. Even taking the most conservative approach, the nuclear rocket can handle twice the payload of a chemical rocket of equivalent size and scope. This, then, is the case of the nuclear rocket, more payload and bigger missions.

What does the nuclear rocket mean to our national space program?

Between now and the early 1970's it means a major magnification of our capabilities. The Saturn booster hopefully will be available after 1963 and for a number of years the Saturn will be the primary booster for space missions. To put it another way, our

national space capability will be dependent primarily upon what the Saturn can accomplish.

The most important means of magnifying Saturn's capability, in this time period, is to add an upper stage nuclear booster. By doing this we can magnify the Saturn capability several times, or perhaps we can develop an all-nuclear rocket system.

Here is the choice. We can rest with the basic Saturn capability through 1970, or we can increase this capability several times through nuclear power.

The prestige factor in being the first nation in the world to demonstrate a nuclear rocket capability cannot be underestimated. But on the question as to whether or not this should be a ground-launched nuclear rocket, or an upper stage of a Saturn or other conventional rocket, I am willing to consider the advice of the experts. All I want is that the decision be based on nuclear rocket technology, and not be based on rigid extrapolations from conventional rocketry, or from budgetary considerations.

But the greatest danger in the nuclear rocket program is delay. A 1965 flight date can be met, but it can also be postponed.

We have learned in the nuclear powered aircraft program that a frequent cause of delay was the constant postponement of flight demonstration because of promises of greater attainment. Whenever it became time to set a flight date the promise of just a little better performance was always injected into the decisionmaking process and flights were always postponed.

We must not permit this to happen again. Let's set a flight date and convert the then existing technology into a mission capability. Let's not mix the ideas of improvement and flight demonstration. Logically, improvement comes later. It comes with the second, third, and later rocket generations.

It would be hard to criticize the "hush-hush" attitude toward safety in power reactors and not discuss it in connection with nuclear rockets. Obviously, any utilization of nuclear energy involves a potential hazard but competent scientific and engineering talent has learned to solve safety problems.

As I understand it, much work has already been carried forward in studying the hazards problem and several interesting avenues to safe nuclear rocket utilization have been uncovered. Surely this work will be expanded and nuclear rockets will be safe.

I would caution, however, that we will not be able to develop nuclear rocket engines with trial-and-error flight test programs. Here, unlike the chemical rocket program, components cannot be put together and fired just to see what happens. The approach which has been used successfully in other nuclear engine developments must be used here. There must be emphasis on theoretical calculations and careful preflight analytical work. This should be a program where we always do it right the first time.

SNAP PROGRAM

For some years the Atomic Energy Commission has had a program for the development of lightweight power reactors to supply auxiliary power in outer space. This work has been carried out under the so-called Snap program.

In the major astronautical programs of the future, electric power in large quantities will be needed to supply electricity for communications, navigational, and other equipment. If manned flights are envisaged, huge blocks of power will be needed to support human life. A third, important need, will be to supply power to the low thrust electrical engines which will be needed for orbital corrections or for actual propulsion for deep space flights. We used to call this "ion" propulsion.

As things stand now, the most powerful space reactor programed in the Snap effort would produce some 30 to 60 kilowatts.

Electrical propulsion experiments using this 30–60 kilowatt plant are being programed in 1965–66 but admittedly this is a very low power experiment. It is hardly meaningful.

There seems to be rather universal agreement that before the 1970's, nuclear power units in the range from 1 to 10 megawatts (1,000–10,000 kw.) will be needed for the big lunar and interplanetary missions. These nuclear space power units take a long time to develop and must be initialed far enough in advance of required flight dates to insure adequate performance and reliability when needed.

In the present Snap effort the Atomic Energy Commission and its staff must be commended for having the plants available for projected flight programs. In fact, these Snap projects were initiated 2 full years before sputnik. It appears, however, that if the 1 to 10 megawatt units, which will be needed later on, are to be ready on time, programmatic decisions should be made now.

As I understand the problem, the Atomic Energy Commission may not yet have a Department of Defense or NASA requirement to proceed with this work. I am aware of nothing in the Atomic Energy Act which says that the AEC needs formal requirements from another agency to conduct nuclear research and development but I may be missing something. It would seem to me that the Commission should proceed independent of a requirement from another agency if the research and development appears to be necessary and desirable.

In addition, because of the urgency of this effort, consideration should be given to several alternate technical approaches.

PLUTO PROJECT

Let's look at the Pluto program.

The AEC has been developing a nuclear ramjet engine in Project Pluto. When developed this engine would propel a very low altitude, strategic, supersonic missile.

In the 1960's, when the nuclear powers of the world will be looking to defenses against intercontinental ballistic missiles, the possession of a high speed, low level missile with relatively unlimited range could be meaningful, in flight it avoids radar detection and confuses the defenses.

Of course, the pros and cons of all this are up to our defense and strategic planners. It is for them to say whether or not this "mixed force concept" of providing supersonic low level capability is important.

I would hope, however, that this missile gets a fair test and is objectively evaluated. I have heard it said that it can't compete against a manned aircraft in a selection process because of the emotional attachment of some planners for airplanes. I would hope that this is not the case.

We have been through situations like this nuclear ramjet selection before. It would seem almost impossible to identify someone in a position of responsibility in the Department of Defense, who can make a clear-cut decision on whether to go forward or not. This decision must be made and there should be definition of the urgency which surrounds the development of this capability.

It seems to me that the system should be programed for early demonstration and actual production of large numbers postponed until it can be evaluated on the basis of experimental data. Why not end the delay and program an early flight demonstration?

OTHER AEC PROGRAMS

Some decisionmaking is also overdue in other programs.

You know of the Joint Committee's efforts to promote the use of nuclear plants at remote locations like Antarctica or Greenland. This could save considerable money by providing more economic electric power. This isn't a case of breaking through technical frontiers. It's more a case of breaking through bureaucratic blockades or budgetary blockheads.

Senator JACKSON has pointed out that the Antarctic powerplants are a classic example of bureaucratic paralysis. Everybody seemingly favored the projects, but nobody would sponsor them or put up the money—except the Joint Committee. Moreover, apparently no one in the executive branch profited from last year's experience. We have gathered informally that neither the Navy, the AEC, or the Budget Bureau has included any Antarctic reactors, or other reactors for remote sites, in their 1962 budget requests.

This problem of the remote site reactors must be faced and it will be.

Nuclear-powered airplanes remain a frontier application. After all this time and effort we must program a flight test. The test need not be tied to the needs of a particular strategic mission. Just demonstrating this technology would be a thing of value—the applications will follow. Things like using the nuclear-powered airplane as a missile platform, or in connection with anti-submarine-warfare patrols, are not unrealistic. Too many years have passed. We should set a date for flight test now and have the technical program and technical supervision to assure success.

Several research and development efforts are underway which involve the direct conversion of nuclear heat to electricity through such things as thermoelectric and thermionic conversion. It is hard to forecast what role direct conversion will play in central station power generation, but some think the first applications would be at remote substations or booster stations. It's hard to forecast on this one, but greater efficiencies and more applications are going to evolve.

Allied to this is nuclear-magneto-hydrodynamic (MHD) generation of electricity. I have been told the technology of the nuclear rocket will be applicable to nuclear MHD, and it seems good to note that the rocket work will contribute directly to this and other civilian power programs. I would hope this prospect is being studied.

ROLE OF AEC LABORATORIES

When it comes to frontiers like harnessing the thermonuclear reactions and those things which require significant invention before they can be beneficially applied, I can only emphasize the importance of the national laboratories of the Atomic Energy Commission. These should remain fixed and permanent national institutions with the ability to make a massive assault on advanced scientific problems.

Of recent years some have pitted the laboratories against industry in a fictitious competition. The national laboratories of the AEC are not competitors of industry. Their primary role is to do advanced research and development. Industry automatically benefits from their pioneering efforts. If the laboratories were weakened, fewer programs would be ready for industrial participation. The national laboratories are a benefit to industry.

The Joint Committee and the Atomic Energy Commission remain in agreement on the vital role of the laboratories.

ROLE OF INDUSTRY

I would like to make clear that when I speak of the role of the AEC laboratories, I by no means downgrade the role of industry. We on the Joint Committee want to encourage a growing, healthy, and competitive atomic industry. We don't want it to end up with one or two giants dominating a weakened industrial effort. Nor do we want the work spread so thin that it is impossible to have a nucleus of talent sufficient

to do an adequate job. This requires technical and managerial judgment of a high order.

I believe you are aware of one field which the Joint Committee has pioneered. That is an affirmative effort to obtain advice and information from industry itself as well as other groups, including scientists and labor. This has been accomplished through such means as our "202" hearings on the state of the industry through informal seminars and meetings, through panels of consultants, and by individual visits and discussions. All of this is to the good in my opinion. And I am glad to say that in recent years the AEC has followed suit.

AEC ADMINISTRATION

Finally a word on administration and management. For years we on the Joint Committee labored to get mutual agreement with AEC on program objectives and methods. We have made considerable progress in this direction, but something still seems to be missing. It still takes AEC far too long to develop and recommend projects, and still longer to get construction started after authorization. The AEC finally began to recognize this problem of long leadtime more than a year ago. But I regret to say that progress is still too slow.

And now, my friends, we have talked mostly tonight of the technological challenges of the sixties. Behind those frontiers, there looms the grim and threatening challenges of a vigorous and dangerous ideology. Its shadow has already engulfed most of the land mass of the European and Asian Continents. Another grim shadow stretches out south of Europe to a land of teeming and restless millions. In another century we were wont to refer to it as the "Dark Continent." In this century—yes, in this decade—we see the darkness of communism threatening these new colonial nations. A darkness not of pigmentation of the skin, but a growing cloud which seeks to snuff out the lights of the mind—the torches of dignity and freedom.

I trust that we, of this generation, working as we plan to work on the technological challenges of the sixties, will not become so engrossed with our pursuit of the economical kilowatt that we forget the great ideological challenge which looms always behind the technological frontiers of the sixties.

Let us resolve to acquit ourselves so that future historians will write, "They solved the problems of the sixties and they also laid the foundation in the 20th century for the preservation of freedom."

EARL WARREN'S FELLOW TRAVELERS SMEAR JOHN BIRCH SOCIETY

Mr. RIVERS of South Carolina. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. RIVERS of South Carolina. Mr. Speaker, during the past several weeks Members of this House have been inundated with letters from thoughtful Americans who are clamoring to bring about the impeachment of Earl Warren. This movement has been spearheaded by the John Birch Society, a nationwide organization of patriotic Americans whose dedication to their country is epitomized in their aim to bring about "less government, more responsibility, and a better world to live in." It is significant that although the John Birch Society is more than 2 years old, it has been almost completely ignored by the press until its recent all-out drive to impeach the Chief Justice. Recently the John Birch Society has been disparaged by Time magazine and by Members of the other Chamber of this Congress. These charges and their poisonous sources will be discussed in detail and their origin disclosed.

The John Birch Society, led by its courageous and perceptive founder, Robert Welch, of Belmont, Mass., has leveled the full force of its attack upon one of the most inept poseurs who has ever worn the robes of Chief Justice. Earl Warren had no judicial experience before he attained the highest judicial office in our Republic. He received this honor as a reward for delivering the votes of the State of California to the late misguided Eisenhower regime. The audacity of the Warren Court has finally aroused a large portion of our lethargic and complacent population. Americans who had taken our freedoms for granted have at last begun to realize that only renewed vigilance will preserve our freedoms in a world that is rapidly being swallowed up by the Communist conspiracy.

Few people who scoffed at southerners and their resistance to the Supreme Court decision of May 17, 1954, realized the real significance of the death knell which was sounded for the Constitution of the United States on that fateful day. The issue at stake was not the right of States to run their schools as each State deemed best for its own particular needs. Actually, on May 17, 1954, the Supreme Court assumed the authority to nullify State boundaries and to make laws by judicial decision.

The issue has been clouded by the arguments of idealistic and social-minded persons. Now, however, humanitarians who once hailed the decision as a broad interpretation of the Constitution are beginning to perceive its frightening implications. They realize now that the decision of May 17, 1954, was a part of a pattern designed to weaken and gradually prostrate our entire governmental structure. A review of the decisions of the Warren Court establishes beyond the shadow of a doubt that while the interests of the United States have been grossly abused, the interests of our enemies have been handled most tenderly. The report of the American Bar Association's Special Committee on Communist Tactics, Strategy, and Objectives, published in 1958, illustrates this solicitude for the enemy in simple and graphic terms. Since the publication of the report, additional decisions of the Warren Court merely aggravate its concern to protect the termites in our midst.

Why should not the John Birch Society attack Earl Warren? That he is unfit to fill his high position is attested to by his own colleagues, whose dissenting opinions show that even his fellow Justices hold no high opinion of their Chief's qualifications for his grave responsibility. Priceless rights, explicit in our Constitution, have been snatched from our people by Earl Warren and his cohorts. The list is an appalling one. Many rights, guaranteed by the sovereign States in framing the Constitution, have been taken away from the Federal Government as well as from the States. When the members of the John Birch Society protested this Court's usurpation, as is their right and duty as loyal American citizens, Time magazine, of March 10, carried a slurring account of the society and its founder. It is curious to note the similarity of the article in Time to an article published about a week previous to its appearance, in People's World, a west coast publication. People's World, as verified by the research staff of the Senate Internal Security Subcommittee, is the official organ of the Communist Party on the west coast. In its issue for February 25, 1961, appeared an article describing the John Birch Society. It characterizes the chapters of the society as "cells," and states that the society was named for John Birch, "a U.S. Army captain, who is supposed to have died in China 10 days after V–J Day. Welch blames his death on Chinese Communists." The Communists' organ also states:

> On Welch's council are such veteran enemies of democratic rights as Dean Clarence Manion; T. Coleman Andrews, former income tax collector; Spruille Braden, former Latin American "expert" of the U.S. State Department; and Adolphe Menjou, unsavory relic of the House Un-American raid on Hollywood.

It seems strange that Time magazine, with its extensive research department, should have used language and examples so similar to the above description in attacking the John Birch Society. Time's article carried the same three names in listing the council of the John Birch Society. And yet there are 27 members of the council of the John Birch Society, all of whom are unquestionably patriotic. Why did not Time magazine see fit to name additional members of the council? Is it possible that Time was content with a mere rehash of the article that appeared in a Communist publication? In its effort to smear the society, why did not Time verify the fact that John Birch was an Army captain who served with honor under the command of Gen. Claire Chennault? That John Birch's death was mysteriously hushed up by this Government has been established by painstaking research. Naturally, the Communist Party is anxious to discredit the record of an American hero who was slain by Chinese Communists 10 days after the Communists joined the United States as allies. Why is Time magazine anxious to discredit the organization that bears his name in words so strangely similar to those used by a Communist publication?

It is not surprising, Mr. Speaker, when one sees the appalling list of Supreme Court decisions that are crippling our State and National defenses against the Communist conspiracy, that the very organization that is alerting our people to this menace should be attacked by the Communist organ. It is surprising, however, that a magazine like Time, which purports to expose and attack communism, should publish an article so amazingly similar to that of a Communist

publication which attacks loyal Americans.

I enclose herewith, Mr. Speaker, an answer to the slanderous article—which appeared in Time magazine—by Mr. Bryton Barron over radio station WEAM, Washington, on Sunday, March 19, 1961, titled "Operation Washington," and marked "Exhibit 1." I also enclose the distinguished names of the illustrious Americans who form the council of the John Birch Society titled "Exhibit 2," along with the committee of endorsers of the John Birch Society marked "Exhibit 3." Mr. Speaker, one has said:

But on one man's soul it hath broken,
A light that doth not depart;
And his look, or a word he hath spoken
Wrought flame in another man's heart.

The above-mentioned material follows:

EXHIBIT 1

OPERATION WASHINGTON—RADIO STATION WEAM

(A weekly commentary on major events from the Nation's Capital: Commentator, Mr. Bryton Barron, Mar. 19, 1961)

Colonel DUNN. I canceled my scheduled broadcast today to bring you Mr. Bryton Barron with a sensational exposé of how the Communist apparatus is able to spread its poison and how loyal Americans sometimes unwittingly lend themselves to its propaganda and smear campaigns. Mr. Barron.

Mr. BARRON. First permit me to thank you, Colonel Dunn, for relinquishing your time on this program today so that I might give our listeners one of the most shocking pieces of evidence of Communist activity and influence in this country that has come to our attention since the days of Alger Hiss and the Yalta betrayal. The specifics which I bring you are up until this very moment unknown to the American public at large. Unfortunately, if we may judge from what we read in a national news magazine, in the CONGRESSIONAL RECORD of discussions on the floor of the Senate, and in certain newspapers, we may conclude that a lot of good people have, indeed, fallen for a piece of Communist propaganda—hook, line, and sinker. For that reason we are inviting representatives of the press and certain Senators and Members of Congress to listen with you at this time to what I have to reveal.

Let me begin by referring to an article which appeared in the People's World for February 25, 1961. The People's World, I am advised by the research staff of the Senate Internal Security Subcommittee, is the official organ of the Communist Party on the west coast. Please note this: the People's World, as its title might suggest, has been cited by congressional report as a mouthpiece of the Communist Party in America. The article to which I refer, and which I will quote in full in a moment, is entitled: "Enter (from stage right) the John Birch Society." Note, too, the date—February 25, 1961—for it is the first in an amazing chronology. The next date in this chronology is about a week later, when an article in a weekly news magazine, using some of the same wording as the Communist organ and presenting much of the same point of view, was included in the postdated issue of that magazine of March 10. On March 8, by which date the issue of the magazine was in the hands of subscribers, a U.S. Senator put the rehash of the Communist theme into the CONGRESSIONAL RECORD in the course of a speech on the floor of the Senate. And then one of the wire news services, with equal naivete, picked up the tale and spread it all over the country, apparently never taking the time to check the source. Even a respected Washington newspaper was on March 12 moved to hasty and unwarranted editorial comment.

If this were the first time this sort of thing had happened in our country, if this were the only time that presumably well-meaning Americans had allowed themselves to be a transmission belt for Communist propaganda, it would be bad enough. But every trained observer knows full well that the American people are constantly being brainwashed in this fashion. So it behooves us to examine this typical but flagrant case to see how this brainwashing is carried on. If, when I get through, many of our listeners are still disposed to parrot the Commie line in this matter, then heaven help us as a Nation.

So now I will quote verbatim from the article which set the Communist transmission belt in motion. I would personally be one of the last to dig up garbage such as what I am about to read to you, but since others have already presented it under a seemingly respectable label, you are entitled to get it straight. Please remember that what I read is the Communist line, from the so-called People's World for the 25th of last month—and that virtually every word of it is, as you might expect, ridiculous beyond description. So I read:

"LOS ANGELES.—Suburban newspaper columnists have been devoting uneasy attention recently to an organization known as the John Birch Society, apparently a well-heeled outfit spawned by the cold war.

"The society's founder is Robert Welch, 71 (here let me pause for a moment to note that this first attempted statement of fact is typically inaccurate, for Mr. Welch is 10 years younger than the age indicated), a retired Boston, Mass., candy manufacturer, who set up the organization December 9, 1958, at Indianapolis, Ind. Neither the date nor place seem to be of significance but the society's 'cell' method of organizing (here let me state parenthetically that the term 'cell' is purely a Communist attempt to misrepresent what is normal in the formation of patriotic and fraternal organizations, namely, the setting up of local 'chapters,' which is the term used by the John Birch Society) and the role of its founder seems to have aroused misgivings.

"Welch, who is described as the absolute boss of the society, was born in North Carolina, finished the university there, spent 2 years at Annapolis and another 2 at Harvard. He's lived in Boston since 1919.

" 'Democracy is merely a deceptive phrase,' Welch proclaimed on one ocassion, 'a weapon of demagogery, and a perennial fraud.

"Welch seems to have taken fright at some of the liberal decisions of the U.S. Supreme Court and his cells were commanded to wield pens in a letterwriting campaign calling for the impeachment of Chief Justice Warren.

"Welch also tackled the Eisenhower menace to free enterprise. He thinks Milton Eisenhower, brother of the former President, was a Communist, and it is 'his firm belief that Dwight Eisenhower is a dedicated, conscious agent of the Communist conspiracy.'

"That appeared in a 1958 booklet, 'The Politician,' written by Welch, which seems to have been withdrawn from circulation after being seen by a few leaders of the movement (parenthetically let me note that no such book was published; the Commies are trying to drag in some private views of Mr. Welch penned long before the society was formed and in no way tied to its purposes).

"Said Bill Sumner, in the Pasadena Independent (and this inclusion by the Commies is surprising): 'Locally, and in this area, the society seems to be attracting men and women of some substance. It would not pay to dismiss them as a group of fanatics and crackpots worthy only of a passing snort.'

"Besides Pasadena, the society has picked up recruits in Santa Barbara. Significantly, both communities are dominated by the retired well-to-do.

"On Welch's council are (and now note these characterizations of outstanding Americans) such veteran enemies of democratic rights as Dean Clarence Manion, T. Coleman Andrews, former income tax collector; Spruille Braden, former Latin-American 'expert' of the U.S. State Department, and Adolph Menjou, unsavory relic of the House Un-American's raid on Hollywood.

"Recruiting is done at house meetings by means of a 4-hour movie on which Welch appears alone and explains why there must be complete obedience to the leader. That, he says, will keep out Communists and others who might create dissent.

"Each cell has its director who in turn consults with a district director monthly who transmits orders from above. Directives also approved in the monthly John Birch Bulletin, edited by Welch.

"Letterwriting to public officials and to newspapers has been the main activity of the society but lately its attention has turned to the PTA, which Welch feels is too much to the left.

"The society is named for John Birch, a U.S. Army captain who is supposed to have died in China 10 days after V–J Day. Welch blames his death on Chinese Communists."

So there you have the Commie line.

What I have just read, particularly the more blatant portions, will sound very familiar to those who read a similar article in a weekly news magazine. In the latter we find, for example, the same use of the Communist term "cell"; there, too, we find the same individuals mentioned—Dean Manion, Spruille Braden, and Adolph Menjou—whom the People's World has listed disparagingly, but whom you and I know as able and dedicated Americans among the many connected with the John Birch Society. Why, if the weekly magazine did any research at all in the matter, did they include only names which the Commies mentioned? Why, for example, did they not include the name of Cardinal Cushing, Archbishop of Boston? Here is an excerpt from what the latter has written: "I beg to advise you that I do not know of any more dedicated anti-Communist in the country than Robert Welch. I unhesitatingly recommend him to you and endorse his John Birch Society."

The magazine article mentioned does add one thing to the contribution of the People's World. It tells us in its not-to-be imitated style that "one Chicago conservative" does not favor the John Birch Society. Interestingly enough, the magazine does not give us the name of the one critic. That is hardly impressive.

When Senator YOUNG, of North Dakota, unwittingly gave further circulation to Commie propaganda, he did say, on the floor of the Senate, that in his State the John Birch Society "has among its members some of the most able and influential people in each community." That much would certainly check with my own observation in many areas where I have been.

It is not the purpose of this broadcast, however, to discuss the merits or demerits of the John Birch Society. Those who wish to know what the society stands for can, I am sure, find its objectives and purposes clearly set forth in the manual or bluebook of the society. Certainly one should not turn to the Communist People's World, or any of its dupes for guidance on matters of high patriotic purpose. I see no occasion to dig into the private writings of Mr. Welch—that is, of course, unless one wishes to somehow divert and distract attention, for example, from the movement to impeach Earl Warren—for Mr. Welch is probably as much entitled as the rest of us to his private opinions. It ill behooves so-called liberals

who are always wanting us to forget the past of certain of their spokesmen to now dig up and garble the private thinking of Robert Welch years prior to the founding of the John Birch Society. It is just another phase of the smear tactics of which we speak. However, if anybody wants to argue the point, let me remind him that 2 years or more ago, when the New York Times and the Washington Post, the State Department, and the White House, were lavishing their praise on Fidel Castro, as the savior of Cuba, our friend Robert Welch was one of the very few in America who had the insight, and the courage, to describe that Red puppet in print for exactly what he was. Let those who may be disposed to challenge Mr. Welch's judgment on current issues put that in their pipes and smoke it.

Why at this time, why at this moment in our history, 2 years after the organization of the John Birch Society, and several years after the private writings which they distort, do the Commies and their dupes now seek to discredit Mr. Welch and the John Birch Society? This question is a fundamental one; it strikes to the very heart of what we have to say today. The answer is clear, even from the article which I read you. The John Birch Society under Mr. Welch's leadership has inspired thousands of thoughtful Americans to protest against the trend of the Warren Court decisions in recent years. All over the Nation there is a mounting demand for the impeachment of Earl Warren. And the Commies are fighting back for him, not on the merits of the issue, but with lies and smears, as we see.

To those who are active in the nationwide movement to effect a housecleaning of the Warren Court, this is all as heartening as it should be revealing to the public at large. The demand for impeachment is really beginning to be felt. A mouthpiece of the Communist Party in America has rushed to Warren's aid. You may respond accordingly, more certain than ever of the need to press for impeachment.

One other thought in closing. The shocking demonstration of Communist influence on thinking in this country, which I have revealed today in a specific instance, should help alert some who might otherwise be duped. Watch to see how many of your friends simply parrot the Commie line in this matter.

This is Bryton Barron concluding and saying "Thank you."

Colonel DUNN. Thank you Mr. Barron. You have been listening to Mr. Bryton Barron, veteran of 26 years in the State Department and the author of "Inside the State Department," which can be purchased from The Bookmailer, Box 101, Murray Hill Station, New York 16, N.Y.

This is Colonel Dunn in Washington.

EXHIBIT 2

THE COUNCIL OF THE JOHN BIRCH SOCIETY

Each of the men listed below, who make up our council, came into the Society solely as an individual, representing in no way any other group or organization. But simply for identification, we have given each name the briefest line or two concerning other connections, or past accomplishments.

Dr. N. E. Adamson, Jr. A Boston surgeon. Assistant Medical Director of New England Mutual Life Insurance Co. Youngest member of the council.

Mr. Thomas J. Anderson, editor and publisher of Farm and Ranch, farm paper with 1,300,000 circulation.

Hon. T. Coleman Andrews. Former Commissioner of Internal Revenue of the United States. Now chairman of the board of two large (and affiliated) insurance companies.

Hon. Spruille Braden. Former Ambassador to several countries, former Assistant Secretary of State. A top authority on Latin American affairs.

Col. Laurence E. Bunker. Former personal aide to Gen. Douglas MacArthur for 6½ years—during the Japanese occupation, the Korean war, and MacArthur's early months in this country after his return.

Mr. F. Gano Chance, president, A. B. Chance Co., Centralia, Mo. Former president of Missouri Chamber of Commerce and of Associated Industries of Missouri.

Mr. S. J. Conner, president of the Conroth Co., Chicago, and with many other business interests.

Mr. Ralph E. Davis, president of General Plant Protection Corp., and affiliated companies, Los Angeles.

Dr. S. M. Draskovich, author of "Tito, Moscow's Trojan Horse." Editor in chief of Srpska Borba (the Serbian Struggle), a weekly newspaper, published in Chicago, with sizable circulation in 36 countries.

Mr. Wm. J. Grede, president of Grede Foundries, Inc., Milwaukee. Former president of the National Association of Manufacturers and former head of the International YMCA.

Mr. A. G. Heinsohn, Jr. President Cherokee Mills, Sevierville, Tenn. Author of "One Man's Fight for Freedom." A very successful manufacturer and a very dedicated patriot.

Dr. Granville F. Knight. An outstanding physician and public-spirited citizen of Santa Barbara, Calif. Author of many scientific papers, especially on the misuse of chemicals and adulterants in foods.

Mr. Fred C. Koch, president, Rock Island Oil & Refining Co., Wichita, Kans. Strong supporter of many patroitic movements, and especially of right-to-work legislation.

Mr. Alfred Kohlberg. Was a charter member of our council. Now deceased.

Dean Clarence Manion. Former dean of Notre Dame Law School. In 1953 was appointed, by President Eisenhower, Chairman of a Special Commission on Intergovernmental Relations. He later resigned rather than stop crusading for the Bricker amendment. Founded the Manion Forum, which now reaches a radio audience of many millions every week.

Mr. Frank E. Masland, Jr. President of C. H. Masland & Sons (carpet manufacturers), Carlisle, Pa. A leader in his community and State, who serves as chairman, vice chairman, or active member of the boards of a great many educational, philanthropic, and industrial organizations. Also famous as an explorer of out-of-the-way places in the world.

Mr. N. Floyd McGowin. President, W. T. Smith Lumber Co., Chapman, Ala. Active on many important boards of national organizations and enterprises.

Mr. W. B. McMillan. President of the Hussmann Refrigerator Co., St. Louis, Mo. An outstanding business leader. Was, next to your founder, the first member of the John Birch Society.

Dr. Revilo P. Oliver. Professor of Classical Languages and Literatures at the University of Illinois. Recognized as one of the very top scholars in America in his field. Now becoming rapidly recognized, also, as one of the ablest speakers on the Americanist side.

Mr. Cola G. Parker. Former President of the Kimberly-Clark Co. Former president of the National Association of Manufacturers. More recently, U.S. employer delegate—a stoutly patriotic and embattled delegate—to the International Labor Organization.

Hon. M. T. Phelps. Former chief justice of the Supreme Court of Arizona.

Mr. Louis Ruthenburg. Formerly president, then chairman of the board, of Servel, Inc., Evansville, Ind. Former president, Indiana State Chamber of Commerce. Now retired except as an industrial consultant. Has received several honorary degrees and three Freedom Foundation awards.

Mr. J. Nelson Shepherd. President, Midwest-Beach Co., Sioux Falls, S. Dak. An outstanding citizen and strong supporter of many patriotic causes.

Mr. James Simpson, Jr. Was a charter member of our council. Now deceased.

Mr. Robert W. Stoddard. President of Wyman-Gordon Co., Worcester, Mass. On board of directors of several of New England's largest businesses, including First National Bank of Boston. Has just served two terms as president of Associated Industries of Massachusetts. Active on the boards of many educational and philanthropic institutions.

Lt. Gen. Charles B. Stone III. USAF (retired). Succeeded Gen. Claire Chennault as commander of our 14th Air Force in China near end of World War II, and is lifetime honorary chairman of the 14th Air Force Association.

Mr. Paul H. Talbert. President, Paul H. Talbert Co., Beverly Hills, Calif. One of the most successful insurance executives in the United States. Also one of the most public spirited and influential citizens of his State of California.

The basic function of the council is threefold: (1) To show the stature and standing of the leadership of the society; (2) to give your founder the benefit of the council's advice and guidance, both in procedural or organizational matters, and in substantive matters of policy; and (3) to select, with absolute and final authority, a successor to myself as head of the John Birch Society, if and when an accident, "suicide," or anything sufficiently fatal is arranged for me by the Communists—or I simply die in bed of old age and a cantankerous disposition. And we believe that both the growth and the effectiveness of the society will be greatly helped by the experience, ability, and resolute purpose of so strong a governing body.

EXHIBIT 3

COMMITTEE OF ENDORSERS

Now in process of formation. For some States no letters of invitation have yet gone out, and for others—Texas and Wisconsin, for instance—they have just started. But acceptances have been running about 4 to 1 against regrets, and we are already very proud of the membership of this committee.

Alabama: Lt. Gen. Edward M. Almond.

Arizona: Frank Cullen Brophy, Clarence J. Duncan, Mrs. V. M. Haldiman, Edwin McDowell.

California: Frank P. Adams, Mrs. Gertrude Derby Bale, Andrew Brown, Hon. Kit Clardy, William B. Coberly, Jr., William W. Cone, C. M. Crawford, Richard H. Creel, M.D., Mrs. Helen H. Garretson, Francis P. Graves, D. Hanson Grubb, J. H. Harris, Rev. Francis Kean, Max A. Koffman, D. B. Lewis, Doane M. Lowery, Mrs. Doris A. Parks, Sister M. Margaret Patricia, Ph. D., Ray M. Spalding.

Connecticut: Philip N. Dumbrille, Franklin Farrel, Jr., Rev. Francis E. Fenton, A. Brooks Harlow, E. Merrill Root, E. L. Wiegand.

District of Columbia: Brig. Gen. Bonner Fellers, Mrs. John F. Gibson, Jr., Rear Adm. Paulus P. Powell, Melchior F. R. Savarese, M.D., Vice Adm. T. G. W. Settle.

Florida: Mr. and Mrs. Frederick S. Ballweg, Mrs. A. Gray Boylston, Thomas Gaskins, Sydney Houston, Lt. Gen. Sumter L. Lowry, Mrs. Florence Post.

Georgia: Hugh H. Armstrong, Paul K. McKenney, Jr., R. Carter Pittman.

Hawaii: Mrs. George P. Cooke.

Idaho: J. H. Gipson, Sr.

Illinois: George J. Hess, M.D., W. A. Kates, Theodore W. Miller, Max Pray, W. B. Taylor, Jr., George H. Williamson.

Indiana: James L. Doenges, M.D., Hugh S. Ramsey, M.D.
Iowa: J. S. Kimmel, Sr.
Kansas: Robert D. Love, Hon. Wint Smith.
Kentucky: R. S. Logan.
Louisiana: John U. Barr, Dr. Medford Evans.
Maryland: George O. Blome.
Massachusetts: Eugene H. Clapp, Miss Hope Gray, Hubert W. Kregeloh, Charles J. Lewin, Robert H. Montgomery, Col. W. Bruce Pirnie, Burton A. Prince, Miss Olive Simes, Rodney Washburn.
Michigan: Mrs. Harmon L. Brown, Richard Durant, Irving E. Ingraham, Vernon P. Johnson, M.D.
Mississippi: Tullins Brady.
New Jersey: Mrs. Frederick Griswold, Jr., Mark M. Jones, Ross Nichols, Louis S. Wegryn, M.D.
New Mexico: George S. Richardson, M.D.
New York: Mrs. Kenneth C. Crain, Frank de Ganahl, E. Ainsworth Eyre, Norman J. Gould, Merwin K. Hart, Mrs. Seth Milliken, T. I. Parkinson, Jr., Commodore Frederick G. Reinicke, Archibald B. Roosevelt, George M. Tisdale.
Ohio: Charles W. Pavey, M.D., Hon. Gordon H. Scherer.
Oklahoma: Glenn O. Young.
Pennsylvania: Frank W. Gaydosh, Rev. Richard Ginder.
Rhode Island: Robert B. Dresser, Norman D. MacLeod.
South Carolina: James L. Coker, Roger Milliken, Thomas Parker, M.D.
Tennessee: J. P. McCallie.
Texas: John R. Anderson, Mrs. W. L. Goldston, W. H. Kellogg, Brig. Gen. W. L. Lee, Edward D. McKay, M.D., Maj. Gen. W. G. Weaver, Brig. Gen. T. F. Wessels.
Utah: Capt. and Mrs. Stephen Abbot, Hon. J. Bracken Lee.
Vermont: William S. Schlamm.
Virginia: E. S. Dillard, Matt McKeon, Capt. R. W. Orrell.
Washington: P. C. Beezley, Fred M. Harris, Col. Tom R. Hutton, Harry M. Robbins.
Wisconsin: Mrs. Walter K. Graham, Mrs. Robert A. Murray, Mrs. Norman Skogstad.
Wyoming: Dan Hanson, A. E. Larson.

LOSS OF JOBS IN TEXTILE INDUSTRIES

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. SEELY-BROWN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SEELY-BROWN. Mr. Speaker, as the Representative in Congress of the area which once was one of the foremost textile-producing congressional districts in the country, I speak out in anguish over the jobs which have been lost; and in greater anguish over the jobs for Americans in the textile-producing industries that are continuing to be lost with an appalling momentum. These are jobs which never will be recovered, not only in my State, but in any State, unless emergency action is taken, and immediately, to save this important part of our domestic economy from ruin.

I hope and expect to be joined in this appeal by many of my colleagues who also serve constituencies which are facing the same problem, and for the same reason—the handing over of our market to our competitors, with the aid of our tax money.

There was a time, not too many years ago, when textile production accounted for more than two-thirds of all of the jobs in industry in my district. An even greater percentage of the gross product of the four counties of Connecticut that comprise the district was keyed to textile production.

In the annals of textile production in this country, not only were such places as Norwich, and Willimantic, and Danielson, and Putnam, and Wauregan names that had real meaning, but we had also our Attawaugan, and Yantic, and Baltic, and Jewett City, and Grosvenor Dale, and Moosup, and Oneco, and Pawcatuk, and Rockville, and Stafford Springs, and Somers, and a dozen other places. Some of these were one-industry mill towns, but they had fame beyond their borders, and made great contributions to the skill, the ingenuity, the diligence, and resulting therefrom, the prosperity that made the textile-producing industry great.

The waning of textile industry employment in my district began quite a number of years ago. We lost jobs, mostly in cotton textiles and the processing of manmade fibers, to southern mills.

But we have not given up, and will not give up. We are not afraid of southern competition. In my district, we still count textile production as an important part of our economy, and we cannot be prosperous unless there can be a reasonable prospect that things can and will get better for our textile mills.

Yet, unless emergency action is taken, by the President of the United States, acting under the authority specifically vested in him under the national security provisions of the Trade Agreements Act, there can be no such prospect that things will get better. In fact, the only prospects are that things will get so much worse that American textile production will disappear entirely, as a profitable enterprise.

There has been no letup in the sharply rising levels of textile imports from countries where workers' wages are at rates illegal in the United States. Cotton cloth and cotton yarn imports are representative of what is happening throughout the textile industry.

Not only are our cotton textile manufacturers and their partners in production, their employees, competing with low-wage foreign production, they are using as raw material, American raw cotton for which our producers pay 25 percent more than the special export prices provided to foreign mills. Our Government pays a support price to cotton growers; and sells the cotton to our foreign competitors at a price a quarter off what the raw cotton market is here.

Such raw material cost and wage advantages for foreign textile manufacturers, over which the American textile industry has no control whatever, place our textile-producing industry in an intolerable competitive position.

The figures tell the story so that anybody can understand it.

In 1958 U.S. imports of cotton cloth were approximately 142 million square yards. These imports increased to 242 million square yards in 1959, nearly doubling from the already high 1958 level. Cotton cloth imports jumped to a new record high of 455 million square yards in 1960.

There is an ominous and unmistakable trend in this. Not only is the import level at a record high, but the rate of increase is such that, if it continues unchecked, the entire market for domestic cloth will be supplied by foreign production.

From data also supplied by the Department of Commerce, we can note an even sharper rate of increase in cotton yarn imports.

No fiber and no fabric of the American textile industry can fail to be injured by this deluge of foreign competition. For example, imports of manmade fiber fabrics, which averaged about 5 million pounds in 1958, doubled to more than 11 million pounds in 1959 and continued at over 10 million pounds in 1960.

Woven wool imports moved up from about 34 million square yards in 1958 to 47 million yards in 1959 and attained a new high level of 62 million square yards in 1960.

The same alarming trends appear beyond the cloth manufacturing of the textile industry—in apparel import statistics.

This is a grim picture, but you cannot really appreciate just how grim until you make the comparison on what has been happening to the balance between textile imports and exports. The United States has lost its historical position as a net exporter of textile manufactures.

In 1947, the United States exported $1.4 billion of textile manufactures, and imported $366 million in foreign-made textile manufactures. By 1957, these exports had dropped to $667 million, but imports had increased to $635 million. In 1958, the import total of $636 million exceeded our exports of $600 million. By 1960, imports had risen to $932 million, but our exports of $694 million left a balance in favor of imports of $238 million worth of textile products.

The impact of these trends on the U.S. textile industry with its billions of dollars invested in machinery and equipment, and with hundreds of thousands of jobs at stake, is clear to see. Uncertainty about spending for new plants and equipment in the United States and increased search overseas for possible investment in textile plants in countries where foreign governments favor the development of industry are to be expected as part of the logical outcome.

The time has come for the President to act, in the interest of the survival of the American textile-producing industry.

I would like to call the attention of the Members of the House to the recommendations which have been made, after a thorough study of the problems of the domestic textile industry, by a special subcommittee of the Senate Committee on Interstate and Foreign Commerce, under the chairmanship of the Senator from Rhode Island, the Honorable JOHN O. PASTORE, my neighbor.

I believe that these recommendations are sound, and that they clearly are

warranted by the seriousness of the situation.

In summarizing them here, and also in endorsing them, I hope that each of these recommendations will be carried out without delay, and that such action as is required, by the Executive, and by the Congress if necessary, will be taken promptly.

These recommendations are: First, that quotas be established by category and by country, for imports of textile mill products, garments and apparel, manmade fiber staple, filaments and filament yarn; second, that the program of data collection and research be continued and expanded as part of the regular activities of the Textile and Clothing Division of the Business and Defense Services Administration in the Department of Commerce; third, that the Internal Revenue Service publish at the earliest possible opportunity a revised schedule of depreciation rates, reflecting current industry practices, which would permit a more rapid writeoff for tax purposes; fourth, that necessary textile research be initiated and expanded by both the industry and appropriate Government agencies, including the Business and Defense Services Administration; fifth, that the Department of Agriculture complete rapidly its alternatives to the present cotton price-support program with a view toward the elimination of the two-price, cotton-marketing system.

The first of these recommendations will not be to the liking of those Americans who are stanch advocates of a liberal trade policy. In fact, probably some of them will contend that nothing needs to be done in this situation, particularly because, in the aggregate, the United States continues to have a favorable balance of trade.

However, so distinguished an authority from that side as Dr. Alfred C. Neal, president of the Committee for Economic Development and formerly research director of the Randall Commission on Foreign Economic Policy, has said:

> The explosive effects of advanced technology in a country with extremely low wages can be damaging to all—to the exporting country because it overexpands, and to importing countries because they cannot move people and resources out of damaged industries fast enough. Controlling the most serious of these cases by means of agreed quotas, which are temporary and expandable, may be the only reasonable alternative to the disruption of the whole trading system of the West.

It is evident that selective controls will be needed or we will face disruption of the entire trading pattern of the free world.

I do not contend, nor do those who are associated with me, that import quotas are the only answer.

In the supplementary report of the Pastore subcommittee, it should be noted that the recommendation concerning quotas is only one of five.

The quotas which can be and should be imposed on textile imports, by category and by country, should not be fixed for all time. They should be flexible. As the market in this country expands, imports should be allowed to increase.

Under the Trade Agreements Act, we have tariff duties that are supposed to be reciprocal with the countries with which we make trade agreements. Let us have quotas on imports that are both flexible and reciprocal. There is ample evidence of the workability of this flexible system of quotas by countries who impose it on American goods.

Let us have import quotas without losing the concept of reciprocity in our foreign trade.

If the other four recommendations of the Pastore subcommittee can be carried out, it will help us to achieve the real solution to the problem, which is an increase in exports of textiles, so that our country can regain the position which it traditionally held in textile production.

We cannot continue with the situation which existed in 1960, when textile imports totaled 170 percent of our textile exports.

THE OPINION POLL RESULTS, 22D CONGRESSIONAL DISTRICT OF OHIO

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentlewoman from Ohio [Mrs. BOLTON] may extend her remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mrs. BOLTON. Mr. Speaker, the tabulation of the results of my 1961 opinion poll has just been completed. A questionnaire containing 14 national issues was recently sent to each home in the 22d Congressional District of Ohio. Over 18,000 replies were received from my constituents during the past 2 weeks. I am happy to report that this is the largest response that has ever been received on this annual poll, and indicates a growing interest and concern on the part of the individual citizen in the issues before the Congress.

A copy of the results of this poll will be sent to each home in my district, and I would like to take this opportunity to thank each person who sent a reply to these questions. It was especially gratifying to receive the many hundreds of thoughtful letters containing helpful viewpoints or suggestions on these and other issues of national interest.

The largest favorable response—84 percent approval—was indicated on proposed legislation that I have introduced in the Congress to raise the amount a retired person can earn and remain eligible to receive social security benefits. The issue incurring the greatest disapproval—61 percent against—was the granting of Federal aid to cities to assist in the cost of mass transportation.

With the question of Federal aid to education being thoroughly debated in the Congress, it is enlightening to see that whereas a 57-percent favorable vote was cast for Federal grants for school construction, only a 35-percent favorable vote was cast for Federal aid for local teachers' salaries.

A very healthy vote of approval—4½ to 1—was also given to the work of the House Un-American Activities Committee in exposing Communist activities as 67 percent of the replies favored its continuation, compared to 15 percent opposed, and 18 percent having no opinion.

The results of this poll, I am sure, will be of interest to the Members of Congress, as well as my constituents.

Do you favor—	Percent		
	Yes	No	No opinion
1. Extension of Federal-State unemployment compensation benefits to 39 weeks?	65	29	6
2. Federal aid to economically depressed areas?	78	15	7
3. A health insurance program tied in to the social security system?	58	35	7
4. Payment of social security benefits, at a reduced rate, to men who retire at the age of 62?	68	23	9
5. Raising the amount retired persons may earn and still remain eligible for social security benefits?	84	12	4
6. A peacetime GI veterans' educational benefits program?	45	41	14
7. Federal aid to cities to assist in the cost of mass transit systems?	23	61	16
8. Federal grants for school construction?	57	36	7
9. Federal aid for local teachers' salaries?	35	56	9
10. Federal income tax deductions of the cost of college tuition?	71	20	9
11. Continuation by the House of Representatives of the Un-American Activities Committee?	67	15	18
12. A change in the electoral college system of electing the President and Vice President?	71	19	10
13. A resumption of diplomatic relations with Cuba?	24	58	18
14. U.S. diplomatic recognition of Red China?	24	59	17

PRESIDENT'S PROPOSAL CALLS FOR BACK-DOOR BILLIONS TO GO ABROAD

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentleman from Washington [Mr. PELLY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. PELLY. Mr. Speaker, I have listened with mingled emotions to President Kennedy's special message on foreign aid.

I have in mind—very much in mind—that the present national debt of the United States is between $285 and $290 billions. As such, the people of this country still owe for previous years' expenditures for foreign aid and other costly Federal programs an amount in excess of 3 years annual tax revenue. This unpaid debt exceeds by about $90

billion the combined debt of 67 other free world countries. Our average per capita national debt is higher than that of any other free world country.

Frankly, in the past I have gone along in supporting foreign aid on the basis that if a mistake was being made it was better to make it on the side of the ideology of freedom and in the interest of defense against communism. But all the while my fingers have been crossed lest we lose the very freedom we have sought to protect through a weakened economy and an unstable currency and loss of confidence here and abroad in our dollar.

In the past, I have looked to our House Appropriations Committee to review and control expenditures in the light of existing conditions and available revenues each year. The recent crisis such as the flight of gold out of the country is a case in point.

Frankly, Mr. Speaker, in recent months after studying our financial picture and reappraising the program of aiding other nations, I have thought in my own case I would not vote for any amount in excess of $1 billion.

After all, during the past 3 years our international balance of payments has been adverse by a total of $10 billion.

Today's message to the Congress on foreign aid invites reconsideration, but offhand proposing new spending of $7.3 billion over 5 years—outside the appropriation procedure—would preclude any possibility of my supporting such a program.

Any withdrawal from the Treasury as far as I am concerned is an appropriation under the Constitution. I will vigorously oppose any measure to create any new agency or any authority of such agency to borrow from the Treasury in order to bypass the scrutiny and overall control of Congress. I am frank in saying, and hereby serve notice to do everything possible to defeat this backdoor proposal.

I would hope some responsible organization representing the taxpayers of America would take this matter to court and test the constitutionality of financing agencies outside of the normal procedure of appropriation.

If, however, the only means at hand of ending the budget-busting device of backdoor spending is by defeating the foreign aid program, I would hope those of us who are resolved to restore control of spending to Congress would band together and succeed.

The integrity and fiscal responsibility of the Nation are at stake and I for one denounce the President's proposal calling for funding foreign aid outside of congressional appropriations as called for by our Constitution.

LABOR-MANAGEMENT COOPERATION SOLVING EMPLOYEE RETRAINING PROGRAM

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. HARVEY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HARVEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the March 21, 1961, edition of the Wall Street Journal. Because it appears most likely Members of the House will be considering depressed area legislation next week, this article has particular importance. Here is an excellent example of union officials and management working together to resolve a mutual problem of great concern in softening the blow of automation and retraining displaced workers for other jobs. Tangible results of this program already are evident. It is significant that the worthy objectives of this program were recognized by both labor and management and accomplished without the help of the Federal Government.

ARMOUR PROGRAM EASES IMPACT OF AUTOMATION IN OKLAHOMA CITY TEST—DISPLACED WORKERS RETAINED AS BUTCHERS AND BEAUTICIANS; PAY SINKS BUT MORALE RISES

(By Richard F. Janssen)

OKLAHOMA CITY.—Booker T. Combs, a rotund, 53-year-old Negro who spent 26 years laboring in the recently abandoned Armour & Co. meat packing plant here, gleefully slaps his leg and declares, "Closing that plant was the best thing that ever happened to me." The reason for his cheerfulness: Mr. Combs is now launching a new career as a licensed real estate broker.

He is one of the first to complete an experimental program undertaken jointly by Armour, the United Packinghouse Workers Union and the Amalgamated Meat Cutters Union to soften the blow of automation by retraining displaced workers for other jobs. The unprofitable, half-century-old Armour plant here was closed last July and its work was shifted to more efficient, automated plants elsewhere. The Armour-union effort is being watched closely by both management and unions in other industries around the country.

The Armour effort may also provide some guidelines for a Federal program that's included in the administration's depressed areas bill. Among other things, the bill would provide $14.5 million for technical assistance and payments to workers on retraining programs.

Other industries and unions also are beginning to work together on the automation problems. The United Steelworkers of America and Kaiser Steel Corp., for example, have set up an automation study committee. And Cambell Soup Co. and a California Teamsters local are working toward a retraining program.

SOME WORKERS FIND JOBS

How is the Armour plan working? The final score won't be in until all the classes are over and it's seen what success the retrained workers have in landing and keeping new jobs. But tangible results are beginning to appear. Some workers already have found jobs in new fields; in most cases, they like their new jobs better than their former packinghouse chores. Perhaps more important, "the program has done a lot of good for the morale of these people—it has simply given them hope," says Prof. Robben W. Fleming of the University of Illinois, executive director of the committee running the program.

The committee, with Dr. Clark Kerr, president of the University of California, as impartial chairman, was formed by Armour and the unions as part of the labor contract signed on August 31, 1959. Financed by a $500,000 contribution from Armour, the committee's main job is to prepare a report on automation problems and possible solutions. The report is to be completed before negotiations begin to replace the current, companywide labor contract which expires next August.

As a pilot experiment, the committee undertook to retrain 58 of the men and women who were idled by the closing of the Armour plant here. So far, 13 of the men have been retrained as retail store butchers, two men as real estate brokers and two women as beauticians. At public evening schools and private trade schools, the others are preparing for jobs in such fields as upholstering, auto mechanics, tailoring and refrigeration, as well as boning up on such subjects as elementary reading and arithmetic.

Even after training, however, the big problem will be finding jobs, the union contends. "We don't want to take any bows if all these people have done is get some exercise in school; all the retraining in the world is not going to do much good until we have an expanding economy so we can find places for these people to work," a UPWA spokesman says. Of the 13 men who finished a 12-evening, meat-cutting course in January only 2 work in retail meat stores and 2 in wholesale meat outlets. Two are janitors and one works in a warehouse, while the other six still haven't found any jobs, reports Mrs. Margaret Hostler, the former plant nurse and personnel worker who coordinates the training.

SHARP PAY CUTS

The men fortunate enough to land jobs behind retail meat counters had to take sharp cuts in pay, but this has done little to dampen their appreciation for the chance. "I was making up to $160 a week at Armour on piecework in a 40-hour week, and now I put in 50 hours to make $80," says 51-year-old Bill Ferrell, now cutting meat in a shabby corner grocery store. But he philosophizes: "After 26 years at Armour, I would have gone nuts soon doing the same thing over and over again. Retraining is the best thing when a plant closes."

White-robed Rafe B. Mackey, now working as a butcher in a gleaming new suburban supermarket, agrees that the new position has advantages. "I enjoyed skinning calves a great deal, but I also like meeting people; this job is a little cleaner and more social." Money is his chief complaint. Mr. Mackey, 41 and a high school graduate, had been making up to $6 an hour on piecework at Armour; now he's down to around $2 an hour. "I think retraining is good, but I wish the class had been longer so we could have learned more," he adds.

Not all those left without jobs have tried to find them. Puttering in his sunny backyard, 60-year-old Virgil Whitehead admits, "I haven't looked for a job," since finishing the retraining program. But he promises to do so when Lent ends and butcher shops have more demand for meatcutters. He, too, appreciated the butcher training, however. "I learned things about picking out meat in the store even if I never get a job in meat again," he says. Mr. Whitehead, a veteran of 18 years at Armour, says he's living on his $1,665 severance check, which for 26 weeks was supplemented by unemployment compensation.

Observers figure the Armour experiment will provide a stiff test of whether retraining actually leads to job opportunities. Many of the former employees involved are over

50 years of age, a factor which leads many companies to refuse to hire them. Few are high school graduates, and many have not completed grade school. Others run into job barriers because they are Negroes. Such obstacles also kept some out of training courses. "We had one Negro who wanted to go to barber college, but none of them in Oklahoma City are integrated," says Mrs. Hostler. The plumbers union rejected a 37-year-old man for apprenticeship, citing 25 as the maximum age.

GREAT POSSIBILITIES

Even so, most of the workers now in training are optimistic. Take Lonnie Renfrow, a slim, 41-year-old Negro learning how to service refrigerators and air conditioners at a private trade school. "This new business is growing and has great possibilities," he says. "Eventually, I'll make more money in it than I did at Armour."

Mrs. Mary Pippin, a pert brunet taking typing and real estate at the American Business College here, hopes to make more money by opening her own sales office. The former Armour bacon slicer and bookkeeper adds: "I worked there for 18 years and probably never would have quit—but this automation project is opening up a whole new world for me."

One of the committee's findings is that such a retraining program need not be costly. Although they offered it to all 300 production workers idled by the plant closing, only 58 accepted it. Close to 200 chose to find jobs on their own, while the remainder who passed up the course are still unemployed. The total tuition cost incurred by the committee is only around $4,000, thanks partly to a limit on payments. "We pay the first $60 and then half the remainder up to a total of $150," Mrs. Hostler says. The committee reasons that workers will be more serious about schooling if they have a financial stake in it.

The workers are split on the merit of this point. "If I didn't have $60 of my own money in this, I might not care enough to work hard and stick with it," admits Mrs. Pippin. But Lloyd Fortune, a 34-year-old Negro father of six and Armour hide cellar worker since age 18, begrudges the $100 he paid toward his trade school auto mechanics course. "The company could just as easy have paid all of it," he says.

From the company's standpoint, one benefit of the program has been to minimize the bitterness that would understandably spring from the sudden plant closing. "The company has done a nice thing for us unemployed," says Mr. Combs, happy with the real estate brokers' license he won after a stiff state examination and a 22-week training course. Both the working butchers say they still cheerfully recommend Armour meat to their retail customers, although some of the disgruntled people who didn't take the training say they deliberately avoid eating the Armour products.

REDUCTION OF POSTAL RATE ON THIRD-CLASS LOCAL MAILINGS

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentleman from Minnesota [Mr. ANDERSEN] may extend his remarks at this point in the RECORD, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. ANDERSEN of Minnesota. Mr. Speaker, I introduce, for appropriate reference, a bill to reduce the postal rate on third-class local mailings by small businesses.

It is increasingly apparent that our postal rate increases have worked a hardship on a segment of our economy that can least afford it—that of our small businessmen.

We are all aware, and are constantly being told that the Postal Department is losing money on the handling of mail. The postal rate on third-class mailings was increased from 2 cents to 2½ cents effective July 1, 1960.

It is my opinion that the Postal Department is not losing money on the handling of third-class local mailings. In fact, I feel that there is no one place in the Postal Department that produced so much revenue, for such little effort expended, as in this local mailing of third-class mail.

The continuation of this service, at a reasonable cost, for local mailings, is of vital importance to small business.

EXTENSION OF UNEMPLOYMENT COMPENSATION BENEFITS

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland [Mr. MATHIAS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. MATHIAS. Mr. Speaker, when the rollcall vote was taken today on the adoption of the conference report on the bill to extend temporarily unemployment compensation benefits, I was unavoidably detained on public business and not able to reach the floor in time to record my vote in favor of adoption. As a matter of fact, I was in conference with community representatives from Hagerstown, Md., concerning problems which affect employment of many thousands of people in the Sixth Congressional District of Maryland.

I was, however, recorded in favor of this bill when it was before the House and, had I been present, I would have voted in the affirmative.

FTC REGULATORY LAG

Mr. JOELSON. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. PATMAN] may extend his remarks at this point in the RECORD and include extraneous matter and a table.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. PATMAN. Mr. Speaker, recently much has been said and written about the backlogs and delays which have been building up in the work of our Federal regulatory agencies and commissions. The recent report made by Dean James M. Landis to President Kennedy on the regulatory agencies devoted considerable space to this problem. At page 5 of that report, it was stated:

Inordinate delay characterizes the disposition of adjudicatory proceedings before substantially all of our regulatory agencies. In the Civil Aeronautics Board, for example, the average age of dockets closed by formal proceedings in 1960 was some 32 months. As of June 30, 1959, out of 464 proceedings then pending, 166 had been pending for more than 3 years. The Federal Trade Commission as of June 30, 1959, had 309 cease-and-desist orders pending, of which 118 had been pending for more than 1 year and 30 for more than 3 years. In the Federal Power Commission the backlog of pending cases in 1959 was almost 4 times as great as in 1957. Only last September that Commission announced that it would take 13 years with its present staff to clear up its pending 2,313 producer rate cases pending as of July 1, 1960, and that with the contemplated 6,500 cases that would be filed during that 13-year period it could not become current until A.D. 2043 even if its staff was tripled.

On March 8, 1961, I received a copy of a letter which had been directed on that date to Chairman Earl W. Kintner, of the Federal Trade Commission, by representatives of an organization of a large number of small business firms. In that letter a vigorous complaint was made about the action which had been taken in a Trade Commission case with the result that its final disposition will be postponed for years. That case had been pending for years with only a few days of hearings held, when in September they were adjourned, according to reports in the trade press, not to be resumed until April 1962. In view of the fact that the complaints about delays in the handling of that case and others were made on behalf of small business firms to me for attention and consideration, I promptly requested the FTC to supply me with a list of all advertising cases pending there for a period of more than 4 years, and a list of all antimonopoly cases pending there for a period of more than 1½ years. Since a change in the administration of that agency was imminent, I requested this list of cases be provided me on or before the 15th of March, 1961. The list was not supplied me on that date. However, yesterday there was a change in the administration of the FTC and yesterday afternoon the list I requested, showing the status of these cases, was supplied to me.

This list of cases discloses a shocking situation. It demonstrates that the regulatory lag at the FTC is far more pronounced than was thought to be the case. An examination of the list discloses that a number of cases have been pending at the FTC and unresolved for periods ranging up to 8 years. It is recognized that many of these cases were instituted by the FTC at the behest of small business firms who were complaining about unfair trade practices which were alleged to be destroying small business. In the meantime, during the pendency of these cases, it is alleged that many small business firms have been destroyed as a result of the practices against which these cases were directed.

Mr. Speaker, as I have stated there has been a change in the administration of the FTC, effective yesterday at 10 a.m. There is promise of improvement in

the work of that agency, but the tragedy is that all the improvement possible cannot bring the resurrection of the many small firms which have been destroyed as a result of the practices and conditions challenged by cases which have all but withered and died on the vine at the FTC. Our hope must lie in the prospects for the future that these conditions will not be tolerated and that through the improvements now in prospect in the administration of our Federal regulatory agencies our free and competitive enterprise system, and through it small business, will be allowed to survive and prosper.

With leave to extend and revise my remarks, I here insert the list of cases to which I referred and as supplied to me yesterday by the FTC. The list is as follows:

FEDERAL TRADE COMMISSION,
Washington, March 21, 1961.

The Honorable WRIGHT PATMAN,
Chairman, Small Business Committee, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: In response to your request of March 10, delivered to the former Chairman of the Federal Trade Commission, I am pleased to furnish the attached statistical summary presenting the requested information on our old formal cases.

If I may be of further assistance, please call on me.

Very truly yours,

JOHN N. WHEELOCK,
Acting Executive Director.

(P.S.—The present administration of the Federal Trade Commission assumed office today. This data was prepared under the supervision of the outgoing administration. In view of the urgent need of the data, I am transmitting it immediately.)

FOURTH NATIONAL ASSEMBLY OF CIVIL WAR CENTENNIAL COMMISSION

Mr. JOELSON. Mr. Speaker, I ask unanimous consent that the gentleman from New Jersey [Mr. ADDONIZIO] may extend his remarks at this point in the RECORD, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. ADDONIZIO. Mr. Speaker, the decision of the Executive Committee of the Civil War Centennial Commission to hold the fourth national assembly in Charleston next month, despite the lack of equal accommodations for all delegates, is an affront to—if not a clear violation of—the purposes of Public Law 85–305 which established the Commission. It is inconceivable that an official body of the U.S. Government should acquiesce in discriminatory practices that are in direct conflict with our national policies.

In response to my protest concerning the customs in Charleston, as they affect State delegations, Maj. Gen. U. S. Grant 3d, Chairman of the Commission, wrote me on March 17:

> Although our Commission does not exclude Negroes from its assemblies, and has no inclination or desire to do so, still we have no control over local customs. Therefore, it seems incumbent on us to carry out the plans for April 11 and 12 made with so much care and labor.

If the Commission has no control over local customs, it does have control over the location of its meetings. It would seem that "plans made with so much care and labor" should include suitable accommodations for the delegates. If the executive committee cannot insure that all officially designated delegates to the assembly will be welcomed with equal courtesy and consideration, then, in my opinion, it is remiss in the performance of its duties.

I am confident that the full Commission will repudiate the executive committee's bland disavowal of its responsibilities and will cancel the assembly if all delegates cannot be properly accommodated in Charleston. As a distinguished member of the Commission has observed:

> In consideration of recent developments it could, it seems to me, be argued successfully that the site selected for the fourth national assembly fails to meet the legal requirement that it shall be "a place of meeting generally convenient," and that, under the circumstances, its proceedings would be unlikely to result in recommendations "for the most fitting and appropriate way to commemorate the observances of the centennial of the Civil War."

The gentleman's most able letter is printed in full below. I commend to all Americans his eloquent words:

> Any indignity actual or implied, any embarrassment, any act of discrimination of whatever kind suffered by an officially designated delegate to the assembly would not only violate its spirit but would rashly destroy the noble object which it purports to serve and would ill become a great and united people.

The letter follows:

MARCH 17, 1961.

DEAR CONGRESSMAN ADDONIZIO: Thank you for your letter of March 14 concerning the Fourth National Assembly of the Civil War Centennial Commission which is scheduled to convene in early April.

Public Law 85–305, approved September 7, 1957, provides in section 6(B–2): "The Commission shall call, at a place of meeting generally convenient, and not later than January 15, 1958, a national assembly of representatives of civic, patriotic, and historical groups whose duty it shall be to consider and make recommendations to the Commission for the most fitting and appropriate way to commemorate the observances of the centennial of the Civil War. The Governors of each of the several States and noncontiguous territories of the United States shall be invited to appoint representatives to the assembly. When this assembly shall have made its recommendations, it shall be adjourned subject to the call of the Commission."

In consideration of recent developments it could, it seems to me, be argued successfully that the site selected for the fourth national assembly fails to meet the legal requirement that it shall be "a place of meeting generally convenient," and that under the circumstances, its proceedings would be unlikely to result in recommendations "for the most fitting and appropriate way to commemorate the observances of the centennial of the Civil War."

I have reviewed my files. The agenda for a meeting of the full Civil War Centennial Commission held on Tuesday, January 5, 1960, included, under "new business," (6–b) "Recommend site of fourth national assembly Charleston, S.C., April 12, 1961." The minutes of that meeting, which I attended, do not show, however, that the recommendation was accepted or, for that matter, even discussed.

A circular distributed by the Commission in July 1960, headed "Centennial Activities Already Planned" contains the bald announcement, "The fourth national assembly has been scheduled for Charleston, S.C., in April 1961." Again, in the third annual report of the executive director, submitted to Maj. Gen. U. S. Grant 3d, chairman, Civil War Centennial Commission, December 6, 1960, is (p. 2) the statement, "On April 11–12, our fourth national assembly will be held in Charleston, S.C., to coincide with the reenactment of the attack on Fort Sumter."

In response to inquiry made of the Commission's headquarters, I am informed that the executive committee (of which I am not a member) at a meeting held on January 4, 1960, received a recommendation that the place should be Charleston and gave it unanimous approval. I cannot, however, find any documentation to support the belief that the Commission itself ever had opportunity formally to ratify or sanction the decision.

For myself, let me say unequivocally that I am in sympathetic and complete agreement with the position taken by the New Jersey Civil War Centennial Commission. Any indignity, actual or implied, any embarrassment, any act of discrimination of whatever kind suffered by an officially designated delegate to the assembly would not only violate its spirit but would rashly destroy the noble object which it purports to serve and would ill become a great and united people.

It is earnestly to be hoped that a way may be found to resolve the difficulty to the honor and satisfaction of all the citizens of every section and every region.

Having had a very small part in the special joint session of the senate and general assembly, at Trenton, on February 21, it was my privilege to meet the members of New Jersey's commission, including that gifted and cultivated lady, Mrs. Madaline A. Williams.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. STAGGERS for 5 minutes today and to revise and extend his remarks.

Mr. HEMPHILL (at the request of Mr. JOELSON) for 1 hour on Tuesday, March 28, 1961.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. VINSON to revise and extend his remarks made in Committee of the Whole and to include tables and other extraneous matter.

Mr. ROGERS of Florida (at the request of Mr. BROWN of Ohio).

Mr. HEMPHILL (at the request of Mr. MCCORMACK) to revise and extend the remarks he made in the House today and include extraneous matter.

Mr. BOW to revise and extend the remarks he made in the House today and include a colloquy between himself, Mr. BRAY, Mr. LIPSCOMB, Mr. NYGAARD, Mr. VAN ZANDT, Mr. MOELLER, and Mr. AYRES; and to include extraneous matter.

Mr. UTT (at the request of Mr. LATTA) to include two tables in the remarks he made today on the conference report on the bill H.R. 4806.

Mr. TEAGUE of Texas.

(The following Members (at the request of Mr. LATTA) and to include extraneous matter:)

Mr. BERRY in two instances.

Mr. SHORT.

Mr. VAN ZANDT.

(The following Members (at the request of Mr. JOELSON) and to include extraneous matter:)

Mr. HEMPHILL.

Mr. THORNBERRY.

Mr. FALLON.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 205. An act to expedite the utilization of television transmission facilities in our public schools and colleges, and in adult training programs; to the Committee on Interstate and Foreign Commerce.

S. 712. An act authorizing the Secretary of the Treasury to coin and sell duplicates in bronze of a gold medal presented to Robert Frost by the President of the United States; to the Committee on Banking and Currency.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 4510. An act to provide a special program for feed grains for 1961.

H.R. 4806. An act to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 307. An act to authorize certain beach erosion control of the shore in San Diego County, Calif.

S. 449. An act to extend the time in which the Outdoor Recreation Resources Review Commission shall submit its final report.

S. 1028. An act to amend the transitional provisions of the act approved August 7, 1959, entitled "Nematocide, Plant Regulator, Defoliant, and Desiccant Amendment of 1959."

S. 1116. An act to authorize the sale, without regard to the 6-month waiting period prescribed, of certain calcines and matte proposed to be disposed of pursuant to the Strategic and Critical Materials Stock Piling Act.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 1822. To adjust the amount of funds available for farm operating loans made pursuant to section 21(b) of the Bankhead-Jones Farm Tenant Act, as amended.

H.R. 4510. To provide a special program for feed grains for 1961.

ADJOURNMENT

Mr. JOELSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 16 minutes p.m.), the House adjourned until tomorrow, Thursday, March 23, 1961, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

704. A letter from the Comptroller General of the United States transmitting a report on the review of certain aspects of the program for the termination of Federal supervision over Indian affairs by the Bureau of Indian Affairs, Department of the Interior; to the Committee on Government Operations.

705. A letter from the Secretary of Commerce, transmitting a draft of a proposed bill entitled "A bill to amend the act approved July 14, 1960 (74 Stat. 526), relating to the establishment of a register in the Department of Commerce of certain motor vehicle operators' licenses"; to the Committee on Interstate and Foreign Commerce.

706. A letter from the Secretary of State, transmitting a draft of a proposed bill entitled "A bill to amend the Foreign Service Buildings Act, 1926, to authorize additional appropriations, and for other reasons"; to the Committee on Foreign Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MCMILLAN: Committee on the District of Columbia. Supplemental report. H.R. 258. A bill to amend the District of Columbia Sales Tax Act so as to increase the rate of tax imposed on gross receipts from certain sales, and for other purposes; with amendment (Rept. No. 173, pt. 2). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. Report on activities of the Committee on Government Operations (Rept. No. 184). Referred to the Committee of the Whole House on the State of the Union.

Mr. SPENCE: Committee on Banking and Currency. S. 900. An act to provide for the striking of medals in commemoration of the 250th anniversary of the founding of Mobile, Ala., without amendment (Rept. No. 185). Referred to the Committee of the Whole House on the State of the Union.

Mr. SPENCE: Committee on Banking and Currency. S. 1. An act to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically distressed areas; with amendment (Rept. No. 186). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. AYRES:

H.R. 5819. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of interstate enterprises engaged in retail trade, to increase the minimum wage under the act to $1.15 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. KITCHIN:

H.R. 5820. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of interstate enterprises engaged in retail trade, to increase the minimum wage under the act to $1.15 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. BROYHILL:

H.R. 5821. A bill to provide for the conveyance of a portion of the Henry G. Shirley Memorial Highway to the Commonwealth of Virginia, and for other purposes; to the Committee on Public Works.

By Mr. DANIELS:

H.R. 5822. A bill creating a commission to be known as the Commission on Noxious and Obscene Matters and Materials; to the Committee on Education and Labor.

By Mr. GARLAND:

H.R. 5823. A bill to amend title 10, United States Code, with respect to crediting certain service of females sworn in as members of telephone operating units, Signal Corps; to the Committee on Armed Services.

H.R. 5824. A bill to amend section 106 of title 38, United States Code, to provide veterans' benefits for female members of telephone operating units, Signal Corps, who served overseas during World War I; to the Committee on Veterans' Affairs.

By Mr. GOODELL:

H.R. 5825. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of interstate enterprises engaged in retail trade, to increase the minimum wage under the act to $1.25 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. HALPERN:

H.R. 5826. A bill to extend certain reduced third-class postage rates to civic associations; to the Committee on Post Office and Civil Service.

By Mr. HEMPHILL:

H.R. 5827. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 per hour, and for other purposes; to the Committee on Education and Labor.

By Mr. HOLTZMAN:

H.R. 5828. A bill to provide for recognition of Federal employee unions and to provide procedures for the adjustment of grievances; to the Committee on Post Office and Civil Service.

By Mr. JOHNSON of Wisconsin:

H.R. 5829. A bill to amend the Federal Property and Administrative Services Act of 1949 to permit donations of surplus property

to volunteer firefighting organizations and to volunteer rescue or lifesaving organizations, and for other purposes; to the Committee on Government Operations.

By Mr. LANE (by request):

H.R. 5830. A bill to amend the Shipping Act, 1916, as amended; to the Committee on Merchant Marine and Fisheries.

By Mr. McMILLAN:

H.R. 5831. A bill to amend section 11 of the act of April 1, 1942 (56 Stat. 197, ch. 207; D.C. Code, 1951 ed., sec. 11–776) being an act to "consolidate the police court of the District of Columbia and the municipal court of the District of Columbia, to create the municipal court for the District of Columbia, to create the municipal court of appeals for the District of Columbia, and for other purposes"; in order to modify the retirement benefits of the judges of the municipal court for the District of Columbia, the municipal court of appeals for the District of Columbia, and the juvenile court of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. BROYHILL:

H.R. 5832. A bill to amend section 11 of the act of April 1, 1942 (56 Stat. 197, ch. 207; D.C. Code, 1951 ed., sec. 11–776) being an act to "consolidate the police court of the District of Columbia and the municipal court of the District of Columbia, to create the municipal court for the District of Columbia, to create the municipal court of appeals for the District of Columbia, and for other purposes"; in order to modify the retirement benefits of the judges of the municipal court for the District of Columbia, the municipal court of appeals for the District of Columbia, and the juvenile court of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. McSWEEN:

H.R. 5833. A bill to authorize the Secretary of Agriculture to grant easements for road rights-of-way over national forest lands and other lands under the jurisdiction of the Department of Agriculture, and for other purposes; to the Committee on Agriculture.

By Mr. MASON:

H.R. 5834. A bill to equalize taxation and provide revenue; to the Committee on Ways and Means.

H.R. 5835. A bill to equalize taxation and provide revenue; to the Committee on Ways and Means.

By Mr. O'BRIEN of New York:

H.R. 5836. A bill to amend title II of the Social Security Act to extend the period during which certain State and local employees under a retirement system may acquire social security coverage by transferring from one division or part of such system to another; to the Committee on Ways and Means.

By Mr. ROBISON:

H.R. 5837. A bill to amend section 502 of the General Bridge Act of 1946, and for other purposes; to the Committee on Public Works.

By Mr. ST. GERMAIN:

H.R. 5838. A bill to amend the Federal Water Pollution Control Act to provide for a more effective program of water pollution control; to the Committee on Public Works.

By Mr. SCHERER:

H.R. 5839. A bill to amend the Subversive Activities Control Act of 1950 so as to require the registration of certain additional persons disseminating political propaganda within the United States as agents of a foreign principal, and for other purposes; to the Committee on Un-American Activities.

By Mr. SHORT:

H.R. 5840. A bill to provide appropriate lapel buttons for widows, parents, and next of kin of members of the Armed Forces who, subsequent to World War II, lost their lives in the armed services of the United States during peacetime; to the Committee on Armed Services.

By Mr. UTT:

H.R. 5841. A bill to amend the Internal Revenue Code of 1954 to permit the amortization over a 60-month period of certain civil defense facilities; to the Committee on Ways and Means.

By Mr. VINSON:

H.R. 5842. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of interstate enterprises engaged in retail trade, to increase the minimum wage under the act to $1.25 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. ANDERSEN of Minnesota:

H.R. 5843. A bill to reduce the minimum charge per piece for the third-class (bulk) local mailings of small businesses; to the Committee on Post Office and Civil Service.

By Mr. BROYHILL:

H.R. 5844. A bill relating to the exemption from the club dues tax in the case of nonprofit swimming or skating facilities; to the Committee on Ways and Means.

By Mr. DENT:

H.R. 5845. A bill to provide for grants to the several States to permit them to establish a State college of technology offering a 24-month course leading to a degree of bachelor of technology; to the Committee on Education and Labor.

By Mr. DEVINE:

H.R. 5846. A bill to amend title 28, United States Code, to establish certain qualifications for persons appointed as judges or justices of the United States; to the Committee on the Judiciary.

My Mr. FULTON:

H.R. 5847. A bill to provide for the establishment of a Council to be known as the National Citizens Council on Migratory Labor; to the Committee on Education and Labor.

H.R. 5848. A bill to provide for the registration of contractors of migrant agricultural workers and for other purposes; to the Committee on Education and Labor.

H.R. 5849. A bill to amend title III of the Public Health Service Act to authorize grants for improving domestic agricultural migratory workers' health services and conditions; to the Committee on Interstate and Foreign Commerce.

H.R. 5850. A bill relating to the power of the States to impose use tax assessments with respect to sales in interstate commerce; to the Committee on the Judiciary.

By Mr. GALLAGHER:

H.R. 5851. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. MEADER:

H.R. 5852. A bill to provide for the free entry of a towing carriage for the use of the University of Michigan; to the Committee on Ways and Means.

By Mr. RHODES of Pennsylvania:

H.R. 5853. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. SCHERER:

H.R. 5854. A bill to provide for the expiration of certain authorizations by the Congress for projects for flood control or river and harbor improvements; to the Committee on Public Works.

By Mr. SCHNEEBELI:

H.R. 5855. A bill relating to the deduction for income tax purposes of contributions to charitable organizations whose sole purpose is making distributions to other charitable organizations, contributions to which by individuals are deductible within the 30 percent limitation of adjusted gross income; to the Committee on Ways and Means.

By Mr. VAN PELT:

H.R. 5856. A bill to amend paragraph 1726 of the Tariff Act of 1930 to place on the free list magnetic tape and other sound recordings for radio music broadcasts; to the Committee on Ways and Means.

By Mr. HOLTZMAN:

H.J. Res. 333. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. WESTLAND:

H.J. Res. 334. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. PHILBIN:

H. Con. Res. 204. Concurrent resolution to recognize Samuel Wilson, of Troy, N.Y., as the progenitor of America's national symbol "Uncle Sam"; to the Committee on Interior and Insular Affairs.

MEMORIALS

Under clause 4 of rule XXII,

The SPEAKER presented a memorial of the Legislature of the State of Iowa, memorializing the President and the Congress of the United States relative to ratifying a proposed amendment to the Constitution of the United States of America relating to granting representation in the electoral college to the District of Columbia, which was referred to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANFUSO:

H.R. 5857. A bill for the relief of Anthony Outeri (Auteri); to the Committee on the Judiciary.

By Mr. BATES:

H.R. 5858. A bill for the relief of Josephine C. Rumley, administratrix of the estate of George S. Rumley, doing business as George S. Rumley Shoe Manufacturing Co., and for other purposes; to the Committee on the Judiciary.

By Mr. CORMAN (by request):

H.R. 5859. A bill for the relief of Harold A. Saly; to the Committee on the Judiciary.

H.R. 5860. A bill for the relief of Cornelius F. Hoorn; to the Committee on the Judiciary.

By Mr. DELANEY:

H.R. 5861. A bill for the relief of Ante Martinovic, Maria Martinovic, and Yandranka Martinovic; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 5862. A bill for the relief of Givara Selim Omer also known as Selim Gabbarra; to the Committee on the Judiciary.

By Mr. KEARNS:

H.R. 5863. A bill for the relief of Harry Hong Sang Fong; to the Committee on the Judiciary.

By Mr. RUTHERFORD:

H.R. 5864. A bill for the relief of Mrs. Chui Sam; to the Committee on the Judiciary.

By Mr. SAUND:

H.R. 5865. A bill for the relief of Herminia C. Balagot; to the Committee on the Judiciary.

By Mr. WIDNALL:

H.R. 5866. A bill for the relief of Halina Maria (Gutowicz) Olsenwik; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause I of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

101. By Mr. STRATTON: Resolution of the Common Council of the City of Amsterdam, N.Y., favoring the adoption of legislation for acquisition of Government surplus property by cities; to the Committee on Government Operations.

102. Also, petition of the Board of Trustees of the Village of Fort Johnson, N.Y., expressing approval of the New York State Assembly Resolution No. 98 (Eagen) memorializing the Congress to amend the social security law to increase the permissible annual income of recipients under age 70 years to the sum of $1,800; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

Veterans' Insurance: Mr. Teague of Texas, and Mr. Gross

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. TEAGUE of Texas. Mr. Speaker, on March 21, at the time of the debate on the bill H.R. 4539, which proposes to pay a special dividend to holders of so-called RS and W insurance, the gentleman from Iowa [Mr. GROSS] and I engaged in colloquy concerning the general subject of insurance.

The question was raised as to why dividends on World War II insurance were so high. I have since written a letter to the gentleman from Iowa explaining in some detail my reasons. Under leave to extend my remarks I include the text of that letter:

MARCH 22, 1961.

Hon. H. R. GROSS,
Member of Congress,
House of Representatives,
Washington, D.C.

DEAR COLLEAGUE: Apropos of the discussion and colloquy between us on the floor on yesterday concerning Veterans' Administration insurance, I thought I should write you concerning some of the background of this subject.

U.S. Government life insurance which was enacted for the benefit of World War I veterans has the premium rates based on the American Experience Table Mortality with interest at 3½ percent. This is set forth in section 743, title 38.

Section 702 of title 38 provides that premium rates for national service life insurance, the World War II variety, shall be the net rates based upon the American Experience Table Mortality and interest at 3 percent per annum. You will note, of course, that both of these provisions are set by law, and in the case of World War I, has been in effect close to 40 years and World War II since October 1940. Insurance is the contract and may be subject to a suit. Any policyholder who is dissatisfied with a decision of the Veterans' Administration (or for that matter any beneficiary) may sue the Government in the nearest appropriate district court. You will readily appreciate that the Congress thus is without power to make a mandatory change of the mortality table just as a private insurance company cannot change the rules in the middle of the game; neither can the Government. If you attempted to do so, I think one suit would be sufficient to establish the fact that the Government is without power to change the mortality tables.

I cite all of this because the mortality table and the lengthened lifespan are the reasons for the unusually high dividends which World War I veterans and World War II veterans enjoy. There is nothing that the Government or the Veterans' Administration can do about either of these facts. I am sure you appreciate this.

Since the enactment of the two acts that I referred to above, the Congress has generally tried to put insurance, which has been written in recent years, on a more realistic mortality table basis. I cite the insurance written as "RS" and "W." "RS" insurance was not expected to produce any dividends and was made nonparticipating, but it did produce a surplus and therefore we had the equitable duty to distribute it as a dividend. This is the reason for the passage on yesterday of H.R. 4539. The experience of the Veterans' Administration in death claims has been so favorable on this insurance that approximately $65 million was accumulated.

The so-called "W" insurance which was provided by Public Law 85-896 sets the premium on so-called X-18 table and you will be glad to know that this table of mortality is accomplishing its aim that Congress had for it; namely, providing low cost nonparticipating insurance.

I hope to introduce, as I said yesterday, a bill shortly which will provide for the payment of the administrative expenses for the operation of the insurance program by deductions from the dividends available to World War I and World War II veterans. There is a considerable question whether this can be done, since as I have indicated above the insurance is a contract. I plan to submit this to the Veterans' Administration as soon as I draft it, and also to the Attorney General so that the constitutional question can be resolved.

You can readily tell, of course, that I feel that there is no easy solution to this problem. If you care to introduce legislation which you think will correct it in any way, I'll be happy to request departmental reports immediately and see that you get a public hearing at an early date at which time you can present your point of view in the fullest possible manner. I would not limit this to insurance but will offer you the same opportunity on any matter coming within the jurisdiction of this committee.

Very truly yours,

OLIN E. TEAGUE,
Chairman.

Charles R. Hook

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. ROGERS of Florida. Mr. Speaker, I would like to express best wishes to Mr. Charles R. Hook as he begins an active retirement in Florida.

Mr. Hook and I met and worked together on the Hoover Commission recommendations during recent years and his dedication to service to his country is well known by all who have worked with him.

We in Florida welcome Mr. Hook to our State, and hope he will spend a good deal of his time with us. His business and civic talents will find new avenues of expression in our fast-growing State, and we will encourage him to take an active interest in the development and expansion of Florida.

The Minimum Wage Law

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to revise and extend my remarks, I am making a statement and including certain extraneous matter for the information of Members of Congress as to the minimum wage law.

I am not opposed to a minimum wage law as such, but I am opposed to a minimum wage law which stands any likelihood of furthering unemployment in my district, in my State, and in my country.

If H.R. 3935, the committee bill, is to be the bill which is to be pressed for passage, then I would hope that an amendment to that legislation would be accepted to take care of the rural areas of this country. As numbers of us know, who have studied and are concerned that the plight of the small merchant, who has clerks who do not make enough sales at the margin of profit now existing in rural retail stores, to justify the raise in wages, the impact of extending the coverage to those areas and to those establishments would be to cause some layoff of people and further unemployment, as well as extend the economic difficulty in those little communities. In the small rural communities of this country, when a person is laid off it means a loss of income to the community as a whole and any widespread unemployment in these areas will affect larger communities.

I recognize the fact that in the larger metropolitan statistical areas of this country, because of the fact that cost of living is higher in the cities, the sales are greater, the sales per clerk are larger per hour, and the stores are for the most part modern, they pay higher wages, but in the rural areas of this country this

is not true, and I, therefore, would propose an amendment to H.R. 3935, as reported March 13, 1961, as follows:

AMENDMENT

(1) On page 19, between lines 16 and 17, insert the following new paragraph:

(2) "Any employee employed in a retail or service establishment, situated outside of the boundaries of a standard metropolitan statistical area as now delineated and now defined by the Federal Committee on Standard Metropolitan Statistical Areas, under the direction of the U.S. Bureau of the Budget: or."

(Renumber successive paragraphs.)

For estimated coverage of employees I present the following tabulation:

EXHIBIT A

ESTIMATED COVERAGE—WAGE HOUR BILL USING STANDARD METROPOLITAN STATISTICAL AREAS, BUREAU OF THE CENSUS

	Number employees covered
Total retail employees, 1958	7,942,914
67.7 percent in standard metropolitan statistical area	5,377,363
Standard metropolitan statistical areas, with $100,000 per store exemption test	3,129,625
With $300,000 per store exemption test	2,317,643

(1) Statistical Abstract of United States, 1960, page 834.

(2) Percent based on latest available census reports.

(3) Statistical Abstract of United States, 1960, page 833.

Worker by store size based on 1954 census.

Nineteen hundred and fifty-eight figures not available.

If we are going to extend the coverage, this amendment would serve to recognize the conditions which actually exist in our communities today. I have also introduced, for the purpose of allowing the House to vote, and I hope favorably, on the pure constitutional question, a bill which I believe will extend the coverage to those actually engaged in commerce, without any extension of coverage or invasion of those fields not engaged in commerce.

This bill consists of an amendment to the Fair Labor Standards Act of 1938, as amended. The purpose of the amendment is to provide certain additional coverage for employees presently engaged in retail trade or service and of other employees engaged in commerce or in the purchase of goods for commerce, to increase the minimum wage under the act, and for other purposes.

You will note that the purpose and issue of this submission differs from the purpose and effect of H.R. 3935, as introduced by Mr. ROOSEVELT, and H.R. 5561, as introduced by Mr. KITCHIN, and H.R. 5537, as introduced by Mr. MARTIN of Nebraska.

In order more precisely to differentiate between the present submission and the former bills referred to, we note, briefly, that the Roosevelt bill, consists of "enterprise" tests under which all retailers are covered who come within the "enterprise" definition, and have sales of more than $1 million annually, regardless of the number of units or establishments making up the total enterprise; the Kitchin bill provides coverage only as the enterprise is engaged in business in two or more States and has five or more units, but otherwise accepting the enterprise criteria of the Roosevelt bill in all its vastness and complex impacts. The Martin bill is a simple amendment to the Fair Labor Standards Act to increase the minimum wage to $1.15 without affecting present coverage provisions or the exemptions therefrom. The Martin amendment has great appeal to many people.

Constitutional questions plague both H.R. 3935—Roosevelt bill—and H.R. 5561—Kitchin bill. Under both measures, however, some extension of coverage is sought, and, not withstanding certain blanket exemptions contained in both measures, measurable additional coverage is provided.

The enclosed submission differs from any of the foregoing in that it will accomplish the following:

(a) It will avoid the constitutional question inherent in the Roosevelt and Kitchin bills, that is, the regulation of local business activities, that are truly and legally intrastate. This avoidance is accomplished by retaining the present format of the Fair Labor Standards Act, which has been held constitutional by the Supreme Court of the United States.

(b) It will provide additional coverage. This is accomplished by amending out the retail exemption. By repeal of the retail exemption, employees of retail and service industries will be covered to the extent that such employees are engaged in trade, commerce, transportation, transmission, or communication, among the several States, or between any State and any place outside thereof. Employees who engage in activities which are not interstate in character will not be covered.

The present test of the Fair Labor Standards Act, as laid down and recognized by the Supreme Court has been an "employee" test: that is, whether or not the services of the "employee" has been those of one directly engaged in interstate activities. By retaining this test, all employees of retail and service establishments who are engaged in such interstate activities and transactions will be covered and it is estimated that there will be an additional coverage of 1,800,000 persons.

Individuals whose activities are intrastate in character, such as those individuals engaged in local retailing activities which are performed after the interstate movement of merchandise has ceased, will not be covered. By way of example, warehousemen, communication forces, and buyers will so be covered; local salespersons are not covered.

Much litigation over the past 23 years has produced a clear and definitive picture of the relative distinctions of interstate against intrastate activities. There will be no period of uncertainty, there will be no multiplicity of litigation, and there can be no distortion by regulation. Distortion by regulation can be a nightmare under the enterprise doctrine by the Roosevelt bill and by the Kitchin bill.

The complexity of retail distribution is such that the economics of the industry differ by locality, by region, by character of stores, by productivity of employees, by inventory turnover within the various segments of the retail industry—see Dun & Bradstreet study attached exhibit B—and many other similar significant factors of difference and variety.

EXHIBIT B.—*Operating ratios for 41 lines of retail trade*

Line of retail trade	Year	Cost of goods sold [1]	Gross margin [1]	Total expense [1]	Net operating profit [1]	Selected operating expenses					Inventory turnover per year	Source of survey [The ratios compiled by Dun & Bradstreet, Inc., may be reproduced or used publicly with credit to Dun & Bradstreet, Inc. [1] The bracketed ratios are based on net sales.
[2] Does not include mechanics' wages.
[3] Not available.
[4] Does not include manufacturing labor.
[5] Ratios shown are for stores in the following volume groups: department stores with annual sales volume under $250,000; furniture stores between $250,000 and $500,000; women's wear stores under $250,000.
[6] Rent only.
[7] Salaries of owners and managers.
[8] Total expense plus net profit does not equal gross margin.
[9] Before owners' salaries were drawn.

EXPLANATION OF TERMS

Advertising: Net expenditure for newspaper, radio, and other forms of advertising' exclusive of wages.

Bad debts: Receivables considered during the year as uncollectible, or the reserve set up to cover such losses.

Cost of goods sold: Opening inventory, plus merchandise purchased (including inbound freight and cartage), less closing inventory; after deducting cash discounts received.

Employees' wages: Gross payroll of all employees, including amount withheld for Federal income taxes.

Gross margin: The difference between net sales and cost of goods sold; also known as "gross profit on sales." This is a composite figure, the net result of selling different kinds of goods at varying markups. Cash discounts received are included in gross margin.

Inventory turnover: Cost of goods sold divided by average inventory (average of opening and closing inventories).

Net operating profit: The difference between gross margin and total expense; before deduction for Federal and State income taxes but after allowance for owners' salaries.

Net sales: Gross sales less returns and allowances and less sales and excise taxes collected, net after all discounts allowed.

Occupancy cost: The cost of occupying a store, whether rented or owned. For renters, this item includes rent, utilities, and leasehold improvements; for owners, it includes utilities, property insurance and property taxes, interest on mortgage and building depreciation.

Owners' compensation: Salaries or drawings of proprietors, partners, or officers.

Total expense: The sum of all individual expense items. It does not include income taxes and in most cases does not include nonoperating charges.

Year: This represents the period upon which the ratio figures are based. It is not the year the figures were published.

Conversion table

[In percent]

Gross margin	Markup	Gross margin	Markup
5.0	5.3	28.0	38.9
7.5	8.1	30.0	42.9
10.0	11.1	31.0	45.0
12.0	13.7	32.0	47.1
13.0	15.0	33.0	49.3
14.0	16.3	34.0	51.6
15.0	17.7	35.0	53.9
16.0	19.1	37.0	58.8
17.0	20.5	39.0	64.0
18.0	22.0	40.0	66.7
19.0	23.5	42.0	72.5
20.0	25.0	45.0	81.9
22.0	28.2	47.0	88.8
25.0	33.3	50.0	100.0

To obtain a gross margin shown in this table, multiply cost of goods by the markup percent opposite and add the result to cost of goods. This will give the selling price needed to obtain the desired gross margin.

By eliminating the problem of regulation of these intrastate activities, these economic complexities are avoided. Further, discrimination is firmly avoided, but, more importantly, the commerce clause is neither ignored nor distorted, and is not made a basis of dangerous federalism in local affairs best handled at the State level.

Another objection to H.R. 3935, the Roosevelt bill, is the fact that it gives insufficient recognition to small and locally owned group operations in the retail field and in the farm cooperative field—such as FCX Farm Supply Stores—each of which establishment is a separate corporation in most cases. Many of these separate establishments are organized in separate corporations or other distinct legal forms and the local residents and management or the employees or, in the case of cooperatives the patrons thereof, are also owners of the business.

There is a vast distinction between this type of locally owned, locally formed, "homegrown" mercantile operation and

large integrated mercantile groups whose stock is publicly floated and issued in the large stock exchanges of the country.

I do not wish to discriminate in any way against any group in the mercantile industry, but I do feel that these separately organized, locally owned "home-grown" mercantile organizations deserve consideration.

I offer the following amendment to accomplish my expressed purposes on this matter:

AMENDMENT

On page 42, between lines 21 and 22, insert the following paragraph:

(3) "Any employee employed by any retail or service establishment, which is separately organized in corporate or other legal form, in which local residents of the State in which such establishment is located or local management personnel or employees (including district or group supervisory employees having supervision of not over 15 establishments) or their immediate families own at least 20 percent of the net worth of the establishment."

I hope the House will seriously consider my bill and amendments and what we have said here.

When Lyndon Johnson Talked to Businessmen

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. THORNBERRY. Mr. Speaker, on February 13, 1961, the Honorable LYNDON B. JOHNSON, the Vice President of the United States, delivered a significant address to a meeting called by the National Industrial Conference Board in Washington, D.C.

U.S. News & World Report made the following editorial comment on the Vice President's address:

A little-noticed speech by Vice President LYNDON JOHNSON, delivered in Washington on February 13, 1961, is attracting growing attention among businessmen and Members of Congress.

The speech, delivered at a meeting called by the National Industrial Conference Board, was cleared by the White House. It dealt with the attitude of the Kennedy administration toward business.

I ask that the Vice President's speech as carried in the U.S. News & World Report be included as these remarks:

WHEN LYNDON JOHNSON TALKED TO BUSINESSMEN

(From Vice President JOHNSON's address in Washington, February 13, 1961)

Today you have heard the President. You have met distinguished members of his Cabinet. I believe you can leave Washington confident that your Government is in able, strong and—above all—highly responsible hands.

In these moments, I would like to offer you a perspective on the role of your Government during this period—and to make several comments about the relationship of the business community to Government.

It is no secret—and no criticism—to say that, when many businessmen speak, write, or think about Government, they use more shorthand than their secretaries.

In that shorthand, "new" means "more" and "more" is an ugly word: nearly as ugly as words like "welfare" or "planning"—or that word not to be spoken in mixed company, "Democrats."

This shorthand needs revision.

Yesterday is yesterday. The idiom of yesterday's politics and yesterday's prejudices no longer applies—not even for the word "Democrats." If we are to respond successfully to the new facts we must face, we must leave yesterday's habits behind us.

This first fact must be understood first: Both abroad and at home we have arrived at the start of a new era. The arrival of this new administration is a coincidence—not the cause.

Whomever history might have installed in America's leadership at this time would have to face new facts—new facts requiring new responses.

We must not allow our old preconceptions and prejudices to keep us from facing the new facts of our national life today—at home or abroad. I want to make this absolutely clear. This Administration does not—and will not—seek great new powers by proclaiming great new perils.

The purpose of your national leadership is to accomplish, not to aggrandize—to accomplish what will make the liberty of the people secure, not to aggrandize Government to make the state supreme.

Peril there is. Peril there will continue to be. In candor, we shall acknowledge it. But powers there are, also. In candor, we acknowledge that, to meet the perils, our need is less for new powers than for new resolve in using those we have—using them with new precision, new energy, and new results.

At home, as abroad, we must treat what is ill without injuring what is well. In nothing that we do can we—or shall we—be oblivious to the weight which government itself today presses down upon the people and their enterprise. As we will not ask what cannot be borne, neither shall we ignore the needs which a free society cannot neglect.

We shall do what is right because it is right, never because it is cheap—remembering, always, that it is never right to be prodigal and never wrong to be prudent.

In saying these things, my purpose is not to offer gratuitous reassurances to the business community. I do not believe any administration, chosen by the people to lead the strongest and most stable government on earth, must or should endlessly avow itself to be responsible, loyal, or sincere.

If there be a brand of partisanship which does not permit such fundamentals to be presumed, then it is that partisanship—and not its targets—which needs to be examined and reexamined.

Today, as in times past, the business community is being urged and encouraged to take up positions of opposition, to trifles—by men of trifling purposes. With ill-concealed relish such men summon the American business community to work for the failure—rather than the success—of this American administration.

No American, of any walk of life, surrenders his integrity by working for—rather than against—the success of his government. When some call you to oppose, ask: Oppose what? Oppose why?

An economy which can afford millions for the few minutes' life of a missile can afford 2 pennies for 1 minute of human labor. A people who believe in God who marks the sparrow's fall can heed the calls from their fellow men which come from out the darkness of all the lands like the Congo.

To honor our system of private enterprise and sustain it, we must be certain its promise is fulfilled—not for the few, but for all: for yesterday's miner of coal as for today's operator of a computer; for the bedridden aged as for the healthy bodied young; for the man whose skin is not white as for the man whose skin is white.

When we talk of these things, we talk not of burdening private enterprise—but of unburdening it of those things which detract from its force in the world.

The success and survival of our system depends upon things of principle as well as profit—and I believe those who suggest otherwise understand neither the system nor you who are part of it.

Take with you from Washington the message that yesteday's shorthand won't do. New does not automatically mean more—more spending, more taxes, more government. For a new generation and a new administration, new means new—new responses to the new facts with which we are faced.

The interest of business—the interest of all Americans—lies not in the failure but in the success of the search for such new responses.

We invite you to the labors of the search and to the rewards of its success.

The Medora: North Dakota Townsite Area Adjoining Teddy Roosevelt Memorial Park

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. SHORT. Mr. Speaker, I would like to call the attention of my colleagues, and ask their support of a bill which I have introduced—H.R. 2295—to assist my home community of Medora in a problem they face which they are unable to solve by themselves.

This small, historic cow town of Medora has been totally unprepared and unequipped for the impact of the thousands of visitors who come there each year, attracted by the Theodore Roosevelt National Memorial Park, the Marquis de Mores Chateau, and the outdoor drama, "Old Four Eyes."

The legislation which I propose, and in which I have been joined by other members of the North Dakota delegation: Senators YOUNG and BURDICK, and Congressman NYGAARD, only authorizes the Department of Interior to extend its existing facilities upon reaching an agreement with Medora relative to the cost of service and the period of repayment. I want to firmly emphasize this does not provide a direct grant to the village.

Only with adequate sewage and water facilities can the community meet the dire need for sufficient eating, lodging, and restroom accommodations. We had this legislation prepared only after exhaustive study convinced us there is no way the town of Medora can finance construction of its own facilities. This bill provides that in order to afford this service to visitors to the area and to encourage the preservation and restoration of the pioneer cattle town of Medora, the Secretary of the Interior is authorized to assist in modernizing the water and sewage facilities of the village. The cost

of the proposed facilities may not exceed $100,000 and non-Federal users of the system would be charged enough to recover a pro rata share of depreciation, plus costs of the system's operation and maintenance. The existing water and sewage disposal system located within the National Park headquarters area is ample to take care of the needs of the park and also allow the people of Medora to connect to that system.

This bill has been assigned to the Interior and Insular Affairs Committee, where we are hopeful of getting early and favorable consideration. The departmental reports last year were favorable, but the shortage of time prevented getting final action on similar legislation.

I am happy to report that the 37th Legislative Assembly of the State of North Dakota in session this year joined in supporting this legislation, and passed Senate Concurrent Resolution 00, introduced by Senators Leland Roen and William R. Reichert, pointing up the need to remedy the situation and thus enhance the whole Theodore Roosevelt Memorial Park development.

A copy of their resolution follows:

CONCURRENT RESOLUTION COMMENDING THE SPONSORS OF LEGISLATION PRESENTLY IN CONGRESS WHICH SEEKS TO REMEDY THE SANITATION AND WATER SUPPLY FACILITIES OF MEDORA, N. DAK., AND ALSO URGING THE CONGRESS TO FAVORABLY CONSIDER SUCH PROPOSED LEGISLATION

Whereas House Concurrent Resolution U adopted by the 36th legislative assembly provided for the creation of a commission to cooperate with the village board of Medora, N. Dak., in the preservation of that community as a typical pioneer cow town in an area of State and national importance and interest; and

Whereas it has been proposed to restore Medora to its historic appearance at the time of Theodore Roosevelt, the Marquis de Mores, the Eaton brothers, and the colorful Texas and Oklahoma drovers whose longhorn trail herds grazed the Badlands of this State and blazed the routes into western North Dakota, followed by others for more than half a century; and

Whereas the impact of the ever-increasing activities in the adjoining Theodore Roosevelt National Memorial Park upon Medora has resulted in overtaxing and overloading the sanitation and water supply facilities of the village to the extent that the health and well-being of its inhabitants and visitors are seriously imperiled; and

Whereas U.S. Representatives DON L. SHORT and HJALMAR C. NYGAARD have introduced House bills Nos. 2295 and 2270, respectively, and U.S. Senators MILTON R. YOUNG and QUENTIN N. BURDICK have jointly introduced Senate bill No. 98 in the current session of Congress, authorizing the Secretary of the Interior to provide water and sewage disposal facilities to the Medora area adjoining the park with a view to alleviating and correcting such dangerous situation and greatly enhancing the value of the said park development; and

Whereas the proposed legislation provides that such water and sewage disposal systems would be connected to those of the National Park Service in said park, and that the costs allocated to the village of Medora would be repaid by the non-Federal users thereof in such manner and under such conditions as may be determined by the Secretary of the Interior: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the North Dakota delegation in Congress, the sponsors of the aforementioned proposed legislation, be highly commended for seeking to remedy the intolerable situation in Medora, as described herein, through enactment of the legislation proposed in the aforesaid bills; and be it further

Resolved, That the Congress is hereby urged to give favorable consideration to the legislation proposed by said bills to the end that the planned water and sewage disposal facilities proposed therein may be authorized and constructed; and be it further

Resolved, That the secretary of state is hereby directed to mail copies of this resolution to Senators Young and Burdick, and Representatives Short and Nygaard; to Hon. Clinton P. Anderson, chairman, Senate Committee on Interior and Insular Affairs; to Hon. Wayne N. Aspinall, chairman, House Committee on Interior and Insular Affairs; Hon. Stewart L. Udall, Secretary of the Interior; Hon. Conrad L. Wirth, Director, National Park Service; and to Hon. David E. Bell, Director of the Bureau of the Budget, all in Washington, D.C.

ORVILLE W. HAGEN
President of the Senate.
HOWARD F. DOHERTY,
Secretary of the Senate.
R. FAY BROWN,
Speaker of the House.
GERALD L. STAIR,
Chief Clerk of the House.

It is my hope that when these improvements are made in the facilities of the town of Medora that many of my colleagues will find the opportunity to visit the park and relax in the pleasant, invigorating atmosphere of the Badlands, where I have lived all my life.

Division of Indian Health Employees Scholarship Fund in the Aberdeen, S. Dak., Area Office

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BERRY. Mr. Speaker, one of the finest projects of a group of Federal employees that has come to my attention is the Division of Indian Health Employees Scholarship Fund in the Aberdeen, S. Dak., area office.

The program was begun in 1958 when it was discovered that a number of Indian students desiring to continue their education in health programs were unable to do so because of lack of sufficient funds. The employees in the Division of Indian Health decided to take the initiative and establish a scholarship program to meet this need.

In addition to contributions by employees, various fundraising activities have been conducted including dances, bingo parties, and the like. The employees and their families contributed of their time and energy in making these affairs successful, thus adding to the scholarship fund.

During the 1960–61 school year, six students received scholarships totaling $1,962. The scholarship fund currently contains $1,800.12 in savings and $509.50 in their checking account, for a total reserve of $2,309.62.

I would like to commend Dr. James R. Shaw, Chief of the Division of Indian Health, and Dr. Donald McNaughton, medical officer in charge of the Aberdeen area, for this fine effort, and their encouragement of the employees in the Division to assist in this very worthwhile endeavor.

H.R. 2797, a Bill To Establish Procedure for Determination of Economic Justification of Certain Inland Waterway Improvement Projects

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. VAN ZANDT. Mr. Speaker, on January 16, 1961, I introduced H.R. 2797, which if enacted into law will make possible Interstate Commerce Commission participation in economic surveys of proposed waterway navigation projects.

The Federal Government each year expends vast sums of money for the construction and improvement of navigation facilities of the inland waterways of the United States. Congress regularly enacts legislation authorizing the future expenditure of additional amounts for such purposes. There is a fundamental weakness in the procedure by which these projects are approved and Federal funds authorized and appropriated therefor. It is that the agency of the Federal Government charged with the responsibility of regulating surface transportation in interstate commerce—the Interstate Commerce Commission—is not consulted concerning the economic value of the proposed waterway project as a transportation instrumentality. Nor is there any requirement that surveys, studies, and reports with respect to proposed waterway projects give consideration or weight to the national transportation policy declared by Congress in the Transportation Act of 1940. The procedure followed has led to the authorization and construction of navigation projects that are not economically sound additions to our national transportation system.

Before a particular waterway improvement for navigation purposes is undertaken, a survey is normally authorized by Congress and is then made by the Corps of Engineers, U.S. Army through the division engineer and submitted to the Board of Engineers for Rivers and Harbors for review and recommendation. In making such surveys and reaching conclusions as to whether a particular project should or should not be undertaken, the Board is required by statute to consider the amount and character of commerce which will be benefited by the improvements, the relationship of the cost of the improvement, both construction and maintenance, to the commercial interests involved, and the necessity for

the work, together with the propriety of its being undertaken, continued, or maintained at the expense of the United States. The statutory requirements provide only a very general standard to guide the engineers in reaching their conclusion.

In actual practice to arrive at their recommendations, the Engineers first perform their appropriate function as engineers in estimating the total cost to build the project. From this they calculate annual costs, against which they balance "benefits," consisting almost wholly of assumed "savings" in transportation costs as compared with charges over existing means and routes of transportation. These so-called "savings" are, of course, not true economic savings but result principally from shifting true transportation costs from shippers to taxpayers through providing the waterway at public expense. The Engineers have no responsibility with respect to the welfare of the national transportation system and in recommending inland waterway improvements give little, if any, weight to the effect on other existing forms of transport. They have the sole responsibility for surveying, studying, and reporting to Congress upon the economic feasibility of constructing or improving an inland waterway navigation facility.

On the other hand, to obtain a certificate to operate as a common carrier by water application must be made to the Interstate Commerce Commission and a certificate is issued only after an ICC finding that the proposed service is or will be required by the present or future public convenience and necessity. To obtain a permit to operate as a contract carrier by water application must be made to the ICC and a permit is issued only after an ICC finding that the proposed operation will be consistent with the public interest and the national transportation policy declared in the Interstate Commerce Act. These requirements, essential as they are to the development and coordination of a sound national transportation system, are largely ineffective where they come into play only after huge expenditures have already been made to construct or improve a waterway transportation facility which is unnecessary or undesirable in light of public convenience and necessity, the public interest, and the national transportation policy. Once such a navigation project has been constructed, no matter how uneconomic it may be, it would be anomalous for the ICC to deny applications to operate over it. Clearly, if the Commission is to have control over the issuance of certificates and permits it should be the agency delegated by Congress to make recommendations with respect to the wisdom of the Government constructing additional waterways, the provision of which has so much bearing on the effective exercise of authority over certificates and permits.

The ICC, as the agency directly charged with responsibility for the effectuation of a sound national transportation policy and the maintenance of a sound national transportation system, should have a direct and vital role in determining the economic suitability of proposed inland waterway navigation projects.

H.R. 2797 would require that the ICC consider and report to the Corps of Engineers with respect to public convenience and necessity requirements of all proposed inland waterway construction or improvement projects favorably recommended by the Engineers and not yet commenced or less than 25 percent complete. It sets forth eight specific economic factors to be considered by the ICC in determining the economic justification of such proposals. It would require the Engineers to submit its surveys and reports containing recommendations favoring inland waterway projects to the ICC for its investigation and report. The bill would require the Board of Engineers for Rivers and Harbors and the Chief of Engineers in reaching their determination of the recommendation to be made to Congress concerning the desirability in the public interest of any inland waterway improvement to give due consideration to the ICC report. Moreover, it would provide for Congress to have for its consideration the independent reports of the ICC for all inland waterway projects favorably recommended to it by the Engineers as well as for previously authorized projects not commenced or less than 25 percent complete.

The interjection of the Interstate Commerce Commission into the existing procedure by which inland waterway projects are recommended would not alter in any respect the requirement upon the Corps of Engineers to furnish an engineering, cost, and related study upon which the Congress may rely in determining the feasibility of a proposed project. It would simply provide additional data for the guidance of Congress in the form of the ICC report that is required to accompany the Engineers report. Such additional data is vital to the preservation and development of a sound national transportation system.

Indian Housing

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BERRY. Mr. Speaker, today one of the great American tragedies is the plight of the American Indians, who as the first Americans were sole landlords of vast and untracked lands for about 20,000 years before descending to North America by way of the Bering Strait and the Aleutian Islands about 9,000 years ago.

Ben Franklin said of the Indians:

> Savages we call them because their manners differ from ours, which we think the perfection of civility. They think the same of theirs.

Failure to recognize and act on the very serious and specialized problems of the Indians living in 24 States containing Federal reservations, and those in Alaska, is not only a disservice to our Nation but perpetuates an injustice upon people from whom we borrowed certain lofty ideas of democracy for our own Constitution.

The progress of time has not been kind to the first Americans but has ravaged them culturally, economically, and socially. While much can be said of the successful efforts of some tribes to sustain their culture, the effects of prejudice and assimilation are evident. The American Indian, once the epitome of many men in one man—dynamic, powerful, fearless, and proud as he roamed the plains, the mountains, and valleys, is less proud and less fearless as he ekes out an existence. The Indians, through the years, have developed a certain resignation that their status quo will continue. Understandably, many are Americans—with reservations.

Millions of non-Indian Americans enjoy and take for granted the highest living standards anywhere in the world. By contrast, the vast majority of the more than 380,000 American Indians exist under standards and conditions which are a generation and a half behind the rest of their countrymen.

Only an integrated attack on existing conditions combined with a united cooperative effort on the part of the Congress, the Federal Government, industry, organizations, and Indian leaders to improve the economic and social climate will avoid further degradation and decadence of the American Indians, who in spite of conditions are increasing, not vanishing. Indian children born today soon learn to expect little from the future. Many are without education because of inadequate school facilities. There is nothing ahead but more deaths in the first year of life; more disease from tuberculosis, heart, and infections; more outside toilets designated by health authorities as unsanitary; more unsanitary and contaminated water supply; and more brush wickiups—constructed of saplings or yucca fronds—brush shelters, hogans, tepees, wigwams, tar paper shacks consisting of one or two rooms with dirt floors, which more often than not are occupied by large families. Few are electrified, heated, or have adequate facilities for disposal of garbage and refuse.

These are but a few of the hard and sober facts as to what a large percentage of the Indians have experienced throughout their lifetime and what Indian youth faces today unless action is taken. We know what such conditions have brought in other nations.

Let us leave the disquieting effects induced by depicting the truth of the bleak and seemingly hopeless situation of the Indians and let us review a step taken recently which has created a new climate for seeking feasible solutions to the housing problem of Indians.

Both my colleague, BEN REIFEL, and I appreciated the opportunity to make a few remarks at the first American Indian Housing Conference held January 23 and 24 at the National Housing Center in Washington. The sponsor of the conference was Arrow, Inc., a nonprofit Indian organization. Sixty or more

American Indians representing 25 different tribes attended. Arrow invited Government agencies, Members of the House and Senate, representatives from Senate and House Interior and Insular Affairs Committees, other organizations, private industry, tribal attorneys, and interested individuals, directly or indirectly concerned with Indian affairs to participate. The purpose of the conference was twofold. First, Indian tribal leaders were given the opportunity to identify their general housing problems and to enumerate at length the difficulties Indians encounter in meeting the credit eligibility requirements necessary to purchase homes with mortgages insured by the Federal Government. Secondly, the representatives of the various Government agencies, particularly FHA and PHA, explained the laws and regulations governing their existing programs and services, which can be and have been utilized to assist Indians in upgrading their living standards. In addition, participants discussed areas which may require remedial, amendatory, or new legislation. Efforts were made by legal counsels of the housing agencies to determine which agency should appropriately have the major role in assisting Indians to improve their housing.

The Indian reservation lands, comprising many, many millions of acres, present complex problems which must be resolved before a workable solution in Indian housing can be initiated. The complexities surrounding Indian lands are compounded by the fact that some of the land is restricted from being sold, mortgaged, or leased because it is owned by the tribe and as tribal land is held in common by tribal members. Other land is allotted land, owned by individual Indians, but before it can be sold, the consent of the Secretary of the Interior must be obtained since it is trust land.

I commend Arrow, and all the participating agencies, individuals and organizations, and the Indians for their candor in discussing difficult and somewhat sensitive problems and for contributing a reservoir of important information. The success or failure of any such meeting depends largely upon the prevailing atmosphere in which the meeting is conducted.

Particularly, however, I want to express a special thank you to the Federal Housing Administration who was asked by Arrow to take the lead in the conference work. FHA officials gave generously and willingly of their time and knowledge about the agency's existing programs and services which have already been successfully used in Arizona and which can be used by individual Indians and groups of Indians in other areas in the transition to better housing.

The conference succeeded in getting across to the Indian representation that on the part of the Federal Government housing agencies there is genuine concern and desire to help all Indians to have decent, safe, and sanitary housing. The housing officials urged the Indian leaders to return to their tribes and decide on the kind of housing best suited to their needs. They should engage competent land planners and architects to carefully plan and develop a housing program with the aid of FHA consulting and advisory services.

A new spirit was born at this first American housing conference. It is a spirit which has rekindled hope in the minds and hearts of the Indians for a brighter future for their children, and it has stirred the imagination of the Federal housing agencies to continue to explore every way in which Indians may share the productivity of our Nation both economically and socially as well as safeguarding their rights to benefit from the marvelous development we envision for the future.

The conferees adopted the following resolution at the conclusion of the conference which I anticipate will be properly presented to the new FHA Commissioner:

Whereas the first conference on Indian housing sponsored by Arrow, Inc., has focused attention of various agencies, groups, and individuals on the serious problem of Indian housing: Be it

Resolved, That—

A. A Coordinating Committee on Indian Housing be formed by the Commissioner of the Federal Housing Administration including but not limited to Department of the Interior; Department of Health, Education, and Welfare; Department of Agriculture; Federal Housing Administration; Public Housing Administration; Veterans' Administration; Indian representation; tribal attorney representation; industry representation, whose function it will be to (1) examine existing public housing programs to determine their application to Indian need; (2) recommend such administration changes as may be necessary and possible in rules, regulations, and procedures so that housing programs may be made available for Indian people; (3) recommend such amendatory or supplemental legislation as may be necessary to make housing programs available to Indian people; (4) stimulate activity in all organizations they represent to provide at all times under existing authority full opportunity for Indians to participate in housing programs; (5) take such other action possible to accomplish the objective of adequate housing for Indians.

B. Regional and other sectional meetings on Indian housing be promoted by Indian groups and tribes to reach better understanding of needs and desires of Indian people for housing. Reports on these meetings to be forwarded to the above coordinating committee.

C. Appreciation be extended to Arrow, National Congress of American Indians, Bureau of Indian Affairs, and the Federal Housing Administration as well as other agencies, groups and individuals for their interest in housing problems of Indian people.

Pioneers for the New Frontier

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Secretary of Commerce, Luther H. Hodges, before the annual convention of the Associated General Contractors of America, Inc., on Monday afternoon, February 27, 1961, at the Statler-Hilton Hotel, Boston, Mass. It was a distinct privilege for me to be present on this occasion and to hear Secretary Hodges' speech:

PIONEERS FOR THE NEW FRONTIER

Governor Volpe, Mr. Miller, distinguished guests, ladies and gentlemen, it is indeed a privilege to be with you at this 42d annual convention of the Associated General Contractors of America, and I appreciate your honoring the Department of Commerce in asking me to be here. I well expect my position as Secretary of Commerce to be my most challenging opportunity for public service. During my career in the business world I dealt at length with the numerous manufacturing problems of the textile industry as well as the merchandising problems of American business and in my capacity as general manager of a large textile corporation, I acquired some experience in dealing with the construction industry through our plant expansions.

Also, my involvement in the program of German industrial reconstruction after World War II, in the work of disbursing American foreign aid funds, as well as in fostering major industrial expansion in the State of North Carolina, afforded me unique opportunities to promote the construction and modernization of facilities which represent the backbone of our complex economic society.

I do not have to tell an informed group such as this about the vital value of the highways, factories, stores, schools, hospitals, homes, and other construction activity in the everyday life of our Nation. Nor can I overlook the size and importance of the industry which you represent, accounting as it does for almost 15 percent of the Nation's total economic output.

However, my experience has convinced me that many of us have failed properly to appraise the economic issues confronting us in the next decade. This is true, even when these issues have major implications for the outlook of the particular segment of the economy with which we are individually involved.

What are the issues we must face up to in the coming years if we are to fulfill our national objectives, our international commitments, and our promises to our children for a secure future of peace, prosperity, and progress?

We face difficult choices dictated not only by self-interest, but by the intense competition of other nations, both friendly and not so friendly. They have pushed modernization of industry and capital investment while we concentrated on producing abundant consumer goods with little regard to the prices or wage levels involved. They stressed research in science and technology—we too often reacted as if the news of their effort was science fiction. They built schools and universities while we in many areas debated problems of Federal aid to education—who learned to copy and improve on our methods of production, while we too often halted our major production facilities because of breakdowns in labor-management relations.

What is the current situation? At present 5½ million of our fellow Americans are unemployed. More than half of our major metropolitan areas are economically depressed. Costs continue to show the impact of a long period of wage-price spirals. We face the possibility of a continuing deficit in our balance of payments. We are almost certain to have an unbalanced Federal budget. We are confronted with difficult problems in the areas of international relations.

Where do we start, and what are the resources which we can bring to the task of meeting our national goals? If the Nation's economic recovery and growth are to be

energetically advanced, what will be the nature of the governmental actions needed, and what role will the business community play in advancing these goals both in its own interests and those of the Nation?

To get close to home, what is the task for the great construction industry of the United States, an industry which in scope, impact, and potential for releasing creative forces, ranks extremely high in the world? How can you bring fresh reality to your association's slogan, "America Progresses Through Construction"?

A number of specific problems suggest the magnitude of the challenge ahead. As President Kennedy observed in his state of the Union message, 25 million Americans are living in substandard homes.

What an opportunity for building we have here. Unhappily most of these people cannot afford the homes which are being built today by an industry which too often bears the burden of sky-high building costs—high money rates—inflated land values—antiquated building codes—restrictive work practices—and a singular lack of uniformity in design and equipment.

If we are going to build 2 million homes a year rather than the 1¼ million homes of last year, we will need breakthroughs in many areas. Onsite productivity will need to be advanced by both management and labor. Such matters as the most advanced design of equipment and basic materials will need new research with emphasis on practical application.

The monetary and fiscal policies of the Government and the lending policies of private investors will need reappraisals. Cost cutting will need to be realized in dramatic ways. The pace of forward planning and execution of plans by local communities to provide supporting facilities such as schools, roads, water, and sewer works to sustain a higher level of new housing construction will also have to be stepped up in tune with the tempo of the times.

Another problem. We have growing classroom shortages despite the many new school construction projects underway and the record level of approvals by voters for financing these buildings. It has been estimated that there are 2 million schoolchildren with inadequate space. The crisis in secondary and college classroom space in particular is approaching an acute phase.

Assuming favorable action by Congress on President Kennedy's program, Federal grants may be forthcoming soon to help alleviate this problem, but money alone will not do the job. Our architectural and construction industries need to adopt new techniques to make sure that the taxpayers' money yields the highest return in this field lest we build structures that fail to meet the changing educational needs of even a single decade. The opportunity here for imaginative leadership is a challenging one.

Can you imagine the kinds of construction opportunities there would be if we really got to work to do a serious job of urban renewal in this country? Can you imagine the kinds of construction prospects we would have if we took full advantage of the opportunity for modernizing our vast industrial machine?

I am not asserting that we face today an immediate shortage of capacity, but I do believe we face a shortage of that kind of efficient physical plant which would make it possible to produce more economically and to perform the research which leads to the production of more new products—thus broadening the scope of both our domestic and foreign markets, and making our products and services more competitive.

Many people have been telling us that it is lower wage levels which have been permitting foreign nations to compete with us effectively in world markets. Although we compete with lower wage scales elsewhere, it seems to me that the truth is that more modern production facilities, more efficient labor practices, better planning, more aggressive salesmanship—in short, greater productivity, superior research efforts, and more initiative have enabled foreign producers to outdo us in many areas of legitimate business competition.

As I told the National Industrial Conference Board recently, we have in this country taken things too easy—we haven't really been selling. However, I see signs of improvement, and a reawakening of our people.

I want to emphasize that a lot of talk and grumbling will not solve our problems—we need to "dig" for business. We in the Government are taking some practical steps. By way of example, we are taking a new hard look at our tax laws and I am hopeful we can do something along this line. Without discussing specific proposals, if you will permit this generality, I will say that we must make our tax laws the instrument of incentive rather than an alibi for indifference.

We need provisions bearing on depreciation allowances to stimulate rather than retard the investment decisions of industry.

As the officer of the Government primarily concerned with the problems of business and industry, large and small, I consult with other Cabinet officers who represent the interests of the farmer, of labor, and of other sectors of our population. We also represent the interests of the Nation as a whole. I know that there is broad agreement among us on those policy matters which are crucial to reversing the present economic downtrend, reducing unemployment, and maintaining the purchasing power of the dollar.

Make no mistake. Whatever our immediate areas of responsibility, we are pulling together as a team. This is important.

This administration believes in fiscal responsibility and balanced budgets. But human wants and national needs are paramount. If necessary to spur recovery, I believe and I know my colleagues believe, that the Federal budget can be used effectively to help, not hinder, our forward progress.

The farmer must be helped to expand his real income so that he reinforces economic growth. Fiscal and monetary policies must be aimed at providing more funds for investment, at lower costs, within a framework of restricting inflationary forces. We must develop urban areas by more practical planning and well-placed financial assistance at all levels of government. Furthermore, these programs must be carried on side by side with vigorous efforts to help the growing number of distressed areas of the country by long-term redevelopment programs as well as by more immediate relief measures.

You are, no doubt, aware already of the President's actions and proposals in regard to our human and natural resources, such as housing, surplus food, unemployment, old age security, health, taxes, veterans aid, education, minimum wages, and development of our land, water, forests, and minerals.

I might stress to this group our plans for expediting procurement and construction. We have already accelerated our Federal aid highway fund payments for this fiscal year and are urging the States to speed up contracts. Other departments of Government are working along the same lines.

But no short-range measures can substitute for a long-term effort to promote economic growth by fostering private investment, by maximizing our use of natural resources and the further development of energy sources, and finally by strengthening and utilizing to the full our human resources through broad advances in the fields of education and health, as well as through scientific and technological gains.

Underlying all our programs and proposals for their implementation must be stress and concern for achieving greater productivity and price stability. President Kennedy's recently announced Labor-Management Advisory Committee provides a vehicle for moving forward toward these objectives. The Committee is composed of a membership from labor, management, and the public. I have no doubt that in the final analysis the broad economic advances, which we must achieve to nurture our profit motivated economy, throughout the sixties, depends not only on the scientific breakthroughs which are sure to come, but on our development of sound wage and price policies within a framework of healthy competition, friendly Government policies, and a mutual understanding of economic problems by industry and labor and a rededication to the national interest.

A word about the outlook for your industry. The construction analysts in the Department of Commerce tell me that by 1965 physical output in construction should exceed 1959 record levels by 20 to 25 percent. This indicates a volume of new construction approaching $70 billion in current dollars. You also should know that we are closely cooperating with the leaders of your industry in a program to stimulate the participation of American construction firms in foreign work.

This effort, we hope, will open up in the next few years many new uncharted opportunities which should not only expand your profits but also reinforce the accurate image of American know-how in many parts of the world.

Having mentioned the Department of Commerce, I should like to say something more about my views of how this Department can best serve the construction industry as well as the other industries within our sphere of interest.

May I assure you that the Department of Commerce will pursue the goals of this administration with determination, dedication, and vigor. We shall respond with imagination and resourcefulness to the immediate needs of the economy as well as to the long-range requirements for growth. We shall be ever mindful of expanding markets, both domestic and foreign, and sustaining a healthy and attractive climate for investment not only to increase output but to modernize plant and equipment. In short, we in the Department of Commerce shall expend every effort to demonstrate beyond all doubt the superiority of the free enterprise system and the benefits it offers to all.

We cannot carry out our mission without your wholehearted cooperation, your constructive suggestions, and your criticism. We must not only have your figures for our statistics, but we must also have your opinions, outlooks, and proposals whether for administrative actions, for legislative considerations, or for analytical studies.

Since January 20 we have concentrated on sustaining and improving the organization of the Department of Commerce to increase its effectiveness—an effort which will continue with force and inspiration.

With many different areas of responsibility we shall study each to assure that our established programs will meet current and future needs. As examples, our steadily changing transportation picture requires a constant reappraisal of our highway program. Our system of patents encourages and protects invention to stimulate investment and production. Our foreign trade must be expanded by promoting markets and effectively meeting competition abroad. Finally, our domestic economy must operate with the full knowledge embodied in facts and figures to assure that our growth is balanced and our prosperity widespread. As Secretary of Commerce, I shall administer the Department so that it can and will meet its responsibilities.

The major responsibility of private industry is to avail itself of every profitable worldwide opportunity to invest, produce, sell, and grow. We in the Department of Commerce have no pat formulas to offer you to

accomplish any of these, but offer valuable tools for your use. We have an abundance of statistical information which makes us the leading factfinding organization in the world. Our veritable stockpile of information covers population, business, science, and technology and many other facets of world developments. This is not a dormant inventory—it is kept up to date and it is useful.

The National Bureau of Standards has conducted research in the field of building technology for many years, and its work in this field is well known to all of you here. In an extension of this activity, the Bureau has recently been designated as a central agency within Government for coordinating a broad program of fundamental fire research to be carried out by the Bureau, the Forest Service of the Department of Agriculture, the Bureau of Mines of the Department of the Interior, and several private laboratories.

The goal of this research is additional knowledge of the why and how of unwanted fires, to help reduce the great loss of lives and property in accidental fires. Standards has been working in this field since 1914, developing basic information on ignition phenomena and fire resistance of materials, on flame detection and extinguishment, and on fire growth and spread. This new program is expected to remedy the present scarcity of technical information required to improve fire fighting methods, and should eventually prove of great value to the construction industry as it seeks to meet the needs of our country.

Our Census Bureau, the Nation's major fact-finding agency, furnishes the construction industry with information on housing starts, the value of construction put in place and related data of importance to your industry. Figures on population growth, migration and family formation and income are also provided by the Census Bureau. All of this material is essential to prompt and accurate appraisals of economic trends. We are making efforts to improve coverage and expedite publication of results.

What is the value of these facts and figures which the Commerce Department furnishes? To quote an expert appraisal of Census programs submitted to the Secretary of Commerce several years ago "a free society is dominated by individual motivations and actions. Freedom of choice is its hallmark; freedom of choice of occupation and career; freedom of entry into business; freedom to buy or not to buy and freedom as to what to buy; freedom in the management of our far flung business system; and all other freedoms of choice that mark our liberties. These very freedoms impose on us the necessity of widespread information." You have these freedoms and choices. We have the information you need to exercise them wisely. Ask for our information and use it.

Furthermore, we analyze and interpret statistics and observations without partiality or favor in order to make clear their implications. We have experts who view current developments calmly and judiciously so that they assume proper proportions.

These facts, figures and analyses pertaining to our economy are yours virtually for the asking. Of course, there is necessarily a limit to the details we can collect and digest, but even that limit is being pushed back daily. I understand that we have been doing just this in our monthly publication devoted to your industry—Construction Review.

In the field of construction, particularly, we are now engaged in a major program of improving the quality, expanding the scope, and increasing the detail of the statistics. When the major objectives of this undertaking are attained all of us will have the "fever chart" for your industry. With total construction, including maintenance and repair, accounting for 75 billion of our 500 billion dollar economy, this body of information will assuredly give us, individually and collectively, greater insight into current economic conditions.

In connection with our dedication to economic progress, we are looking ahead 10 years to estimate the direction of construction activities and what factors will influence them. Upon completion, this outlook study will be made available to you and the rest of American industry for guidance in making important business decisions.

The value of much of this information is sometimes difficult to appraise unless it is lacking. A case in point is our effort to stimulate foreign construction by American contractors, which I mentioned earlier.

This export expansion effort is an important part of a program I consider essential to our very existence. A number of you met at the Department of Commerce several months ago with our staff to determine how the Government could assist you in obtaining more foreign contracts. Up to now, great difficulty has been experienced in producing specific proposals, largely because of the lack of reliable information—information about the volume of work involved, information about prices, and information about financing terms. I might add that we are attempting to gather these facts now.

Facts and figures by themselves do not solve problems or bring about progress. They bring problems into focus, suggest solutions, and measure progress. It is up to us, you and the Government to act on these indicators by making sound private and public decisions.

A basic question which now arises is, Can we in Washington, civil servants and political leaders, discharge our responsibilities by simply operating within the Government? The answer is "No." As many of you are aware, it is very easy to lose touch with reality in the Nation's Capital. This places a number of responsibilities on you and your association, where they rightfully belong.

First of all, we in Government cannot make your individual business decisions for you nor would you want us to. You must make your own decisions with the facts you have and with whatever assistance we can give you. Secondly, we cannot make public decisions without your assistance. You must give us basic information; you may even have to tell us what questions must be answered and what kind of economic intelligence is required; you must let us know what your industry problems are; you must offer your solutions to national problems; and you must give us your views on our solutions.

To accomplish these things, we must have lines of communications. If you have them in your association, use them. If not, I would strongly recommend that you set them up. We have in the Department of Commerce, within the Business and Defense Services Administration, the Construction Industry Division. Your association officials are familiar with the officials of this Division. They are there to serve you and are your best lines of communication with the Department of Commerce.

You must realize that you, too, have been called upon by the President to ask yourselves not what the country can do for you, but what you can do for your country. I suggest you examine closely any wasteful practices which impair productivity and retard progress. I suggest you not hide from technological advances in the unfounded fear that they may crimp your profits, but welcome and utilize them in the interests of improving the quality and value of your work. Admittedly, you have many obstacles to surmount, but as a major industry, you have the stuff to be pioneers for the New Frontier.

To give emphasis at the expense of repetition, I wish to conclude by saying once again that the Department of Commerce is dedicated to the administration program of providing our free enterprise system with the means of strengthening and enriching our national economy. We aim to do this by not only collecting, analyzing, and disseminating vital information but also by encouraging domestic and foreign trade as well as by studying and developing solutions to widespread business problems.

To do this, the Department needs and welcomes your participation and cooperation. Let us work together in the service of the Nation.

HOUSE OF REPRESENTATIVES

THURSDAY, MARCH 23, 1961

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Luke 12: 15: *A man's life consisteth not in the abundance of the things which he possesseth.*

Almighty and ever-gracious God, who art great and good enough to supply all our temporal needs and immortal longings, may the mandates of Thy divine righteousness and justice find a voice and a bearing in all the deliberations and decisions of this day.

We humbly acknowledge that we are frequently baffled and bewildered by the mysteries and dilemmas of life, its tragedies and tribulations.

Help us to see and realize more clearly that the questions and problems, which confront humanity, cannot be answered and solved on a merely economic basis and level, no matter how abundant our farm products and material resources.

May we have the wisdom to understand that man, created in the image of God and destined for eternity, can never be satisfied with food, raiment and shelter alone but that he needs and longs for the spiritual blessings of the kingdom of God.

Hear us in the name of our blessed Lord who came to give us the more abundant life and bids us to manifest it and share it with all mankind. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a joint resolution and a concurrent resolution of the House of the following titles:

H.J. Res. 176. Joint resolution to provide for the reappointment of Dr. Jerome C. Hunsaker as Citizen Regent of the Board of Regents of the Smithsonian Institution.

H. Con. Res. 142. Concurrent resolution authorizing the printing of additional copies of the report "Communist Target—Youth—Communist Infiltration and Agitation Tactics."

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, concurrent resolutions of the House of the following titles:

H. Con. Res. 51. Concurrent resolution to print as a House document the publication "Facts on Communism—Volume II, The Soviet Union, From Lenin to Khrushchev" and to provide for the printing of additional copies.

H. Con. Res. 81. Concurrent resolution to provide for the printing of a House document.

The message also announced that the Senate had passed a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. Con. Res. 17. Concurrent resolution authorizing the printing of the pamphlet entitled "Our Capitol" as a Senate document and providing for additional copies.

TREASURY-POST OFFICE DEPARTMENT APPROPRIATION BILL, 1962

Mr. GARY. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight, Friday, March 24, to file a report on the Treasury-Post Office Department appropriation bill, 1962.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. PILLION reserved all points of order on the bill.

A NATIONAL LOTTERY

Mr. FINO. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York.

There was no objection.

Mr. FINO. Mr. Speaker, while we in Congress persist in refusing to recognize and capitalize on the natural gambling spirit of the American people and, while we continue to ignore the tremendous revenue-producing possibilities of a national lottery in the United States, billions of American dollars flow out of our country every year in support of foreign-operated lotteries, and other gambling activities.

The recent worldwide sale of Irish Sweepstake tickets for the March drawing is a very good example. The report from Ireland informs us that the gross receipts for this month's sweepstake run reached a new high of over $17,500,000.

Mr. Speaker, I wonder how many Members of this House know what part of this amount represents our own American dollars? Probably $15 million of the grand total. All of it, painlessly and voluntarily, donated by our American wage earners.

Judging from the billions of dollars that pour out of this country yearly into Ireland, and into some of the 42 other civilized countries where gambling is legal and proper, it should not be difficult to conclude that a national lottery in this country could bring into the coffers of our own Government $10 billion a year in additional revenue.

Mr. Speaker, I wonder how long are we going to permit and allow hyprocrisy to blind us from the obvious? How long are we going to continue our stubborn refusal to recognize the fact that the urge to gamble is deeply ingrained in most human beings? How long is it going to be before we accept the fiscal facts of life and adopt a realistic, courageous, and sensible approach toward this instinctive and universal human trait? How long will it be before we get smart and couple the gambling spirit of our own people together with our Government's need for additional income?

Mr. Speaker, let us try to be—not smarter—but just as smart, as these 43 countries that have found a profitable and satisfactory answer to the problem of gambling.

CALL OF THE HOUSE

Mr. YATES. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 21]

Ashley	Fisher	Mailliard
Blatnik	Hagan, Ga.	Monagan
Blitch	Hall	O'Konski
Breeding	Harvey, Ind.	Osmers
Buckley	Kearns	Rabaut
Cahill	Kilgore	St. Germain
Derwinski	McDonough	Wright

The SPEAKER. On this rollcall 410 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

AUTHORIZING CONSTRUCTION FOR MILITARY DEPARTMENTS

The SPEAKER. The unfinished business is the further consideration of the bill, H.R. 5000, to authorize certain construction at military installations, and for other purposes, which the Clerk will report by title.

The Clerk read the title of the bill.

The SPEAKER. The question is on the amendment upon which a separate vote was demanded. The Clerk will report the amendment.

The Clerk read as follows:

On page 5 strike out line 4, 5, and 6, and insert a new section on page 11 following line 15, reading as follows:

SEC. 108. The Secretary of the Army is authorized to obtain by contract or otherwise such studies as may be necessary to enable him to determine the feasibility and advisability of relocating in new quarters within the city of Chicago, Illinois, or elsewhere in the United States, the Quartermaster Food and Container Institute now located in Chicago, Illinois, and an expenditure of $10,000 out of appropriations available to the Department of the Army is authorized for this purpose. In connection with such studies the Secretary of the Army shall communicate with the Advisory Board on Quartermaster Research and Development of the National Academy of Sciences—National Research Council, and shall request its recommendations. Upon conclusion of such studies which shall be completed as promptly as possible, the Secretary of the Army shall report to the Committee on Armed Services of the Senate and House of Representatives the conclusion of such studies, together with such recommendations as he shall consider appropriate.

The SPEAKER. The question is on the amendment.

Mr. BATES. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas, 269, nays 145, not voting 17, as follows:

[Roll No. 22]

So the amendment was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Kilgore for, with Mr. Cahill against.

Until further notice:

Mr. Buckley with Mr. Hall.

Mr. Rabaut with Mr. Harvey of Indiana.

Mr. Thompson of Louisiana with Mr. O'Konski.

Mr. Wright with Mr. McDonough.

Messrs. HARDING and MILLER of New York changed their vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. VINSON. Mr. Speaker, on passage I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 412, nays 0, not voting 19, as follows:

So the bill was passed.

The Clerk announced the following pairs:

Mr. Buckley with Mr. Cahill.
Mr. Rabaut with Mr. Taber.
Mr. Kilgore with Mr. McDonough.
Mr. Thompson of Louisiana with Mr. Hall.
Mr. Wright with Mr. Moorehead of Ohio.
Mr. Evins with Mr. Harvey of Indiana.
Mr. Monagan with Mr. Mosher.
Mr. Blatnik with Mr. O'Konski.

Mr. RHODES of Arizona changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

MILITARY CONSTRUCTION BILL

Mr. BOLAND. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD on the military construction bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. BOLAND. Mr. Speaker, this legislation authorizing construction for the military departments and Reserve components in fiscal year 1962 contains items totaling $8,876,000 for construction at Westover Air Force Base in my congressional district of Massachusetts.

I am most pleased with the recommendations of the Armed Services Committee and the inclusion of these vitally

needed improvement projects for Westover Air Force Base, which is headquarters for the 8th Air Force of the powerful Strategic Air Command. The air base was constructed some 20 years ago for smaller piston engine aircraft. We are now in the jet age and Westover is in need of improvements if the SAC crews and the landing strip are to continue to adequately handle the large jet bombers and tankers.

The construction program for Westover provides for installation of 1,500 feet of U.S. standard approach lights at the secondary end of the primary runway. These lights are essential to the safe recovery of high performance aircraft during inclement weather. More than 35 percent of all aircraft landings are made to this end of the runway.

Also to be installed is a narrow-gage and centerline runway lighting system. This system is one of the essential components of an integrated approach and landing system required for the recovery of high performance aircraft. Floodlights will be installed along the edge of the aircraft parking areas to light 11 aircraft parking spaces. Aircraft maintenance must be conducted on an around-the-clock basis to meet the operational requirements of SAC flying forces. Provision will also be made for 5,000 square yards of open storage pavement for the disposal and salvage yard. There is no existing facility that can be used for this activity.

The largest item for Westover is $8 million to provide for a combat operation center, the nature of which is classified; while $26,000 is provided for the fee purchase of 100 acres of land for the combat operations center.

This authorizing legislation also provides for the construction of an addition to the Army Reserve Center in Springfield at a cost of $111,000. The addition to the present building is needed to provide more space for training Reserve units.

FAIR LABOR STANDARDS AMENDMENTS OF 1961

The SPEAKER. The unfinished business is the further consideration of the resolution (H. Res. 229) providing for the consideration of H.R. 3935, a bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes.

The Clerk read the title of the resolution.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

SUBCOMMITTEE ON COMMUNICATIONS AND POWER

Mr. MOULDER. Mr. Speaker, I ask unanimous consent that the Subcommittee on Communications and Power of the Committee on Interstate and Foreign Commerce may sit and hold hearings during the course of general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

FAIR LABOR STANDARDS AMENDMENTS OF 1961

Mr. POWELL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3935) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 3935, with Mr. WALTER in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York [Mr. POWELL] will be recognized for 3½ hours, and the gentleman from Pennsylvania [Mr. KEARNS] will be recognized for 3½ hours.

The Chair recognizes the gentleman from New York [Mr. POWELL].

Mr. POWELL. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, we are now about to begin our deliberations on H.R. 3935, authored by the gentleman from California [Mr. ROOSEVELT] which contains the proposed amendments of the Fair Labor Standards Act of 1938. As chairman of the Committee on Education and Labor I went before the Rules Committee and requested an open rule with ample time for full debate and consideration of this measure. This was done because the members of our committee, the minority and the majority alike, were in full accord about the importance and significance of this legislation.

Now I want to answer, for once and for all, all criticism directed at the amount of time allocated for these hearings. This gigantic stack of books upon this table represents all the hearings concerning wage hour amendments since 1949. The total number of pages represents the astounding number of 12,000. Just a few months ago, last year, 146 witnesses were heard in 3 months and 1,575 pages of the printed record were necessary to report these hearings. The hearings this year fill a total of more than 600 pages of the printed record, so that on this specific proposal which the Congress had before it last year and this year, in less than 12 months we have had 2,200 pages of hearings. Anyone who says that this is not enough is only someone who does not believe in any legislation at all and only wanted to use the hearings to conduct a filibuster. We, the members of the Committee on Education and Labor, are not going to allow our committee to be used as an opportunity to delay any legislation by those who are completely opposed to such legislation regardless of what its fiscal form may be. In fact, I would like to point out to the very critics who say that the hearings were not long enough that they themselves refused to bring before the Committee on Education and Labor, in hearings in subcommittee and in full committee, the so-called Kitchin-Ayres substitute, which means that they themselves are guilty of not giving the American citizens and the committee an opportunity to discuss their legislation.

This legislation is one of the major measures proposed by the new administration to clear the economic climate of the smog of recession by stimulating further economic growth. Let no one rise today and say that there should not be a raise in minimum wage and an extension of coverage because we are in a recession because the facts of history belie such an argument. Specifically, the record shows that Congress has twice passed minimum wage legislation in a recession. And each time the increase was followed by improvement in employment.

In the depths of the bitter depression of the thirties, in the year 1938, the original minimum wage law was proposed under the leadership of Franklin Delano Roosevelt, and when that was adopted by Congress there followed a rise in employment rather than a fall. Again in 1949, during a recession and serious unemployment we raised the minimum from 40 cents to 75 cents. I was the conferee from the House on that particular legislation. Again that increase did not aggravate employment difficulties but rather marked the start of a rise in employment. Some critics cite a Government study which showed a 9 percent decline in 1955 when we raised the minimum to $1. The proof that they cite is entirely erroneous and fallacious because it comes from just one of many Government studies. It is from a survey of a selected segment of the lowest wage industries, and these industries are one in which employment has been declining steadily for years. These industries are work shirts, cigars, wooden containers, sawmilling, and tobacco steaming, and the decline there was due to competition from substitute products and the decline in consumer demand.

Let the truth be told now concerning the 1955 so-called proof. The Labor Department made an exhaustive check and could find no more than 1,800 workers in this entire Nation who may actually have been laid off after the minimum was raised to $1, in comparison to 2,500,000 low-paid workers who benefited from the increase. Even in the South where the impact of the dollar minimum was the greatest, there was no rise in unemployment insurance claims after the minimum was raised. Still another survey by the Labor Department of the 1955 wage increase indicated that every one of the low-wage communities benefited and prospered after the last increase in the minimum.

Retail employers who would be covered by this legislation contend that even though experience has been favorable in other industries, employment in retailing would go down if they had to meet a minimum wage.

This is totally false. In 13 States a $1 minimum wage has already been applied to the retail trade and what has happened? In New Jersey, retail employment jumped 8 percent the following month while total employment within the State rose only 1.5 percent. In Vermont, retail employment increased 4.2 percent, while employment in all industries in the State declined 3.7 percent.

Now let us get on with the business of helping America and stop hoodwinking the public with phony statistics and false arguments. A vote for this bill is a vote against the recession, a vote to push our economy forward, a vote to provide greater consumer purchasing power.

Not one scintilla of evidence was produced in the testimony given to our subcommittee this year or last year that modest increases had had any but the most salutary effect upon the Nation's economic progress. The New York Times editorialized this week, "We do not share that fear and neither history nor statistics bear it out. On the contrary, surveys have shown that a higher minimum in low-wage communities has actually stimulated rather than depressed employment."

We have tried to meet the objections of the honest and sincere supporters of this legislation. We will, as this Congress resolves itself into the Committee of the Whole, deal sympathetically with any amendments brought forward by any Member of this body on both sides of the aisle who believes in a better wage and more coverage for the American workingman. But we will resist the efforts of anyone who is against such legislation to try to amend this bill in order to kill it.

Finally, I speak as a representative of the largest city in this Nation and I speak voicing the sentiments of my colleagues all across this country who come from the big cities. We have given our vote to those of you who come from the agricultural sections and now we are asking you to give us your vote for those who come from the urban areas of our country. Firmly and frankly, I would like to say that the vast majority of my colleagues from the urban areas have made up their minds that if we do not get the cooperation from those of you who represent the rural areas that we are going to think twice as to how we will cast our vote on all legislation affecting rural areas beginning immediately, even though such programs may come from the administration. It was just a few days ago that, reluctantly, many of us, including the present Speaker, voted in favor of the feed-grain bill. We voted because we thought you representing the rural areas needed it. Therefore, we ask you today, however reluctantly, that you give us your vote for this legislation.

Cooperation must be a two-way street.

Mr. ALGER. Mr. Chairman, will the gentleman yield?

Mr. POWELL. I yield to the gentleman from Texas.

Mr. ALGER. Did I understand the gentleman's position to be that we should vote on this bill or any bill not on the merits of the bill itself but rather on some trade-out with Members representing city and rural areas?

Mr. POWELL. No; I did not say that at all. I am merely saying that those of you who come from areas who may not be affected as dramatically as areas that we represent in the cities and urban areas, that we are asking you to vote with us because we believe that this is good for us, just like we voted with those of you from the agricultural areas because you told us it was good for you.

Mr. ALGER. I am glad he did not mean it the way I understood it. I will simply tell the gentleman I am here to listen to his views and the views of others, possibly to present my own view if I feel I am learned enough to participate in the discussion, but let me assure the gentleman that this gentleman is not going to be traded out with anybody and will solely vote on the merits of the bill. And, I thank the gentleman.

Mr. POWELL. I would like to turn the leadership over to the gentleman from California [Mr. ROOSEVELT] for the balance of the debate.

Mr. KEARNS. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman and members of the committee, I am very happy to be here and hear the chairman of the full committee, the gentleman from New York [Mr. POWELL], make one appeal to this body—that we think twice before we vote. I hope that the majority and the minority weigh this very carefully, because we not only should think twice but maybe three or four times before we vote.

Mr. Chairman, I do not want to dispute the chairman, but there was a statement that he made that to me was not quite accurate. The minority was never, never consulted as to who the witnesses would be. They had their own agenda. They made it up. They went through it the way they wanted to. We had 3½ days of hearings on a bill that affects all segments of the economy of this country.

Then, upon my insistence, the gentleman from California [Mr. ROOSEVELT] was very kind, after he had called the executive session, to have the Secretary of Commerce come in. He was there with us for about an hour and a quarter, and we interrogated him. And, I think it proper to bring out one point that the Secretary said—and he is a very fine gentleman and very capable, I am sure, or Mr. Kennedy would not have appointed him—but it was his opinion if the administration bill went through in its present form, it would only be a matter of a few years until everybody in this country would be affected by the ramifications of its provisions.

Now, I am not antiminimum wage, goodness knows. I sat up there and broke the deadlock in the committee from 90 cents to $1. I am not against considering an increase in the minimum rate; I am not even against considering extension of coverage.

But I would like to refer to the late Gus Kelley. When he was chairman of the Subcommittee on Fair Labor Standards he did extensive research on this important subject, and it was the opinion of the subcommittee on both sides of the aisle that this legislation had such far-reaching aspects that we should have a thorough analysis before getting into intrastate commerce.

And so I appeal to you today, let us not act too hastily. Let us listen to the debate. Let us understand the substitutes, the amendments that we may have before us so that when we go home and answer to our constituents, we will have made a wise decision and one that this country, our great America, will be proud of.

Mr. ROOSEVELT. Mr. Chairman, I yield myself 15 minutes.

Mr. Chairman, the committee bill, H.R. 3935, has, of course, two major purposes. First, it will raise the minimum wage now received by 4.6 million workers to $1.25 over a period of 3 years. And second, it will extend the protection of the act to an additional 4.3 million employees, primarily in our large retail and service enterprises.

Mr. Chairman, I would like to say that I have great respect, of course, for the ranking minority member of our committee. We have had a most cordial relationship for many years now. But I think it would be fair to say that when he referred to our late, very much esteemed colleague, Mr. Kelley, that what then obtained might be true. We have taken 4½ years since that time to give further study to the act. And the bill that has now come to you from the committee, I can assure you, has had the most careful preparation. I believe that while it might involve some controversial issues, it cannot be said that those controversial points have not been studied with a great deal of care.

I agree with the distinguished gentleman from Pennsylvania [Mr. KEARNS] that it would be well for each and every one of us to examine carefully the provisions of the bill which some of my esteemed colleagues would have us adopt in opposition to the committee bill. I believe it will be called the Ayres-Kitchin substitute.

You know, sometimes when we come into consideration of this kind of legislation, it reminds me a little bit of the story of one of the elders of a particular church who was charged with the responsibility of trying to get a new pastor for the church. He had considerable difficulty. One night he had a dream and in the dream he had been able finally to pick a successor pastor.

On the first Sunday on which he appeared in the pulpit the pastor gave a most stimulating sermon and everyone was most pleased with it. And so the next Sunday it seemed that the church was overcrowded because members of the congregation who had not been there the first Sunday decided they better come and hear the new pastor. So again he delivered a most stirring sermon. But to the astonishment of those who had heard it the Sunday before, it was exactly the same sermon that had been made on that Sunday. And when they

went up to him and congratulated him, those members who had just heard it, he thanked them very much and said he hoped that they would be back on the third Sunday.

And, of course, everybody was back. And to the amazement of the congregation he again made the same stirring sermon for the third successive time. And this time the congregation was much disturbed, including the elder who had picked him. He went to him and asked him why he did it. He said, "For the simple reason that even though I have delivered the same sermon three times, as I have gone out among my brethren after the sermon, I have found that while they thought my delivery was excellent, somehow or other my words did not have great effect."

That must be, I am sure, the feeling of many people who have heard the basic discussion of minimum wage over and over in this Chamber. But I think no one will deny that today what the committee has proposed fits the needs of our time and that there can be little or no question of the basic, the fundamental economic facts which have produced the need for raising the minimum wage at least to $1.25, which is being presented by the committee. I note the fact, for instance, that in the previous years, when we raised the minimum wage, the Congress has, on an arbitrary basis, tried always to see that a ratio of 50 percent of the average hourly national wage should be reflected in the minimum wage. If we were to go to $1.25 at this very time we would barely be making—in fact, we would be a little under, that 50-percent ratio.

Because of the times in which we find ourselves, the economic pressures of the times, the committee has decided on the basis of the evidence before it, to suggest to the House that we take this in two steps, 2 years at $1.15, well under that 50-percent figure, and bring it up after 2 years to the $1.25, recognizing as we must, that at that time it may not itself be equal to the 50 percent of the national hourly wage rate.

As to the coverage, again we are dealing with the facts of the situation. There was a time when the greatest employment in this country was in industrial concerns, but it is no secret, and is well substantiated, that the greatest employment in our country today has shifted over from industrial concerns, to what you might call the white-collar or blue-collar workers in the retail and service industries. As a result, we note today from statistics that a large number of people who got less than the minimum wage of $1 an hour under the present law are in those industries. We know it is necessary to bring those workers under the protection of the act, if they are not to be exploited and if our country, our whole economic system, is not to be denied the purchasing power, without which these individuals working for less than $1 an hour can hardly contribute to the health and the welfare of our society in a free America.

I think, too, we have recognized in the committee that this would impose somewhat more difficult problems for those concerned, those enterprises not now covered, so the committee again has adopted what is known as the escalation clause. We have not started at the $1.15, rather we have started with $1 an hour, and then by successive steps gone to $1.05, then from $1.05 up to $1.15, and in the fourth year we get to the $1.25.

I hope and believe that there are not too many here today who would want to keep these newly covered employees permanently at any goal which is less than that of their brother workers in industrial concerns. Certainly that would be dividing our country into two classes of citizenship, and I find it hard to believe that any of us would want to do that.

I am sure you know that the substitute to be offered by Messrs. AYRES and KITCHIN would of course leave them at $1, and it would limit the other people under present coverage to $1.15, way below the 50-percent figure that has become historic and accepted by nearly everyone who is an expert in this field.

I think it would be well also at this time to discuss the constitutional question involved in this proposal.

I should like to point out to my colleagues that the committee very carefully did not go back to the proposals made last year to extend coverage on a basically different basis from what the present law calls for. You will find in the definition of "enterprise," which is in the bill, that it conforms with the definition many times upheld by the Supreme Court and the rest of the judiciary of our country, as being properly within the power of the Congress to legislate on matters of interstate commerce.

I would add that one of the major differences in our approach is a limitation as to those who would be protected or exempted. We have therefore adopted a dollar figure for this purpose as the most practical way of giving protection to small business enterprises. I would specifically like to point out to the small business community of this country, that we have recognized that they have certain disadvantages which do not apply to large enterprises and which, therefore, gives them the right to certain special considerations. However, I would point out that when the substitute of Messrs. AYRES and KITCHIN comes before you, there you will find an entirely new concept of interstate commerce and the reach of the Congress under the interstate commerce clause.

There, for the first time, has been introduced a concept that only those enterprises which have establishments in two or more States, and which have at least five establishments within such enterprise, could properly be said to have an effect on interstate commerce. Now, my friends, that is the radical departure in the labor relations field—one that has never been litigated—and by the simple examination of what it does, you will find it sets up a basic discrimination which, I believe, no one in the House, once they get the facts would want to do. For instance, have not many of you within your own knowledge, as most certainly I have, known of small businesses with small gross sales, which do have establishments in two or more States and which, under the substitute bill, would be covered; whereas the large multimillion retail-service stores, which operate in my State of California, but operate only in the State—or only in the State of Texas or only in Pennsylvania or Michigan—or, indeed, only in the State of Arizona where there happens to be a most important department store—would be covered, while the little fellow would be included.

A little local retail business, for example, operating four one-man delicatessen shops, or shoeshine stands, or beauty parlors in different locations in the city of Washington would be covered by the Ayres bill if it also sought to serve some customers in the suburbs through a shop in Bethesda or Silver Spring or Arlington or Alexandria. The same thing could happen in New York or Memphis or Chicago or Philadelphia or Texarkana or any of the many cities which are located near State lines. It wouldn't make any difference whether the gross annual dollar volume of the whole business was a mere $25,000 or $50,000, or whether its operations involved any significant amount of commerce across the State line—it would be covered regardless of how much or how little interstate commerce it does.

Now let us look for a moment at the other side of the coin. The Ayres bill would cover these little businesses but how about the big ones that happen to do business under a single roof or to keep all their branches within the borders of a single State? Here again the Ayres bill totally disregards the question of whether the business does enough interstate commerce to justify Federal wage and hour regulation.

An enterprise doing an annual business of many millions of dollars, whose operations require the production and transportation from many States of immense quantities of goods is left free from the minimum wage under the Ayres bill so long as it is careful not to operate any shop across the State line. Yet its neighbor across the street, which may require only a few thousand dollars worth of goods produced in other States, will be covered if it operates five small shops and one of them is in the adjacent State.

We are supposed to be legislating under the commerce clause. Now we can justify a formula for coverage which has absolutely no relation to the impact of the business on interstate commerce, but depends only on the number of stores and their geographical location, must be explained by supporters of the Ayres bill. I for one cannot justify it, and while I am not a lawyer, it seems plain to me that the courts will want a better justification than the arbitrary declaration in the bill that these enterprises, regardless of their interstate activities or lack of them, are engaged in commerce or in the production of goods for commerce.

Let us look at a few actual statistics to see how the Ayres bill would not only disregard the impact of a business on interstate commerce as a ground for coverage but would hit the little businessman and let the big one go free.

In 1958, according to the Census of Business, there were over 200 retail com-

panies which had annual sales of less than $500,000 and operated 5 to 9 establishments in 2 or more States.

All 1,500 of the small establishments of these companies would be brought under the act by the Ayres bill. None of them would be brought under the act by the committee bill.

It is ironic that those who are concerned about the "far reaching ramifications" of the committee bill are sponsoring legislation that would extend Federal regulation into the area of small local businesses.

Now let us look at what happens to some of the giant enterprises whose operations require a huge volume of interstate commerce.

In 1958, according to the Census of Business, there were 4,800 retail establishments which had annual sales of $1 million or more and which were operated by chain store organizations with outlets in only one State. These establishments had a total of 390,000 employees, and annual receipts of more than $11 billion. Nearly 2,700 of these establishments, with 280,000 employees, had annual receipts in excess of $5 million each.

The Ayres bill would not cover even one of these establishments. The committee bill would cover all of them.

Now I have the figures and I will bring them out at the proper time in this debate, to show to you that this amendment, which is going to be proposed, sets up a kind of discrimination which I am sure the Members of this Congress do not want to embark upon, and which establishes a complete reverse of all of the legislative and all of the judicial experience under the minimum wage laws. Therefore, my friends, I hope whatever we adopt and send over to the other body, will be based upon the historic precedents and upon the proven way to legislate on minimum wage legislation. I hope it is not too unfair to draw the attention of my colleagues on the other side of the aisle to the fact, that only recently, testimony before the Committee on Education and Labor was brought out on the very subject of this dollar test, as against what I call the "5 in 2" formula, and I am sure you will remember that in that discussion, and I have the specific colloquy that occurred on the Senate side between then Senator Kennedy and Secretary Mitchell, in which the Secretary definitely stated that after consideration, the Eisenhower administration reached the conclusion that the "5 in 2" formula just simply was not workable, and that, therefore, they came back and suggested the dollar figure as the proper way to differentiate between large interstate enterprises, and small local businesses. I refer, if you want the citation, to page 31 of the Senate subcommittee hearings on the bill, S. 1135, and other bills before the Congress at that time. It is a most interesting colloquy. I hope you will have the time to read it because, I think, when you do, you will find that even the Republican administration after careful study rejected the formula to be proposed by Messrs. AYRES and KITCHIN.

Mr. Chairman, I think we now come down to the basic question before us and that is a constitutional one. On this I would refer you to a memorandum which appears in the RECORD of yesterday. A reading of that convinces me that there simply can be no question but that we have followed a perfectly proper formula. But if you have any doubt about it, I would further call your attention to the fact that when many of my colleagues in the House voted for the Landrum-Griffin bill not too long ago, some of you will remember you gave specific acceptance and congressional sanction to an administrative regulation by the National Labor Relations Board. The Board operated under their regulations that they would accept jurisdiction generally on the basis of a $500,000 figure although for some businesses it was less. They established that criterion for the assertion of jurisdiction.

May I point out that this practice in itself has been specifically upheld in many court decisions. The NLRB has been acting under this very procedure for years; and, as far as I know, there is nothing discriminatory about it, and certainly nothing unconstitutional.

Lastly, Mr. Chairman, the argument is made that some future Congress may decrease the $1 million figure to $500,000, or maybe down to $1. All I can say to you is that none of us here on this floor know or can control what any future Congress will do. We must rely upon good sense, as well as the judiciary, to say at some time in the future that if proposals are made to go below that amount which has a true effect on interstate commerce, the Congress and the courts will stop you; but if there is a true impact on interstate commerce, then the Congress has the legal and constitutional right to act.

Our judgment in committee today, after executive consideration, is that there is no question that a $1 million figure is the practical and realistic figure, upon which coverage should be based; provided—let me emphasize—that we can always show that the individual employee has a direct connection with interstate commerce. If he does not, then his enterprise will not be covered. There is no question about the constitutionality of such an approach. So, Mr. Chairman, in my humble opinion, if you examine the committee bill, you will find that the bill is a moderate and reasonable one, extending coverage to millions of our citizens, while being mindful of the problems of the small businessman.

Mr. LANDRUM. Mr. Chairman, will the gentleman yield?

Mr. ROOSEVELT. I yield.

Mr. LANDRUM. The gentleman referred to the so-called Landrum-Griffin Act, the Reporting and Disclosure Act of 1959, as justification for using a dollar volume to establish wage-hour jurisdiction. His argument, in my opinion, is refuted by a careful reading of section 701 of this act. I read:

> Section 701(a) * * * The Board, in its discretion, by rule or decision or by published rules adopted pursuant to the Administrative Procedure Act, decline to assert jurisdiction over any labor dispute involving any class or category of employers where, in the opinion of the Board, the effect of such labor dispute on commerce is not sufficiently substantial to warrant the exercise of its jurisdiction: *Provided*, That the Board shall not decline to assert jurisdiction over any labor dispute over which it would assert jurisdiction under the standards prevailing on August 1, 1959.

The necessity for that provision, as the gentleman well knows, was that in passing the National Labor Relations Act, the Congress conferred upon the Board, jurisdiction of disputes in labor and management relations.

When the Congress originally conferred jurisdiction on the National Labor Relations Board, to handle cases involving disputes between labor and management and for many years thereafter, the Board did not have too much business. After a few years, however, the volume of cases coming to the Board increased in such great numbers, that it could not properly and expeditiously handle them. So the Board decided to set up some criteria by which to establish and limit jurisdiction. In doing so it adopted, among other things, the dollar volume to which the gentleman has referred; and for a long time we went along with that criterion in utilizing the processes of the National Labor Relations Board. If the Board refused a case, State courts could act. Then came *Gus* v. *Utah Labor Board*, 353 U.S. 1 (1956) in which the U.S. Supreme Court decided that State courts did not have jurisdiction to act and could not settle such disputes. That left for a long period of time a no-man's land, in which people with cases that did not meet with the rules and regulations under the Administrative Procedures Act of the National Labor Relations Board had no forum to which to go. Faced with the proposition and with the fact that thousands upon thousands of businesses in America were without a forum in which to settle disputes, the Congress in writing the Labor Management Disclosure Act of 1959 merely said to the Labor Board: "All right, if you must have criteria by which you will accept or decline cases, you may do so as the Supreme Court has approved, but if you do decline it is all right for the State courts to take over." That is all the Landrum-Griffin Act did. It gave no recognition to any dollar standard and any analogy to the dollar volume of business to establish jurisdiction in wage-hour matters is, in my opinion, completely erroneous and entirely unrelated to the problems we are discussing.

I thank the gentleman for giving me his time.

Mr. ROOSEVELT. Mr. Chairman, I will answer in the words of the gentleman himself, because he explained to you that in the act to which he refers, Congress has told the National Labor Relations Board that it can make monetary regulations regarding its jurisdiction. It then issued regulations as it affects interstate commerce, and came up with a $500,000 figure. If that is not a non sequitur I do not know my Latin. No one has attacked that $500,000 figure as being an improper exercise granted by the Congress in order that the Board handle cases involving interstate commerce. If it is proper for the Board to administratively have a monetary figure

of $500,000, surely it is constitutional for the Congress to set a figure of $1 million by statute.

I think that is the answer to the gentleman's question, and I think he will want to discuss that in his own time.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. KEARNS. Mr. Chairman, I yield 15 minutes to the gentleman from California [Mr. HIESTAND].

Mr. GRIFFIN. Mr. Chairman, will the gentleman yield?

Mr. HIESTAND. I yield to the able gentleman from Michigan.

Mr. GRIFFIN. I would like to add briefly to the colloquy that just took place between the distinguished gentleman from Georgia [Mr. LANDRUM], and the distinguished gentleman from California [Mr. ROOSEVELT]. First of all, the 1959 Labor Reform Act did not fix any particular jurisdictional standards for application by the National Labor Relations Board. Tomorrow, if it sees fit to do so, the National Labor Relations Board could change the jurisdictional standards now in effect and, conceivably, could utilize an entirely different basis, throwing out the dollar volume test. The National Labor Relations Board, on its own, without any directive or approval from the Congress, has set up a dollar-volume test. In the 1959 act, we provided only that when the National Labor Relations Board refuses to take jurisdiction of a case, whatever its grounds or whatever its basis, whether it is dollar volume or any other reason, there will be a forum for litigants with disputes in the labor relations field.

Mr. HIESTAND. I am glad the gentleman clarified that point. I am sure everybody agrees that it is very important.

Mr. Chairman, the bill before us today is, in my humble opinion, unutterably bad. I shall confine my remarks to the bill itself rather than to the proposed substitutes, because this is what is before us, and I think we should know when we come to vote on a substitute that we are voting against a very, very bad bill. And, I think we can tell our constituents just how bad this bill is if we decide to vote against it.

I hesitated a little bit to come before you at this time after these very brilliant dissertations of several of my colleagues. I am just a businessman, and I do not share their abilities. However, I am in dead earnest on this thing.

Mr. Chairman, at a time when President Kennedy and his big staff are crying "recession" and advocating antirecessionary measures, a prorecession measure comes before us. At a time when the banks are out of debt, there is plenty of money in circulation at reasonable costs, and employment is close to record high, the only basis for this "recession" cry is unemployment.

At this very time there comes before us a bill which, according to all testimony, some reluctant, I might add, would increase unemployment. Certainly, this is true directly in the lower income group, which the President professes to want to help.

I submit, Mr. Chairman, that this bill, H.R. 3935, introduced and sponsored by the gentleman from California, would in effect doublecross these very low income people the sponsors claim they want to help.

Many thousands of marginal workers, either senior citizens, semihandicapped either physically or educationally, including, of course, youthful beginners and college students with little experience, would be thrown out of work if this vicious bill is enacted.

A spokesman for a Pennsylvania community with a high unemployment rate has testified that minimum wage legislation "would cause people in our town to lose their jobs." He said,

> Please do not undo * * * the work we have done to help ourselves.

The bill as I have said would worsen unemployment by throwing marginal workers out of jobs. And marginal workers have much difficulty in finding new jobs. As testimony in committee reveals, the Kennedy plan promises inflation and an upset of cost and stability levels.

Even our balance of payments problem is affected, it was testified. For a sharp boost in the minimum wage almost automatically means a higher cost of production, further pricing us out of the foreign market.

Any measure which would raise the cost of production raises the cost of living. Thus, the apparent increase of the minimum wage would soon be eaten up by the increased cost of living. This increased cost of production would come about, according to the testimony of union leaders and many others, by the maintenance of the wage differential between the lowest income group and those higher. It would be passed along all the way up the line, and competing industries, of course, would have to adjust their wage rates or lose their employees.

They would have to pay the going wage. So this would be a colossal increase all the way along the line. It would be a temporary benefit, because it would soon be caught up in the increased cost of living.

This increased cost of living, as I have said, is putting us further out of competition with imports, already a serious factor causing unemployment in many lines. So there would be more unemployment there.

Just why, Mr. Chairman, do you suppose the proponents are promoting this kind of bill just now? Either they are unconcerned about unemployment or they are convinced, contrary to the testimony, that it will not be increased. Surely they do not want to damage the low-income people for the sake of a vote-getting gadget. Or can it be that they are intent upon building big government, ever bigger, as this measure surely would do?

Mr. Chairman, this measure has several vote-getting gadgets in it and some jokers. On one page it exempts any employee employed as a driver or driver's helper making local deliveries in pursuance of an agreement made as a result of collective bargaining by representatives of employees certified as bona fide by the National Labor Relations Board. This, Mr. Chairman, is what we call the Jimmy Hoffa joker.

As everybody knows, there is a vast number of industries that hire their own truckers, or some one of the independent truckers, of which there are thousands. They would have to call for a union election in order to be certified by the NLRB. In other words, only members of the Hoffa union are exempt.

As everybody knows, Jimmy Hoffa's Teamsters Union controls the vast majority of truckdrivers. Is not this unfair and discriminatory clause a clause forcing membership into Jimmy Hoffa's union? It is just one of the many inequities in this abominable bill.

There are a lot of other things about it I should like to mention. When we were before the Committee on Rules we were trying to clarify several definitions; for instance, the definition of "enterprise." We compared it with the last year's definition, and finally a member of the committee made this comment: "Well, it looks like a bird's nest to me and I might even say a last year's bird's nest. It is as clear as a last year's bird's nest."

I suggest that defining interstate commerce purely on the grounds of the size of the business as reflected in dollars is not only a completely fallacious definition, but a very dangerous one. If we pass this bill, thus setting up another definition of interstate commerce, it will later, when the minimum limits are lowered, as it is freely admitted by some of the proponents they will be, enable your Federal Government to go into every business in the land, even to the corner bootblack, and regulate wages, hours, overtime, et cetera. This means, eventually and inevitably, of course, regulation of prices, also. Is that what we want to legislate?

Mr. Chairman, I am sure that every Member here is concerned about the vast and increasing size of this Government, its colossal cost and power. The Supreme Court has sustained the legality of certain definitions of interstate commerce. In the case of *U.S.* v. *Wrightwood Dairy Company* (315 U.S. 110–1942), it ruled that the power to regulate commerce includes the power to regulate both the operations which precede as well as those which follow commercial intercourse itself, provided that such operations are deemed by the Supreme Court to be capable of "affecting commerce among the States." That was a broad power sustaining the enactment of the Fair Labor Standards Act in 1938. This decision was based on a legislative finding that the existence of certain labor conditions in manufacturing industries engaged in commerce—

First. Caused commerce to be used to spread and perpetuate substandard labor conditions among the workers of the several States.

Second. Burdens commerce and the free flow of goods in commerce.

Third. Constitutes an unfair method of competition in commerce.

Fourth. Leads to labor disputes burdening and obstructing commerce and the free flow of goods in commerce.

Fifth. Interferes with the orderly and fair marketing of goods in commerce.

In this and other decisions the Court and Congress both recognized that it was the "use of facilities of interstate commerce in spreading substandard labor conditions" that gave constitutional authority to the Labor Standards Act. The Court has never held that Congress had the authority to prescribe minimum wages or maximum hours in industries other than those clearly in interstate commerce.

H.R. 3935 is a sharp departure from the historical application of Federal power. It is proposed to subject to Federal regulation any entire enterprise which has one or more employees, who handle, sell, or otherwise work on goods "that have been moved or produced for commerce by any person." The industry does not have to affect commerce as in the Fair Labor Standards Act. All employees of the enterprise would be governed by Federal standards simply because one or more of them happened to handle goods that have been moved or produced for commerce.

Think how far reaching that would be.

Mr. Chairman, when goods have reached a retail establishment they have come to rest. They are no longer a part of interstate commerce. They have become local property and subject exclusively to local control. When goods are in transit, they would seem to be subject to Federal regulation, but when they arrive Federal control should end. At least, that is the lesson to be learned from the Supreme Court decision in Walling against Jacksonville Paper Co. back in 1943.

The exemptions under this bill, based as they are on the dollar sign, introduce an entirely new principle.

It was freely admitted that the million-dollar limit was set on the basis that those enterprises could afford to pay more money. Yet the hotels, according to testimony before the Rules Committee, were exempted because although they were over a million-dollar volume, they could not afford it. May I suggest, Mr. Chairman, that they were exempted, as was freely admitted by several other proponents, because they were organized and articulate and strong and had much strength in opposing the bill. So far as we can tell, all of the other list of exemptions were exempted simply for political expediency, and the million-dollar minimum was set because "this is the most we can get away with." Is that a good, sound basis upon which to legislate?

If we are legislating on the basic principle of what is best for the country, why do we lower ourselves to legislate on ability to pay or political expediency? Such a concept of ability to pay introduces a new and flexible constitutional authority, one which can be exercised without limit under the guise of regulating commerce within the States.

A dollar sign cannot serve as the trigger point for constitutional authority or limitation, nor can a dollar sign be permitted to eliminate our Federal system. If we pass this bill, we take a long step toward big government by tearing down the limitations in the Constitution. The Founding Fathers indeed were wise. They feared tyranny, the tyranny of big government. They wanted the Government to be the servant of the people, not the master. Here we would give a bureaucrat authority almost unlimited.

This bill is not designed to help the unfortunate, the low-income worker. It would hurt him. It is designed, in my judgment, either as a vote-getting gadget or a builder of big government. In either case I am opposed to it, and I am opposed to it every inch of the way.

Mr. ROOSEVELT. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. DENT].

Mr. DENT. Mr. Chairman, there has been a great deal of criticism aimed at the chairman of our subcommittee because it has been said that not enough time was given to the opponents of this legislation. I think that the chairman of the full committee, the gentleman from New York [Mr. POWELL], covered that subject very well. If any person wanted to take the time to read the record of the hearings we held, I am sure he would have to run for reelection in order to be here to vote by the time he finished reading it.

However, when you give time to people and representative organizations, that is not tabulated in the hours that the committee spends on a subject. I am sure that the chairman, like the rest of the members of the committee, has met with representative groups both pro and con in his home district and here in Washington.

I want to say at this time, after discussing the matter, we felt there was sufficient coverage in the bill to take care of the situation. However, at this time I would like to interrogate the sponsor of the bill, if he would permit himself to be interrogated.

I direct my question, of course, to our distinguished colleague, the gentleman from California [Mr. ROOSEVELT]. Some questions have been raised about retail service businesses regarding the overtime exemption, which appears on page 39, line 22 of your bill. That provision, as you know, exempts from overtime requirements any employee whose regular rate of pay is 1½ times the minimum rate applicable to the employee, and more than one-half of his compensation for a representative period comes from the commissions.

What, in your opinion, might constitute a representative period which would qualify an employee under this provision?

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from California.

Mr. ROOSEVELT. The gentleman from Pennsylvania, I think, knows we have provided in the bill that a representative period shall be in no event less than 1 month, and in some cases, of course, from the testimony and the discussion with the Secretary of Labor, we know it could be as much as a year. I think it is important to bear in mind that the committee has been assured, and in the colloquies we had with the Secretary of Labor and his colleagues, that in the event the bill is enacted, it will hold hearings immediately looking to the issuance of general regulations upon this very matter.

But he is never very disturbed by the provisions of the bill which say that a representative period shall in no event be less than 1 month.

I also say to the gentleman that I am happy he brought out that we specifically wrote into the bill that those in executive positions who are beginning to learn the business and are on their way up, as well as others who perhaps have advanced to some degree may have up to 40 percent of their time devoted to nonexecutive duties. We used this for a very specific purpose and upon the representation of reliable people in the retail industry who pointed out their particular need for this kind of exemption, and because of the fact that in the administration of the present act as it is now written there is a limitation of 20 percent, yet in our bill we have in the retail field extended it to 40 percent.

Mr. DENT. I thank the gentleman from California.

The reason I brought this point out so it would be contained in the RECORD was because people get mixed up ofttimes because of the confusion that is created by the many different interpretations of just what the law does or does not do. I do not think there is any organization interested in this legislation that has done more to confuse the issue than this group of State associations and national associations that put out this particular booklet containing, mind you, reprints, photostatic copies, of every editorial they could pick up in the country, all aiming to prove that the passage of this act will decrease employment.

It has been my experience to find that no one employs more help than they need, and they employ no less than is required to do the job. That holds true whether you pass this piece of legislation or not. There is not a retail merchant in the country who would let sales go by the board because of a refusal to put on sufficient help on account of the passage of a bill that raises the pay to a $1 minimum. The $1 minimum is not the argument that is being advanced here by these individuals honestly representing the retail industry. There has been no argument advanced by any of the retailers in my particular area on the question of the dollar; and I will show you why. These figures do not come from me. Let us read what a chainstore magazine says about retail wages:

All States and the District of Columbia regulate the working conditions of store employees in whatever form is required. Twenty-nine States regulate wage rates. But some States like Michigan, Illinois and Indiana do not provide wage controls. Does this mean that retail employees in these States are unprotected? Let's look at the record: According to the last census, New York State retail workers, protected by a "model" minimum wage order, earned an average of $61.50 for a full workweek. In Illinois, where there is no State wage minimum, the average comparable weekly pay was $63.69.

And then, just a couple of paragraphs later—I do not want to bore you by

reading all of these statistics. The article state:

> But there are States where the wage level is lower. Take Mississippi. It has no minimum wage order. As of November 1958, the average weekly retail wage in the State was $47.50.

If that is true how can this organization which purportedly represents the retail enterprises and establishments in the United States say that increasing the minimum wage to $1 will deprive people of employment opportunities?

Why, even in Mississippi, which cannot in any way measure up to the wage levels paid in the industrial north, the retail help is paid an average of $47.50 according to this magazine article appearing in Current Comment. Misinformation and misrepresentation have been the stock in trade over the years of many who try to destroy a forward movement by telling an untruth.

On this floor a few minutes ago one of my respected colleagues referred to what he called the "Hoffa amendment." I can only believe that he was referring to that in order to cast on that particular amendment some kind of a cloud that is not there, and he knows it is not there. That amendment was asked for by a respected Member of this Congress, not a member of our committee, who has spoken on this floor against Mr. Hoffa and his teamsters. It was asked for because of a condition that is true in every community in America.

Where local deliveries are made it is impossible to measure the exact overtime that is due to a truck driver or delivery man when you and I know that mechanical failures, tire blowouts, traffic tieups, make the actual working period one that cannot be determined. They all work on a daily rate of pay, not on an hourly basis. This amendment is an honest effort to protect employers in communities where daily deliveries are made. I might say to you I am surprised that you are going to take it out because you are going to do a favor to Jimmy Hoffa because he has never asked for any amendment or consideration before our committee.

Mr. HIESTAND. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from California.

Mr. HIESTAND. I agree, of course, with the gentleman from Pennsylvania that a vast number of deliveries are made by small people with one or two drivers, and so forth, and that the wage arrangement is made by trips. That has to be so. The gentleman is substantially correct. My point was it was specified in the committee bill it had to be recognized by the National Labor Relations Board which means being forced into unions. The National Labor Relations Board cannot certify without an election. You see the burden that is put on small operators. There is no other implication except that stated.

Mr. DENT. Why did the gentleman call it the Hoffa amendment when he knew, and I told him it was introduced at the request of a respected Member of the House? I had never seen the amendment until 5 minutes before it was introduced.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. ROOSEVELT. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. DENT. Mr. Chairman, I only wanted to bring that out to point up the fact that the mass of this misinformation that is being given out is in order to confuse you as to the basic issue. I will put in the RECORD the misinformation put out about the Pennsylvania minimum wage law by the same organization which tries to show that employment in Pennsylvania retail establishments particularly has been reduced because of the passage of the Pennsylvania minimum wage law. I have here a complete and detailed account of the operation of that law first put into effect in 1959 with a dollar minimum in the cities of Pittsburgh and Philadelphia and an 85-cent minimum in the rest of the State. Now the entire State after 2 years of operation has been on the dollar minimum.

This information, if you will take the time to read it, will show that on every specific point made by the publishers of misstatements and untruths, in every instance that they called attention to, is belied by the facts in the records in the Commonwealth of Pennsylvania.

Now, Mr. Chairman, it might be good for all of us to recognize that this is just another drive toward meeting that goal that was set out many years ago, a living economy in America, where everybody participates in it; where all of the people, the lesser and the great, all can at least have the minimum requirements of our way of life. All of us know, without any question of doubt, that a $40 a week pay check cannot possibly pay the necessary cost of the living standards that we have in this country today. It costs just as much for a person earning 40 to 45 cents an hour to buy a loaf of bread or a pair of shoes as it does to a Member of Congress at $22,500.

Mr. Chairman, I believe in the capitalistic system of government, but I believe that it has responsibilities; that in order to maintain a capitalistic form of government in this day and age it must assume and practice those responsibilities. The least among us must, if we work, must earn at least a minimum rate of pay. One dollar is not enough for the requirements of a family; in fact, a family of 6 children, with a mother and father, drawing direct relief today in the State of Pennsylvania will get more money than we are setting up under a $1 minimum in this act. Sometimes in talking about persons on relief, some of you say they do not want to work. Why, you pay them more not to work than you are willing to pay them to work.

Mr. Chairman, the time has come when we must face realities. We have in this country 21 million Americans not covered by the protection of a maximum hour and minimum wage bill. The gentleman from California [Mr. ROOSEVELT] is trying at this time, through his sponsorship, with the help of a great many Members of this Congress, to cover at least 4 million more that are not covered today. It will be many, many years before we ever achieve the ultimate and see to it that each and every worker in this country earns at least a minimum income if he works.

Now, this is important, and I want you to hear it. There are those who are great free traders in our midst, and they say that we must never close our borders, no matter what happens to our employment in industry; that we must go overseas and raise the standards and raise the minimum wage of the Chinese, the Japanese, the Hong Kongese, and Taiwanese and the rest of our competitors, while here in America, with an enlightened, civilized country such as we have, there are still 21 million Americans not protected by minimum wage laws. Yet many of you tell me in private conversation that you think we are going to be able to raise the standards of the 11-cent-an-hour workers in other countries.

Mr. Chairman, much publicity is being given to a survey by the Pennsylvania Retailers' Association purporting to show that retail employment in Pennsylvania declined as a result of a $1 minimum wage made effective by that State.

After having analyzed the reliability of that survey, I find it thoroughly unreliable; first, because the survey sample is suspect; second, stores which did not respond were not checked; third, the payroll period surveyed was unrepresentative and employment was affected by severe weather in the week of the survey; fourth, stores reporting a decline were not queried on why it occurred and no check was made of employment change in the same period in other years; and fifth, no distinctions were drawn between part-time and full-time employees.

These are some brief technical comments on the survey by the Pennsylvania Retailers' Association of the employment effects of the $1 retail minimum wage in Pennsylvania. This is the survey described in the statement presented by John Means of that association to the Senate Subcommittee on Labor on March 3.

Pennsylvania raised its retail minimum wage outside Philadelphia and Pittsburgh to $1 an hour starting January 15, 1961. The $1 had been put into effect in Philadelphia and Pittsburgh 2 years earlier, in January 1959.

The retailers' association survey collected employment data from selected stores outside Philadelphia and Pittsburgh for the week just before the $1 minimum became effective and for a week 3 weeks later. The survey results showed a decrease of employment of 6 percent, which the retailers' association concludes is largely the result of the higher minimum wage.

The association's statement does not fully describe the technical procedures used in this survey, but even from the limited information it does provide, it is quite clear that its survey and the interpretation the association has drawn from it are thoroughly unreliable. Its principal failings are these:

First. The makeup of the sample is suspect. The statement contends that the survey's sample of 3 percent of all

retail employees is of adequate size. It is indeed true that 3 percent can be an adequate sample, but the test of reliability is not merely size but the makeup of the sample. If properly stratified, a small sample can be representative of the whole. But the sample here is composed of stores belonging to the association; there is no statement of whether they are all the member stores or, if not, how these particular stores were selected.

Second. In any event, responses came from only a portion of those sent a questionnaire. The statement does not report just what proportion of those receiving a questionnaire answered, but does acknowledge a large nonresponse. Any sound survey must examine nonresponse and the reasons for it to determine if it masks a different picture than that reported by respondents.

It is not difficult to imagine that some stores with favorable employment experience, and well aware of the purpose of this survey, simply refrained from replying so as to avoid changing the picture the association might present.

Third. The representativeness of the payroll period surveyed is also questionable. The survey used the week ending February 4, 1961, as a measure of employment after the minimum wage was increased. Is this an appropriate week? We do not know, and the association statement does not seek to justify its selection, but we are aware that the weather was extremely bad that week in Pennsylvania and severe weather would normally curtail sales and to some extent employment as well. Such an employment decline would of course be unrelated to the minimum wage.

Fourth. Since the survey was supposed to measure the effect of the minimum wage on employment, it was derelict in not examining why employment declined in the responding stores.

Particularly, it should at least have inquired about employment in the same January to February period in earlier years, so that it could determine how much of any employment change is purely seasonal. Ordinarily, retail employment falls off merely for seasonal reasons between December and February.

The survey also fails to provide information on the extent to which employees laid off were part-time or full-time workers. In the case of the 376 national chainstore units, the survey figures show a decline in employment from January to February of 10 percent as against a decline in total hours of only 3.6 percent, which would indicate that workers then laid off were principally part-timers—whose layoff might be due to the customary practice of reducing the part-time workforce in February rather than to any effects of the higher minimum wage.

Fifth. For these reasons it is not possible to rely on the results of the Retailers Association survey nor is it possible, even if the survey figures are accepted, to draw the conclusion that decline in employment totals was due to the increased minimum wage.

The association's contention that an increased minimum adversely affects employment should also be measured in light of the fact that it ignores entirely the earlier experience with minimum wages in its State. Retailers in Philadelphia and Pittsburgh, who account for over 60 percent of retail employment in the State, readily adjusted to the $1 minimum wage in January 1959 and retailers elsewhere in the State adjusted equally readily when an 85 cents minimum wage was applied to them at the same time.

One of the major arguments of opponents of minimum wage improvement is that it would cause unemployment and worsen the present recession period problems.

For proof they cite a Department of Labor finding that employment declined 9 percent in parts of some low-wage industries after the minimum wage was raised to $1.

Experience proves, however, that this argument has no merit. Past minimum wage improvements have not adversely affected employment—and indeed, usually have helped stimulate a general upturn in employment. Specifically, the record shows:

First. Congress has twice passed minimum wage legislation in a recession period. Each time the increase was followed by improvement in employment.

The first time, in depression year 1938, the adoption of the original minimum wage law was followed by a rise rather than fall in employment. Again, in 1949, during a recession and serious unemployment, Congress raised the minimum—from 40 cents to 75 cents. That increase did not aggravate employment difficulties, but rather, marked the start of a rise in employment.

Second. Why did a Government study show a 9 percent employment decline after the minimum was again raised—to $1—in 1955? This decline is being misinterpreted by opponents of minimum wages.

First, the 9-percent figure comes from just one of many different Government studies. It is from a survey of selected segments of the lowest wage industries; second, these industry segments are ones in which employment has been declining steadily for years—regardless of minimum wage movements; third, the real reason for the decline in these industries—such as workshirts, cigars, wooden containers, sawmilling, and tobacco steaming—is principally such factors as technological change reducing manpower needs, decline in consumer demand, and competition from substitute products. The increase in the minimum wage in itself, as the Department of Labor's studies themselves specifically acknowledge, was a rather small, and in most cases, negligible factor in their decline in employment. Finally, other Government surveys could not find adverse employment effects as a result of minmum wage improvements.

Third. One of the other surveys was an exhaustive check by the Labor Department of every report of an adverse effect. This search could find no more than 1,800 workers in the entire Nation who may actually have been laid off after the minimum was raised to $1—and this should be related to the 2½ million low-paid workers who benefited from the increase to $1.

Fourth. Another Government survey examined what happened to unemployment insurance claims. It found that, even in the South, the region where impact of the $1 minimum was greatest, there was no rise in unemployment insurance claims after the minimum was raised. Thus, any employment declines in low-wage industries, for whatever reason they occurred, were offset by expansion in employment due to the increased buying power the $1 minimum provided for low-wage families.

Fifth. Most striking, however, are the findings of still another Labor Department survey, which focused on low-wage communities before and after the increase to $1. These communities—six were studied in detail—were ones in which large proportions of workers had to be given wage raises because of the new minimum. The surveys found the net effect of the higher minimum on a communitywide basis was to stimulate employment rather than depress it.

Every one of the low-wage communities benefited and prospered after the last increase in the minimum. In the 3½ years after the increase employment in these communities rose 20 percent in affected industries and 14 percent in industries not covered by the minimum wage law—a period in which employment in the Nation as a whole increased only 2 percent.

Sixth. Retail employers, who would be covered by the Federal minimum wage under the legislation now before Congress, contend that, even though experience has been favorable in other industries, employment in retailing would go down if they have to meet a minimum wage.

This argument has been disproved, however, by a study of the official employment statistics in the 13 States in which a $1 minimum wage has been applied to retail trade. The study found that in every one of these States the retail industry has adjusted without unfavorable employment effects. Indeed, retail employment usually increased, or held up better than in other industries in the State, after adoption of the retail minimum wage.

Two specific examples: In New Jersey, when the retail minimum was raised to $1—from 60 cents—retail employment jumped 8 percent the following month—the usual seasonal increase was only 3 percent—and increased 3.4 percent the following year—when total employment in the State rose only 1.5 percent. In Vermont, adoption of the $1 minimum was followed by a retail employment increase of 4.2 percent in the following year, while employment in all industry in the State was declining by 3.7 percent. A complete analysis of this study of retail employment experience in the States with a retail minimum wage is available on request to the AFL–CIO department of research.

Employment data from Government sources are available for 13 States in which a $1 minimum wage has been applied to retail trade. Only 2 other States have a $1 retail minimum—Alaska, $1.50 minimum, and Hawaii—but employment data are not available.

This memorandum presents the retail employment data for each of these States before and after the $1 retail minimum wage.

On the basis of analyses of these data, it can be stated categorically that the retail industry has adjusted to statutory minimum wage requirements without unfavorable employment effects and indeed usually with an increase in employment.

In not even one State is there the slightest evidence that requirement of a minimum wage has led to a decline in retail employment.

Although available data vary and the date the $1 minimum was adopted differs from State to State, the picture that clearly emerges can be summarized as follows:

First. The minimum wage for retail trade has been accompanied by employment experience at least as favorable, and usually more favorable, than in other industries in the same period.

Second. Employment in retailing has generally risen after an increase in the minimum wage, in some cases quite sharply. The exceptions to this finding occurred in connection with the 1958 recession and even then the recession-caused declines in retailing were less than in other industry.

Third. Employment data for the month following application of new retail minimum wages nowhere indicates any precipitous decline because of the minimum wage. Where there is an employment decline, it is in line with, or not as severe as, usual seasonal downturns for that time of year.

It is, of course, not possible to attribute employment changes merely to an increase in the minimum wage. Nonetheless, typical experience has found retail employment moving favorably after an increase in minimum wages. Here in brief are several specific major examples of favorable employment experience following on the heels of an increase in the retail minimum wage:

First. In New Jersey, an increase in the retail minimum to $1—from 60 cents—was followed by an 8-percent jump in retail employment the next month—although the usual seasonal increase would have been less than 3 percent—and by a 3.4-percent increase in annual retail employment the following year—even though total annual nonfarm employment in the State rose only 1.5 percent.

Second. In California, the $1 minimum for retail trade was made effective at the end of 1957 just as the 1958 recession was underway. Total nonagricultural employment in the State declined 7.5 percent the following year, but retail employment held up, declining less than 1 percent.

Third. In New York State, retail employment rose 2.1 percent in 1957—the retail minimum was raised to $1 in February of that year—although at the same time employment in all other nonfarm industry in the State declined 2.3 percent.

Fourth. In Vermont, the $1 minimum was made effective in October 1959. Retail employment in the following year rose 4.2 percent, while employment in all nonagricultural industry fell 3.7 percent.

Fifth. In the State of Washington, retail employment in 1959, the year the minimum was raised to $1—from 65 cents—increased by 4.5 percent and increased another 3 percent the following year, almost twice the rate of employment increase in other industry in the State.

The following pages present, for each of the 13 States with a $1 minimum for retailing (a) a very brief summary of retail employment changes in the year and month following the effective date of the minimum wage and (b) the actual employment statistics before and after the date of the new minimum wage.

All the employment data are from the Bureau of Labor Statistics of the U.S. Department of Labor.

The 13 States for which such data are available are: California, Connecticut, Maine, Nevada, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Utah, Vermont, and Washington.

CALIFORNIA

A $1 minimum wage was made effective for retail trade in California at the end of 1957—November 15, 1957. The former minimum was 75 cents.

Examination of employment data shows that retail employment held up well despite a general downturn in other industries brought on by the general economic recession, in 1958. Specifically:

First. Annual employment in retailing held almost steady after the increase in the minimum even though total employment in the State declined markedly because of the 1958 recession. The figures show a 7.5-percent decline in all nonagricultural employment in 1958, but retail employment dipped less than 1 percent.

Second. In the month in which the minimum was raised to $1 and in the following months—November and December 1957—months in which the 1958 recession was already well underway, employment in retailing nevertheless remained higher than in the same months the preceding year.

Third. A comparison of the short-run employment change, from the month before—October—to the month after—December—the increase in the minimum shows almost the usual seasonal upturn at this time of year—9.2 percent versus 11 percent the year before and 9.4 percent the year after—even though the recession falloff at the end of 1957 might have been expected to produce a marked retail employment decline.

One dollar minimum wage for retail trade effective November 15, 1957:

Annual employment

	Employees (thousands)		Percent change
	1957	1958	
Retail trade	736	729.5	−0.9
All nonagricultural industries	4,810	4,450.0	−7.5

Monthly employment in retail trade

	Employees (thousands)			Percent change, October to December
	October	November	December	
1956	725.4	741.3	805.5	+11.0
1957 [1]	738.5	[1] [2] 750.1	806.1	+9.2
1958	733.6	745.1	802.4	+9.4

[1] Year and month $1 minimum made effective.
[2] Increase in employment, after minimum wage raised, of 1.2 percent over same month in preceding year.

CONNECTICUT

A $1 minimum wage for retail trade was made effective in Connecticut in mid-1957—July 1, 1957. The former minimum was 75 cents.

Employment data show that retail trade employment rose from 1956, the year before the new minimum wage, to 1958, the year after, even though total nonfarm employment dropped continuously during this period. Specifically:

First. Annual retail employment expanded by 1.5 percent from 1956, before the minimum increase, to 1958, the year after. By contrast total nonfarm employment dropped off by 4.3 percent during the same period.

Second. From the June 1957, the month immediately preceding the minimum wage increase, to August, the month immediately following, retail employment held up better than the usual seasonal decline. The decline following the higher minimum was 3 percent, compared with 4.9 percent for the same months in 1956, and 3.2 percent in 1958.

One dollar minimum for retail trade effective July 1, 1957:

Annual employment

	Employees (thousands)			Percent change, 1956–58
	1956	1957	1958	
Retail trade	121.3	118.8	123.1	+1.5
All nonagricultural industries	909.8	904.5	870.9	−4.3

Monthly employment in retail trade

	Employees (thousands)			Percent change, June to August
	June	July	August	
1956	124.0	120.6	117.9	−4.9
1957 [1]	118.7	[1] 116.6	115.2	−3.0
1958	123.7	121.5	119.8	−3.2

[1] Year and month $1 minimum made effective.

MAINE

A $1 minimum wage for retail trade was made effective in Maine on September 12, 1959. There was no previous minimum wage in effect.

Data on employment for retail trade alone are not available for this State, but employment data are available for total trade—of which retailing accounts for 70 to 80 percent and wholesaling for 20 to 30 percent.

The employment figures show that both trade and total nonfarm employment expanded from 1959, the year the minimum wage was first introduced, to 1960, the year immediately following, specifically:

First. Total trade employment in 1960 was 0.9 percent higher than in 1959,

the year the minimum wage went into effect. Total nonfarm employment also rose, by 1.4 percent.

Second. Trade employment in September 1959, the month the minimum was put into effect, was 2.3 percent higher than in September of the previous year. Similarly, in October 1959 the month after introduction of the minimum wage, trade employment was 2.8 percent higher than in October 1958.

Third. From August 1959, the month immediately preceding the establishment of the minimum wage requirement, to September, the month immediately following trade employment held up better than seasonally: it declined only 1.6 percent, as compared with 2.8 permement for the same months in 1958, and 2.2 percent for the 1960 period.

One dollar minimum wage for retail trade made effective September 12, 1959:

Annual employment

	Employees (thousands)		Percent change
	1959	1960	
Total trade [1]	53.5	54.0	+0.9
All nonagricultural industries	273.6	277.3	+1.4

Monthly employment in trade [1]

	Employees (thousands)			Percent change, August to October
	August	September	October	
1958	54.2	52.9	52.7	−2.8
1959 [2]	55.1	[2 3] 54.1	[4] 54.2	−1.6
1960	55.3	54.3	54.1	−2.2

[1] Includes both wholesale and retail trade. Separate data for retail trade alone not available. (Ordinarily, retail trade accounts for 70 to 80 percent of total trade employment.)
[2] Year and month $1 minimum made effective.
[3] Increase in employment, after minimum wage set, of 2.3 percent over same month in preceding year.
[4] Increase in employment, after minimum wage set, of 2.8 percent over same month in preceding year.

MASSACHUSETTS

A $1 minimum wage for retail trade was made effective in Massachusetts at the end of 1959—December 2, 1959. The former minimum was 90 cents.

Data on employment for retail trade alone are not available for this State, but employment data are available for total trade—of which retailing accounts for 70 to 80 percent and wholesaling for 20 to 30 percent.

The employment figures show that trade employment increased in the year following the increase in the minimum wage. Specifically:

First. Employment in trade in 1960, the year following the higher minimum wage, was up 2.1 percent. This was a larger increase than the 1.3 percent rise in total nonfarm employment in the State.

Second. The immediate change in trade employment, from the month before the minimum was raised to the month after, was in line with the seasonal employment change in these months in other years. The seasonal change of 3.1 percent from November 1959 to January 1960 compares with a drop of 3.4 percent in the corresponding 1958–59 period and a drop of 2.8 percent in the 1960–61 period.

One dollar minimum for retail trade made effective December 2, 1959:

Annual employment

	Employees (thousands)		Percent change
	1959	1960	
Total trade [1]	379.1	387.0	+2.1
All nonagricultural industries	1,890.7	1,915.1	+1.3

Monthly employment in total trade [1]

	Employees (thousands)			Percent change, November to January
	November	December	January	
1958–59	379.0	392.1	366.1	−3.4
1959 [2]–60	387.5	[2] 404.5	375.4	−3.1
1960–61	393.1	412.0	382.2	−2.8

[1] Includes both wholesale and retail trade. Separate data for retail trade alone not available. (Ordinarily, retail trade accounts for 70 to 80 percent of total trade employment.)
[2] Year and month $1 minimum made effective.

NEVADA

A $1 minimum wage for retail trade was made effective in Nevada in mid-1957—July 1, 1957. The former minimum was 87½ cents.

Employment data for the period 1956–58 show that retail employment dropped slightly between 1956 and 1957, but remained level in 1958, while nonagricultural employment as a whole declined slightly between 1956 and 1958. Specifically:

First. Annual employment in retailing dropped 1.3 percent between 1956 and 1957, when the new minimum went into effect, but showed no change in 1958. Total nonagricultural employment, rose slightly in 1957, but declined in 1958 to 0.7 percent below 1956 levels.

Second. Immediately after the increase in the minimum wage, retail employment increased. The rise was more than the usual increase from June to August. From June 1957, the month immediately preceding the effective date of the new minimum wage, to August 1957, the month after the month of the minimum wage increase, retail employment rose by 7.5 percent. By contrast, in the same period in 1956 the increase was only 3.6 percent and in 1958 it was 3.1 percent.

One dollar minimum wage for retail trade effective July 1, 1957:

Annual employment

	Employees (thousands)			Percent change, 1956–58
	1956	1957	1958	
Retail trade	15.9	15.7	15.7	−1.3
All nonagricultural employment	85.5	86.4	84.9	−.7

Monthly employment in retail trade

	Employees (thousands)			Percent change, June to August
	June	July	August	
1956	16.7	17.3	17.3	+3.6
1957 [1]	16.0	[1] 16.6	17.2	+7.5
1958	16.2	16.6	16.7	+3.1

[1] Year and month $1 minimum made effective.

NEW HAMPSHIRE

A $1 minimum wage for retail trade was made effective in New Hampshire at the end of 1959—November 30, 1959. The former minimum was 85 cents.

Data on employment for retail trade alone is not available for this State, but employment data are available for total trade—of which retailing accounts for 70 to 80 percent and wholesaling for 20 to 30 percent.

The employment figures for trade show that the increase in the minimum wage in New Hampshire was accompanied by an increase in employment. Specifically:

First. Employment in trade in 1960, the year following the higher minimum wage, was up 4.9 percent. This was a larger increase than the 2.3-percent rise in total nonfarm employment in the State.

Second. The immediate impact, from the month just before the minimum was increased—October—to the month just following the increase—December—found an employment rise of 3 percent. This was a greater rise than in the same period in other years; in 1958, the October-December rise was 2.8 percent and in 1960 it was 2.3 percent.

One dollar minimum wage for retail trade effective November 30, 1959:

Annual employment

	Employees (thousands)		Percent change
	1959	1960	
Total trade [1]	32.8	34.4	+4.9
All nonagricultural industries	191.1	195.5	+2.3

Monthly employment in retail trade [1]

	Employees (thousands)			Percent change, October to December
	October	November	December	
1958	32.1	32.0	33.0	+2.8
1959 [2]	33.5	[2] 33.2	34.5	+3.0
1960	35.2	34.9	36.0	+2.3

[1] Includes both wholesale and retail trade. Separate data for retail trade alone not available. (Ordinarily, retail trade accounts for 70 to 80 percent of total trade employment.)
[2] Year and month $1 minimum made effective.

NEW JERSEY

A $1 minimum wage for retail trade was made effective in New Jersey on October 9, 1956. The previous minimum wage, varying by zones, ranged from 55 cents to 60 cents.

Examination of employment data shows that retail trade employment increased after the new minimum became effective. The annual increase was larger than for nonfarm industries generally. In the month immediately after the minimum was raised, employment jumped 8 percent, a much larger rise than in the same month in other years. Specifically:

First. Annual employment in retailing was 3.4 percent higher in 1957 than in 1956 when the minimum wage was increased. Total nonfarm employment increased by 1.5 percent in the same period.

Second. Retail employment in October 1956, the month of the minimum wage increase, was 4 percent higher than in October of the previous year 1955. In November 1956, the month after the wage increase, retail employment was 10.1 percent higher than in the same month of the previous year 1955.

Third. The month-to-month increase in retail employment from September 1956, the month just before the minimum wage rise, to October 1956, the month immediately following, was much larger than for the same period in either 1955 or 1957. The increase for the 1956 period was 8 percent, as against 2.3 percent in 1955, and 1.5 percent in 1957.

One dollar minimum for retail trade made effective October 9, 1957:

Annual employment

	Employees (thousands)		Percent change
	1956	1957	
Retail trade	264.5	273.4	+3.4
All nonagricultural industries	1,930.4	1,958.6	+1.5

Monthly employment in retail trade

	Employees (thousands)			Percent change, September to November
	September	October	November	
1955	256.0	256.9	261.8	+2.3
1956 [1]	267.0	[1] [2] 267.3	[3] 288.3	+8.0
1957	274.6	275.6	278.7	+1.5

[1] Year and month $1 minimum made effective.
[2] Increase in employment, after minimum wage increase, of 4 percent over same month in preceding year.
[3] Increase in employment, after minimum wage increase, of 10.1 percent over same month in preceding year.

NEW YORK STATE

A $1 minimum wage was made effective in New York State starting February 15, 1957, for retail trade in all cities of 10,000 or more, with a 90-cent minimum in cities of less than 10,000. In January 1958, the 90-cent minimum in small communities was raised to the $1. Before 1957, the minimum had been 70 cents in the over 10,000 cities and 65 cents in the smaller ones.

Retail employment in New York increased after the raising of the minimum wage, even though total employment in the State was declining. Specifically:

First. Annual employment in 1957, the year the retail minimum was raised, increased by 2.1 percent over 1956, at the same time that employment in all nonfarm industries declined by 1.7 percent. If retail employment is eliminated from the nonfarm total, then the decline in total nonfarm nonretail employment is 2.3 percent.

Second. Retail employment in the month the minimum wage was raised, February 1957, was 2.3 percent greater than the same month a year earlier. Employment the following month, March 1957, was 1.5 percent higher than the preceding March.

Third. In the 2 months immediately following the increase in the minimum, there was virtually no change in employment; from January to March 1957, the period bridging the increase of the minimum in February 1957, employment edged off one-half of 1 percent, a change worse than the minor upturn in the same period the year before, but better than a larger decline in the same period a year later.

One dollar minimum wage for retail trade effective February 15, 1957, in cities of 10,000 or more, 90 cents in cities of less than 10,000 people:

Annual employment

	Employees (thousands)		Percent change
	1956	1957	
Retail trade	859.8	878.0	+2.1
All nonagricultural industries	6,120.4	6,018.7	−1.7

Monthly employment in retail trade

	Employees (thousands)			Percent change, January to March
	January	February	March	
1956	830.3	823.7	835.3	+0.6
1957 [1]	851.5	[1] [2] 842.4	[3] 847.6	−.5
1958	878.4	860.8	665.4	−1.5

[1] Year and month in which minimum wage raised.
[2] Increase in employment, after minimum wage raised, of 2.3 percent over same month in preceding year.
[3] Increase in employment, after minimum wage raised, of 1.5 percent over same month in preceding year.

PENNSYLVANIA

A $1 minimum wage was made effective for retail trade in cities over 500,000—Philadelphia and Pittsburgh—starting January 19, 1959; the minimum in cities of 10,000 to 500,000 was set at 85 cents and in cities under 10,000 at 75 cents.

Starting January 15, 1961, the minimum in cities of 10,000 to 500,000 has been raised to $1 and in cities under 10,000 to 90 cents. Employment data for the period after this increase are not yet available from Government sources.

Examination of employment data for the entire State and separately for Philadelphia and Pittsburgh shows that (a) retail employment moved more favorably after the new minimum wage than did other employment, and (b) an immediate downturn in employment occurred in the month following the raising of the minimum, but this downturn was no greater than has been customary at that season, January to February, in other years. Specifically:

First. Annual retail employment in the State as a whole moved up in 1959, the year the minimum wage was raised, by eight-tenths of 1 percent, a bit more than the six-tenths of 1 percent increase in total nonfarm employment in the same year.

The same was true in Philadelphia: the $1 minimum at the start of 1959 was followed by an increase in employment of 2.2 percent over the preceding year as against a 1.5-percent rise in employment in all industries.

In Pittsburgh, where total employment in 1959 declined by 2.4 percent, retail trade held up better, edging down only nine-tenths of 1 percent.

Second. In the month immediately after the minimum was raised, February, retail employment declined, but no more than the seasonal decline typical at that time of year.

For the State as a whole, the January to February decline in 1959 when the minimum was raised was 1.3 percent, a decline smaller than in 1958, 2.1 percent, and 1960, 1.5 percent, years when there was no increase in the minimum wage.

In Philadelphia and Pittsburgh, the decline over the month was also in line with the usual seasonal drop from January to February.

One dollar minimum wage for retail trade made effective January 19, 1959, in Philadelphia and Pittsburgh; 85 cents minimum made effective in cities of 10,000 to 500,000 and 75 cents in cities under 10,000.

Effective January 15, 1961, minimum in cities of 10,000 to 500,000 raised to $1 and in cities under 10,000 to 90 cents. Employment data for the period following this increase are not yet available.

Annual employment

	Employees (thousands)		Percent change
	1958	1959	
Entire State:			
Retail trade	506.3	510.5	+0.8
All nonagricultural industries	3,609.6	3,629.7	+.6

1958	504.2	493.4	−2.1
1959	493.6	487.1	−1.3
1960	503.2	497.5	−1.5
Philadelphia:			
1958	202.8	199.3	−1.7
1959	201.5	200.0	−.8
1960	206.9	206.0	−.4
Pittsburgh:			
1958	114.0	109.6	−3.9
1959	109.3	106.8	−2.3
1960	109.9	107.7	−2.0

NOTE.—Data for December 1957 is on different SIC basis, so December to February change not calculated because data not comparable.

RHODE ISLAND

A $1 minimum wage for retail trade was made effective in Rhode Island on October 1, 1957. The former minimum was 90 cents.

Data on employment for retail trade alone are not available for this State, but employment data are available for total trade, of which retailing accounts for 70 to 80 percent and wholesaling for 20 to 30 percent.

There was a general downturn in all employment in the State between 1957 and 1958, but trade employment held up

better than nonfarm employment as a whole. Specifically:

First. From 1957, when the minimum was increased, to 1958, trade employment dropped by 2.8 percent, considerably less than the 4.2-percent drop in nonfarm employment generally.

Second. On an immediate basis, trade employment went up just after the minimum wage was raised. It increased by 1.3 percent from September 1957, the month just before the minimum wage rise, to November 1957, the month immediately following. This compares with a 1.8-percent increase for the same months in 1956, and a 2.9-percent increase for the 1958 period.

One dollar minimum for retail trade made effective October 9, 1957:

Annual employment

	Employees (thousands)		Percent change
	1957	1958	
Total trade [1]	53.2	51.7	−2.8
All nonagricultural industries	284.0	272.1	−4.2

Monthly employment in trade [1]

	Employees (thousands)			Percent change, September to November
	September	October	November	
1956	54.4	[2] 54.0	55.0	+1.8
1957 [2]	52.4	[2] 52.3	53.1	+1.3
1958	51.0	51.2	52.5	+2.9

[1] Includes both wholesale and retail trade. Separate data for retail trade alone are not available. (Ordinarily, retail trade accounts for 70 to 80 percent of total trade employment.)
[2] Year and month $1 minimum made effective.

UTAH

Minimum wages of 85 cents to $1, varying by zones, were made effective in Utah on September 1, 1960. The former range was 75 to 90 cents.

Employment figures for 1961 are of course not yet available, so it is not possible to measure the effects of the new minimum on a year-to-year basis. From 1959 to 1960, including the part of 1960 in which the new minimums were in effect, retail employment expanded by 4.5 percent, somewhat larger than the increase for all nonfarm employment.

Retail employment in September and October 1960, the 2 months following the increase in the minimum wage, was 4.1 percent higher than in the same months the preceding year.

Minimum wage of 85 cents to $1, varying by zones, made effective September 1, 1960:

Annual employment

	Employees (thousands)			Percent change, 1959–60
	1959	1960	1961 [1]	
Retail trade	42.1	44.0	------	+4.5
All nonagricultural industries	253.0	263.0	------	+4.0

[1] 1961 data not yet available to permit measurement of change in annual employment in year after minimum wage increased.

Monthly employment in retail trade

	Employees (thousands)			Percent change, August to October
	Aug.	Sept.	Oct.	
Year before minimum raised (1959)	43.5	43.5	43.5	None
Year in which minimum raised (1960)	45.4	[1] 45.3	45.3	−0.2
Increase in employment, same month before and after minimum raised	------	+4.1	+4.1	

[1] Month 85 cents to $1 minimum made effective.

VERMONT

A $1 minimum wage for retail trade was made effective in Vermont in October 1959. The former minimum was 75 cents.

Examination of employment data shows that retail employment expanded in Vermont in the year following the minimum wage increase, even though employment in other industries dropped off.

Specifically:

First. Annual employment in retailing rose 4.2 percent from 1959 to 1960, while employment in all nonagricultural industries dropped by 3.7 percent.

Second. Retail employment in October 1959, when the increase went into effect, was 1.2 percent greater than in October of the previous year. The November 1959 retail employment level was 1.9 percent higher than in November 1958.

Third. The immediate change in retail employment, from the month before the minimum was raised to the month after, was no different than the employment change in these months in other years. The seasonal change of 3 percent from September to November in 1959, when the minimum was raised, was virtually the same as in the same period the year before, 1958, and the year after, 1960.

One dollar minimum wage for retail trade effective October 8, 1959:

Annual employment

	Employees (thousands)		Percent change
	1959	1960	
Retail trade	16.5	17.2	+4.2
All nonagricultural industries	106.2	102.3	−3.7

Monthly employment in retail trade

	Employees (thousands)			Percent change, September to November
	September	October	November	
1958	16.5	16.3	16.0	−3.0
1959 [1]	16.8	[1 2] 16.5	[3] 16.3	−3.0
1960	17.0	16.7	16.5	−2.9

[1] Year and month $1 minimum made effective.
[2] Increase in employment, after minimum wage raised, of 1.2 percent over same month in preceding year.
[3] Increase in employment, after minimum wage raised, of 1.9 percent over same month in preceding year.

WASHINGTON

A $1 minimum wage for retail trade was made effective in Washington in mid-1959—June 11, 1959. The former minimum was 65 cents.

Retail employment increased substantially following the increase in the minimum wage. Specifically:

First. Annual employment in retailing rose after the minimum was increased in mid-year, so that total 1959 retail employment was up 4.5 percent over 1958, and 1960 employment rose another 3 percent, so that employment in 1960 stood 7.6 percent above levels in 1958, the year before the minimum wage was raised.

Second. In terms of specific months, retail employment in June 1959, the month the minimum wage was raised, was 5.5 percent higher than in June of the previous year, 1958. Similarly, in July 1959, the month following the introduction of the new minimum, retail employment was 6 percent higher than in July of the previous year, 1958.

Third. In terms of immediate employment changes, from May of 1959, the month just before the minimum wage increase, to July 1959, the month immediately following, retail employment rose 3 percent, an increase broadly in line with the upturn customary at this season.

One dollar minimum wage for retail trade effective June 11, 1959:

Annual employment

	Employees (thousands)			Percent change, 1958–60
	1958	1959	1960	
Retail trade	118.6	123.9	127.6	+7.6
All nonagricultural industries	782.8	812.8	816.4	+4.3

Monthly employment in retail trade

	Employees (thousands)			Percent change, May to July
	May	June	July	
1958	114.7	118.0	119.2	+3.9
1959 [1]	122.6	[1 2] 124.5	[3] 126.3	+3.0
1960	126.8	129.1	129.5	+2.0

[1] Year and month $1 minimum made effective.
[2] Increase in employment, after minimum wage raised, of 5.5 percent over same month in preceding year.
[3] Increase in employment, after minimum wage raised, of 6 percent over same month in preceding year.

Mr. ROOSEVELT. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. CELLER].

Mr. CELLER. Mr. Chairman, I want to direct a few brief remarks primarily to some colleagues on the other side of the aisle, particularly from my own State. I fear that some of them may have regarded this minimum wage bill as a partisan issue.

This issue transcends narrow party lines. The Fair Labor Standards Act has been the law of the land for 23 years; it is not a measure tied to one party or the other. Both parties have in recent years publicly and repeatedly recognized a need for updating it, for making its standards modern standards tied to the realities of today's living costs and today's industrial structure rather than to the different needs of earlier needs.

First, consider the increase in the minimum. I personally prefer that the

minimum wage be increased more rapidly than provided by the committee bill. I believe the minimum should immediately be raised to $1.25 an hour. After all, the minimum has not been increased since 1955. To increase it by 25 cents now, 6 years after the last adjustment, would mean we are raising the minimum at the rate of only 4 cents a year.

The committee bill approaches this even more modestly. It seeks to ease any potential adjustment difficulties by deferring the full 25-cent increase for still another 2 years. This would mean that over the 8-year period since the last increase, the minimum will have been raised at a rate of only 3 cents a year.

Is this too much? Can there be genuine party difference on the moderateness of so small a figure? Should we not be ashamed that we are advancing our minimum protection at so slight a rate, a rate so far behind the rate of general advance in industrial wage levels?

If we permit this amount to be trimmed further, or to be put off indefinitely, we would be guilty of a grievous injustice to the many workers still dependent on the statutory minimum as the determinant of their wage level.

New York State is a relatively high wage area. We are justly proud of the fine wages enjoyed by most of our State's citizens. Why should we therefore be concerned with the minimum wage issue? Apart from fundamental humanitarian and moral considerations, which I cannot take the time to dwell on in detail, let me remind you that even in New York we are plagued still by pockets of unjustifiably low wages, by nagging echoes of sweatshop days we fondly but mistakenly believe are buried in the distant past. Unfortunately, thousands of our own State's workers will not rise above $1 or $1.10 unless and until the legal minimum requirement is raised to require a more decent wage. It is for these working citizens of our own State and other similar States that we must be concerned.

Many of these low-wage workers, although employed full time, are not paid enough to sustain their families and must therefore be subsidized by local relief agencies or Federal assistance in order to survive. Surely it is morally wrong for employers to benefit from the labor of workers who are able to exist only because of financial aid from relief agencies. Surely minimum welfare needs for employed workers should be met by adequate minimum wage requirements.

At the same time, we must be concerned with another problem—the need for protection of employers who do pay more reasonable wages but are undercut by cutthroat wage competition. The increase in the minimum wage to $1.25 will help reduce the runaway of industry seeking to take advantage of the lowest possible wages available in other areas. And, I should add, it will curtail such runaway without discouraging sound growth of industry in new areas based on factors other than substandard wages.

As to extension of coverage to unprotected workers, New York State has recognized the value of minimum wage standards for industries excluded from coverage of the Federal act. It has established for retail industry, both large and small, minimum wages as high as the Federal standard—and the results have been beneficial.

But as we look to the record of worker protection provided in many other States, we must be shocked at the unbelievably low standards still countenanced in some jurisdictions and the total lack of any protection whatever in others.

Can we in good conscience stand by and say that fair labor standards in other parts of the country are not our concern? Can we stand by and say that States which have set no minimum wage standards to govern large businesses, businesses which the Congress has regulated in other respects, have made a judgment we must accept?

Surely the answer is clear, whether posed in moral, economic, or constitutional terms. And surely it is a fundamental matter on which we can unite without regard to party label.

Mr. ROUSSELOT. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and sixteen Members are present, a quorum.

The Chair recognizes the gentleman from Ohio.

Mr. AYRES. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. BRUCE], a new member of the committee.

Mr. BRUCE. Mr. Chairman, I think I do not need to express the emotions that run through the mind of a freshman when he stands for the first time before his colleagues. There are many conflicting thoughts in mind. You remember men whose greatness you can never hope to equal who have stood in the same position. You have sat here just long enough to reach out and understand the eloquence of some of your colleagues who have years of experience in this position. You strive in conscience not to be divisive; and I hope and pray that what I do say is not divisive in nature, but is more important, a statement or a restatement of certain basic philosophies.

I do not question the motive of any of the gentlemen in the Chamber. It is not for me to challenge motive because no one except the individual can understand that. We have seen wide disagreements here already. We have seen variance of opinion expressed in fiery terms. I wish it were possible for me to have a full and total understanding in all of its ramifications of what effect legislation such as we are discussing here would have. This is impossible because we are dealing with a national picture, with even international overtones by implication.

It would be easy for me to stand here and try to express the opinions of one group or another. I have met with representatives, many of them from business enterprises large and small; from labor organizations large and small. And all I can tell the gentlemen is that I have tried to the best of my ability not to be influenced by what could be considered their interest in personal gain or advantage, but rather to the best of my humble ability to try and reach a conclusion which I could stand here and defend, honestly believing it to be right.

I can assure the gentlemen that on the final vote on this issue, on this measure and like measures I shall vote "no," not because I hate somebody, not because I do not love the unemployed, and not because I do not love the low-income people and want to help them; but rather because I think this legislation will hurt them, will harm them. We are dealing in an age of upside-down language. We are living in a period where the word "liberal" has become synonymous with collectivism and centralization of authority; where to stand for the liberty of the individual and oppose the extension of the Federal Government is to be labeled as a reactionary. I repudiate the terms as now used because they are meaningless.

I shall vote in the final analysis against each and every one of these bills because I believe we are overstepping the authority of the Federal Government in a very delicate field. I do not believe it is possible for us to look across a nation as vast as this, with our varying economic conditions in Georgia, Mississippi, Alabama, Indianapolis, New York City, Boston, and California and say, "This is what you have to do," and do it with any type of justice whatsoever. In the name of justice we wreak havoc and injustice. We violate the concept of individual liberty upon which this Nation was founded. Liberalism, conservatism—let us forget the conflict of name-calling and reestablish a philosophy that says we are individuals, that we are 50 sovereign States.

If they want $1.25 in New York State, have the New York Legislature pass the $1.25. If they want it in Alabama, are there not enough people in Alabama who can and will be heard? Have you forfeited the responsibility of the State governments? Do we not have legal channels to be heard within our States? This is the jurisdiction which we must reemphasize and reiterate in a day when ideologies are in total conflict.

We do not defeat total collectivism in the world with a gradual, bit-by-bit collectivism here at home. We say we are going to increase purchasing power by setting off inflation. We say $1 is not enough now. That may be. Why is it not enough? Because it is inflation that has destroyed the value of the dollar as a purchasing entity. So we push it to $1.25, and then 2 years from now come back and say, "It is not enough." So we make it $1.50 or $2. We go in circles and in contradiction. In the name of helping the low-income groups we set off an inflation spiral that hurts them above all. We further destroy the value of the dollar and make more and more people dependent on government for subsistence.

We have established a subcommittee in the Committee on Education and Labor to study the effects of automation, and then we come in with proposals like this one which only speed up automation. I have talked with men in my own district and elsewhere. Based on these conferences, I know that if this goes through they will be forced to step up automation and increase the impact of automation and its temporary dislocation of employment. Again I say we are going in circles and in contradiction.

There is a question of constitutionality involved in the dollar volume approach advocated here. One gentleman says there is and the other says there is not. Obviously there is a question. We substitute for the formula of interstate commerce the formula of dollar volume. This change is made along with others, exemptions for this and that, because one group has more pressure and better lobbies; because this group or that apparently controls more votes politically. Minority view though it may be, I still hold that "that governs best which governs least" on a Federal level. I shall so speak, I shall so vote, I shall so dedicate my time.

Mr. AYRES. Mr. Chairman, I yield 10 minutes to the gentleman from New Jersey [Mr. FRELINGHUYSEN].

Mr. FRELINGHUYSEN. Mr. Chairman, we have all heard expressed here very eloquently the very different views of Members on this legislation. There is no doubt in my own mind that we are faced with a very controversial piece of legislation. I think perhaps at the outset I should make my own position clear.

I believe and have so stated over the past few years that we should have a moderate increase in our Federal minimum wage, and also that there should be a suitable extension of coverage. I should add also at the outset that I voted against this bill as it was reported from the committee. Why, one may ask, why did I do so? Why am I unenthusiastic about the specific provisions of this bill? I should like to mention first the so-called escalator provision. The chief sponsor of this bill, the gentleman from California [Mr. ROOSEVELT], has described this as a $1.25 minimum bill. It is, of course, not quite accurate so to describe it. They are suggesting an increase to $1.15, and then in 2 years' time an increase to $1.25.

In a sense, I suppose, it can be said that we are, if we should enact this proposal, thereby discharging campaign promises made last year, and platform pledges made last year. Nonetheless I fail to see why there is any justification for this Congress to attempt to legislate matters which more appropriately should come before us at a later time.

During the brief testimony on this bill the Secretary of Labor, Mr. Goldberg, in answer to a question by me and the quotation is on page 55 of the hearings, specifically opposed an immediate increase to $1.25 for two reasons. He recognized the adverse side effects which might result, and he referred to the obligation of taking a balanced view with respect to this whole question. Well, if Mr. Goldberg expressed then a reasonable point of view, why would it not be reasonable to take a look at a future date of what future increases and future extensions we should make in this legislation?

The argument has been advanced that if we do not do it now, it may be difficult for us to do it later. But, I would suggest that we are legislating in the dark without any possibility of knowledge as to what the economic condition of the country will be 2 years from now, if we attempt to make mandatory an increase of any amount. If this approach is logical and wise, we might just as well authorize still further increases and still further extensions 5 years from now or, perhaps, 10 years from now.

Mr. Chairman, in my opinion, this is not the course of wisdom. The chairman of our full committee has said we have had masses of testimony, and he brought here to the well the volumes of the hearings which have been held since 1949 on this general subject to justify the wisdom of what this committee is now proposing. Well, the fact of the matter is, out of all these mountains of hearings, we have precious little this year. True, we have a volume of some 600 pages incorporating the views of a grand total of 11 witnesses on this very tremendous and very controversial subject. In addition, there was bulky testimony—printed statements by various other groups. The fact that we have gone over a lot of this ground before and have even passed legislation in previous years is no excuse for our committee skimping on its responsibility to take a direct look at the testimony and to hear the testimony of witnesses both for and against this bill.

We have heard the gentleman from Pennsylvania [Mr. DENT] mention the fact that a great many representative groups have been in informal discussions with us as individual Members.

He suggests that as a result of those informal meetings there have been some changes in the law which make this meritorious legislation. In my opinion that is a very poor way to legislate. In the first place, the "we" who make the decisions which result in the changes in the legislation are perhaps the gentleman from California [Mr. ROOSEVELT], or perhaps the gentleman from Pennsylvania [Mr. DENT], or perhaps some Republican. However, the "we" is not the committee, sitting as a legislative body with direct responsibility for producing sound legislation.

Mr. DENT. Mr. Chairman, will the gentleman yield?

Mr. FRELINGHUYSEN. Briefly.

Mr. DENT. I only want to say that there were no changes made as a result of that meeting. If the gentleman will remember, I asked a question of the sponsor. That brought out the fact that no change was made in the law. What the gentleman from California [Mr. ROOSEVELT] wanted was a clarification of the law for the record. There was no change made by anybody but the committee.

Mr. FRELINGHUYSEN. I am glad the gentleman from Pennsylvania thinks so, because I am just about to bring out the fact that I offered an amendment in the committee which was proposed to me in this informal way. This amendment incidentally was accepted unanimously by the committee, although I had no clear view in my own mind whether the amendment I was offering was meritorious or not. For anyone to say that no changes were made as a result of these informal pressures is simply not to state the truth.

Mr. DENT. Mr. Chairman, will the gentleman yield further?

Mr. FRELINGHUYSEN. I will yield in a moment.

I refer specifically to the language on page 43 of the committee bill beginning on line 13 and going through line 20. It refers to a limit of overtime exemption for certain laundries. I read the language:

> *Provided further*, That this exemption shall not apply to any employee of any such establishment which has an annual dollar volume of sales of such services of $250,000 or more and which is engaged in substantial competition in the same metropolitan area with an establishment less than 50 per centum of whose annual dollar volume of sales of such services is made within the State in which it is located;

I assume that some Members know what the language means. They may also know if it will be satisfactory to the enterprises which would be affected if it is incorporated into law. All I know is that a Member of Congress sent me a letter saying that this language should be retained in the legislation. I hope it will be beneficial.

I should point out that this provision was in the bill as originally introduced by Mr. ROOSEVELT. For some reason it was taken out during, I suppose, the deliberations of the subcommittee. As a result of my inquiry about the wisdom of including such language in the bill there was a brief discussion with respect to the fact that there are certain laundries in the District of Columbia which are presently handicapped competitively by laundries which operate either in Virginia or in Maryland and which are exempt from overtime provisions under the present law. This additional protection was suggested as important for the laundries in the District of Columbia so they would not be at an undue handicap if there should be a further increase in the minimum wage law.

I am certainly no expert in the field of what constitutes reasonable competition for laundries. I cannot be certain whether we should provide some additional protection for laundries in the District of Columbia, as compared with laundries in the nearby States. I simply raised the question in committee as to why it had been deleted. There was relatively quick agreement that there was nothing wrong with the language, so it was incorporated in the bill. If it was a good provision why had it been deleted? Has there been any thorough

exploration of the effect of the provision?

This is what I call an unwise way to legislate. Perhaps it is better that something was done in committee than to have it done on the floor. Nonetheless, what we are about to do here on the floor is probably to abandon, for one reason or another, the committee bill and to accept a major alternative. This is probably what should be done. If we do, it will be proof that we as members of the committee have not performed our own responsibilities adequately.

Mr. DOMINICK. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Seventy-eight Members are present, not a quorum.

The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 24]

Anderson, Ill.	Harrison, Va.	Rabaut
Auchincloss	Harvey, Ind.	Rivers, S.C.
Baker	Holifield	Sisk
Barrett, Pa.	Ikard	Smith, Miss.
Breeding	Kilburn	Spence
Buckley	Kilgore	Springer
Cahill	Lindsay	Steed
Coad	McDonough	Thompson, La.
Curtis, Mass.	McVey	Vinson
Daddario	Magnuson	Wilson, Ind.
Davis, Tenn.	Mason	Wright
Fogarty	Monagan	Zelenko
Hall	O'Konski	
Harris	Osmers	

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. WALTER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 3935, and finding itself without a quorum, he directed the roll to be called, when 390 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

Mr. AYRES. Mr. Chairman, I yield 25 minutes to the gentleman from New York [Mr. GOODELL].

Mr. GOODELL. Mr. Chairman, may I say at the outset that I stand here as a Member who voted to report out the minimum wage bill. I was in favor of minimum wage legislation. I am in favor of it today. But I would like to talk about some aspects of this particular committee bill that I think are important for us to understand before we act on such legislation.

When I voted to report this bill out I voted to do so with one major reservation. I said I could not vote for it unless certain defects were cured, particularly the dollar volume test of Federal jurisdiction.

Last fall I had the dubious pleasure for a Republican of following Candidate Kennedy around the country on the Nixon Truth Squad; and as you all know, one of the major issues Mr. Kennedy talked about was the $1.25 minimum wage. I almost came home with ulcers from listening to him talking on this issue in one place after another to large crowds. He would start out by saying: "Mr. Nixon thinks $1.25 is extreme; he thinks it is excessive. Do you think $1.25 minimum wage is excessive?" And the crowd would chorus back: "No! No!"

That happened time after time: in Scranton, Pa.; Muncie, Ind.; Carbondale, Ill.; Youngstown, Ohio; and out in the Far West—$1.25 minimum wage now.

Let me give you some direct quotes from some of the things Mr. Kennedy said last fall about this $1.25 minimum wage. In Pocatello, Idaho, on September 6, 1960, he was talking about the Rules Committee, and at the end he made reference to minimum wage. I quote Candidate Kennedy:

> From reports I have read they evidently agreed to have the House go to conference on minimum wage only because they understood that the House conferees would not budge from the House bill, which was $1.15, and hopelessly inadequate.

In Charleston, W. Va., on September 19, 1960, Candidate Kennedy said:

> The bill for $1.25 passed the Senate by a vote of 2 to 1. It failed in the House of Representatives by 12 votes. We went to conference in the House and Senate and tried to get an adjustment. We were informed in the conference that if we passed the $1.25 an hour it would be vetoed.

In Amsterdam, N.Y., on September 29, 1960, Candidate Kennedy said:

> I think this administration should pass a minimum wage of $1.25 an hour. [Applause.] The Vice President of the United States on Monday night's television show said that $1.25 an hour was extreme, $1.25 an hour being $50 a week. You will get that under my bill which was considered extreme in 1960. What is extreme about that? I want somebody in the Senate or the House to live on $1.25 at a time when the Bureau of Labor Statistics says a single woman to even survive in an urban center of the United States, it costs her $52 a week. Yet the average wage for laundry women in five large cities of the United States is 64 cents an hour, and for a 48-hour week.
>
> I believe in $1.25 minimum wage, and I think the next Congress should pass it.

Candidate Kennedy on October 9, 1960:

> I come from a party which believes in a $1.25 minimum wage. [Applause.]

On October 12 Candidate Kennedy said:

> I don't lead a party which believes $1.25 an hour is extreme. Mr. Nixon said that on the debate a week ago.

On October 19, quoting Candidate Kennedy:

> We fought in the last Congress for a bill to provide $1.25 minimum wage for restaurant employees, retail stores and all the rest. Mr. Nixon says it is extreme. I don't think $1.25 an hour for somebody who works in a business which makes $1 million a year is an extreme wage, living in New York, Whittier, Calif., or Boston, Mass.

On October 28, quoting Candidate Kennedy:

> Anyone who believes that a minimum wage of $1.25 is extreme, Mr. Nixon is your man.

These quotes are direct quotes.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield to the gentleman from West Virginia.

Mr. BAILEY. In view of the gentleman's vote to report the bill out of the committee, shall we get the impression, your colleagues on the committee, that some of this talk about the now President Kennedy when he was a candidate might have rubbed off on the gentleman from New York?

Mr. GOODELL. Maybe that is the explanation, I will not comment on it. I have been in favor of a minimum wage for a long while before I started following Candidate Kennedy.

Mr. BAILEY. I thank the gentleman for his vote.

Mr. GOODELL. Now, we come to the 87th Congress with President Kennedy, not Candidate Kennedy. President Kennedy sends up to the Congress not a minimum wage law for $1.25 an hour but for $1.15 an hour, exactly what Mr. Nixon and Mr. Eisenhower last year proposed, and Mr. Kennedy could have had it in conference had he been willing to accept it. At that time he said, "No, it is totally inadequate, it is cruel and it is just a miserable approach to the minimum wage problem."

In the subcommittee we considered the question as to when the $1.25 an hour should become effective. When it got to the full committee we proposed that it go into effect 1 year from the date of enactment, that it start at $1.15 and then go in 1 year to a minimum wage of $1.25 an hour.

This was going to come out of the full committee, I think I can say advisedly, with $1.25 effective 1 year from now when lo and behold we received a letter from Kennedy's Secretary of Labor from which I quote:

> During the past several days we in the Department of Labor have given very careful consideration and further study to all of the economic implications of this accelerated program for reaching the highest minimum wage rate a year earlier than originally proposed. In view of the many factors involved and after a realistic appraisal of the entire situation, it is my hope that the Committee on Education and Labor may find it possible to reconsider this decision and restore the original three step approach, as outlined above, or, if considered more desirable, adopt a two step approach, that is, a minimum wage of $1.15 for 2 years and 4 months after the date of enactment and a minimum wage of $1.25 thereafter.

With this direct word from President Kennedy's emissary, the committee decided to postpone the $1.25 minimum wage for 2½ years. I might say that this "very careful consideration and study of the economic implications" of $1.25 minimum wage came just a little bit late for President Kennedy. He might of thought of that during the campaign when he exhorted for $1.25 an hour immediately.

Mr. FRELINGHUYSEN. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield to the gentleman from New Jersey.

Mr. FRELINGHUYSEN. Is it not true also that Secretary of Labor Goldberg specifically recommended against

the suggestion by the chairman of our full committee, the gentleman from New York [Mr. POWELL], that we have an immediate increase to $1.25?

Mr. GOODELL. Yes, he did. He also, from what he sent up here, left out the restaurant workers that he mentioned in one of the quotations I gave you in the campaign. But, it would appear from all of this that there is a great difference between being a candidate for President and being President. If you are a candidate, $1.15 an hour minimum wage is cruel and inadequate. If you are President, $1.15 minimum wage is fine and it will help everybody.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield to the gentleman from West Virginia.

Mr. BAILEY. Can you cite an instance in which President Kennedy has changed his position on minimum wage?

Mr. GOODELL. I think everything I have said here indicates that he has changed his position. All last fall Candidate Kennedy was for $1.25 now, immediately. Two years from now is not $1.25 now.

Mr. BAILEY. The legislation that we are considering today will give us $1.25 minimum but not in 1 year.

Mr. GOODELL. Two and a half years from now.

Mr. BAILEY. Please do not leave the impression that he has deserted his position on the $1.25.

Mr. GOODELL. If I have not left that impression, then I have failed completely in what I am talking about here.

Now, another point. We are essentially today considering the Ayres substitute as contrasted with the Kennedy proposal that came out of committee. There has been a lot of talk about the constitutional issues involved. A little earlier somebody said the five-store approach was arbitrary. I might say that the five stores are recognized in the trade, the retail trade, as the point where a chain begins. That is where the five-store theory came from. In other words, five stores or more is considered to be a chain.

Now, one of my colleagues earlier quoted Secretary of Labor Mitchell testifying last year that the five-and-two formula for interstate commerce was unworkable. And, I might point out that that testimony came before the Ayres substitute was perfected, and that those imperfections that were in it have been corrected. He was worried about possible wholesale evasion under the five-two formula. There is no claim now that there will be an evasion under the present substitute to be considered.

But, what are the implications of this $1 million volume sales test? When Secretary Goldberg appeared before our committee I asked him: "Can you think of any retail store that would not come under your definition of interstate commerce and be under the jurisdiction of this act if you eliminate the $1 million?" And he said, "No, I cannot. As a practical matter, they are all in interstate commerce."

Now, the implications of this are very clear, that if we once establish the $1 million test of jurisdiction by the Federal Government, we are finished as far as local and State jurisdiction over any of these small enterprises is concerned, because all they will have to do from that point on is to reduce this $1 million figure.

I have debated with many of the advocates of this bill on national networks and in practically every instance when I brought this up they admitted that it is their intention to start lowering this $1 million figure as quickly as they can. And, when Senator Kennedy and the gentleman from California [Mr. ROOSEVELT] originally introduced their bills, they put the figure at $500,000; not $1 million. So, anybody in the retail business or service business that thinks they are protected by this act and exempt because they do less than $1 million business today, they better take another close look, because they are left out only for the moment. And, the gentleman from California [Mr. ROOSEVELT]—I am sorry he is not on the floor and I hesitate to use his name when he is not here—when he came before the Committee on Rules day before yesterday he said that next year he felt we ought to give immediate consideration to bringing in the hotel workers and re-evaluating this whole thing.

So it is not going to be very long before we start revising it all over again and probably lowering the million dollar figure.

There is a technical aspect of this bill to which I wish to call attention. It may sound rather innocuous but I think it is very important. The committee bill changes the enforcement provisions that presently obtain on minimum wage legislation. Under present circumstances if a man is not paid a minimum wage or if he fails to get his overtime pay, when it is discovered, he has a right to sue his employer and get double damages for the amount of back wages that he was not paid. The Secretary of Labor is not satisfied with this. Under the committee bill, when an employee sues his employer, if the Secretary of Labor decides that he also wants to sue and steps into the suit then the employee's case is immediately terminated and the Secretary of Labor sues the case for him. Under the present law there is a requirement that no employee can be made a plaintiff in a suit unless he gives his consent to whomever tries to sue for him. That is eliminated under the committee bill. The Secretary of Labor will be able to go in himself and sue at any time, take over the lawsuit. Or sue by himself, regardless of the desires of the employee he is suing for.

There has been a lot of talk here about the big department stores in single cities that would be left out of this bill, the substitute bill, because they do not have five establishments and they do not operate in two or more States. This is a very false issue, in my opinion. I have before me a list of the largest department stores in this country and they always use them as the awful example. J. L. Hudson of Detroit pays a minimum wage today of $1.15 and they will not be affected at all by this bill.

Emporium Capwell of San Francisco today pays $1.25 minimum wage.

Thrifty Drugs, Los Angeles, pays a minimum wage of $2.20. None of these stores here pay less than $1.15 minimum wage today.

Yesterday I had a gentleman in from Rochester, N.Y., and asked him what the seven or eight large stores in his area, department stores, paid as a minimum wage. Not a single one of them paid less than $1.25 an hour. So this is just a false issue brought up to give the impression that we are going to cover the small people and leave out the big ones, that the employees of those large establishments will be unprotected and go on getting less than the minimum wage.

Mr. WIDNALL. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield.

Mr. WIDNALL. How would this affect laundries—the administration bill?

Mr. GOODELL. That is another very interesting point. The committee bill would include laundries if they do over $1 million business a year, provided that not more than 25 percent of their business is commercial. The tricky thing here is that most of our small laundries today, in order to survive, have taken up the business of servicing restaurants and hotels. They have done that in quite large proportions and it is the only thing they can do to keep their head above water economically.

Those laundries, regardless of volume of sales, will be covered under the committee bill if more than one-fourth of their volume is this type of commercial business.

Mr. WIDNALL. It is my understanding that in our State of New Jersey the only laundries that will be covered are those that are unionized at the present time and where the employees are getting substantially above the minimum wage in this bill. The nonunion laundries, that are taking away business from the unionized laundries, are not covered and will have a further advantage over the union laundries to the detriment of the union workers in the union laundries.

Mr. GOODELL. That could very well be the case. I do not know the New Jersey situation.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield.

Mr. SMITH of Iowa. I think the gentleman would like to clarify this. They are covered if they do over $1 million worth of business. Then the ones that do 25 percent in commercial business that are now under the law continue the coverage. The others that are covered are those that are in substantial competition with those now covered in the same metropolitan area that do more than $250,000 worth of business.

Mr. GOODELL. I agree with the language the gentleman refers to. The

fact is that virtually all the small laundries will be covered if they do over 25 percent commercial work. Virtually all of them satisfy the stipulation about which the gentleman is speaking, about being in competition with such other laundries.

Mr. AYRES. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield to the gentleman from Ohio.

Mr. AYRES. Will the gentleman state what the situation regarding laundries is under the so-called Kitchin-Ayres substitute.

Mr. GOODELL. The Kitchin-Ayres substitute will leave them right where they are, most of them exempt.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield.

Mr. CURTIS of Missouri. I was very much interested in the gentleman's statement predicting that this action here is only a forerunner of what action next year might be as far as coverage is concerned. I call attention to the Secretary of Labor's prepared statement before the committee which appears on page 25 of the hearings, where he says—

> In fact, protection under the present law is denied to some 20 million men and women in private industry. But I also realize that we have to progress step by step, sometimes haltingly, to achieve the act's original purposes.

I presume from that statement, and I might ask the gentleman's comment on it, that the Secretary is making quite clear that in his opinion, at any rate, and incidentally contrary to the facts, the original purposes of the act were complete coverage, and that is the objective toward which he intends to take us if he has his way.

Mr. GOODELL. I might state in that connection that I am in favor of extending the coverage today, but I want to accomplish the extension by a way which will guarantee that our purely local enterprises which should come under local and State laws will be regulated by local and State governments, not the Federal Government. If we accept this volume-dollar sales test feature, they are clearly going step by step right down to the local store, regardless of size.

Mr. CURTIS of Missouri. I shall take the floor tomorrow, if I am granted time, and I think I will be yielded time, to expound the economic theory of a minimum wage. It never was intended to be, in fact, it will badly damage it if it is made a complete coverage. That is not the theory, and tomorrow I will speak about it.

Mr. GOODELL. I agree with the gentleman 100 percent.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield to the gentleman from Indiana.

Mr. HALLECK. I commend the gentleman on his able statement. It is very obvious from his statement that he knows what this legislation is about and knows the problems that are involved.

Let me ask the gentleman this question: In spite of all of the statements that were made in the last campaign, certain efforts that were made to enact at that time a minimum wage of $1.25, is it the gentleman's clear impression now that by reason of the consideration of the whole economic situation, and all the other factors involved, the administration now thinks that a 15-cent increase in the minimum wage at this time is sufficient?

Mr. GOODELL. I do not think there is any question about that on the record.

Mr. HALLECK. One further question: Of course, the committee bill does provide for the increase to $1.25 2 years and 4 months after the bill becomes law. Does the gentleman think that would justify a contention at the moment that this is a bill for $1.25 rather than $1.15?

Mr. GOODELL. The best way to answer that, I think, is that I have a vision of Candidate Kennedy, standing in front of an audience last fall, saying "I am not for $1.25, I am for $1.15 and you will have to wait 2½ years for your $1.25." He did not do that. It was a lot different. He said, "You should have $1.25 an hour now." I do not think this is a $1.25 minimum wage in the view of those people Candidate Kennedy promised $1.25 last fall,

Mr. HALLECK. I would like to make this further observation. That as a matter of good legislative practice, we all realize 2½ years from now, the Lord willing, the Congress will again be in session. Will not the gentleman agree with me, we might better leave the determination of what the minimum wage ought to be at that time for the determination of the Congress then in being at that time and for us to legislate for the present as far as the minimum wage is concerned?

Mr. GOODELL. I am not in sympathy with the escalator but I do favor a $1.25 minimum wage, and I think it could very well be handled, if we are going to postpone it for 2½ years, in another Congress.

Mr. O'HARA of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GOODELL. I yield to the gentleman from Michigan.

Mr. O'HARA of Michigan. Did I understand the gentleman to say he differed with the coverage provisions and that he favored the $1.25 minimum wage?

Mr. GOODELL. I am in favor of going to $1.25—yes.

Mr. O'HARA of Michigan. When the gentleman was a member of this so-called truth squad last fall, following President Kennedy around, did he tell the people he thought President Kennedy was right on that point and that Mr. Nixon was wrong?

Mr. GOODELL. President Kennedy made a very interesting display of this $1.25 minimum wage. I did not have an opportunity to talk about what I was in favor of. I was talking about what his record was in the Congress and any contradictions between his campaign and his record. I never assailed him on this point because, consistently in the Senate of the United States, he stood for a $1.25 minimum wage—but, it looks different apparently when you get into the White House.

Mr. O'HARA of Michigan. I wish the gentleman had undertaken his responsibilities as a teller of truth and had told his audience that he, himself, felt President Kennedy's argument was correct and that Mr. Nixon's was incorrect.

I thank the gentleman for yielding to me.

Mr. GOODELL. Mr. Chairman, I would like to conclude on this issue with just one statement. If we adopt the volume sales test for extension of coverage in this minimum wage law, we will be creating a precedent that will come back to haunt us not just in minimum wage legislation, but in many other fields because we will be acknowledging therein that all any kind of enterprise has to do to come under Federal jurisdiction is to make a million dollars, and very soon after we acknowledge that, we will carry it on further and say—all they have to do is to make $500,000 and then $250,000 and then $100,000 and then every single enterprise in the country is going to be under Federal jurisdiction. As much as I favor the extension of the minimum wage law, I will not go along with any such theory of the extension of coverage under that law.

Mr. BAILEY. Mr. Chairman, I yield 25 minutes to the gentleman from Illinois [Mr. PUCINSKI].

Mr. PUCINSKI. Mr. Chairman and my colleagues, I rise in support of H.R. 3935. It was my privilege to serve on the subcommittee which wrote this legislation. I would like to thank the gentleman from California [Mr. ROOSEVELT], the gentleman from Pennsylvania [Mr. DENT], the gentleman from Iowa [Mr. SMITH], the gentleman from Ohio [Mr. AYRES], the gentleman from California [Mr. HIESTAND], and the gentleman from New York [Mr. GOODELL] for their contributions and for reporting out what I think is a good bill. There has been a good deal of discussion here about this bill being rushed through the committee. Nothing could be further from the truth. This committee in this session held hearings in which 11 key witnesses were intensely interrogated. The committee read more than 100 statements presented by interested parties both for and against the legislation. And this same committee for the most part last year in March, April, and May, for 3 long months held exhaustive hearings; and I daresay they were about as exhaustive as any hearings ever held in this Congress. Last year we heard 140 witnesses. The record is replete with testimony for and against this legislation. So any suggestion that this legislation was not thought out by the committee or had not taken into consideration the views of all interested parties is just torturing the truth.

I think this is a fair bill. This bill will provide additional coverage, additional income for some 4.3 million people, Americans who are not now covered by

fair labor standards; and it will bring an increase to $1.25 to approximately 2 million people who now are and have been covered since 1938.

It is quite obvious to me from listening to the previous speaker, that the very responsible position taken by the President of the United States, Mr. Kennedy, in giving American industry 2 years to adjust itself to the $1.25 standard, is becoming very irritating to our Republican colleagues. I am certain they would prefer to have the President ignore the problems of American industry in adjusting to these new standards by requesting an immediate increase to $1.25 an hour so the Republicans could make political hay by charging Mr. Kennedy with irresponsibility if he followed their prodding. The gentleman from New York [Mr. GOODELL] has failed to point out in this Republican truth squad which followed Mr. Kennedy during the campaign that the fundamental issue was that Mr. Kennedy stood for $1.25 an hour, and the previous administration constantly came before this Congress and held the line at only $1.15. The fact that President Kennedy has said he is willing to provide 24 months to give American industry an opportunity to adjust itself to the $1.25 an hour minimum is commendable. It shows the kind of responsible government the President has promised the American people, and he is making good on that pledge.

You might ask, why is there a need for this legislation at this time? And I think it is a perfectly valid question. This is really the fundamental question of this entire controversy. When the Fair Labor Standards Act was adopted in 1938, 56 percent of the American labor force was engaged in production and only 44 percent of the American labor force was engaged in services. So the Congress in 1938 quite properly excluded the service industries from coverage and concentrated on industrial production workers. In the ensuing 22 years, however, America has experienced a revolution and we find that in 1960, just the reverse is true: Only 43 percent of our labor force now is employed in production and 57 percent of the American labor force is now engaged in services which are not covered by any fair labor standards.

We have in this country today 8 million Americans who are earning substantially less than $1 an hour. How are you going to proclaim to the world the wonders and advantages of the capitalistic system and the benefits of free enterprise, when we have to admit to the world that there are Americans in this country earning substantially less than $1 an hour? We should enact legislation that would bring all these people up to at least the $1 an hour standard. But this committee, after exhaustive hearings, recognized that this could not be done at this time and, therefore, proposes to this Congress today a moderate bill, but a bill that will move us forward in giving every American an opportunity to share in the wealth of his Nation. I say that this legislation is very necessary at this time. You have constituents and I have constituents who have asked: How is it that today when we have the largest number of American people employed in the history of our country, we are experiencing the worst recession in 20 years? This is indeed a dilemma that many Americans rightfully question; and I say to you that one reason for this is that while we have been increasing the number of Americans in the labor force of the Nation, these people have not been earning minimum standards with which to increase their consumer power.

And even though statistically they are added to our present record labor force gainfully employed, dollarwise they are not adding enough to national income to stimulate industry; they are not able to provide enough increase in consumer purchasing power to keep the wheels of industry rolling. It is only because we feel the time has come when these people should be brought more effectively into the consumer stream of commerce that we urge adoption of this legislation.

You cannot have economic growth in America if a substantial part of the labor force is not capable of participating in the consumer needs of America. It is rather interesting to me that on both sides of this aisle we support the concept that the American farmer must be helped and we spend some $9 billion a year helping the American farmer remain in the consumer stream through various farm subsidies. We can all visualize this, yet we see this violent debate today because we are trying to bring the retail and service employees up to the same standard without cost to the Government. Therefore, Mr. Chairman, I urge adoption of this legislation.

We have heard statements made here that because we are in a recession we should not consider this legislation at the present time, that this is not the time to talk about fair labor standards when we have 5 million Americans unemployed. The fact of the matter, Mr. Chairman, is that the full impact of this legislation will not be felt until 1964. Those presently covered will reach the $1.25 an hour plateau in the summer or fall of 1963. Those who will newly be covered will reach their $1.25 plateau by the summer or fall of 1964.

It is important to remember these figures. America today, if the Congress discharges its responsibility, is on the threshold of perhaps the greatest peacetime prosperity our Nation has ever experienced.

The last replacement boom on durable goods that we had in this country was in 1955. According to reliable figures, by 1962 there is going to be a demand for hard durable goods to the tune of $62 billion; by 1963 this figure is going to increase to perhaps $64 billion, by 1964 to $67 billion, and by 1965, at the time that these workers are all reaching their plateau of $1.25 an hour, at a time when we will have forged into the economy of the country an additional billion dollars in wages for consumer goods, the replacement demand for durable goods in America will reach $75 billion. These figures will not materialize if we do not let the American labor force in the retail and service industries participate in helping fill the needs of this replacement boom.

There is one thing I think we should recall. Every single American who will benefit by this legislation is in that economic class today where every single penny he gets in additional salary he is going to plow back into the economy of the country. We are not talking about people who are buying stocks and bonds, we are not talking about people who are amassing savings in banks; we are talking about the American who is today struggling to provide bare necessities for himself and his family, and if we give him 5, 10, 15, 20, or 25 cents an hour more, every one of those pennies will go back into shoes, dresses, washing machines, automobiles and the home he is trying to get for himself and his family immediately. These are the people we are trying to deal with today.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from West Virginia.

Mr. BAILEY. Is the gentleman aware of the fact that in statistics released by the Labor Department there are indicated 76 major distressed areas in the country and that in February they were reporting 101 distressed areas?

Mr. PUCINSKI. Yes, I am, and I thank the gentleman for reminding us of this.

Mr. FRELINGHUYSEN. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from New Jersey.

Mr. FRELINGHUYSEN. I wonder if the gentleman is right in his prediction that we are going to enjoy a prosperous economy ahead, and whether he feels Congress in 2 years might advocate a substantial increase in the minimum wage because the economic conditions of the country would justify such an increase and would it not be wise to wait until that time?

Mr. PUCINSKI. The Congress in its wisdom may want to do that, but I should like to remind the gentleman and perhaps the minority leader that when the question was raised here a moment ago about legislating for a future Congress, the gentleman will please remember that when the concept of minimum standards was adopted in 1938, Congress provided 25 cents an hour immediately, 30 cents an hour a year later, and then it provided 40 cents an hour to go into effect 7 years later, or in 1945. And there was no qualm about legislating by future Congresses at that time. I say that we should approve the committee formula now. If some future Congress wants to give them more, it is up to that Congress.

Mr. FRELINGHUYSEN. Mr. Chairman, will the gentleman yield for some very brief questions?

Mr. PUCINSKI. May I first finish my statement?

Mr. FRELINGHUYSEN. Just this one question. If the President acted responsibly in advocating an increase of no more than $1.15 this year, did he, as a candidate for the Presidency of the United States, act irresponsibly in claiming that he was going to seek $1.25 if he should be elected?

Mr. PUCINSKI. The gentleman is playing on words. The fact of the matter is that the President, as a Senator and a candidate for office, told the American people that he believes the American workingman is entitled to a minimum of $1.25, and he has kept that pledge.

Mr. FRELINGHUYSEN. Well, the candidate for President of the United States could certainly be playing with the American people if he did not mean what he said.

Mr. PUCINSKI. On the contrary, the gentleman will recall that the real issue in that campaign was the Republican administration's position that $1.15 is sufficient, and Mr. Kennedy's position was that $1.25 was the absolute minimum.

Mr. FRELINGHUYSEN. And the position of the present administration is that $1.15 is as far as we can go at this time?

Mr. PUCINSKI. At this time, but you will note Mr. Kennedy has not receded from his plea for a permanent $1.25 an hour in 24 months.

Mr. FRELINGHUYSEN. What is wrong about that?

Mr. PUCINSKI. Nothing. In my opinion, it is a responsible position by the President. I do not care to yield any further, but if the gentleman wants to ask about it later, I will be happy to debate it with him.

This legislation is aimed primarily at retail establishments. Our opponents try to create the impression that the Federal Government will centralize all business, but they very conveniently fail to tell independent businessmen of America that they will have a $1 million cutoff before they come under the bill.

My times does not permit me at this time to read this statement, but here is a statement of the kind of material and misinformation being sent out by lobbyists who oppose this legislation. One pamphlet proclaims that merchants will have to let their untrained, unskilled help go because they will be priced out of the market and so on. Nothing is further from the truth. We have in this country 1.8 million retail establishments. Now, mind you, there are 1.8 million retail establishments in America. This committee bill as presented to the House today would cover only 100,000 of these stores owned by 15,000 corporations. This 100,000 stores out of 1.8 million in America that would be covered under this act siphon off 78 percent of all the retail business in America. Now, I defy anybody to stand here and tell me that he is for the small independent American businessman and still opposes this concept when these 100,000 stores owned by the large chains are siphoning off 78 percent of all the retail business in this country.

We have in our bill, and quite properly, presented a provision that in the small communities of America—and these are the communities that many Members of Congress represent—where you have a series of businesses which are excluded from this bill because they do below $1 million gross annually, if there is a chainstore in that community which does less than $250,000 annual gross volume, even though the rest of his chain may be covered, that individual store would be excluded from coverage along with the independent merchants. We had testimony before the committee that if a chainstore raises salary standards, all those who may not be covered will have to voluntarily meet those standards to remain competitive for skilled help in small communities. Our committee bill provides relief for the individual chainstore if it is a member of a chain consisting of less than 15 stores. There is a possibility that the committee may offer a further amendment to spread this exemption out to all chainstores in small communities doing less than one-quarter million dollars gross annually regardless of how large the chain corporation may be.

We have heard talk here about violating some fundamental principles when we try to establish the concept of coverage on dollar volume instead of the principle of five or more establishments doing business in two or more States. The dollar volume principle is interwoven throughout our whole philosophy and concept of Government. There is nothing new, nothing revolutionary, no magic in this formula.

The National Labor Relations Board—and my colleagues on this side last year voted for the Landrum-Griffin bill which said, among other things, that the National Labor Relations Board must take jurisdiction over any retail establishment that does in excess of $500,000, and that the National Labor Relations Board must take jurisdiction over any industrial establishment that does in excess of $50,000 gross annual business. You were the gentlemen who voted for this bill. You supported this dollar-volume concept in labor-management relations. Why, then, is there any difference today when we suggest that the same formula be applied to this bill?

The Small Business Administration—and many of you on this side have supported it—is set on dollar volume. Many of our defense contracts are given preferential treatment on dollar volume, gross annual dollar volume. And so who is to say that the concept of dollar volume is unrelated to American principle or contrary to some fundamental principles?

I say, Mr. Chairman, that the only way you are going to save the American businessman is to adopt the dollar-volume principle. Let us see what has been said about the most prominent substitute bill being discussed here, the Kitchin-Ayres bill which eliminates the dollar-volume principle, by the American Retail Federation which has among its members 41 State retail associations and 29 national retail associations. These are retailers, these are the people who are going to be affected, these are the people who know retailing better than anyone else. What do they say?

The Kitchin-Ayres bill, which would cover a retail company having five stores in two States, is based on a concept of interstate commerce which is fallacious in its foundation. That bill seeks to create a new concept of what is interstate commerce.

To understand this, simply look in the book entitled "1960 Fairchild's Financial Manual of Retail Stores," which is published by Fairchild Publications, Inc., in New York. It contains financial data on retail stores and tells which companies have stores in more than one State. Leaf through this manual and you will find at least 35 stores doing a total of $2 billion in annual sales which would not be covered under Kitchin-Ayres. In it are at least four companies doing over $100 million which would not be covered, another dozen doing between $50 million and $100 million, and the remainder between $10 million and $50 million.

Contrast the above stores with a company which would be covered—namely, the W. E. Walker Co., of Columbia, Miss. That company has 20 to 30 stores in 3 States and does a total volume of $2 million to $3 million.

Those of you who want to support the Kitchin-Ayres substitute would be wise to ponder these figures.

You are going to exempt under this principle of five or more stores in two or more States a western corporation that does $2 billion of retail business. Yet you are going to put under coverage a company, because it crosses State lines, that does $2 or $3 million worth of business.

I say the only way to bring justice to the American businessman if we are going to extend this coverage is to adopt the principle of dollar volume. This, indeed, will give him the protection he needs.

Let us examine the most frequently mentioned complaint, that foreign competition is creating such a problem in America that we cannot have a Fair Labor Standards Act at this time because these American businessmen are being hurt by foreign competition. I accept that concern. I am just as deeply concerned about this problem as any Member of the Congress. It was for this reason that I supported the theory and concept that in this bill for the first time in the history of this country, as far as I know, we have given the Secretary of Labor the right to conduct an investigation whenever there is a complaint made that foreign imports are, indeed, hurting American retailing, and upon completion of this investigation he is to make a report both to the President and to the Congress, and on the basis of his figures the Congress can take appropriate action. I think we have met this problem in our committee bill.

We talk about inflation. One of the previous speakers mentioned that this bill should not be adopted because of its inflationary impact on the economy of the Nation. Figures prepared for this committee indicate that an increase to $1.15 for those presently covered would have a three-tenths of 1 percent increase effect on the total wage bill, and an increase of eight-tenths of 1 percent when the increase is to $1.25 for those not covered.

For the newly covered, the 4.3 million, the increase would be 1.6 percent in wages at $1 per hour.

May I point out at this time that any way you look at this legislation the net increase in wages under this bill would be less than when Congress approved an increase to $1 an hour in 1955.

This committee has worked extremely hard. The committee has worked very hard to try to bring you a reasonable, moderate, responsible bill. I hope we will not make the same mistake on this legislation that we made last year. We have heard a great deal of discussion here that if the Democrats had gone along last year we would have had $1.15 already, and that we have wasted all this time. But these folks forget that we could not have gone to $1.15 last year on the Kitchin-Ayres substitute because in the rush of amendments on this very floor in this very well we had adopted an amendment that would have excluded 14 million workers who had been covered under this legislation since 1938.

Mr. AYRES. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I would prefer to finish my statement.

Mr. AYRES. I know the gentleman does not want to make a misstatement. Since the gentleman was not a member of the conference committee, he perhaps does not realize that the first thing Senator Kennedy, the chairman of the committee of conference, did was to remove the Smith amendment.

Mr. PUCINSKI. The gentleman will remember also that under the parliamentary rules of this House that amendment could not have been removed.

Mr. AYRES. The amendment was removed in the conference on agreement.

Mr. SMITH of Iowa. Will the gentleman further identify that as the Frank Smith amendment?

Mr. PUCINSKI. Yes; I will be very happy to identify that as the Frank Smith amendment.

Be that as it may, the fact remains that the following day when that mistake was called to the attention of the House, the sponsor of the amendment had made it very clear that he had no intention of offering such an amendment. We all agreed with him We knew he did not. All I am pleading now is that when we get down to studying this bill, let us study the committee bill, but let us not try to write this complicated legislation on the floor, because we, indeed, are going to make some other serious mistake. We did last year. There is going to be debate on this bill—there should be debate. There is going to be disagreement—there should be disagreement. When the time comes that the Members of this Congress stop disagreeing, and start thinking in a single cadence, we will have lost that very precious commodity which distinguishes us from all other social orders as free Americans—the right to be different. I do hope, however, that after thoughtful consideration and study of the committee bill, you will come to the conclusion that this committee proposal is the only way to help more Americans to share in the wealth of their Nation.

Mr. AYRES. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Ohio.

Mr. AYRES. Would the gentleman from Illinois tell me whether or not the statement he made regarding the position of the American Retail Federation was read from a laborgram dated March 20, 1961, signed by James G. Michaux?

Mr. PUCINSKI. That is correct, I read from a laborgram dated March 20, 1961.

Mr. AYRES Mr. James G. Michaux is the same gentleman who testified along with Mr. Rowland Jones against the committee bill against any extension of the minimum wage regardless of the name of the bill or of the coverage. If it covered any retail operations, this association is against it.

Mr. PUCINSKI. I thought though that Mr. Michaux's analysis of the Kitchin-Ayres bill was a great deal more devastating than anything in the testimony he presented before the committee regarding the committee bill.

Mr. AYRES. If the gentleman would read the testimony, found on page 250 of the hearings, he will see that the American Retail Federation representatives made it quite clear that they wanted no part of extending the coverage in the retail field.

Mr. PUCINSKI. And they made it even more clear in this laborgram that they disapprove of the Kitchin-Ayres bill to a substantially greater degree.

Mr. AYRES. And the reason for that was they realized that the Roosevelt bill was losing support and the Kitchin-Ayres bill was gaining, and now they want to attack it too.

Mr. PUCINSKI. The gentleman does not agree with the retail federation?

Mr. AYRES. I do not agree with their position that the so-called Kitchin-Ayres substitute would be at all detrimental to the retail industry.

Mr. PUCINSKI. In view of the fact that there are some 41 State organizations and 21 national organizations in the retail federation, people who know this business very well, I would be willing to accept their analysis of the Kitchin-Ayres bill which indicates the inequities and unfairness that it presents to American merchants are vastly more so than any problem that the committee bill might present to them.

Mr. FRELINGHUYSEN. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from New Jersey.

Mr. FRELINGHUYSEN. At the very outset of his discussion, the gentleman paid tribute to the fairness with which our committee considered the very many complex questions involved in legislation of this kind. I wonder if the gentleman would tell this committee whether or not there were 3½ days of direct testimony this year in connection with this bill?

Mr. PUCINSKI. That is correct. In my opening remarks, I said as far as direct testimony was concerned, we heard 11 key witnesses. The gentleman will remember this, that we had sent a memorandum or a letter to all interested parties advising them that if they had any testimony that would be different than their testimony last year, the committee would make every effort to hear that testimony—so the statements were accepted in lieu of testimony. But the gentleman will also recall that I said we heard 140 witnesses over a 3-month period last summer in connection with this bill.

Mr. FRELINGHUYSEN. Is it not true that the printed hearings where so much of the testimony was incorporated, or all of the testimony was incorporated, was not through direct witnesses appearing before the committee, and that this testimony was not available to the full committee prior to our reporting out the bill?

Mr. PUCINSKI. The gentleman is describing a situation that I am not aware of. So far as I am concerned, I have had access to all the testimony, both oral and the statements presented to the committee, and I was guided by that testimony in evaluating this bill.

Mr. FRELINGHUYSEN. The testimony was not available to the gentleman.

Mr. PUCINSKI. The statements of these respective associations were.

Mr. FRELINGHUYSEN. The statements may have been available in the material going back to 1949, but that is still not making it available in such a form that it might be useful to us.

Mr. AYRES. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, the question has been raised as to just what effect the $1 million cutoff would have on the retail merchants throughout the United States. I would like to read the testimony given before the committee by the organization that the gentleman from Illinois [Mr. PUCINSKI], just referred to, and I quote:

> Now let us come a little closer to home, in Hagerstown, Md. We took this same situation and went on West Washington Street in Hagerstown, Md. There are 25 stores in the block. Eighteen would be covered under the $1 million enterprise test; seven would be exempt. The 18 covered have a starting minimum of 93 cents and the 7 exempt have a starting minimum of 83 cents.

You will find that this pattern follows throughout the United States. When you talk about trying to help the low income worker in the retail field when you use the dollar volume test you will find that it is not an equitable test in that respect; but the main thing I am objecting to on the dollar-volume test is that we are giving the Federal Government an opportunity eventually to cover every retail establishment in the United States.

Mr. Saffridge, who is the president of the Retail Clerks Union, in testifying before the committee criticized the Roosevelt bill. He said that $1 million was entirely too high as a starting point, that it should be $500,000 as a maximum; but he did say that $1 million was a start in the right direction.

Mr. AYRES. Mr. Chairman, may I inquire how the time stands?

The CHAIRMAN. The gentleman from Ohio has 2 hours and 22 minutes remaining, and the gentleman from California has 2 hours and 3 minutes remaining.

Mr. AYRES. Does the gentleman from California care to yield?

Mr. ROOSEVELT. I have yielded more time than has the gentleman. I think the gentleman should use more of his time, for it will be unfair to allow time to be accumulated by the other side. I think the gentleman from Ohio should yield unless he has no further speakers.

Mr. AYRES. Mr. Chairman, I yield 5 minutes to the gentleman from Montana [Mr. BATTIN].

Mr. BATTIN. Mr. Chairman, I have heard the farmer discussed here and how his friends in the city went along with the feed grain bill, and how as a result of that, the members from farming areas should in turn go along with the proposed committee bill on minimum wage. But there is one thing that has not been pointed out, those who supported the feed grain bill were people who do not grow feed grain crops. It seems to me that most of the Members who voted for that bill grew either tobacco, cotton, or some crop other than feed grains. Then we come to another situation. Assuming, and it is only an assumption, for the sake of the argument that the feed grain bill is going to benefit the farmer by increasing his income, we are now called upon to pass this bill that will increase the farmer's cost by increasing the cost of everything he consumes.

It seems to me to be a little bit on the ridiculous side to say: We want to increase your income, Mr. Farmer, we want to give you a little bit more through a feed grain bill, then come back within the same week and say: Now, what we want you to do after we have given you this help is to vote for a bill that is going to increase inflation and bring about higher costs to the point where you Mr. Farmer, will be back in exactly the same position as before.

I think the legislation should stand on its merit, and not on sympathy or at least a cry for sympathy that we went along with you, now you have got to go along with us.

I feel certain that the proposal to be made as a substitute or as an amendment to the bill passed out by the committee is going to be a great deal more beneficial to the farming communities than the one being presented now by the Committee on Education and Labor.

Mr. HALEY. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Eighty-three Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 25]

Ashley	Edmondson	Landrum
Baker	Fallon	McDonough
Barry	Findley	Machrowicz
Bolling	Fogarty	Madden
Breeding	Garmatz	Magnuson
Buckley	Gavin	Mason
Cahill	Hall	O'Konski
Celler	Harvey, Ind.	Passman
Coad	Hoffman, Mich.	Price
Curtis, Mass.	Holifield	Rabaut
Davis, Tenn.	Horan	Rains
Dawson	Kee	Rivers, S.C.
Denton	Kilburn	Saund
Dingell	Kilgore	Shelley
Smith, Miss.	Thompson, La.	Willis
Smith, Va.	Whalley	Wright
Steed	Wharton	Zelenko

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. WALTER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 3935 and finding itself without a quorum, he had directed the roll to be called, when 380 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from Montana [Mr. BATTIN] will proceed.

Mr. BATTIN. Mr. Chairman, just prior to the quorum call I was discussing the question of rural versus city, as far as the present bill is concerned. We were told that the city folks followed through on the feed grain bill and supported it. I would like to refer to the RECORD of March 8, 1961, where one of our colleagues from a city district made this comment:

> I am against higher price supports for two basic reasons: First, the idea that the Government can cut production by offering farmers a higher and higher price incentive is to me a false one; and second, I see no logic at all in being part of an effort which can only have one effect—raise food prices to consumers.

Yet we are told they went along, that there was no question, that it was good for the farmer and it was good for us. We are asked now to accept this as a matter of principle, and told that without question we should follow along blindly.

In his remarks opening debate on this bill the Chairman of the full Committee politely implied that if we did not go along we were going to have to pay. Just how we were going to pay was not outlined by the gentleman from New York.

I would like to remind the Committee it was the Congress that put the farmer in the box and now that he is there maybe some Members think it is going to be a little bit easier to manipulate him. I am not going to go along with that concept. The farmer is as much a consumer as anybody in the country.

It was stated during the feed grain debate, if you recall, that he was one of the largest consumers in the country. All I would do is to call the attention of the House to the fact that this farmer would find any increase in the minimum wage a rather difficult economic pill to take. He does produce for us, he does provide for us, and I for one am not going to be intimidated by any remarks made on the floor regardless of who makes them.

The CHAIRMAN. The time of the gentleman from Montana has expired.

Mr. KEARNS. Mr. Chairman, I yield 10 minutes to the gentleman from Nebraska [Mr. MARTIN].

Mr. MARTIN of Nebraska. Mr. Chairman, I rise this afternoon to speak to you in behalf of the millions of American citizens who are shackled by the constant extension of Government controls. This bill is a continuation of that policy; a continuation of the socialistic trend which started in these United States some 30 years ago, and I think it is time that we began to think seriously of this trend and to put a halt to it.

I speak, of course, in opposition to this bill sponsored by the gentleman from California [Mr. ROOSEVELT]. Let me give you a couple of examples: In the first place, he puts retailers under the control of the Federal Government to try to establish the concept that those engaged in a retail business are doing interstate business. Members of the committee, this is a false premise. I do not care whether you place the floor at $1 million or whether you say they are engaged in two or more States and have five or more stores or what particular formula you use, the results are still exactly the same. You are extending controls to the retailer who is doing business only within his own trade territory.

Mr. Chairman, I happen to be in the lumber business and I own four lumber yards in the State of Nebraska. My home is 50 miles from the Kansas line. If I should happen to buy one more yard 50 miles away from my home over the Kansas line, I would come under the concept of two States and five operations, and yet in my business I operate strictly at retail and I am doing business only within my own trade territory. By no stretch of the imagination can you say that I am engaged in interstate commerce.

One of the results of the Federal Government going into the retail field will be increased unemployment. Let me give you some quotes from statements of the Department of Labor, issued when the minimum wage was increased to $1 in 1956:

> During the period of adjustment to the higher minimum there were significant declines in employment in most of the low-wage industry segments studied.

Let me give you a further quotation:

> The increase in the minimum wage to $1 an hour took place at a time of expanding economic activity and this facilitated adjustment to the minimum wage increase. Had the minimum wage increase become effective during the period of recession, its adverse effects on employment might have been even greater.

That is a quotation from the Department of Labor. We have had many gentlemen on the other side of the aisle constantly reiterate and pound into our ears for the last 12 weeks that we are in a period of recession. Now, that was a quotation from the Department of Labor as to what the results of this bill would be under those conditions.

The average sales clerk in a retail store—and I am speaking of small towns, towns of 25,000 population or less—will sell about as follows: If he sells $7 worth of merchandise per hour, he is doing a fairly good job. Let me tell you what the cost is, based on $1 an hour, selling $7 of merchandise per hour for each employee.

The labor cost is 14.3 percent. At $1.10 it is 15.7 percent. At $1.25 it is 17.8 per-

cent; in other words, an increase of 3½ percent in the cost of doing business. Your average department store in the United States is making less than 1 percent net profit today. If you add 3½ percent increase in labor expense you can see where you are going to end up—not in the black, but in the red. That will be the direct result of this bill if it is applied to the retail industry.

Mr. Chairman, let me give some other figures here. The gentleman from Pennsylvania [Mr. DENT] spoke briefly about these and I think they are accurate figures. This is in connection with a survey made in Pennsylvania among retailers and what happened when this increase in the minimum wage in the State of Pennsylvania became effective, on January 15, 1961. In the zone 2 stores, those being stores in cities in Pennsylvania between 10,000 and 500,000 population, the minimum wage was raised from 85 cents to $1. In the zone 3 stores, those in cities of under 10,000 population, the minimum wage was raised from 75 cents to 90 cents an hour. This increase became effective on January 15, 1961, about 2 months ago. Here are some figures from those stores that were surveyed. The total number of employees in the surveyed stores on January 14, 1961, was 15,663. Remember, this increase became effective on January 15. Two and a half weeks later, on February 4, or in that payroll week, there were 14,681 employees in those same stores, a drop of 6.3 percent in the number of employees.

In regard to the weekly hours worked—I will not give the individual figures—there was a decrease of 5 percent. Here is another tabulation of 200 store units which on January 14, 1961, had a total number of employees of 8,428. On February 4 they had 8,045, a decrease of 4.5 percent. The decrease in the number of hours worked was 5.9 percent.

Here are some figures in depressed counties where your cities are from 10,000 to 500,000. They are in zone 2. In January 1961 the total number of employees was 3,591. In February of 1961 the number was 3,475, or a decrease of 3.2 percent. These are figures taken from surveys of retail stores in the State of Pennsylvania within the last 60 days. It proves without a doubt what has happened with the increase in the minimum wage in that State.

Let me make another point, Mr. Chairman. As an employer, there are only two things you can do when your operating expenses increase. First of all, you are going to try to decrease them. If it is a question of an increase in labor cost, you are going to look around to try to cut down on your labor expenses; in other words, you are going to reduce your payroll. And I am sorry to say that most of the people who would be affected by this type of legislation are the marginal employees, the employees who are least valuable to management and who can least afford to be without a job.

The problem is that you are going to lose part-time employees, women who come into a retail store and work a few hours a week to earn additional money. Those are the people who are going to suffer. That is one result of this type of legislation.

The second result is to increase his returns sufficiently to break even, the employer is going to have to raise the price of his merchandise, and that is going to contribute to inflation. Secretary of Labor Goldberg, in debating with Senator GOLDWATER on TV two or three Saturdays ago, in answer to a question from the Senator in regard to this specific matter, made the statement that the cost of living would be increased 0.8 percent as the result of the passage of this minimum wage bill. This is something to consider. We have been going down this road of inflation for many, many years, and it has to be cut off, it has to be stopped.

One other point: Think seriously for just a moment as to where the demand for this type of legislation is coming from. I was back in my district in Nebraska last week and talked to quite a number of people. I did not find a single person who was asking for this legislation. I have not had a single letter, telegram, or telephone call requesting that this legislation be passed. I think if each one of you would be honest with yourself you would find that there is very little or no demand from the constituents you represent here in Washington for this legislation. Where is it coming from? It is coming from a small handful of greedy men who want to extend further Federal controls over the lives of the citizens of this country. I am sorry to say that there are those among us who would like to take care of our citizens from the cradle to the grave. To that philosphy I am opposed, and because of that I am opposed to this bill.

Mr. DENT. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Nebraska. I yield to the gentleman from Pennsylvania.

Mr. DENT. The gentleman mentioned figures with respect to Pennsylvania. He will note that while I was talking I called attention to those figures and told the House that I had the answers to every one of them. I might say that the employment in every retail store is heavier during the Christmas season and immediately after Christmas because of the cleaning up of inventories, and that it would be lower in every retail establishment in this country that does a Christmas type of business. The retail stores about which the gentleman is talking prove exactly what I am saying. If the gentleman will refer to the statistics I placed in the RECORD during my talk, he will find that the employment increase started in the second week in November and kept climbing until the peak right before the Christmas rush and during Christmas week. Then it started to cut back in the second week in January. Certainly there is a 6-percent differential between January 14 and February 15. It is a natural phenomenon in all retail establishments.

Mr. MARTIN of Nebraska. I beg to differ with the gentleman from Pennsylvania. These figures were taken on January 14, which was 3 weeks after Christmas.

I also call attention to the fact that in the retail industry as a whole throughout the country employment is stable, and that there is a less than 1 percent fluctuation in total employment in the retail industry compared with 12 percent in manufacturing.

Mr. FRELINGHUYSEN. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Nebraska. I yield to the gentleman from New Jersey.

Mr. FRELINGHUYSEN. Mr. Chairman, I have been very much interested in this colloquy between the gentleman from Pennsylvania and in the figures which the gentleman now in the well of the House has given us. I wonder if you would care to comment on the testimony of the Secretary of Labor with respect to the effect of this bill as an anti-recessionary measure. You will recall, he claimed there would be a salutary effect as a result of such an increase and that the effect of unemployment, in his opinion, would be minimal. I wonder whether the gentleman agrees with this contention and, if not, how does he feel?

Mr. MARTIN of Nebraska. That does not jibe with the facts. According to the statement I read from our Labor Department a few minutes ago, after the enactment of this increase in 1956, there was substantial unemployment as a result of the increase.

Mr. FRELINGHUYSEN. Would you be in accord then, I might ask the gentleman, that in a recessionary period it would be far more difficult to adjust to an increase in minimum wages than in a time of rising prices such as was the case in the last increase?

Mr. MARTIN of Nebraska. That is absolutely correct, but I am opposed to the extension of Federal controls, in any case, to the retail industry. I do not think it is the proper function of the Federal Government, and I do not think we have any business going into that area.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Nebraska. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. I want to commend the gentleman for his very fine statement in bringing out these facts and statistics in the debate, and also to back up his statement that we have had over a period of years this experience in extending the minimum wage to other areas and increasing the incidence of unemployment as an immediate result. On page 183 of the hearings, there is a quotation from a Labor Department report, and I will read a part of it:

> During the period of adjustment to the higher minimum, there were significant declines in employment in most of the low-wage industry segments studied.
>
> In a group of 12 low-wage industry segments, the Department reported a 9-percent employment drop. This group included such industries as sawmills, children's seamless hosiery, cigars, workshirts, and fertilizer.

The point is, I think, every economic study reveals that the overall picture is as the gentleman has pointed out. And I would like to hear some statistics from the other side to refute these very basic

facts in regard to the economic impact of minimum wage legislation. I again want to commend the gentleman.

Mr. MARTIN of Nebraska. I thank the gentleman.

Mr. SANTANGELO. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Nebraska. I yield to the gentleman from New York.

Mr. SANTANGELO. As I understand it, the gentleman from Nebraska is opposed to the intercession of the Federal Government in this area of the retail trade.

Mr. MARTIN of Nebraska. That is correct.

Mr. SANTANGELO. And you are in favor of State control of wages in the retail field; are you not?

Mr. MARTIN of Nebraska. This is a matter for State and local control, rather than for the Federal Government, because the retailer is not engaged in interstate commerce. The Supreme Court ruled in 1938 that interstate commerce consisted of the production of goods and the distribution of goods across State lines.

Mr. SANTANGELO. Can you tell me, sir, whether your State has any statutory minimum wage for these workers and whether your State has any wage board for the workers and what protection do the workers of your State have from an exploiting employer? You have none.

Mr. MARTIN of Nebraska. We do not have exploiting employers in the State of Nebraska, sir.

Mr. SANTANGELO. Do you have a minimum wage law in the State of Nebraska?

Mr. MARTIN of Nebraska. No, sir; not to my knowledge.

Mr. SANTANGELO. Do you have a minimum wage board which has fixed any wages for retail workers in the State of Nebraska?

Mr. MARTIN of Nebraska. No; not to my knowledge.

Mr. SANTANGELO. Do you have any protection for workers in the State of Nebraska?

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Nebraska. I yield to the gentleman from California.

Mr. ROOSEVELT. The gentleman, I think, made the observation that there was little or no demand for this type of legislation and he asks whether we had heard of any such demand. I do not say that I always believe completely in the accuracy of the Gallup poll, but when the Gallup poll, as published just a few weeks ago, came out and said that more than 75 percent of the American public were for a minimum wage bill, I do not think it is that inaccurate. I hope the gentleman will give some credence to the voice of the people.

Mr. MARTIN of Nebraska. I should like to point out that in taking polls, questions are often worded in a manner to slant the answers. The polls are not always indicative of the true situation. I believe that may be the case in this Gallup poll, although I have the greatest respect for it.

Mr. ROOSEVELT. At least I can say that in that respect the gentleman agrees with former President Truman—he does not like polls either.

May I also ask the gentleman whether it is not also true that in the January 1961 4–D report this statement is made on page 18:

> Information was also obtained on the movement, over the period of adjustment to the $1 rate, of wages in noncovered industries in six small localities. Here the outward effects were quite limited. For example, in retail trade in the six localities, average hourly earnings in February 1956 were about 97 cents. In contrast, in industries of these localities whose employees were generally subject to the act, average hourly earnings in February 1956 were $1.20. By June 1959 average hourly earnings in retail trade had increased to $1.10, or by 13 percent; and the average for subject industries increased to $1.42, or by 18 percent. (Average hourly earnings for all retail trade for the United States increased during the same period by 15 percent.)

The six localities that came under this survey showing that they were not just large industry areas are Meridian, Miss.; Dothan, Ala.; Dalton, Ga.; Sunbury-Shamokin, Pa.; Athens, Ga., and Fort Smith, Ark.

Certainly that 4–D report would clearly show that the impact of unemployment and the impact of minimum wages was not anything except beneficial.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. ROOSEVELT. Mr. Chairman, I yield 10 minutes to the gentleman from South Carolina [Mr. HEMPHILL].

Mr. HEMPHILL. Mr. Chairman, I take this time, and I want to thank the committee for the time, because I think I recognize here the confusion which exists in the attempt here in the House and in this bill to legislate in two entirely separate areas. We are legislating in the first instance in the area declared constitutional by the Supreme Court of the United States, the area of wages; on the other hand, we are also trying to legislate in the field of the extension of coverage. Whether or not you say the extension of coverage is constitutional, you have the attempt both in the committee bill as I read it, and in the Ayres-Kitchin bill as I read it. The extension of coverage in either bill is questionable from a constitutional standpoint.

In an effort to give this House an opportunity to vote on a purely constitutional question I introduced—and I am no expert on wage and hour law, I had had assistance in drawing the legislation—I introduced a bill which bears the number H.R. 5827. That particular legislation deals purely with those people who, whether in the retail trade or not, are engaged in interstate commerce as previously defined by the U.S. Supreme Court.

If we must leave that particular area it seems to me that on the question of the extension of coverage we should take advantage of the opportunity to explore the impact of that extension of coverage.

You will find on page A2007 of yesterday's RECORD, and following pages, the statistics from Dun and Bradstreet which show the net income of the various retail outlets and retail industries in this country. One of the things that concerns me is that in the committee bill we have a dollar line demarcation.

In the Kitchin-Ayres bill we say that if a man has 5 or 10 stores in 2 or or more States he is engaged in interstate commerce. Here is an appliance, radio and television dealer. His percentage of net operating profit is 1.1. That means if he does a million dollars' worth of business he makes a net operating profit of $11,000. We say to the man who makes $11,000 with his investment in the business that we are going to draw a line of demarcation and say beyond a million dollars, if you make $1 over a million dollars you have to pay it, if you make $999,999 you do not have to pay the minimum wages.

In keeping with what I think was the intention of this committee, and I think it is, I also mentioned in my remarks a thing called standard metropolitan statistical areas of this country.

Now, I know the problems of the people of my small community because as a lawyer I have handled many problems for them. I know a clerk who does not sell $5 worth of goods many hours of the day. Those are the kind of people in the rural areas of this country. Those are the people we hear talking about unemployment that I am concerned about. So if I get a chance in the parliamentary scramble which is inevitable here I shall offer an amendment. I realize my amendment probably will never be considered because I am not a member of the committee. I wish you would consider it as a part of the duty of the House, taking out of coverage those rural areas where the impact is far more significant than in the city areas, by an amendment to that effect.

We have here before us the retail industry of this country and the differences in the variety of that retail industry. Those are things which have not yet been explored here either in this Congress or in the last Congress. One of our businesses has a certain pattern of consumer buying, another business does not, and rural areas have these problems because of the fact, too, that their trade is not steady. They are not in a high-cost living area, they are not in a high-income area; yet they are competing directly with people who want to go to the city to buy in the fine city stores. We have that problem in the rural areas of my part of the country.

Are you considering those people who are just as good Americans as anybody else when you say you do not recognize the difference in the cost of living, the difference in the cost of overhead, and the difference in average salary, yet make no differentiation except by the dollar line?

I have another problem in my district in connection with this legislation. We have some small family owned chains. Not only are they family owned chains, but the local man owns half of the business in the little town I live in. Those particular people under the committee bill and the Kitchin-Ayres bill are coming under the legislation. The committee has put in here 15 or more stores in two or more States, they say even in one State, and they put on it a limit of $250,000. A filling station on this side

of the street has a limit of a million dollars, and the little store on this side of the street, which is part of a chain, has $250,000.

These are the things that concern me about the pending legislation.

How in the world can we legislate in the area of extension of coverage and be just unless we recognize that we should not pit one part of the industry as against another? And that is being done here. Washington, for instance, I think, has the highest cost of living any place. I would testify to that. Out in Virginia some place I assume that the cost of living is like it is in my State. Now, is there any differentiation? Is it worthy of consideration of this Congress?

The reason I say this is because if I have the opoprtunity I intend to offer some amendments to accomplish what I think the committee even wants to accomplish. I do not believe that anybody wants by this legislation to put anybody out of business or to create any unemployment. I refuse to believe that. But, I say that in keeping with that faith and that philosophy, then I think we have to consider whether or not there will be unemployment here as compared with the creation, possibly, of the consumer dollar or better wage over there. It is not fair to consider one and not consider the other. It is not fair not to consider the variety which exists in this greatly differentiated retail industry area.

Now, I have studied the Vinson amendment as best I could, and I would like to ask the gentleman from California [Mr. ROOSEVELT] a question about that. The Vinson amendment included a limitation based on the standard metropolitan statistical area, is that true?

Mr. ROOSEVELT. I do not know exactly what the Vinson amendment does have in it. To the best of my knowledge, however, it does not have the standard statistical test in it.

Mr. HEMPHILL. Well, it has the same metropolitan statistical area test that you have in H.R. 3935.

Mr. ROOSEVELT. As to radio stations only.

Mr. HEMPHILL. If that limitation is good enough for the radio stations in my particular community, why is it not good enough for others who are similarly afflicted with the limitation of operation and limitation of income and limitation of area?

Mr. ROOSEVELT. Well, I would say to the gentleman that the committee in studying the situation in radio and television stations made it applicable only to three particular classes of employees. They were the announcers, the chief engineers, and the news chiefs or the people who headed up the news staff. We had no testimony; nobody came before the committee and suggested the standard statistical basis or metropolitan statistical basis, and therefore we did not have enough information to find out whether we could in any way apply it to the broader concept of the employees in general in the area and in the service industries. Actually, as far as I know, there has been no legislation of any kind. However, there is this information as to what forms a metropolitan area, but it has never been reduced to legislation, and therefore we had very little to go on.

Mr. HEMPHILL. While there has been no legislation on it, there has been and there is available to anybody who is interested maps put out by the U.S. Bureau of the Budget and U.S. Census Bureau in which the area definitions are so plain. It is obvious what there is in the standard metropolitan statistical area and what areas are rural in this country, and the means of delineation are so clear that there can be absolutely no mistake about it. If anybody wants a copy, I have a number of them here.

Would the gentleman consider an amendment along this line if I have an opportunity of introducing it?

Mr. ROOSEVELT. May I say to the gentleman, of course it would be considered very carefully, but I would have to say in all honesty, because it did not receive the full consideration it would need, that I doubt very much whether it would be acceptable to the committee.

Mr. HEMPHILL. I thank the gentleman. I hope the Congress will legislate here only in a constructive manner, to create, to encourage employment. We should never legislate to create unemployment or threaten the businessman with burdensome overhead that his margin of profit can neither absorb nor handle.

If the committee has not considered the difference in operation, costs, personnel utilization, and other factors differentiating the rural from the metropolitan areas, in the retail trade, it should. Meanwhile, acceptance of my amendment would protect any rural stores. I ask that help.

Mr. ROOSEVELT. Mr. Chairman, I yield such time as he may desire to the gentleman from Michigan [Mr. O'HARA].

Mr. O'HARA of Michigan. Mr. Chairman, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. O'HARA of Michigan. Mr. Chairman, opponents of the committee bill have criticized the new coverage provisions of the bill as being unfair. I believe the coverage provisions of the committee bill are eminently fair.

On the other hand, I believe the new coverage provisions of the Ayres-Kitchin substitute unfairly covers many small chain establishments while not covering their larger competitor who does business in only one State.

There follows a partial list of retail enterprises illustrating this point:

Partial list of large dollar volume retail stores not having 5 or more establishments in 2 or more States (exempt under Ayres-Kitchin substitute)

Store	City and State	Volume	Store	City and State	Volume
City of Paris	San Francisco, Calif	$14,000,000	Wiebold Stores	Evanston, Ill	$67,000,000
Crowley, Milner & Co	Detroit, Mich	22,000,000	Webb's City	St. Petersburg, Fla	29,000,000
Emporium Capwell	San Francisco, Calif	108,000,000	Zion Coop. Mer. Inst	Salt Lake City, Utah	26,000,000
Gilchrist Co	Boston, Mass	22,000,000	Harzfeld's	Kansas City, Mo	11,000,000
The Higbee Co	Cleveland, Ohio	52,000,000	Fischer Co	Cleveland, Ohio	98,000,000
Holmes Co	New Orleans, La	30,000,000	Lytton's	Chicago, Ill	16,000,000
Horne Co	Pittsburgh, Pa	66,000,000	Neiman-Marcus	Dallas, Tex	41,000,000
J. L. Hudson Co	Detroit, Mich	150,000,000	Thrifty Drug Stores	Los Angeles, Calif	115,000,000
Marston Co	San Diego, Calif	14,000,000	H. C. Bohack Co	New York, N.Y	171,000,000
Mays, Inc	Brooklyn, N.Y	57,000,000	Alpha Beta Food Markets	La Habra, Calif	82,000,000
Meir & Frank	Portland, Oreg	57,000,000	Bayless Markets	Phoenix, Ariz	48,000,000
Outlet Co	Providence, R.I	16,000,000	Hill's Supermarkets	Farmingdale, N.Y	31,000,000
Penn Traffic Co	Johnstown, Pa	10,000,000	Market Basket, Inc	Los Angeles, Calif	96,000,000
Rich's	Atlanta, Ga	92,000,000	Purity Stores	Burlingame, Calif	100,000,000
Stix, Baer & Fuller	St. Louis, Mo	61,000,000	Shopping Bag Food Stores	El Monte, Calif	84,000,000
Schuster	Milwaukee, Wis	47,000,000	Miller & Rose	Richmond	37,000,000
Walker-Scott	San Diego, Calif	11,000,000			

The short list of large dollar volume enterprises not having five or more establishments in two or more States represents a partial enumeration of very large businesses that would be covered by the committee bill, or by the substitute to be introduced by the gentleman from Oklahoma [Mr. ALBERT], but which would not be covered by the Ayres-Kitchin substitute.

The list of chains is a partial enumeration of small enterprises that, in contrast, would be covered by the Ayres-Kitchin substitute.

However, under the Roosevelt bill, enterprises having less than 15 outlets would not be covered as to those outlets that did a gross business of less than $250,000, even though the enterprise did a total business of over $1 million.

Under the terms of the substitute which, I understand, will be introduced by the gentleman from Oklahoma [Mr. ALBERT], no establishment of any of the enterprises listed would be covered unless that outlet, itself, did a gross business in excess of $250,000 per year.

State by State list of some retail chains with 5 to 50 establishments in 2 or more States (covered by Ayres-Kitchin substitute)

Mr. ROOSEVELT. Mr. Chairman, I yield 5 minutes to the gentleman from Utah [Mr. KING].

Mr. KING of Utah. Mr. Chairman, I rise in support of the committee bill. We have heard some questions raised about whether the committee bill introduces a new concept of interstate commerce, and about whether it goes too far when it covers retailers and service enterprises.

Let me attempt to throw light on these two questions.

First, the issue is not whether retailers are or are not in interstate commerce. One glance at the products on the shelves of the typical store should make everyone thoroughly aware that retailers distribute products coming from all parts of the country, and that they are therefore clearly in the stream of interstate commerce.

It does not make any difference whether the retail company runs 3 stores or 10 stores, or whether it runs them all in one State, or has them spread over several States. If it sells interstate products, it is a part of interstate commerce regardless of the location or number of its stores.

The issue, I repeat, is not whether these businesses are in commerce, but simply whether we choose to exercise our authority to cover them.

Let us note further, that we have already considered these types of business to be within our regulatory authority. In other legislation, indeed in legislation in the labor field, we have already covered such business. The Taft-Hartley Act covers retailing. The Landrum-Griffin Act regulates every labor union in every industry "affecting interstate commerce," so that a union in a retail store is already under the Congress regulatory authority.

Thus the issue is not whether we should stretch our constitutional author-

ity, but rather whether we should now use authority we have repeatedly exercised in other legislative areas. The issue is whether certain industries, which are already regulated and indeed protected by Federal legislation, should be now required to meet fair minimum labor standards. This is essentially an issue of public policy, not of constitutional authority.

Finally, my own position is that these businesses surely should meet the same minimum fair standards as other American industries, but that a distinction should be drawn for the smallest of such businesses. I believe that even the corner grocer is technically in interstate commerce, but I draw the line at extending our authority to such locally-oriented merchants. I would favor continued exemption for them. Since some explicit dividing line is necessary between the truly small merchant and the sizable retailer, use of a business volume test, along the lines already used by the National Labor Relations Board, is sound. Although that Board uses $500,000 annual business as the test of whether it takes coverage, I think $1 million is a sounder dividing line between the substantial and the genuinely small business, as far as this legislation is concerned.

I, therefore, support that $1 million test, which is the basis used by the committee bill, as the cutoff point for determining how far to exercise congressional authority in requiring business adherence to fair minimum labor standards.

I urge the passage of the committee bill.

Mr. ROOSEVELT. Mr. Chairman, I yield 5 minutes to the distinguished majority whip, the gentleman from Oklahoma [Mr. ALBERT], for a very important statement.

Mr. ALBERT. Mr. Chairman, I have just introduced a bill which contains substantial amendments to the bill presented to the House by the committee. This bill has been drawn after consultation with members of the Democratic leadership, the Secretary of Labor, and representatives of the administration. This bill undertakes to work out some of those provisions which have troubled many Members of Congress and which have been objected to by many types of establishments.

Copies of this measure will be available to all Members on Friday, that is, tomorrow. I shall undertake by unanimous-consent request when we go back into the House to have a copy of this bill inserted in the CONGRESSIONAL RECORD, as well as having had the bill introduced, and I am hopeful that printed copies will be available to the Members tomorrow.

It is our belief that this substitute will provide a sound basis for realistic action by the House as a reasonable and moderate accommodation to the wide range of views expressed on this measure during this debate. Salient features of the new proposal are: No overtime requirements for all newly covered employees, and a new and solid basis for exerting interstate commerce only over very large retail service, and other covered establishments, only where 25 percent of the annual volume of these firms depends on interstate commerce.

The fact that they would be provided a flat $1 minimum wage for all newly covered workers will, in my opinion, do much to overcome the objections of many Members of the House and of retail and service industries.

We believe this to be a moderate yet effective approach to legislation of this kind at this time. The effect of this bill will be with respect to presently covered employees and as to the minimum wage for the first 2 years, $1.15 an hour, and after 2 years $1.25 an hour; newly covered employees $1 an hour now and later on; maximum hours, presently covered employees, time and one-half for overtime after 40 hours; newly covered employees, no overtime provisions. Only retail and service establishments, laundries, transit systems, and other establishments doing more than $250,000 annual volume of business, and only if they are in a common business enterprise, 25 percent of whose dollar volume of business depends upon interstate commerce, and again, only where the enterprise does a $1-million volume of business per year.

These annual dollar volume standards are $350,000 in the case of construction enterprises. All family-run stores are exempt from the minimum wage. All hotels, motels, restaurants, hospitals, nonprofit organizations, schools for handicapped or exceptional children, and those engaged in processing are exempt. Telephone companies having 750 stations or less will be exempt. Family laundries engaged mostly in purely intrastate commerce are also exempt. Small interstate retail manufacturing and sales firms are also exempt if they do 85 percent of their selling within the State. Motion picture theaters would be exempt, as well as food handlers, catering houses, and seasonal amusement and recreation businesses.

Special provisions for retail and service establishments are as follows:

First. Lower minimum wages set by the Secretary of Labor for full-time students outside school hours and jobs not held by full-time workers.

Second. Bona fide sales executives and administrators are exempt even if they do less than 40 percent nonexecutive or administrative work.

With respect to Puerto Rico and the Virgin Islands, special provisions for lower than minimum wages and for lower wages set by order of the Secretary of Labor.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

H.R. 5900

A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the Act to $1.25 an hour, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Fair Labor Standards Amendments of 1961".

DEFINITIONS

SEC. 2. (a) Paragraph (f) of section 3 of the Fair Labor Standards Act of 1938 is amended by inserting after "Agricultural Marketing Act, as amended," the following: "the processing of shade-grown tobacco for use as cigar wrapper tobacco by agricultural employees employed in the growing and harvesting of such tobacco, which processing shall include, but shall not be limited to, drying, curing, fermenting, bulking, rebulking, sorting, grading, aging, and baling, prior to the stemming process,".

(b) Paragraph (m) of section 3 of such Act, defining the term "wage", is amended by inserting before the period at the end thereof a colon and the following: "*Provided,* That the cost of board, lodging, or other facilities shall not be included as a part of the wage paid to any employee to the extent it is excluded therefrom under the terms of a bona fide collective-bargaining agreement applicable to the particular employee: *Provided further,* That the Secretary is authorized to determine the fair value of such board, lodging, or other facilities for defined classes of employees and in defined areas, based on average cost to the employer or to groups of employers similarly situated, or average value to groups of employees, or other appropriate measures of fair value. Such evaluations, where applicable and pertinent, shall be used in lieu of actual measure of cost in determining the wage paid to any employee".

(c) Section 3 of such Act is further amended by adding at the end thereof the following new paragraphs:

"(p) 'American vessel' includes any vessel which is documented or numbered under the laws of the United States.

"(q) 'Secretary' means the Secretary of Labor.

"(r) 'Enterprise' means the related activities performed (either through unified operation or common control) by any person or persons for a common business purpose, and includes all such activities whether performed in one or more establishments or by one or more corporate or other organizational units but shall not include the related activities performed for such enterprise by an independent contractor: *Provided,* That, within the meaning of this subsection, a local retail or service establishment which is under independent ownership and control shall not be deemed to be other than a separate and distinct enterprise by reason of any arrangement, which includes, but is not limited to, an agreement (1) that it will sell, or sell only, certain goods specified by a particular manufacturer, distributor, or advertiser, or (2) that it will join with other such local establishments in the same industry for the purpose of collective purchasing, or (3) that it will have the exclusive right to sell the goods or use the brand name of a manufacturer, distributor, or advertiser within a specified area, or by reason of the fact that it occupies premises leased to it by a person who also leases premises to other retail or service establishments.

"(s) 'Enterprise engaged in commerce or in the production of goods for commerce' means any of the following in the activities of which employees are so engaged, including employees handling, selling, or otherwise working on goods that have been moved in or produced for commerce by any person, if not less than 25 per centum of the annual gross dollar volume of business (exclusive of excise taxes at the retail level which are separately stated) of such enterprise is made from sales or services which require, or depend on, shipments of goods in commerce or engagement by employees in commerce or in the production of goods for commerce:

"(1) any such enterprise which has one or more retail or service establishments if the annual gross volume of sales of such enterprise is not less than $1,000,000, exclusive of excise taxes at the retail level which are separately stated;

"(2) any such enterprise which has one or more establishments engaged in laundering, cleaning, or repairing clothing or fabrics if the annual gross volume of sales of such enterprise is not less than $1,000,000, exclusive of excise taxes at the retail level which are separately stated;

"(3) any such enterprise which is engaged in the business of operating a street, suburban or interurban electric railway, or local trolley or motorbus carrier if the annual gross volume of sales of such enterprise is not less than $1,000,000, exclusive of excise taxes at the retail level which are separately stated;

"(4) any establishment of any such enterprise, except establishments and enterprises referred to in other paragraphs of this subsection, which has employees engaged in commerce or in the production of goods for commerce if the annual gross volume of sales of such enterprise is not less than $1,000,000;

"(5) any such enterprise which is engaged in the business of construction or reconstruction, or both, if the annual gross volume from the business of such enterprise is not less than $350,000;

"(6) any gasoline service establishment if the annual gross volume of sales of such establishment is not less than $250,000, exclusive of excise taxes at the retail level which are separately stated:

Provided, That an establishment shall not be considered to be an enterprise engaged in commerce or in the production of goods for commerce, or a part of an enterprise engaged in commerce or in the production of goods for commerce, and the sales of such establishment shall not be included for the purpose of determining the annual gross volume of sales of any enterprise for the purpose of this subsection, if the only employees of such establishment are the owner thereof or persons standing in the relationship of parent, spouse, or child of such owner."

INVESTIGATIONS OF EFFECTS ON EMPLOYMENT OF FOREIGN COMPETITION

SEC. 3. Section 4 of such Act is amended by adding at the end thereof the following new subsection:

"(e) Whenever the Secretary has reason to believe that in any industry under this Act the competition of foreign producers in United States markets or in markets abroad, or both, has resulted, or is likely to result, in increased unemployment in the United States, he shall undertake an investigation to gain full information with respect to the matter. If he determines such increased unemployment has in fact resulted, or is in fact likely to result, from such competition, he shall make a full and complete report of his findings and determinations to the President and to the Congress."

SPECIAL INDUSTRY COMMITTEES FOR PUERTO RICO AND THE VIRGIN ISLANDS

SEC. 4. Subsection (a) of section 5 of such Act is amended by inserting after the words "production of goods for commerce" wherever they appear, the following: "or employed in any enterprise engaged in commerce or in the production of goods for commerce".

MINIMUM WAGES

SEC. 5. (a)(1) Section 6(a) of such Act is amended by inserting after the word "who" in the portion thereof preceding paragraph (1), the words "in any workweek".

(2) Paragraph (1) of section 6(a) of such Act is amended to read as follows:

"(1) not less than $1.15 an hour during the first two years from the effective date of the Fair Labor Standards Amendments of 1961, and not less than $1.25 an hour thereafter, except as otherwise provided in this section."

(3) The first sentence of paragraph (3) of section 6(a) of such Act is amended to read as follows:

"(3) if such employee is employed in American Samoa, in lieu of the rate or rates provided by this subsection or subsection (b), not less than the applicable rate established by the Secretary of Labor in accordance with recommendations of a special industry committee or committees which he shall appoint in the same manner and pursuant to the same provisions as are applicable to the special industry committees provided for Puerto Rico and the Virgin Islands by this Act as amended from time to time."

(b) Subsection (b) of section 6 of such Act is amended to read as follows:

"(b) Every employer shall pay to each of his employees who in any workweek (i) is employed in an enterprise engaged in commerce or in the production of goods for commerce, as defined in section 3(s) (1), (2), (3), or (5) or by an establishment described in section 3(s) (4) or (6), and who, except for the enactment of the Fair Labor Standards Amendments of 1961, would not be within the purview of this section, or (ii) is brought within the purview of this section by the amendments made to section 13(a) of this Act by the Fair Labor Standards Amendments of 1961, wages at a rate not less than $1 an hour.

"(2) if such employee is employed as a seaman on an American vessel, wages at not less than the rate which will provide to the employee, for the period covered by the wage payment, wages equal to compensation at the hourly rate prescribed by paragraph (1) of this subsection for all hours during such period when he was actually on duty (including periods aboard ship when the employee was on watch or was, at the direction of a superior officer, performing work or standing by, but not including off-duty periods which are provided pursuant to the employment agreement)."

(c) Subsection (c) of section 6 of such Act is amended to read as follows:

"(c) The rate or rates provided by subsections (a) and (b) of this section shall be superseded in the case of any employee in Puerto Rico or the Virgin Islands only for so long as and insofar as such employee is covered by a wage order heretofore or hereafter issued by the Secretary pursuant to the recommendations of a special industry committee appointed pursuant to section 5: *Provided,* That (1) the following rates shall apply to any such employee to whom the rate or rates prescribed by subsection (a) would otherwise apply:

"(A) The rate or rates applicable under the most recent wage order issued by the Secretary prior to the effective date of the Fair Labor Standards Amendments of 1961, increased by 15 per centum, unless such rate or rates are superseded by the rate or rates prescribed in a wage order issued by the Secretary pursuant to the recommendations of a review committee appointed under paragraph (C). Such rate or rates shall become effective sixty days after the effective date of the Fair Labor Standards Amendments of 1961 or one year from the effective date of the most recent wage order applicable to such employee theretofore issued by the Secretary pursuant to the recommendations of a special industry committee appointed under section 5, whichever is later.

"(B) Beginning two years after the applicable effective date under paragraph (A), not less than the rate or rates prescribed by paragraph (A), increased by an amount equal to 10 per centum of the rate or rates applicable under the most recent wage order issued by the Secretary prior to the effective date of the Fair Labor Standards Amendments of 1961, unless such rate or rates are superseded by the rate or rates prescribed in a wage order issued by the Secretary pursuant to the recommendations of a review committee appointed under paragraph (C).

"(C) Any employer, or group of employers, employing a majority of the employees in an industry in Puerto Rico or the Virgin Islands, may apply to the Secretary in writing for the appointment of a review committee to recommend the minimum rate or rates to be paid such employees in lieu of the rate or rates provided by paragraph (A) or (B). Any such application with respect to any rate or rates provided for under paragraph (A) shall be filed within sixty days following the enactment of the Fair Labor Standards Amendments of 1961 and any such application with respect to any rate or rates provided for under paragraph (B) shall be filed not more than one hundred and twenty days and not less than sixty days prior to the effective date of the applicable rate or rates under paragraph (B). The Secretary shall promptly consider such application and may appoint a review committee if he has reasonable cause to believe, on the basis of financial and other information contained in the application, that compliance with any applicable rate or rates prescribed by paragraph (A) or (B) will substantially curtail employment in such industry. The Secretary's decision upon any such application shall be final. Any wage order issued pursuant to the recommendations of a review committee appointed under this paragraph shall take effect on the applicable effective date provided in paragraph (A) or (B).

"(D) In the event a wage order has not been issued pursuant to the recommendation of a review committee prior to the applicable effective date under paragraph (A) or (B), the applicable percentage increase provided by any such paragraph shall take effect on the effective date prescribed therein, except with respect to the employees of an employer who filed an application under paragraph (C) and who files with the Secretary an undertaking with a surety or sureties satisfactory to the Secretary for payment to his employees of an amount sufficient to compensate such employees for the difference between the wages they actually receive and the wages to which they are entitled under this subsection. The Secretary shall be empowered to enforce such undertaking and any sums recovered by him shall be held in a special deposit account and shall be paid, on order of the Secretary, directly to the employee or employees affected. Any such sum not paid to an employee because of inability to do so within a period of three years shall be covered into the Treasury of the United States as miscellaneous receipts.

"(2) In the case of any such employee to whom subsection (b) would otherwise apply, the Secretary shall within sixty days after the enactment of the Fair Labor Standards Amendments of 1961 appoint a special industry committee in accordance with section 5 to recommend the highest minimum wage rate or rates, in accordance with the standards prescribed by section 8, not in excess of the applicable rate provided by subsection (b), to be applicable to such employee in lieu of the rate or rates prescribed by subsection (b). The rate or rates recommended by the special industry committee shall be effective with respect to such employee upon the effective date of the wage order issued pursuant to such recommendation but not before sixty days after the effective date of the Fair Labor Standards Amendments of 1961.

"(3) The provisions of section 5 and section 8, relating to special industry committees, shall be applicable to review committees appointed under this subsection. The appointment of a review committee shall be in addition to and not in lieu of any special industry committee required to be appointed

pursuant to the provisions of subsection (a) of section 8, except that no special industry committee shall hold any hearing within one year after a minimum wage rate or rates for such industry shall have been recommended to the Secretary by a review committee to be paid in lieu of the rate or rates provided for under paragraph (A) or (B). The minimum wage rate or rates prescribed by this subsection shall be in effect only for so long as and insofar as such minimum wage rate or rates have not been superseded by a wage order fixing a higher minimum wage rate or rates (but not in excess of the applicable rate prescribed in subsection (a) or subsection (b)) hereafter issued by the Secretary pursuant to the recommendation of a special industry committee."

MAXIMUM HOURS

SEC. 6. (a) Subsection (a) of section 7 of such Act is amended by designating such subsection as subsection (a)(1), by inserting after the word "who" the words "in any workweek".

(b) Section 7 of such Act is amended by adding at the end thereof the following new subsection:

"(h) No employer shall be deemed to have violated subsection (a) by employing any employee of a retail or service establishment for a workweek in excess of the applicable workweek specified therein, if (1) the regular rate of pay of such employee is in excess of one and one-half times the minimum hourly rate applicable to him under section 6, and (2) more than half his compensation for a representative period (not less than one month) represents commissions on goods or services."

WAGE ORDERS IN PUERTO RICO AND THE VIRGIN ISLANDS

SEC. 7. Subsection (a) of section 8 of such Act is amended by inserting after the word "industries" where it appears in the first sentence the words "or enterprise"; and by inserting after the words "production of goods for commerce" where they appear in the second sentence the following: "or in any enterprise engaged in commerce or in the production of goods for commerce".

LIMITATIONS ON REPORTS REQUIREMENTS

SEC. 8. Section 11(c) of such Act is amended by adding at the end thereof the following new sentence: "If an employer has filed with the Secretary a written assurance (in such form as the Secretary shall prescribe) that he is complying with the provisions of this Act, the Secretary shall not require such employer to make any other written report to him pursuant to this subsection unless he has reason to believe, on the basis of complaints made to him or on the basis of other information he considers reliable, that such employer has violated or is violating this Act."

CHILD LABOR PROVISIONS

SEC. 9. Subsection (c) of section 12 of such Act is amended by striking out the period at the end thereof and inserting in lieu thereof the following: "or in any enterprise engaged in commerce or in the production of goods for commerce."

EXEMPTIONS

SEC. 10. Subsections (a) and (b) of section 13 of such Act are amended to read as follows:

"(a) The provisions of sections 6 and 7 shall not apply with respect to—

"(1) any employee employed in a bona fide executive, administrative, or professional capacity, or in the capacity of outside salesman (as such terms are defined and delimited from time to time by regulations of the Secretary, subject to the provisions of the Administrative Procedure Act, except that an employee of a retail or service establishment shall not be excluded from the definition of employee employed in a bona fide executive or administrative capacity because of the number of hours in his workweek which he devotes to activities not directly or closely related to the performance of executive or administrative activities, if less than 40 per centum of his hours worked in the workweek are devoted to such activities); or

"(2) any employee employed by any retail or service establishment, more than 50 per centum of which establishment's annual dollar volume of sales of goods or services is made within the State in which the establishment is located, if such establishment—

"(i) is not in an enterprise described in section 3(s)(1), or

"(ii) is in such an enterprise and is a hotel, motel, restaurant, hospital, or school for physically or mentally handicapped, or gifted, children, or

"(iii) has an annual dollar volume of sales (exclusive of excise taxes at the retail level which are separately stated) which is less than $250,000.

A 'retail or service establishment' shall mean an establishment 75 per centum of whose annual dollar volume of sales of goods or services (or of both) is not for resale and is recognized as retail sales or services in the particular industry; or

"(3) any employee employed by any establishment (except an establishment in an enterprise described in section 3(s)(2)) engaged in laundering, cleaning, or repairing clothing or fabrics, more than 50 per centum of which establishment's annual dollar volume of sales of such services is made within the State in which the establishment is located: *Provided*, That 75 per centum of such establishment's annual dollar volume of sales of such services is made to customers who are not engaged in a mining, manufacturing, transportation, commercial, or communications business: *Provided further*, That neither the exemption in this paragraph nor in paragraph (2) shall apply to any employee of a hotel, motel, or restaurant who is engaged in laundering, cleaning, or repairing clothing or fabrics where such services are not performed exclusively for such hotel, motel, or restaurant: *Provided further*, That this exemption shall not apply to any employee of any such establishment which has an annual dollar volume of sales of such services of $250,000 or more and which is engaged in substantial competition in the same metropolitan area with an establishment less than 50 per centum of whose annual dollar volume of sales of such services is made within the State in which it is located; or

"(4) any employee employed by an establishment which qualifies as an exempt retail establishment under clause (2) of this subsection and is recognized as a retail establishment in the particular industry notwithstanding that such establishment makes or processes at the retail establishment the goods that it sells: *Provided*, That more than 85 per centum of such establishment's annual dollar volume of sales of goods so made or processed is made within the State in which the establishment is located; or

"(5) any employee employed in the catching, taking, propagating, harvesting, cultivating, or farming of any kind of fish, shellfish, crustacea, sponges, seaweeds, or other aquatic forms of animal and vegetable life, or in the first processing, canning or packing such marine products at sea as an incident to, or in conjunction with, such fishing operations, including the going to and returning from work and loading and unloading when performed by any such employee; or

"(6) any employee employed in agriculture or in connection with the operation or maintenance of ditches, canals, reservoirs, or waterways, not owned or operated for profit or operated on a share-crop basis, and which are used exclusively for supply and storing of water for agricultural purposes; or

"(7) any employee to the extent that such employee is exempted by regulations or orders of the Secretary issued under section 14; or

"(8) any employee employed in connection with the publication of any weekly, semiweekly, or daily newspaper with a circulation of less than four thousand the major part of which circulation is within the county where printed and published or counties contiguous thereto; or

"(9) any employee employed by a motion picture theater; or

"(10) any individual employed within the area of production (as defined by the Secretary), engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market, or in making cheese or butter or other dairy products; or

"(11) any switchboard operator employed by an independently owned public telephone company which has not more than seven hundred and fifty stations; or

"(12) any employee of an employer engaged in the business of operating taxicabs; or

"(13) any employee or proprietor in a retail or service establishment which qualifies as an exempt retail or service establishment under clause (2) of this subsection with respect to whom the provisions of sections 6 and 7 would not otherwise apply, engaged in handling telegraphic messages for the public under an agency or contract arrangement with a telegraph company where the telegraph message revenue of such agency does not exceed $500 a month; or

"(14) any employee employed as a seaman on a vessel other than an American vessel; or

"(15) any employee employed in planting or tending trees, cruising, surveying, or felling timber, or in preparing or transporting logs or other forestry products to the mill, processing plant, railroad, or other transportation terminal, if the number of employees employed by his employer in such forestry or lumbering operations does not exceed twelve; or

"(16) any employee of an establishment primarily engaged in the preparation or offering of food for human consumption who is employed in connection with the preparation or offering of food or beverages for human consumption by such services as catering, banquet, box lunch, or curb or counter service, to the public, to employees, or to members or guests of members of clubs; or

"(17) any employee employed in an amusement or recreational establishment that operates on a seasonal basis; or

"(18) any employee employed by a retail or service establishment which is primarily engaged in the business of selling automobiles, trucks, or farm implements.

"(b) The provisions of section 7 shall not apply with respect to—

"(1) any employee with respect to whom the Interstate Commerce Commission has power to establish qualifications and maximum hours of service pursuant to the provisions of section 204 of the Motor Carrier Act, 1935; or

"(2) any employee of an employer subject to the provisions of part I of the Interstate Commerce Act; or

"(3) any employee of a carrier by air subject to the provisions of title II of the Railway Labor Act; or

"(4) any employee employed in the canning, processing, marketing, freezing, curing, storing, packing for shipment, or distributing of any kind of fish, shellfish, or other aquatic forms of animal or vegetable life, or any byproduct thereof; or

"(5) any individual employed as an outside buyer of poultry, eggs, cream, or milk, in their raw or natural state; or

"(6) any employee employed as a seaman; or

"(7) any employee of a street, suburban or interurban electric railway, or local trolley or motorbus carrier, not included in other exemptions contained in this section; or

"(8) any employee of a gasoline service station; or

"(9) any employee employed as an announcer, news editor, or chief engineer by a radio or television station the major studio of which is located in a city or town of fifty thousand population or less, according to the latest available decennial census figures as compiled by the United States Bureau of Census, except where such city or town is part of a standard metropolitan area as defined and designated by the Bureau of Census, which has a total population in excess of one hundred thousand; or

"(10) any employee of an independently owned and controlled local enterprise (including an enterprise with more than one bulk storage establishment) engaged in the wholesale or bulk distribution of petroleum products if (A) the annual gross volume of sales of such enterprise is not more than $1,000,000 exclusive of excise taxes, and (B) more than 75 per centum of such enterprise's annual dollar volume of sales is made within the State in which such enterprise is located, and (C) not more than 25 per centum of the annual dollar volume of sales of such enterprise is to customers who are engaged in the bulk distribution of such products for resale; or

"(11) any employee whose minimum rate of wages is governed by section 6(b) of this Act."

EMPLOYMENT OF STUDENTS

SEC. 11. Clause (1) of section 14 of such Act is amended by striking out "and" after "apprentices," and by inserting after "messages," the following: "and of full-time students outside of their school hours in any retail or service establishment: *Provided*, That such employment is not of the type ordinarily given to a full-time employee,".

PENALTIES AND INJUNCTION PROCEEDINGS

SEC. 12. (a) Section 16(b) of such Act is amended by adding at the end thereof a new sentence as follows: "The right provided by this subsection to bring an action by or on behalf of any employee, and the right of any employee to become a party plaintiff to any such action, shall terminate upon the filing of a complaint by the Secretary of Labor in an action under section 17 in which restraint is sought of any further delay in the payment of unpaid minimum wages, or the amount of unpaid overtime compensation, as the case may be, owing to such employee under section 6 or section 7 of this Act by an employer liable therefor under the provisions of this subsection."

(b) Section 17 of such Act is amended to read as follows:

"INJUNCTION PROCEEDINGS

"SEC. 17. The district courts, together with the United States District Court for the District of the Canal Zone, the District Court of the Virgin Islands, and the District Court of Guam shall have jurisdiction, for cause shown, to restrain violations of section 15, including in the case of violations of section 15(a)(2) the restraint of any withholding of payment of minimum wages or overtime compensation found by the court to be due to employees under this Act (except sums which employees are barred from recovering, at the time of the commencement of the action to restrain the violations, by virtue of the provisions of section 6 of the Portal-to-Portal Act of 1947)."

STUDY OF AGRICULTURAL HANDLING AND PROCESSING EXEMPTIONS

SEC. 13. The Secretary of Labor shall study the complicated system of exemptions now available for the handling and processing of agricultural products under such Act and particularly sections 7(c), 13(a)(10) and 7(b)(3), and shall submit to the second session of the Eighty-seventh Congress at the time of his report under section 4(d) of such Act a special report containing the results of such study and information, data and recommendations for further legislation designed to simplify and remove the inequities in the application of such exemptions.

EFFECTIVE DATE

SEC. 14. The amendments made by this Act shall take effect upon the expiration of one hundred and twenty days after the date of its enactment, except as otherwise provided and except that the authority to promulgate necessary rules, regulations, or orders with regard to amendments made by this Act, under the Fair Labor Standards Act of 1938 and amendments thereto, including amendments made by this Act, may be exercised by the Secretary on and after the date of enactment of this Act.

Mr. ROOSEVELT. Mr. Chairman, under the agreement I move that the Committee do now rise.

Mr. AYRES. Mr. Chairman, will the gentleman yield?

Mr. Chairman, I would like a few minutes to ask a few questions on this very important matter.

Mr. ROOSEVELT. Mr. Chairman, I do not yield for that purpose.

Mr. AYRES. Mr. Chairman, I ask for 2 minutes.

The CHAIRMAN. Does the gentleman from California yield to the gentleman from Ohio?

Mr. ROOSEVELT. I yield for a statement, if the gentleman from Ohio cares to make a statement at this time.

Mr. AYRES. Mr. Chairman, I yield to the gentleman from Indiana.

Mr. ROOSEVELT. Mr. Chairman, I yielded to the gentleman from Ohio.

Mr. HALLECK. Mr. Chairman, a parliamentary inquiry.

Mr. AYRES. Mr. Chairman, I yield myself 5 minutes.

The CHAIRMAN. The gentleman from Ohio yields himself 5 minutes.

Mr. AYRES. Mr. Chairman, I yield to the gentleman from Indiana.

Mr. HALLECK. Mr. Chairman, in view of the statement which has been made by my very good friend, the gentleman from Oklahoma on the Democratic side, I am wondering since, as he says, this new substitute represents a very marked departure from the bill as reported by the committee, if he does not think that under the circumstances and in view of the fact that this is a new substitute, and that yesterday we had another one, and, further, that we have a committee bill and we have a substitute that has been offered for which there is a lot of support, it would not be a good idea to send this bill back to the committee in order that the committee could work over all these various proposed substitutes and come out here with something that would be understandable?

Mr. ALBERT. Is the gentleman from Indiana addressing his question to me or to the gentleman from California?

Mr. HALLECK. I am addressing the question to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Chairman, every single issue in this modified bill has been argued during the consideration of this bill by this body since the debate on the measure commenced. There is not, in my judgment, an important single departure from recommendations which have been considered by the Committee of the Whole or to objections which have been raised by Members of the House. This is an effort—a good faith effort on the part of the leadership and of the administration to move forward with this measure in a manner that will be acceptable to all concerned.

Mr. HALLECK. Will my colleague from Ohio yield to me to make one further observation?

Mr. AYRES. I yield to the gentleman from Indiana.

Mr. HALLECK. Certainly, I do not question the good faith of the gentleman from Oklahoma. He has always acted in good faith and he is acting in good faith in this matter. But I do not think it is a matter of good faith. I think it is a matter of orderly procedure here in the House of Representatives. As a matter of fact, we started with a bill reported by the committee. There was before us in the last session of the Congress what is known as the Kitchin-Ayres substitute.

A similar substitute, practically identical to what has been introduced, has been before the House for some time in the form of bills that have been printed, and the bill is printed in the CONGRESSIONAL RECORD. I must say that, as I understand the gentleman's brief explanation of the bill he has just introduced, it does vary quite substantially from anything that we have heretofore had before the House of Representatives. That is the reason for my suggestion—given, I may say, in good faith—that possibly it might be well to send the bill back to the committee for further committee consideration.

Mr. ALBERT. I would never question my good friend's good faith. We have been discussing two bills here today as well as other proposals. We have discussed the so-called Ayres-Kitchin substitute and the committee bill. This is a proposal in which we undertake to eliminate objections which have been raised both to the Roosevelt and to the Ayres-Kitchin bill.

Mr. AYRES. I take sufficient time to ask the gentleman from Oklahoma if it would be possible to get just one little copy of this bill in order that we can take a look at it?

Mr. ALBERT. I hope it will be possible. It will be in the RECORD tomorrow morning.

Mr. AYRES. We would like very much to have a copy of it because the gentleman mentioned some things here, I may say to the gentleman from Oklahoma, that the committee never gave any consideration to.

Mr. FRELINGHUYSEN. Mr. Chairman, will the gentleman yield?

Mr. AYRES. I yield.

Mr. FRELINGHUYSEN. It seems to me as a member of the Education and Labor Committee that we are making a mockery of legislative processes if we are to be presented with a proposal which incorporates what the gentleman

from Oklahoma describes himself as substantial amendments and not be given an opportunity even to see the legislation and then be asked to act favorably or unfavorably on it.

Mr. ALBERT. I have introduced the bill. It will be available tomorrow morning.

Mr. GOODELL. Mr. Chairman, will the gentleman yield?

Mr. AYRES. I yield to the gentleman from New York.

Mr. GOODELL. I would like to say that one of the matters mentioned by the gentleman from Oklahoma was never discussed in any form either in the subcommittee or in the full committee, and that is the 25 percent volume of the business being interstate in character. That is a new aspect of the entire problem. We should be given an opportunity to explore exactly what this means and what its implications are. Otherwise I think it would be a very disorderly procedure.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. ROOSEVELT. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, may I first point out to the gentleman from New York that if he will look at the committee bill he will find the reference to percent crossing State lines in many parts of the bill. I would say, therefore, that it has been considered and this is not a precedent.

I yield such time as he may desire to the majority leader, Mr. McCORMACK.

Mr. McCORMACK. Mr. Chairman, of course nobody questions the good faith of my friend from Indiana, but to question the tactical faith is a different proposition. There is nothing new about this; it has happened consistently in many bills coming before the House. As a matter of fact, the Ayres-Kitchin substitute was introduced after the committee reported out the bill. Another illustration is the Griffin-Landrum substitute to the Fair Labor Standards Act when that bill was under consideration. In this instance the gentleman from Oklahoma advises the Members of the House of the introduction of his bill and what it constitutes, in order that the Members may be alerted.

When the bill is read under the 5-minute rule, it would be perfectly proper for him or anyone else who is recognized to offer such a bill as a substitute. Instead of doing that the gentleman has told us what he proposed to do in order that the House might be advised of the content of the bill he has introduced and of the changes in the bill as compared with the bill reported out of the committee. The reason for that is because undoubtedly the fight tomorrow will be between this substitute and the Ayres-Kitchin bill. I think this manifestation of surprise on the part of my friend from Indiana and the other Republican Members has, to say the least, no countenance at all.

The whole purpose is to advise the membership of the House so that they will know what substitute will be offered on tomorrow. The gentleman from Indiana is too smart a technician not to realize that we Democrats take the House into our confidence and when they are in control they operate in secrecy.

Mr. HALPERN. Mr. Chairman, I rise in support of H.R. 3935. Anything less than the minimums proposed in this bill and its extension of coverage would be unfortunate. It is a reasonable bill and although I would have liked to have seen the extended coverage made broader as in the legislation which I offered, the passage of this bill will be of great benefit to some 4,300,000 wage earners who are not now covered by minimum wage legislation, to 3 million others who are covered but will receive increases under this proposal.

The American working man has a right to expect a decent and adequate wage standard. It is time for decisive action. Even though the average hourly rate of earnings in American industry in 1959 was in the neighborhood of $2.20, considerably above the minimum proposed in H.R. 3935, there are still however, some 20 million American workers not protected by minimum wage standards.

Many of these millions are working people whose hourly earnings are far below even the minimum proposed and whose standards of living are necessarily depreciated as a consequence. It is a good portion of these millions, presently beyond the protection of Federal standards, who would be directly benefited by this reasonable legislation.

The step-up wage increase formula is another moderate feature of the bill which deserves commendation. Such provisions are an attempt to reconcile the problems confronted by small businessmen with the public policy of providing decent wage standards for the American workingman.

Beyond the justification of the immediate personal gain, would also be the benefit accruing to our national economy through the creation of an expanded consumers market.

Those whose hourly wage rates would be affected are among the lower income groups in the country. An increase in their take-home pay, even if not great, will yet create a market of considerably expanded proportions because of the sheer numbers involved.

An increase in the consumption of goods in the national interest is intimately related to increasing the consuming power of the lowest income groups in our society. If absorption of the output of our production capacities has become a national necessity, then possession of the means for consuming is just as important. Here is a basic significance of the minimum wage bill and a fundamental reason for the Members of this Congress to back it.

Another beneficial consequence of the enactment of such legislation is its relationship to the development of national standards. Competition among areas of the Nation on the basis of wage differentials is ofttimes exceedingly distressing in terms of human considerations. Where human degradation is involved there is hardly cause for rejoicing. With the elimination of the basing-point system, the remaining method of attainment of competitive advantage through sweatshop methods would be substantially reduced by enactment of this legislation. National standards play a significant role in restricting this abuse.

Mr. Chairman, the arguments on behalf of minimum wage legislation have been advanced time and again. They concern national economic growth, national economic necessity and self-interest, basic humanitarian considerations, and national advancement toward the objectives of the American ideal.

Mr. ROOSEVELT. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. WALTER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3935) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND REMARKS

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent that all Members may have permission to extend their remarks in the RECORD at the conclusion of general debate today.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

COMMITTEE ON MERCHANT MARINE AND FISHERIES

Mrs. HANSEN. Mr. Speaker, I ask unanimous consent that the Committee on Merchant Marine and Fisheries may be permitted to sit tomorrow during general debate.

The SPEAKER. Is there objection to the request of the gentlewoman from Washington?

There was no objection.

GREEK INDEPENDENCE DAY

Mr. CONTE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. CONTE. Mr. Speaker, on this March 25 our stanch and loyal ally Greece and Greco-Americans commemorate the 140th anniversary of independence day. In 1821 the courageous people of Greece after an arduous struggle achieved their independence from the Ottoman Empire. In that famous war, the great British poet Lord Byron gave his life in the cause of freedom.

Without a doubt, Greece can be called the wellspring of Western civilization. The debt owed by all men to the titans of thought spawned by this little nation, is incalculable. Our concept of democracy, indeed the word itself, is of Greek origin. To every field of intellectual endeavor the Greeks have left an indelible mark. Such giants of the intellect as Aristotle, Plato, Eratosthenes, Euclid, Archimedes, Pythagoras, Euripides, Hippocrates, Democritus, and so many more. Indeed, our Western World, its concepts, ideals, culture, and bodies of knowledge have had their origin in ancient Greece.

It is right, therefore, that we who are heirs to the fundamentals and essentials of a civilization given us by the Greeks, should join with them in this celebration.

In our time we have seen the same spirit and courage which the Greeks displayed at Thermopylae manifested once again as they resisted the hordes of an invader in 1941.

A nobility of spirit and ideals, a fierce love of independence, and a dedication to industriousness have characterized the people of Greece and their descendants in America. Today, they stand with us in the identical beliefs in the dignity of man, his freedom, and the rights of self-determination. They are an integral and vital part of NATO. However, they are not only physical allies of the United States but spiritual as well. For we two nations are based on the same basic foundations given to us by their ancient progenitors.

It is indeed a pleasure to know that we can celebrate this occasion with a feeling of joy. That we can join our sentiments to those of the Greek nation, the Greco-Americans, to commemorate independence day in a spirit of freedom, mutual respect, and with a firm confidence in a future of growth and progress.

PRESIDENT KENNEDY DIRECTS DEFENSE DEPARTMENT TO INCREASE SMALL BUSINESS' SHARE OF DEFENSE CONTRACTS

Mr. EVINS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. EVINS. Mr. Speaker, all Americans should be happy in that our Nation, under the leadership of President John F. Kennedy, has an administration dedicated to the proposition that what is good for small business is good for America.

At the President's latest press conference, on March 15, 1961, the very first thing he said was that the Secretaries of the military departments have been instructed to take steps to provide a greater percentage of defense contracts for small business. This Presidential directive is now being implemented through affirmative action.

The President then pointed out that contracts for small business awarded by the Defense Department in fiscal year 1960 amounted to $3,440 million, or only 16 percent. In the President's words, "we are going to try to increase that by at least 10 percent." According to the most recent figures released by the Department of Defense, prime contract awards to small business firms in December 1960, dropped to an alarming low of only 14 percent of the total. This pathetic percentage of awards to small business is emphasized by the fact that the available statistics from fiscal year 1954 reflect a decline from a high of 25.3 percent in 1954 to this dangerously low level.

I have had the privilege and honor of serving as chairman of Subcommittee No. 1 of the Select Committee on Small Business of the House of Representatives, and during the past session of Congress, the subcommittee has studied the organization and operation of the Small Business Administration. As is well known, that agency was established by the Congress, not only for the purpose of rendering financial aid and assistance to small business concerns, but also to be of service to them in the area of Government procurement matters. Thus, joint determinations are made by the SBA and other Government agencies to set aside proposed procurements by the Government, in whole or in part, exclusively for small business concerns. Of course, other forms and types of assistance are supposed to be rendered to small business, by not only the SBA, but also by the small business divisions of each branch of the military services.

I feel that in the light of investigations and public hearings of the House Small Business Committee, facts have been uncovered which clearly indicate that the best interests of small business, and, I might add, of our country, were not being promoted by the prior administration's predilection and favoritism for big business and vested interests.

Small wonder, therefore, that our Nation witnesses a sagging economy. The figures, according to Dun & Bradstreet, show an alarming increase of bankruptcy and business failures. Statistics do not lie. I submit that there must be a reason for this great mortality among small businesses.

The October 1960 total of small firms' adversities projected on an annual basis, reached a postwar record of 65 per 10,000 of listed business population—the highest failure rate since 1939.

I do not want to dwell on this gloomy picture, but it gives me pleasure to have seen reports from leading economists that this business recession has now reached bottom, and that the future looks bright indeed for America's economy. There appears to be no doubt that brighter days lie ahead because a new Democratic administration is now in Washington to guide the destinies of our great Nation to new frontiers of achievement.

The final report of the House Small Business Committee of the 86th Congress reported that one of its studies revealed that the percentage of prime contracts from the Department of Defense to small business declined, and no significant effort was made to stop that decline.

Of particular significance was the President's cognizance of the importance of research and development to our defense posture, and in this vital area he also stated that provision will be made for increasing small business participation. All will welcome President Kennedy's words in this area.

Small business today, as well as in the past, has played a vital role in the maintenance of active competition, upon which our economy is based. The small firms perform great services in the area of innovation and stimulation of the economy by the development of new ideas, new products, and new processes.

It is the declared policy of the Congress that the Government should aid and protect, insofar as possible, the interests of small business, in order to preserve free competitive enterprise and to insure that a fair proportion of contracts for property and services for the Government be placed with small business concerns.

I feel confident that the new Administrator of the SBA, Mr. John E. Horne, will provide the long needed leadership to make that agency an effective instrument on behalf of the small business segment of the American economy.

At this point, I wish to reiterate what has been stated many times. We are not against big business, but we are in favor of permitting small business to survive, and to give it an opportunity to compete on equal terms with others. America grew great on private enterprise and on the initiative of the countless millions of small businessmen. It is important that we foster policies to protect small business because if and when small business disappears, then our free enterprise system will collapse.

I commend the President on his direction in this field to promote private enterprise and small business economy.

HEALTH SERVICE PROGRAMS

Mr. RHODES of Pennsylvania. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. RHODES of Pennsylvania. Mr. Speaker, I am introducing, for appropriate reference, a bill to assist voluntary nonprofit associations offering prepaid health service programs to secure necessary facilities and equipment through long-term, interest-bearing loans.

As my colleagues are aware, I have long been concerned with the problem of how the best of modern American medicine can be made available to all Americans. I am persuaded that one of the most promising developments toward this end lies in the vast expansion of medical group practice, particularly when group practice is associated with comprehensive prepayment plans.

Progress in medical science has made medical practice much more complicated. Fifty years ago it was possible for one doctor to encompass all the knowledge that was then available. Alone, he could provide the best known

treatment for all kinds of diseases and conditions. This is no longer true. And that is why so many doctors have become specialists.

The development of group practice has met these new necessities of modern medical care.

In a medical group, family doctors and all the major specialists work together as a team. The patient benefits by being able to go to one place where his health is comprehensively managed instead of his having to go all over town from family physician to specialist to X-ray man, and so forth.

In group practice each doctor does what he is trained to do best. "Physicians working together in a group," according to the President's Commission on the Health of the Nation, "continue the best features of their training period throughout their professional lives—the stimulation to keep up with medical progress through constant appraisal by informed colleagues and ready access to consultations and technical assistance."

President Truman's Commission, reporting in 1952, went on to say:

> The further development of group practice would carry forward several principles to which we subscribe—the principle that the physician should have access to all the resources necessary for the care of the patient, the principle of comprehensive health services, and the principle that the same high quality of care should be available to all people.

There is the most striking agreement among authorities in the health field on the promise that group practice holds for better health care. Most recently, Dr. Gunner Gunderson, president of the American Medical Association, 1958–59, said that "there is no question that group practice can provide better medicine."

The developments in medical science of which I have spoken have made medical practice more complex and have also tended to make it vastly more expensive. The old ways of paying for care at the time of service, usually when the patient was ill, have become outmoded. Through experience, many groups have discovered that comprehensive prepayment combined with the group practice of medicine provide the ideal setting for high-quality care to be rendered at premiums that working people can afford to pay and can budget for.

Plans that are organized on this basis—and these include plans with more than half a million members like the Kaiser Foundation Health Plan on the west coast and the Health Insurance Plan of Greater New York, as well as smaller plans in various other parts of the country—are bringing the best of modern medical care to their subscribers. Economic barriers to needed care are removed through the provision of comprehensive payments. All important health services are made available including care in the doctor's office, the medical center, and the home. A complete change of focus is accomplished when the emphasis on in-hospital benefits, so prevalent in most other kinds of plans, is removed through the provision of comprehensive payments. Care is directed toward the prevention and early detection of illness. It has been found that the amount of hospitalization is radically reduced for members of most comprehensive plans because they need not go to the hospital to collect benefits, and because there is more preventive care to catch and control disease before it becomes serious enough to result in a hospitalized illness.

It is my conviction that if we are to make the best use of our health resources and facilities, and thus improve the health of the Nation's citizens, we must look to the expansion of comprehensive prepayment plans allied with the group practice of medicine.

One of the major factors that has impeded such expansion is the difficulty that these plans face in obtaining financing for needed physical facilities. I am, therefore, proposing a program of Federal loans to comprehensive group practice health plans for the construction of facilities needed to provide both ambulatory and bed patients with comprehensive medical care. It authorizes an appropriation for this purpose of $10 million for each of the first 2 years and such sums as may be necessary for each of the next 3 years. I look forward to vast savings both in dollars and in health to result from such a program.

This legislation would take its place alongside other efforts by the Federal Government to assist States, local communities, and voluntary associations to improve the health services available to the American public. With the legislation that has been proposed by President Kennedy to aid medical education and to provide grants for community facilities and services as proposed in H.R. 4998 and H.R. 4999, this legislation will be another in the series of steps in the tradition of the highly successful Hill-Burton Hospital and Medical Facilities Act, whereby the Federal Government can meet its responsibility to help in making modern medical care more readily available to all Americans.

The President of the United States, in his health message to the Congress stated that "The dramatic results of new medicines and new methods—opening the way to a fuller and more useful life—are too often beyond the reach of those who need them most." He spoke of the "major deficiencies in the quality and distribution" of health services. The legislation I have introduced today will go far to remedy this situation.

"THIS AWFUL SOCIALISM"—AN ANSWER TO A CONSTITUENT'S LETTER

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, one of my constituents wrote me a letter recently which illustrated the concern many of our people feel toward the expansion of the Federal Government into areas traditionally served by local governments. These developments were characterized as "this awful socialism." But to simply label this whole complicated process as socialism is to replace reason and understanding with slogans and scare words. Moreover, many of these objections to Federal action rest on the faulty premise that local communities actually have the resources to do these jobs.

In an attempt to set the record straight as to my views on this problem, I gave the following answer to this constituent's letter:

> Your letter of January 26 concerning what you call this awful socialism is most disturbing.
>
> The tendency of the Federal Government to become more and more involved in the affairs of the local communities is, I know, on the minds of a great many people. Increased Federal financing of such things as care for the older people, aid to the unemployed, slum clearance and housing, aid to education, and so on, has posed some serious questions for me, for a long time.
>
> However, about the best I have been able to do, to clarify my own thinking, is to look behind some of the propaganda terms and, I think, identify some of the real causes for the trend which disturbs you. But finding causes only raises more questions which, in the end, must be answered by the public whose opinions shape our public policies.
>
> Let me outline the problem, and then pose the real, hard questions which have got to be answered.
>
> To begin at the beginning though, let me say that I do not think that the question whether we should have more or less socialism is a practical question at all. Socialism is a scare word being used by some influential groups who are in a power struggle with government at all levels—Federal, State, and local. Further, I do not think all expansions of the Federal Government into new fields are bad. On the other hand, I do not think that everything the Federal Government does should be done, or that everything the Federal Government attempts could not be better left to the local communities. Let us ask ourselves whether the things that are now being proposed should be done at all, without respect to how they should be done.
>
> First, care of the older people? Is it possible that our society will much longer consign millions of older people to mean shelter, desolate surroundings, and inadequate food and medical care? Considering that our economic system is burdened with surpluses of all kinds and that a chronic defect of the system seems to be that it cannot distribute all the wealth it can produce; will anyone even argue that the older people should share so poorly in the worldly goods?
>
> The unemployed? Does free enterprise mean that we are not our brother's keeper? Has this country wrought an economic system so perfect that there is really no place for 5 to 6 million families whose breadwinners are out of work and cannot find work? Shall we have these families starve or send their children to beg in the streets?
>
> Education? We have it on good authority that at least 2 million schoolchildren go to schools which have no proper room for them, that 90,000 teachers are not properly qualified to teach, and that one-third of the most promising high-school graduates are financially unable to continue their training. We know, also that the advances in science and technology which are now taking place are rapidly eliminating job opportunities for the untrained. The young people today, if properly trained, will tomorrow advance the frontiers of science and technology, for the benefit of all. Shall we, then, allow our children to be prepared only for unemployment tomorrow, only to save a few dollars today?

Housing? Should we merely deplore the increasing juvenile delinquency and build perhaps more prisons? Or must we do something about the crime-breeding and disease-breeding slums which blight our towns and cities?

Depressed areas? The assistance we gave Western Europe to help rebuild its industries after World War II made good sense. The whole Western World is better, richer, and has stronger defenses as a result. Why not, then, help our own distressed areas rebuild their economies? Why is it socialistic to help advance and strengthen free enterprise?

The answer to our first question—"should these things be done"?—is, I assume, "yes." I assume also that they will not be done by private business, because they are not the kinds of things on which private firms can make profits. Even so, they could well be profitable for the Nation as a whole. The postal system, for example, does not make a profit, yet it undoubtedly adds immensely to the profitability of all kinds of private activity.

These things which seem certain to be done obviously must be done, if they are done at all, at some level of government—Federal, State, or local.

Socialistic? During my years in Congress I have heard such measures as social security, unemployment insurance, insurance of bank deposits, FHA insurance of home mortgages, and so on, all opposed for the reason, it was said, that the Government's venture into these fields would inevitably weaken private enterprise and lead to the Government's taking over places which should be reserved for private business. But in the years that have passed, I have not been able to detect any dwindling of private business. On the contrary, private business has grown vastly, become more profitable, more influential in the affairs of the Nation, more secure from large-scale bankruptcy and disorder, and, I suspect, more securely fixed as a continuing institution in the Nation.

Further, notwithstanding the fact that the cries of socialism are now coming from the big business community, I have no doubt that if the recession should seriously worsen and the big corporations became threatened with bankruptcy, there would be demands for much larger scale governmental help and little opposition to the demands. After the experience of the 1930's, moreover, I believe we have all learned enough to know that the time to act against economic disease is when the fever first strikes, not after a crippling disease has run its course and paralysis has set in.

This brings us to the question of how the things now being proposed—increased care for the older people, extended compensation for the unemployed, aid to depressed areas, and more money for education and housing—can and should be done. Personally, I would much prefer that all of these things be done by the local communities—if that could be made possible. Furthermore, we know that in times gone by these things were done, and, for the most part, were done satisfactorily by the local communities.

Furthermore, there was a time when the income-producing wealth of the Nation was largely locally owned and the incomes went largely to local people. Only a few short decades ago the large proportion of the national income was from farming—locally owned farms—and the mills, and the business firms along Main Street were locally owned. When this was true, the local communities could take care of their unemployed, if they had any, their older people, the children's schooling, and so on. But the distribution of ownership of income-producing wealth has drastically changed, and is still changing.

First, while our national income has gone up, a much smaller percentage is produced on farms which are largely locally owned businesses. To illustrate, in 1900, 60 percent of the population lived on farms; by 1930, it was 44 percent; and as of now, only about 10 percent of the population lives on farms.

Furthermore, the nature of farming has changed. It used to be that almost all farms were family farms of a self-sufficient type. When people became unemployed in the towns or cities, there was work and a living for most of them back on the farm of friends or relatives. Today, even the relatively few remaining farms are operating on a corporate-type, mechanical schedule.

What has happened to the locally owned businesses along Main Street? Today they are mostly only local units of some absentee-owned, nationwide chain. I was greatly shocked by a piece published by Miss Sylvia Porter a few years ago showing that after making a survey of Louisville, Ky., she found that 85 percent of all of the jobs in the local stores were jobs in absentee-owned businesses controlled from such distant centers as New York and Chicago.

When business was locally owned, there was no unemployment of older people who were able and willing to work. Today, an individual over 40 or 45 usually cannot get a job with one of the big corporations.

Do people in the local communities still own a share in the local business, by virtue of the fact, as it is sometimes said, that they own stock in the great corporations? As you may know, the New York Stock Exchange now boasts that the stocks of the American corporations are held by as many as 13- or 14-million people. Here is the way to interpret that claim. The U.S. savings bonds are much more widely owned than corporate stocks or any other kind of security. The Treasury reports that 43 million people own these. But a survey made for the Federal Reserve Board recently shows that on a family basis, 73 percent of the American families own not so much as one of these $25 savings bonds. On the other hand, 5 percent of the families owned 87 percent of all of these bonds.

No, it is obvious that ownership of the big corporations is not very evenly distributed among the people or among the local communities.

Where, then, is the power to tax? It lies with the Federal Government; it does not lie with the local communities or even, in most cases, with the States.

In truth, the local communities raise most of the funds they do raise by taxing the assessed value of the homes and farms in the community. This means that the local citizens are paying taxes not only on what they own, but on what they owe as well. Most of the homes and farms are mortgaged and often as not some absentee mortgage holder owns more of the property than does the local resident.

I hate to say it, but I see only this alternative: Either the Federal Government must provide the funds for more and more of the local community needs—and raise the taxes to obtain the funds—or the businesses and other means of accumulating wealth must be returned to the local communities.

This, then, is the question on which I would like the benefit of your views and ideas: Should we try to find some way to break up the giant corporations and turn back the business of Main Street to owners in the local communities?

Should we design and try to pass some powerful new antitrust laws which will force the giant corporations to sell off the individual business units which have been amassed together under these corporate governments?

Should we set up a large bank, something on the order of the RFC, to lend money to local citizens to buy out the local businesses from which the corporations will be divesting themselves?

I do not want to give the impression that I think these questions give the right answers. I ask them only to stimulate thinking as to the kinds of things that might be done to reverse the trend toward what is called socialism. One thing is certain—either we must take some strong, affirmative steps to break up the private economic governments and return the income-producing wealth to the local communitites, or we must accept the consequences of more and more Federal encroachment and more and more Federal intervention into the affairs of the States and local governments.

TAX BENEFITS FOR COLLEGE TUITION COST

Mr. LATTA. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland [Mr. MATHIAS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. MATHIAS. Mr. Speaker, I have today introduced a bill to amend the Internal Revenue Code of 1954 to allow an individual an itemized deduction for the amount of tuition paid to a college, university, or other institution of higher learning.

In a period when intellectual discipline and academic achievement are recognized as vital to our national existence, it becomes essential to insure that scholastic opportunity be as universal as individual talents will permit. One means of increasing educational opportunity is through tax relief. The economic burden of these currently paying the rising cost of higher education will be reduced by this legislation.

In drafting the bill I have taken into account the fact that the average cost for tuition and required fees is currently $225 in a State-owned college or university and $363 in a privately owned institution. The Internal Revenue Code now allows deductions to persons making charitable contributions to scholastic institutions but does not allow deductions for tuition payments. My bill would amend the code to allow a maximum deduction of $500 subject to the limitation of educational assistance paid by the Federal Government. I believe that it is proper and necessary to extend deductions to those individuals paying tuition to institutions as well as to allow present deductions for contributions to the same academic institutions.

According to available statistics, the approximate loss to the Government in the way of tax revenue as a result of enactment of this bill would be $500 million per year. The loss of Federal revenue is justified since deductions resulting from my bill would be a business investment with the prospect of both personal and monetary returns to be enjoyed by the entire Nation.

WEST VIRGINIA DECENNIAL CENSUS

Mrs. HANSEN. Mr. Speaker, I ask unanimous consent that the gentleman from West Virginia [Mr. STAGGERS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Washington?

There was no objection.

Mr. STAGGERS. Mr. Speaker, following the decennial census year, my State of West Virginia, in common with a number of other States of this Union, is under the necessity of changing the number of Members of the House of Representatives, and consequently of changing the boundaries of some or all of the districts. West Virginia loses one Representative, and our current State legislature had the painful duty of performing the necessary operations. We feel that the legislature has accepted its responsibility in a statesman-like manner and redrawn district lines in just and equitable fashion.

In the new distribution, Greenbrier County has been removed from the Fifth District, so ably represented by Congresswoman KEE, and Upshur County has been taken from the Third District, represented by my distinguished and well-loved colleague, Congressman BAILEY, and these two counties have been placed in the Second District, which I have the privilege of representing.

It is understandable that the fine people of these two counties will miss the cordial relations which they have enjoyed with the other parts of their respective former districts, and especially that they will regret the loss of the services of their most capable Representatives. My purpose here is to welcome them into the Second District, and to assure them that every consideration of their interests and needs will be given them in their new connection. They will find, I believe, many things in common with the older counties of the district, their occupations, their ways of life, their traditions, their aspirations. And I hope that they will speedily feel at home in working with their new comrades. I should also ask of them the privilege of extending my prompt and serious attention in any matter in which I can be of service. I sincerely trust that no one of the industrious and conscientious citizens of these two counties, regardless of political connections, will hesitate to call on me, whenever I can promote his interests.

FINANCIAL ASSISTANCE PROGRAM OF THE SMALL BUSINESS ADMINISTRATION

Mr. EVINS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. EVINS. Mr. Speaker, the very cornerstone of the structure established by Congress for assistance to small business is the financial assistance program as set up by the Small Business Act. Under unanimous consent, I place in the RECORD for the attention of my colleagues, some findings of Subcommittee No. 1 of the Select Committee on Small Business of the House of Representatives relative to recent developments of this program:

FINANCIAL ASSISTANCE PROGRAM OF SBA

This program is divided into two main categories:

1. Section 7(a) of the act empowers the SBA to make business loans to concerns for plant construction, conversion, or expansion, including the acquisition of land or to finance the acquisition of equipment, facilities, machines, supplies, or materials for war, defense, or civilian production, or as may be necessary to insure a well-balanced national economy.

2. Section 7(b) of the act empowers the Administration to make disaster loans to both business concerns and homeowners, regardless of size, who suffer disasters because of flood, hurricane, tornado, excessive rainfall, or other sudden catastrophes.

The wisdom of Congress in establishing a disaster loan program and its efficacy has been demonstrated by the amount of loans approved in emergency situations and areas. As of September 30, 1960, 9,513 disaster loans, amounting to $104.9 million had been approved by the SBA since the inception of the program. During September alone, 269 applications for $2.8 million were received, due mainly to Hurricane Donna. The records indicate that the SBA has approved 80 percent of the loan applications received for disaster loans since the program began. The Small Business Act established the interest rate on these disaster loans at 3 percent.

The committee has no criticism to advance regarding the operation of the disaster loan program by SBA.

It is wished that this were also true concerning the regular small business loan program established in section 7(a) of the act. Much criticism has been received concerning the loan policies of the Small Business Administration pertaining to the regular small business loan program, especially during the past 2 years. Of course, many loans have been made under this program; and the record reflects that from the start of its lending operations in September 1953 through June 30, 1960, the agency has approved 20,362 business loans for $955,191,000.

Of this amount, the SBA has disbursed $542.7 million on 16,471 loans. This might appear to be a good record; but when it is noted that there are 4,690,000 business firms in operation (98 percent of them are small businesses by SBA standards), then it is realized that the surface has just been scratched. Less than one-half of 1 percent of the business firms in the Nation have received financial aid from the SBA. At the end of the 1960 fiscal year, the SBA had loans outstanding, including participation commitments, of $381.8 million. The gross debt of all the corporations in the country amounted to nearly $350 billion. Simple arithmetic indicates that SBA's portion of the overall portion of credit was not much more than one-tenth of 1 percent of the corporate debt.

The SBA has approved only 47.3 percent of applications on which it took action since the start of the agency's lending program through fiscal year 1960. Following is a table showing the applications received, approved, and the amount approved for each fiscal year since the inception of the program:

Fiscal year ending June 30—	Applications received	Applications approved	Amount approved
1954	2,289	473	$27,739,000
1955	3,318	1,172	55,975,000
1956	4,081	1,915	81,977,000
1957	6,864	3,536	159,095,000
1958	7,898	4,014	194,997,000
1959	10,213	5,582	267,042,000
1960	8,331	3,670	168,366,000
Total	42,994	20,362	955,191,000

NOTE.—Percentage of applications approved, 47.3.

The percentage of approvals would especially warrant apprehension when it is realized that only a small portion of the small businessmen who approach the SBA actually file formal applications.

An examination of the records of the San Francisco regional office indicates that during the 18-month period from July 1958, through December 1959, there were approximately 5,750 regular financial assistance inquiries which did not result in loan applications. During this same period, only 343 applications were accepted by the regional office for processing. Thus, out of a total of 6,093 inquiries, only 343 resulted in the submission of formal applications. In other words, formal loan applications were accepted from less than 6 percent of the small businessmen who inquired at that regional office concerning financial assistance. If the record of that regional office is a true test of the general situation, then only about 3 percent of the small businessmen who approach SBA requesting financial assistance finally receive such assistance. Also when it is considered that a good many of the loans approved are not actually disbursed, the percentage becomes even less than 3 percent.

Subcommittee No. 1, of the House Small Business Committee, in its report of February 8, 1960, stated:

"It is felt that there are many areas in which the SBA has adopted loan policies which are too stringent and which have not utilized fully the potentialities of the program."

The subcommittee also recommended:

"The SBA should constantly review its procedures in the processing of applications for loans in order to reduce the timelag and redtape involved."

There is nothing that can discourage a program more than to have it swallowed in redtape. This is tied in closely with the strict credit requirements of SBA and the conditions pressed upon the applicant after his loan is approved. It is felt by many that in the past SBA, even after approving an application, imposed such strict conditions prior to disbursement, that the loan became impractical.

The volume of loans approved during the last fiscal year was very disappointing, the lowest since 1957. I was gratified to learn that the drastic decline of last fiscal year has been reversed.

During the first 8 months of the current fiscal year SBA approved loans totaling $127,513,000. Projected for the entire fiscal year this amounts to about $191 million.

This is a hopeful sign that the SBA is acting more aggressively in achieving the objectives of the SBA Act.

SMALL BUSINESS INVESTMENT COMPANIES

Mr. EVINS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. EVINS. Mr. Speaker, I would like to call to the attention of my colleagues of the House, the small business investment companies currently operating in various parts of the country. As you know, these companies have been licensed by the Small Business Administration to provide a source of equity capital and long-term credit for small business concerns throughout the Nation. There now are 200 small business

investment companies licensed by the Small Business Administration.

Mr. Speaker, under unanimous consent, I include the list of such companies licensed by the Small Business Administration as of March 10, 1961:

DECENNIAL CENSUS CONDUCTED IN 1960

Mr. JOELSON. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. DADDARIO] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. DADDARIO. Mr. Speaker, the Constitution requires that an enumeration of the population of this country be taken every 10 years to furnish accurate statistics for the conduct of affairs. As we all know, the decennial census was conducted in 1960.

Recently Members of this body were furnished with copies of a breakdown purporting to be the census results on their States. I am surprised to find that the detail on my home State of Connecticut contained in one table at least of this publication is erroneous and gives a totally misleading impression.

This came to my attention through the alertness of Mr. Herman Wolf, chairman of the Connecticut Travel Commission, one of the many agencies that relies upon such statistics in developing a program to stress Connecticut's beauty and natural attractions and to encourage others to share our great natural advantages.

Mr. Wolf, trying to make sense of table 8 in this pamphlet, had to give up. It just does not make sense. I agree and am asking the Census Bureau today to withdraw this table from circulation. I would recommend earnestly to other Members that they, too, check this publication against their own knowledge of their States and districts.

It does no good to conduct a census if the figures are compiled in Washington and completely divorced from reality. It may be that some machine, which has no knowledge of Connecticut's fine communities, merely rapped out a table for the document. It may be that some earnest statistician totaled the figures—but I cannot understand how a table would be compiled to omit some outstanding towns and to include others which may not be found in the Connecticut State directory.

For instance, at least 12 of the 29 towns in my district are listed in table 8 with populations far too small and bearing no relation to the count as I know it. South Windsor, Windsor, Windsor Locks, Avon, Berlin, Bloomfield, Canton, East Windsor, Farmington, Glastonbury, Newington, Plainville, and Rocky Hill are not listed at all. I would hope that the omission of Avon is not a reprisal against that distinguished descendant of Avon, Mr. Joseph Alsop. Simsbury is listed, with a population in 1960 of 2,745. But Simsbury, in table 7, is shown at its real population of 10,138, although the same, unrealistic, unincorporated figure is contained a line below.

I think table 8 is unnecessary and misleading. I am the more distressed because, as Mr. Wolf notes—his son learned these erroneous figures from an encyclopedia which had no reason to doubt the Census Bureau. Now it does. I have written the Census Bureau asking them to withdraw this table and these figures from the public record as misleading.

APRIL 13, 1961, DESIGNATED AS PAN AMERICAN DAY

Mr. SELDEN. Mr. Speaker, I ask unanimous consent for the immediate consideration of a resolution.

The Clerk read as follows:

H. RES. 230

Resolved, That the House of Representatives hereby designates Thursday, April 13, 1961, for the celebration of Pan American Day, on which day, after the reading of the Journal, remarks appropriate to such occasion may occur.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

The SPEAKER. The question is on the resolution.

The resolution was agreed to and a motion to reconsider was laid on the table.

HOUR OF MEETING TOMORROW

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on tomorrow at 11 o'clock.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. HOFFMAN of Michigan. Mr. Speaker, I object. This is a health measure. We are told that some of us cannot stand these long hours.

Mr. McCORMACK. Mr. Speaker, I was going to make the request to meet at 10, but I compromised. I renew my request.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. BUCKLEY (at the request of Mr. HEALEY), for an indefinite period, on account of illness.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. PATMAN in the body of the RECORD following the legislative program today, and to include extraneous matter.

Mr. MASON on the subject of "Tax Loophole Closures."

Mr. O'HARA of Michigan, the remarks he made in the Committee of the Whole today and to include extraneous matter.

Mr. SANTANGELO and to include extraneous matter.

Mr. ALBERT to include as a part of the remarks he made in the Committee of the Whole today a copy of the bill, H.R. 5900.

Mr. JAMES C. DAVIS.

(The following Member (at the request of Mr. LATTA) and to include extraneous matter:)

Mr. ANDERSEN of Minnesota.

(The following Members (at the request of Mrs. HANSEN) and to include extraneous matter:)

Mr. DENT to revise and extend his remarks in Committee and to include extraneous matter, tables, and charts.

Mr. FOGARTY in two instances.

Mr. EVINS and to include tables.

Mr. RODINO.

SENATE CONCURRENT RESOLUTION REFERRED

A concurrent resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. Con. Res. 17. Concurrent resolution authorizing the printing of the pamphlet entitled "Our Capitol" as a Senate document and providing for additional copies; to the Committee on House Administration.

ENROLLED JOINT RESOLUTION SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 176. Joint resolution to provide for the reappointment of Dr. Jerome C. Hunsaker as Citizen Regent of the Board of Regents of the Smithsonian Institution.

BILL PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 4806. An act to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes.

ADJOURNMENT

Mrs. HANSEN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 2 minutes p.m.), under its previous order, the House adjourned until tomorrow, Friday, March 24, 1961, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

707. A communication from the President of the United States, transmitting an amendment to the budget for the fiscal year 1962 involving an increase in the amount of $721,700 for the legislative branch (H. Doc. No. 118); to the Committee on Appropriations and ordered to be printed.

708. A letter from the Assistant Secretary of the Interior, transmitting one copy each of certain laws enacted by the Legislature of the Virgin Islands in its 1960 regular and special sessions, pursuant to section 9(g) of the Revised Organic Act of the Virgin Islands of the United States; to the Committee on Interior and Insular Affairs.

709. A letter from the Acting Secretary of the Treasury, transmitting a certified copy of amendments to the rules and regulations regarding numbering of undocumented vessels, statistics on numbering and boating accident reports and accident statistics, which will become effective on June 30, 1961, pursuant to the Federal Boating Act of 1958 (46 U.S.C. 527d); to the Committee on Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. House Joint Resolution 73. Joint resolution providing for a study by the Veterans' Administration into the problems of veterans who are elderly, chronically ill, or otherwise handicapped; with amendment (Rept. No. 187). Referred to the Committee of the Whole House on the State of the Union.

Mr. HARRIS: Committee on Interstate and Foreign Commerce. Report on evaluation of methods used in obtaining broadcast ratings (Rept. No. 193). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 5723. A bill to extend the veterans' guaranteed and direct home loan program and to provide additional funds for the veterans' direct loan program; with amendment (Rept. No. 194). Referred to the Committete of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. H.R. 5742. A bill to further amend the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time before June 1, 1963; without amendment (Rept. No. 195). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 4728. A bill to amend title I of the Agricultural Trade Development and Assistance Act of 1954; without amendment (Rept. No. 196). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. WALTER: Committee on the Judiciary. H.R. 1447. A bill for the relief of Wladyslaw Figura; without amendment (Rept. No. 188). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. H.R. 1461. A bill for the relief of Pedro Bigornia Bandayrel; without amendment (Rept. No. 189). Referred to the Committee of the Whole House.

Mr. MOORE: Committee on the Judiciary. H.R. 1467. A bill for the relief of Modesta Pitarch-Martin Dauphinais; without amendment (Rept. No. 190). Referred to the Committee of the Whole House.

Mr. CHELF: Committee on the Judiciary. H.R. 1621. A bill for the relief of Miss Kristina Voydanoff; without amendment (Rept. No. 191). Referred to the Committee of the Whole House.

Mr. POFF: Committee on the Judiciary. H.R. 1622. A bill for the relief of Dr. George Berberian; with amendment (Rept. No. 192). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASHMORE:

H.R. 5867. A bill to amend the Fair Labor Standards Act of 1938, to increase the minimum wage provided for therein to $1.15 an hour; to the Committee on Education and Labor.

By Mr. HARRIS:

H.R. 5868. A bill to amend the Federal Power Act with respect to the number and terms of office of members of the Federal Power Commission, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. BOGGS:

H.R. 5869. A bill to reduce the manufacturers excise tax on self-contained air-conditioning units; to the Committee on Ways and Means.

By Mr. BROOMFIELD:

H.R. 5870. A bill to amend the Federal Civil Defense Act of 1950 to remove certain requirements with respect to State personnel; to the Committee on Armed Services.

By Mr. BYRNE of Pennsylvania:

H.R. 5871. A bill to amend the Shipping Act, 1916, to provide for licensing independent ocean freight forwarders, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. FOGARTY:

H.R. 5872. A bill to amend the act to promote the education of the blind, approved March 3, 1879, as amended, so as to authorize wider distribution of books and other special instruction materials for the blind, and to increase the appropriations authorized for this purpose, and to otherwise improve such act; to the Committee on Education and Labor.

By Mr. HALPERN:

H.R. 5873. A bill to amend title 38 of the United States Code in order to provide a 1-year period during which certain veterans may be granted national service life insurance; to the Committee on Veterans' Affairs.

By Mr. LAIRD:

H.R. 5874. A bill to amend the provisions of the Social Security Act to consolidate the reporting of wages by employers for income tax withholding and old-age, survivors, and disability insurance purposes, and for other purposes; to the Committee on Ways and Means.

By Mr. LINDSAY:

H.R. 5875. A bill to prohibit discrimination in employment because of race, religion, color, national origin, or ancestry; to the Committee on Education and Labor.

H.R. 5876. A bill outlawing the poll tax as a condition for voting in any primary or other election for national officers; to the Committee on House Administration.

H.R. 5877. A bill to declare certain rights of all persons within the jurisdiction of the United States, and for the protection of such persons from lynching, and for other purposes; to the Committee on the Judiciary.

H.R. 5878. A bill to amend part III of the Civil Rights Act of 1957; to the Committee on the Judiciary.

By Mr. MATHIAS:

H.R. 5879. A bill vesting in the American Battle Monuments Commission the care and maintenance of the original Iwo Jima Memorial on Mount Surabachi, Iwo Jima volcanic islands, Pacific Ocean area; to the Committee on Foreign Affairs.

H.R. 5880. A bill to amend the Internal Revenue Code of 1954 to allow an individual a deduction from gross income for tuition paid by him for his own education or for the education of other individuals at institutions of higher education; to the Committee on Ways and Means.

By Mr. RHODES of Arizona:

H.R. 5881. A bill relating to the interest rates on loans made by the Treasury to the Department of Agriculture to carry out the programs authorized by the Rural Electrification Act of 1936; to the Committee on Agriculture.

H.R. 5882. A bill to provide for a program of weather modification to be carried out by the Secretary of the Interior, acting in cooperation with the National Science Foundation, to increase substantially the annual average of usable supply of water available in the Colorado River drainage basin, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 5883. A bill to authorize loans for the design and construction of sea and brackish water conversion plants, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 5884. A bill giving the consent of Congress to a compact between the State of Arizona and the State of Nevada establishing a boundary between those States; to the Committee on the Judiciary.

H.R. 5885. A bill to provide for the relocation and reestablishment of the members of the Papago Indian Tribe inhabiting the village of Sil Murk, which adjoins the Gila Bend Indian Reservation; to the Committee on Public Works.

H.R. 5886. A bill to provide a minimum initial program of tax relief for small business and for persons engaged in small business; to the Committee on Ways and Means.

By Mr. RHODES of Pennsylvania:

H.R. 5887. A bill to assist voluntary nonprofit associations offering prepaid health service programs to secure necessary facilities and equipment through long-term, interest-bearing loans; to the Committee on Interstate and Foreign Commerce.

By Mr. ROBISON:

H.R. 5888. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of interstate enterprises engaged in retail trade, to increase the minimum wage under the act to $1.15 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. ROGERS of Florida:

H.R. 5889. A bill relating to documentation and inspection of vessels of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. RYAN:

H.R. 5890. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for income tax purposes, in the case of a disabled individual, for certain additional expenses of transportation to and from work; to the Committee on Ways and Means.

By Mr. DINGELL:

H.R. 5891. A bill to increase, in the case of children who are attending school, from 18 to 21 years the age until which child's insurance benefits may be received under title II of the Social Security Act; to the Committee on Ways and Means.

By Mr. FULTON:

H.R. 5892. A bill to amend the Civil Service Retirement Act of May 29, 1930, as amended, to provide that accumulated sick leave be credited to retirement fund; to the Committee on Post Office and Civil Service.

H.R. 5893. A bill to prevent the use of stopwatches or other measuring devices in the postal service; to the Committee on Post Office and Civil Service.

By Mr. GOODLING:

H.R. 5894. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. HALPERN:

H.R. 5895. A bill to increase rates of death compensation payable under laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

H.R. 5896. A bill to increase rates of wartime compensation payable for disability statutory awards by amending section 314 (k) through (s) of title 38, United States Code; to the Committee on Veterans' Affairs.

H.R. 5897. A bill to increase rates of wartime disability compensation by amending section 314 (a) through (j) of title 38, United States Code; to the Committee on Veterans' Affairs.

H.R. 5898. A bill to provide for loans to veterans when housing credit is otherwise not generally available, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 5899. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. ALBERT:

H.R. 5900. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes; to the Committee on Education and Labor.

By Mr. HOLIFIELD:

H.R. 5901. A bill to provide for the presentation by the United States to the people of Mexico of a monument commemorating the 150th anniversary of the independence of Mexico, and for other purposes; to the Committee on Foreign Affairs.

H.R. 5902. A bill to amend title II of the Social Security Act to permit public employees (other than policemen and firemen) to elect coverage as self-employed individuals in cases where they do not have coverage under the applicable State agreement; to the Committee on Ways and Means.

By Mr. KING of California:

H.R. 5903. A bill to amend the Internal Revenue Code of 1954 to provide that camper coaches, slide-in cabins, and other articles similar or related in use to house trailers shall not be subject to the manufacturers excise tax on motor vehicles; to the Committee on Ways and Means.

By Mr. MONAGAN:

H.R. 5904. A bill to make the Committee on Education, established by the act of July 26, 1954, advisory to the President and available to the States for consultation on means of improving the quality of education; to the Committee on Education and Labor.

By Mr. OSTERTAG:

H.R. 5905. A bill to provide for the issuance of highway revenue bonds to provide funds for the highway trust fund, to provide for the retirement of such bonds from the tax receipts of such fund, and for other purposes; to the Committee on Ways and Means.

By Mr. PETERSON:

H.R. 5906. A bill to authorize appropriations to the National Aeronautics and Space Administration for special research and development; to the Committee on Science and Astronautics.

By Mr. BROYHILL:

H.R. 5907. A bill to amend the Civil Service Retirement Act to increase from 2 percent to 2½ percent the retirement multiplication factor used in computing annuities of certain employees engaged in hazardous duties; to the Committee on Post Office and Civil Service.

By Mr. DONOHUE:

H.J. Res. 335. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. GROSS:

H.J. Res. 336. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mrs. HANSEN:

H.J. Res. 337. Joint resolution to develop a plan for a system of highways to be known as the Lewis and Clark National Tourway which shall extend from St. Louis, Mo., along the general route of the Lewis and Clark Expedition; to the Committee on Public Works.

By Mr. KEITH:

H.J. Res. 338. Joint resolution to authorize and request the President to proclaim the third week in May of each year as National Art Week; to the Committee on the Judiciary.

By Mr. McDONOUGH:

H.J. Res. 339. Joint resolution requesting the President to proclaim June 4, 1961, as National Teachers Day; to the Committee on the Judiciary.

By Mr. MONTOYA:

H.J. Res. 340. Joint resolution designating the third week in June of each year as National Amateur Radio Week; to the Committee on the Judiciary.

By Mr. KEITH:

H. Con. Res. 205. Concurrent resolution to recognize Samuel Wilson, of Troy, N.Y., as the progenitor of America's national symbol "Uncle Sam"; to the Committee on Interior and Insular Affairs.

By Mr. SCHWEIKER:

H. Con. Res. 206. Concurrent resolution to establish a date for adjournment of Congress; to the Committee on Rules.

By Mr. STEED:

H. Con. Res. 207. Concurrent resolution declaring the sense of Congress on the use of a Great White Fleet in support of American foreign policy; to the Committee on Armed Services.

By Mr. JONAS:

H. Res. 231. Resolution creating a select committee to conduct a study of the fiscal organization and procedures of the Congress; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. RHODES of Arizona: Memorial of the 25th Legislature of the State of Arizona, memorializing the Congress of the United States accept the nomination of Father Eusebio Francisco Kino, S.J., for Arizona's second statue in the Hall of Statuary; to the Committee on House Administration.

By the SPEAKER: Memorial of the Legislature of the State of Delaware, memorializing the President and the Congress of the United States relative to the ratification of a proposed amendment to the Constitution of the United States relating to the granting of representation in the electoral college to the District of Columbia; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Illinois, memorializing the President and the Congress of the United States relative to the ratification of a proposed amendment to the Constitution of the United States relating to the granting of representation in the electoral college to the District of Columbia; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Michigan, memorializing the President and the Congress of the United States relative to the ratification of a proposed amendment to the Constitution of the United States relating to the granting of representation in the electoral college to the District of Columbia; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BRADEMAS:

H.R. 5908. A bill for the relief of Mr. and Mrs. Roth Cline; to the Committee on the Judiciary.

By Mr. GUBSER:

H.R. 5909. A bill for the relief of Hoh Chen Shui Yin; to the Committee on the Judiciary.

By Mr. KING of California:

H.R. 5910. A bill for the relief of Ligaya P. Reyes; to the Committee on the Judiciary.

By Mr. MacGREGOR:

H.R. 5911. A bill to authorize the disposal of surplus equipment, materials, books, and supplies under section 203(j) of the Federal Property and Administrative Services Act of 1949 to the Bar-None Ranch, Anoka, Minn.; to the Committee on Government Operations.

By Mr. PIKE:

H.R. 5912. A bill for the relief of Teresa Coluccio Ieraci; to the Committee on the Judiciary.

By Mr. POAGE:

H.R. 5913. A bill for the relief of Geronimo R. Reyes; to the Committe on the Judiciary.

By Mr. RHODES of Arizona:

H.R. 5914. A bill for the relief of Thomas B. Appleton; to the Committee on the Judiciary.

By Mr. SANTANGELO:

H.R. 5915. A bill for the relief of Mohammed Ali Hussain; to the Committee on the Judiciary.

H.R. 5916. A bill for the relief of Miss Susanna Moscato (Rev. Mother Charitas); to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

103. Mr. SHRIVER presented a resolution of the board of directors of the Chamber of Commerce of Abilene, Kans., opposing the Douglas area redevelopment bill (S. 1) in the belief that industrial development should be accomplished by local people with local funds, and that the U.S. Government should not be a competitor; and that the Federal Government should not help some communities attract industries and jobs at the expense of others, which was referred to the Committee on Banking and Currency.

EXTENSIONS OF REMARKS

Tribute to a Public Health Worker

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. FOGARTY. Mr. Speaker, I wish to call to the attention of the Members the long and distinguished career in public health work recorded by Miss Mary S. Gardner of Providence, who died February 20, 1961.

Miss Gardner herself was invalided in her twenties, but after she had recovered her strength to continue her education, she entered the Newport Hospital Training School for Nurses and was graduated cum laude in 1905. She organized and became the first director of the Providence District Nursing Association, a post she held until 1930.

While director of the association, Miss Gardner served as president of the National Organization for Public Health Nursing from 1913 through 1915. In 1916, her book "Public Health Nursing," was published as a standard textbook, and was subsequently translated into French, Spanish, Chinese, and Korean.

During World War I, Miss Gardner took leave of absence from her post to become chief of the nursing section of the American Red Cross Tuberculosis Commission in Italy. Later, in 1921, she became adviser to the American Red Cross on public health nursing in Europe, and was chairman of the standing committee on public health nursing of the International Council of Nurses from 1925 to 1933.

Miss Gardner wrote many educational pamphlets as well as several novels in which public health furnished the background.

In 1933 Miss Gardner won the Saunders Gold Medal "for distinguished service in nursing." Some of the modern practices that evolved in the first three decades of this century were first instituted by Miss Gardner.

Miss Gardner's devotion to service for the benefit of others is not without background. She was born in Newton, Mass., February 5, 1871, a daughter of the late Justice William Sewell Gardner of the Massachusetts Supreme Court and Mary Parker—Thornton—Gardner, a direct descendant of Matthew Thornton, signer of the Declaration of Independence from New Hampshire. Her interest in nursing stemmed from an association with the late Miss Eleanor B. Green, a sister of former Senator Theodore Francis Green.

Rhode Island primarily and the United States generally can indeed be proud of the outstanding contributions to health and well-being that have been made by Miss Mary S. Gardner. Her fine record of service should also serve to inspire all of us to help in the battle against disease, disability, and premature death.

The Late Honorable B. Carroll Reece

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. JAMES C. DAVIS. Mr. Speaker, I was at home in Georgia last weekend when Congressman Carroll Reece, of Tennessee, passed away at Bethesda Naval Hospital, and did not have an opportunity to participate in the memorial service on the floor of the House on Monday.

I learned with great sadness of his death. During my service in Congress, I became well acquainted with Congressman Reece. I admired him for his integrity, his courage, his understanding of our problems, both domestic and international, and for his unceasing effort to provide satisfactory solutions for those problems.

I treasured the friendship which existed between us. He was a person of whom it can truly be said that he was a great American. He will be greatly missed in the House on both sides of the aisle. His district, his State, and the country have suffered a great loss in his passing.

I extend deepest sympathy to the members of his family in this time of bereavement.

The Small Business Investment Act of 1958

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. EVINS. Mr. Speaker, there is a great deal of interest in the recent progress of the Small Business Administration in carrying out the objectives of the Small Business Investment Act of 1958. Under unanimous consent, I place in the RECORD the following statement summarizing the objectives of this act and the recent accomplishments in carrying out these objectives. These comments are based on the investigations of Subcommittee No. 1 on Organization and Operation of the Small Business Administration, of the Select Committee on Small Business, House of Representatives.

THE SMALL BUSINESS INVESTMENT ACT OF 1958

After much study by the House Small Business Committee and the Banking Committees of both Houses of Congress, the Small Business Investment Act of 1958 (Public Law 85–699) was passed and approved on August 21 of that year. This act provided for the licensing by the SBA of small-business investment companies which were to be a source of equity capital and long-term credit for small business concerns throughout the Nation.

At the end of the 1960 fiscal year (June 30, 1960), 109 licenses for small business investment companies had been granted by the SBA. Requests for licenses or proposals had been submitted by 217 companies. An updating of this information indicates that on March 14, 1961, 200 companies had been licensed and 431 proposals received.

Section 302(a) of the act authorizes the Small Business Administration to advance funds to the investment companies for the purpose of helping them obtain the minimum capital requirements. The maximum amount that SBA may make available to a single company is $150,000. These funds are to be advanced to small business investment

companies through the purchase of subordinated debentures by the Small Business Administration. As of June 30, 1960, the Small Business Administration had committed $11,190,000 to be supplied in this manner to the investment companies licensed as of that date. Another $50,202,364 from private sources brings the total capital available to the 109 companies licensed as of June 1960 to $70,400,000. See the following table for a breakdown which shows the number of proposals received, number of licenses granted, and the capitalization of these companies through fiscal year 1960:

	December 1958 through June 1959	July through December 1959	January through June 1960	Cumulative through June 1960
Proposals received	92	48	77	217
Notices to proceed	46	59	75	180
Licenses approved	16	45	48	[1] 109
	Dollar value			
Initial capital	$5,196,000	$18,142,000	$15,355,000	$38,693,000
Subordinated debentures	(1,319,000)	(4,185,000)	(5,686,000)	(11,190,000)
Additional private capital	4,000	16,258,000	15,445,000	31,707,000
Total capital available	5,200,000	34,400,000	30,800,000	70,400,000

[1] 1 license surrendered Mar. 18, 1960; 108 licenses in force.

Source: Small Business Administration.

Under section 303(b) of the act, the Small Business Administration is authorized to lend funds to investment companies up to one-half of their capital and surplus. The act provides that SBA shall set the rate of interest on these loans. The rate has been set at 5 percent. As of June 30, 1960, based upon the $70 million capitalization of the 108 companies then licensed (1 of the 109 companies surrendered its license on March 18, 1960), these companies were eligible to borrow $35 million from SBA under section 303(b) of the act. But only 11 licensees had made applications for loans totaling $2,390,828 under this section of the act, and only $800,000 of this amount has been disbursed by SBA as of June 30, 1960.

The act authorizes small business investment companies to finance small businesses by (1) furnishing equity capital under section 304 of the act, and (2) through long-term loans under section 305 of the act.

An analysis of the total immediate and potential capital of small business investment companies, and the loan potential for small businesses as of June 30, 1960, including 96 proposed companies which had not yet been licensed (12 proposals had been withdrawn or rejected), indicates a gross potential total of financing available for use under this program of only $234,765,000. This includes not only the present capitalization of the 108 companies licensed, but also includes public offerings not yet subscribed to by the 108 companies and the potential capital of 96 proposed companies not yet licensed, including the full amount of loans authorized under section 303(b). See the following table:

Total immediate and potential capital of small business investment companies and loan potential for small business June 30, 1960

Immediate and potential capital funds of 108 small business investment companies:	
Initial capital:	
Private subscription	$27,503,000
SBA (subordinated debentures)	11,190,000
Total initial capital	38,693,000
Additional public and private subscription	31,707,000
Total capital funds as of June 30, 1960	70,400,000
Public offerings:	
In progress	14,355,000
In registration	27,000,000
Total public offerings	41,355,000
Total capital funds of 108 licensed SBIC's	111,755,000
96 proposed small business investment companies: Initial capital	44,760,000
Potential capital funds of licensees plus initial capital of 96 proposed SBIC's	156,515,000
Loan potential: Section 303 loans, 50 percent of total capital	78,250,000
Total	234,765,000

An analysis of the report of the small business investment companies submitted to SBA on March 31, 1960, indicates that $14.7 million in equity capital and loan commitments had been made to 250 eligible small businesses. The details of the small business financing by the investment companies as of March 31, 1960, is as follows:

	Number of small business investment companies	Number of transactions	Dollar amount
Convertible debentures	22	58	$4,356,176.91
Long-term loans	39	183	5,797,861.67
Capital stock of small business concerns (by conversion)	2	4	87,740.00
Commitments to finance small business concerns	17	41	4,498,450.00
Total			14,740,228.58

Thus we find that as of June 30, 1960, after almost 2 years of operation under the Small Business Investment Act of 1958, 108 companies were in operation with a total capitalization of $70,400,000, with only $13.6 million of that being financed by the SBA. We also see that the total potential capital of all the companies which were licensed on June 30, 1960, plus those with proposals pending, including maximum possible loans from SBA under 303(b) of the act, is only $234,765,000. This is much less than one-tenth of 1 percent of the gross debt of all corporations in the country at the end of 1959.

These facts indicate that, while progress has been made, much more remains to be done before small business is to receive the full fruits of the Small Business Investment Act of 1958. The recent acceleration in licensing of small business investment companies is very encouraging.

On March 16 the SBA announced it had licensed the 200th SBIC, and forecast a sharp increase in SBIC activities in the months ahead. The 200th SBIC brings to $188,636,677 the present capital of operating licensees for financing small business. Only $21.6 million of this came from the SBA.

It looks as if this program is really getting off the ground, and we are looking forward anxiously to the stimulating role this program will play in aiding the small business sector of the American economy.

Tax Loophole Closers

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. MASON. Mr. Speaker, I have just introduced two bills which I designate as "tax loophole closers." Their adoption would provide a substantial amount of the new money that will be required to finance the administration's various programs, and would do so without requiring any present taxpayer to dig deeper into his pocket.

One of these bills, which may be cited officially as the "Credit Union Tax Equalization Act of 1961," would tap a financial source that has never paid a penny of Federal income tax; a competitive lending business whose net income before taxes has increased 2,400 percent in the past 15 years; a parasitical, pseudo-banking institution that is growing like the wind and is very well able to pay its share of the cost of government.

The other bill, which is cited as the "Second Tax Equalization Act of 1961," would produce no such magnificent sum of tax revenue for the Treasury, but it would clear up a competitive situation between mutual and stock fire and casualty insurance companies that the tax experts of Congress have fretted and worried about for nearly 20 years, without ever quite coming to grips with the facts of the matter—the facts being that the tax discrimination in favor of the mutuals is without justification and always has been.

Mr. Speaker, this year's demands for extraordinary expenditures at home and abroad leave the Congress no option but to close every generous loophole in the tax code. Let it not be said that the 87th Congress is as weak kneed and softheaded as some of its predecessors, which accepted the specious argument and pleas of smart promoters that competitive businesses which were organized under such names as mutuals and cooperatives and credit unions would somehow always be without profit and therefore without taxes.

Credit unions, like their blood brothers, the savings and loan associations, the mutual savings banks, and the cooperatives, were first granted tax favoritism on the basis of their claim that they were organized for the sole

benefit of the underprivileged little fellow. They may have started small, but they have long since outgrown their little britches. Let me quote, Mr. Speaker, from the American Banker:

Credit unions are fast becoming big business. Some are subsidized by big business itself, which gives them rent-free office space, as well as clerical help to run the credit union at the expense of the business. Notable in their promotion is the Credit Union National Association, organized to carry out their national public relations, advertising, and provide certain management and insurance aids. They are supported directly or indirectly by small business, college professors, teachers, farmers, firemen and policemen, industrial employees, labor unions. Credit unions are found in city halls, State capitols, public schools, fire stations, police departments. Taxpayers, of course, are unwittingly supporting credit unions, which pay no Federal income taxes, whether chartered by State or Federal Government.

According to the Department of Health, Education, and Welfare, credit unions had total assets in 1958 of $4,347 million and net income of $178 million.

Mr. Speaker, that net income should pay income tax. It is earned like the net income of banks and small-loan companies. It should be taxed like the income of banks and small-loan companies.

Only a few days ago, the President asked the Congress for half a billion dollars of added appropriations for this and that. He did not specify—or even suggest—where or how the money should be raised, but we all know that it will not come out of the clear air. Someone will have to be taxed to pay the bills.

Well, Mr. Speaker, the cost of the expanded school-lunch program which the President suggested, plus the cost of new schools for Indian and Eskimo children, plus the cost of an expanded National Park Service, plus additional appropriations for the Bureau of Land Management, the Fish and Wildlife Service, and the Bonneville Power Administration, plus the cost of expanded U.S. Information Agency programs in Africa and South America would all be met by the imposition of the income tax on credit unions and there would probably be enough money left to pay for the proposed new African programs of the State Department.

Mr. Speaker, if we are going to spend more money we must raise more money by taxation. The best place to get more money by taxation is from sources that are now not paying the tax. As a loophole that may be profitably closed, I recommend the credit unions.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. RODINO. Mr. Speaker, I welcome this occasion to greet you on the 43d anniversary of Byelorussian Independence Day, that memorable and glorious day in Byelorussia's modern history. After enduring the oppressive yoke of Russia's czarist regime, the Byelorussian people earned their long-cherished and well-merited freedom, culminating in their national political independence in 1918.

During the czarist autocracy, the Russians did their worst to eradicate and eliminate all Byleorussian traditional and national traits, including their fervent desire for freedom. Fortunately, the Russians were unsuccessful in their ruthless attempts. The more they oppressed the Byelorussians, the more tenaciously these people clung to their ethnic and national ideals, and longed for the day of their independence. The overthrow of the czarist regime in Russia in 1917 ushered in a new era for them. Early in 1918 they asserted their freedom and on that historic March 25 they proclaimed their independence by establishing the Byelorussian National Republic. But the independence thus regained and proclaimed did not last long. Early in 1921 the Byelorussian National Republic was treacherously attacked and overrun by the Red army. Thus came to an end the Byelorussian Republic, but the idea of freedom and independence has not deserted the Byelorussian people.

I am glad to affirm once more that they still cling to their firm belief in freedom, in their eventual independence. In greeting you on this historic anniversary, I wish freedom to the Byelorussians.

A Statement on Farm Policy

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. ANDERSEN of Minnesota. Mr. Speaker, under leave to extend my remarks I would like to call attention to a statement on the general subject of farm policy made by our colleague, Hon. PHIL WEAVER, before a founders day luncheon at Omaha, Nebr., on Monday, March 20.

I have known PHIL WEAVER since he came to the Congress and have served with him on the Committee on Appropriations. I know of his deep concern over the years at the situation in which our farmers have found themselves—through no fault of their own.

In this speech PHIL WEAVER points up the need for a sound and workable policy for the Nation's farmers. He also points up the need for cooperation of all involved in order to work out such a program that might have some chance of success.

I commend these remarks to all.

Following is the text of our colleague's speech:

We in Nebraska who would hold fast to the Republican cause can be justly proud, as I am, of the vote of confidence we rolled up for Richard M. Nixon last fall. We gave him the largest percentage margin of any of the 50 States.

During the fall campaign our standard bearer, Dick Nixon, made a statement which I'd like to recall for you now. It was a statement that made a tremendous impression upon the Middle West. His resounding vote here in Nebraska can attest to that. Dick Nixon said, and I quote: "The Government got the farmers into this mess, and it is up to the Government to get them out of it."

Why did Dick Nixon and our Republican Party blame the Government?

Well, during World War II the Government asked the farmer of our country to produce as he never had before. The American farmer responded. He not only produced enough to keep our armies on the march, he supplied our allies with vast quantities of food and fiber and the essentials for making war. It was, in truth, a miracle of production.

A farmer today in the broad expanse of America is capable of producing enough food and fiber for himself and for 24 other people. This fact alone frees better than 90 percent of our working population to pursue other goals, to undertake other endeavors. This, and this alone, has permitted us to expand our industrial capacity and to raise our standard of living to the point where we are the envy of all the world.

We are able to buy and drive more and better automobiles, live in better homes, wear better clothes, go to better schools, read more books, than any other nation on earth only because the American farmer, through his efforts and efficiency, has made this possible.

It takes one-half of the total work force in Russia to supply food for the other half. And, at that, they are poorly fed. In America one-tenth of the population is able to do a more thorough job.

And what has the American farmer gained from all this?

Today we find our farmers on the short end of the economic stick.

The American farm operator has the lowest per capita income in our economy today. His average hourly wage—and this is a point I would like our friends who support an increased minimum wage to note—his average hourly wage is less than half of what the average factory worker earns—or 81 cents an hour for the farm operator as compared to $2.29 for the factory hand.

The buying power of our farm citizens has gone down and down—and with it the buying power of our Nebraska communities and cities.

Last fall Dick Nixon promised that the Republicans would do something about it. Well, I'd like to say this—Republicans who were elected and who want to represent the will of the people who expressed this solid support must keep that promise.

We can either approach the problem as Republicans who want to conserve our way of life, or we can turn our backs on the farmers and let every radical idea that comes into the minds of the Kennedy planners become the law of the land. The choice is ours. Dick Nixon and the Republican platform pointed the way.

As Republicans, we are dedicated to the preservation of America. More than that, we are dedicated to the development of a strong, free, and vigorous America. To achieve that kind of America and to pass that kind of life on to future generations, we must help maintain a vigorous, strong and healthy agriculture.

This is the key to American survival.

Let me tell you that our top military leaders who are charged with the responsibility of maintaining our strength and our position of leadership in the free world are fully aware of this need. I participate in hearings

of the Subcommittee on Defense Appropriations of the House of Representatives and I have heard witnesses discuss the danger of growing Soviet might and power. It is not alone of missiles and submarines they speak. They are concerned with the potential industrial growth of the Soviet Union and her slave satellites as well.

Khrushchev knows this too. And he knows that only by building and maintaining a strong farm economy can he free enough of his slave labor to industry to begin to compare or compete with the United States on an equal footing—whether in the making of the instruments of war or in the competition for world trade and world economic leadership.

Within the past month Khrushchev had to fire a half dozen of his top Communist planners and administrators because they have failed in the one area where the United States has been so dramatically successful—in developing a powerful and vigorous farm economy.

The Soviets know—and we must understand completely—that it isn't the missiles or ships that win wars, whether they be shooting wars or the silent, deadly cold war of economic survival. It is the farmer who can produce enough for himself and his country who can tip the balance of power in favor of one way of life or the other—toward freedom or communism.

As Republicans we can—whenever and wherever the opportunity develops—work toward the goal of a strong, well-rounded and healthy nation based upon productive, economically sound agriculture. This is the very essence of conservatism—the very essence of the platform which the Republican Party adopted in Chicago last summer—and this is the very essence of victory here in Nebraska and elsewhere in the Midwest and Plains States in 1962 and 1964.

The alternatives to this actively conservative approach to the farm situation are twofold. Either we can sit idly by and watch our agriculture destroyed—and with it the chances of survival in a tense and dangerous world, or we can sit idly by and watch our 49-percent administration turn out a 100-percent radical program to regiment our farmers completely and give another great segment of our country a Harvard accent.

Please do not misunderstand me. We cannot keep the present administration from moving toward the left and ultimate regimentation simply by noisy opposition. The noise may deafen our own ears but will not silence the economic planners and left-wingers.

We can and we must stand for realistic action to solve the farm problem and thus conserve and preserve our American system against all challengers—whether they be the radical economists in Washington or the Communist empire.

Let us not fool ourselves that the Republicans have the votes in either the House or Senate to do that now. We didn't have them even when Dwight Eisenhower was President. The American farmer cannot wait until we regain the House and Senate and the White House. His problem is urgent—immediate.

We must find a way to work with the present administration to solve these problems to bring about economic order for our farm citizens. It is not my job as a midwestern Congressman to oppose legislation which the farmers themselves have proposed—simply for the sake of opposing.

The recent feed grain bill is an example. It was proposed by farm groups themselves. As it passed the House, there is no doubt the bill was lacking in some ways. In fact, I voted to recommit the bill and delete the controversial section 3. But, let me point out we had no Republican bill to work with and our job was to find and support a workable measure that didn't create more problems than it solved.

Last fall's vote here in Nebraska demonstrates that the farmers and ranchers had faith in the Republican Party. We must not let the farmer down. We must keep that faith.

We must reassess programs and positions of the past to make stronger our position in the future. And the future, my friends, is when we shoot for the top job again in 1964.

The Republican platform of 1960 looked to the future as we must. That platform said in part: "To utilize immediately surpluses in an orderly manner, with a minimum impact on domestic and foreign markets, we pledge * * * payment-in-kind out of existing surpluses as part of our land retirement program."

The recent feed-grain bill attempts to do just that. I was proud to be able to support the Republican platform and pledge myself to its continued support.

The Minimum Wage Law—A Necessity for the Development of America

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. SANTANGELO. Mr. Speaker, on January 14, 1961, the Federation of the Italian-American Democratic Organizations of the State of New York, Inc., held a symposium at the Hotel New Yorker in connection with the minimum wage laws. On this occasion, the Honorable ROBERT N. GIAIMO, from the State of Connecticut, and the Honorable DOMINICK V. DANIELS, from the State of New Jersey, participated. About 75 representatives of various labor and business organizations interested in this subject participated. After the speeches there was a stimulating question and answer period in which the various phases of the minimum wage law were discussed, and the impact of the proposed increase in minimum wage and the extension of coverage were explored.

At this time, 2½ months after the symposium, many of the statements by Congressman GIAIMO have gained greater meaning. It is timely that the speech delivered by the Honorable Representative from Connecticut be inserted in the CONGRESSIONAL RECORD, especially in view of the heated controversy regarding the minimum wage law, its proposed increases, extended coverage, and last minute substitutions. I believe that Congressman GIAIMO's discussion will prove informative and enlightening to those interested in the welfare of the worker and the effect of increase in minimum wage and extended coverage this legislation would have upon industry. His talk follows:

SPEECH OF THE HONORABLE ROBERT N. GIAIMO, MEMBER OF CONGRESS, DEMOCRAT, OF CONNECTICUT, BEFORE THE FEDERATION OF ITALIAN-AMERICAN DEMOCRAT ORGANIZATIONS, NEW YORK CITY, JANUARY 14, 1961

There is no doubt that the Fair Labor Standards Act, enacted 22 years ago, will again be the subject of heated discussion in the Halls of Congress. It is altogether fitting, therefore, that this assemblage interested in the great issues facing our Nation, take note of the coming debate and—as informed citizens—individually determine a position that will strengthen the economic fabric of our society during this crucial period of our country's life. I would like to outline for you some of the arguments which I believe will be voiced on the floor of the House of Representatives within the coming months.

The objective of the Fair Labor Standards Act is to achieve in the United States as rapidly as practicable minimum wage levels necessary for the maintenance of health, efficiency, and the general well-being of workers. This is to be materialized without substantially curtailing employment and earning power. To achieve these dual, but frequently conflicting objectives, the Congress has acted cautiously in applying the law. It has established over the years minimum wages which affect directly only a limited number of employees at the bottom of the economic ladder. The Congress has also limited the application of the act to part of the labor force.

It is estimated that the Fair Labor Standards Act applies to about one out of two employees engaged in nongovernmental jobs. The employees currently excluded from the provisions of the Fair Labor Standards Act fall into two categories:

1. Coverage under the act is limited to employees engaged in commerce, or in the production of goods for interstate commerce, or in occupations directly essential to the production of these goods. This excludes from coverage under the act about one out of every three wage and salary earners in private industry, including the bulk of employees in local retail and services, and about half of the employees in construction. Some 14.5 million wage and salary workers in private industry are not covered by the Fair Labor Standards Act.

2. The act specifically exempts from coverage of the Fair Labor Standards Act several groups of employees who are engaged in commerce or in the production of goods for interstate commerce. This category includes about 6 million employees or one out of every eight wage and salary earners in private industry. The largest groups in this category are engaged in agriculture, as outside salesmen, and in managerial and professional occupations. In addition, the act permits special treatment of handicapped persons and learners. Also, some other groups are exempt from its overtime provisions. Most of retail and service employees are specifically excluded from coverage by specific exemptions in addition to the limitation under the definition of commerce.

The Department of Labor has estimated that 23.7 million employees were covered in 1959 by the Fair Labor Standards Act. Six out of every ten of these were employed in manufacturing. Other large groups were engaged in transportation, wholesale trade, finance, insurance and real estate.

The bills as reported out by the House Committee on Education and Labor and the Senate Committee on Labor and Public Welfare last year constituted a compromise between the initially proposed Kennedy-Roosevelt bill and the Eisenhower administration proposals. The major proposed change in both bills was the extension of coverage to retail and service enterprises with annual sales in excess of $1 million, exclusive of excise taxes.

In the limited time available to me, I would like to discuss this legislation as it affects the retail trade. A study by the Bureau of Labor Statistics showed that in October 1956, about one out of every four employees in all retail trade was earning less than a dollar an hour. The percent earning less than $1 and the impact of raising the wages would vary widely from region to region.

Of course, retail wages have increased appreciably since October 1956, as they did in the rest of American industry. Average hourly rates in retail trade between October 1956 and March 1960 rose 13 percent. The ratio of employees that would be affected by a $1-an-hour minimum today would, therefore, be considerably lower than 4 years ago. Moreover, the data I cite include employees in all retail establishments, regardless of size; generally hourly rates of employees engaged in retail trade tend to increase with the size of the establishment. However, it is clear that a uniform hourly minimum wage would have an appreciably different impact from region to region. There is no reason to believe that the increases in retail wages have been relatively greater in the South, the region with the lowest wages, than in the West where retail wages are highest.

There also exists a wide variation in earnings of employees in various types of retail establishments. Again, the latest national study on wage distribution in retailing by type of establishment is available for October 1956. At that time, more than a quarter of all retail employees earned less than $1 an hour, but in variety stores 3 out of every 4 of the quarter million employees earned less than $1 an hour, while in furniture and appliance stores the comparable ratio was 1 to 8.

Another problem with reference to the application of the FLSA to retail trade is presented by the overtime provisions. Four years ago, 45 percent of the employees in retail trade worked 41 or more hours a week, and 26 percent worked 48 hours or more. The variations in hours of work differed less than wage rates on a regional basis or by type of retail establishment.

The major objective of the Fair Labor Standards Act is the elimination of substandard wages. Not only are earnings in retailing insufficient to provide the needs of a family, but they are also inadequate to provide for the needs of a single woman without dependents. Recent studies in 11 different States indicated that a single woman required a median annual income of about $2,500 for a minimum adequate budget. This annual figure is equivalent to an hourly rate of $1.25 based on 1,800 hours per year. According to the U.S. Department of Labor, more than 4 out of every 10 employees in retail stores earned in 1959 less than $1.25 an hour and 1 out of every 5 earned less than $1 an hour.

In some cases employees in retail establishments earn less than State welfare agencies provide for the indigent and their income is occasionally supplemented by welfare funds. In such cases general tax funds subsidize the low-wage employer.

Elimination of substandard wages is already a function of the Federal Government. Reliance upon the States in this area to pass the necessary protective legislation is futile. The States are hampered from taking effective action because by raising minimum wages, one State would give neighboring States competitive advantages, since the States which do not require payment of minimum decent wages would enjoy lower labor costs. A fair minimum wage standard must be applied, therefore, concurrently for the whole Nation.

The underlying rationale for excluding retail trade from Fair Labor Standards Act coverage rests on the myth that retail business is local in nature. This belief is contrary to the structure of present-day retail trade in the United States and is based on a nostalgia for the simple agrarian economy of our early days as a nation, when the general store was a social center as well as a place to make purchases. Retailing is dominated by big business with some giant chains doing annually a billion dollar and more business with thousands of outlets spread throughout the 50 States. In food retailing, the small neighborhood store is fast disappearing. When the Fair Labor Standards Act was passed, supermarkets accounted for less than a fifth of the total food retail sales; at present, more than half of the dollar volume of food is sold by supermarkets.

Furthermore, the recent trends of growing concentration in retailing is expected to continue. Business Week commented on the activities of the 20 top retailers in 1959, whose sales ranged between $451 million to over $5 billion: "It was generally a year in which the big got bigger and the rich got richer."

Retailing can be considered as local in character only if it is viewed from a narrow technical approach limited to the fact that sales of an individual store are restricted to a given locality. But a realistic approach must also consider the origin of the goods and the structure of retailing used to sell the goods. There is nothing local about grocery chains which control and own integrated food processing factories. One of the chainstores is the world's largest purchaser of coffee, fresh fruits, and vegetables.

The management of the large retail chains is centralized. This results in uniform national pricing regardless of local conditions. Mail order stores use the same catalogs all over the Nation, and even local advertising by national chains is frequently directed by a central authority. Some giant retail chains advertise on national hookups and in magazines that circulate nationally.

The increased concentration in retail trade and the accompanying economies of large-scale selling and efficiencies of operations make it imperative that the coverage of the Fair Labor Standards Act be extended to the industry. Many firms now paying rates below the minimum provided by the Fair Labor Standards Act could no doubt afford to pay the statutory minimum from current high margins of profits. But extension of coverage is not intended to reduce profits, which is the lifeblood of industry and an essential reward for investment and efficient management. It is expected that the elimination of substandard wages would exert a salutary effect upon the productivity of management and labor in the industry. The experience of American industry has indicated that with increases in real wages and standard of living, management in retailing will be spurred to foster economies of operation which may more than compensate for the increased labor costs.

It must be recognized not only that the existence of substandard wages in retailing is a problem of the employees who are denied the means to achieve a decent standard of living, but that low wages in one industry tend to depress the economic conditions in other areas of economic activity. And in the final analysis, it is the total community which must pay the social cost of substandard wages.

The Fogarty Bill To Promote the Education of the Blind

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. FOGARTY. Mr. Speaker, blind children require for their education special equipment in the form of books in raised print, tangible apparatus and devices of various kinds. It was recognized early that the supply of such equipment would never be adequate if each State were left to its own resources. The first legislation providing aid from the Federal Government was approved on March 3, 1879, under the title "An act to promote the education of the blind," chapter 186, 45th Congress. According to this law, a perpetual trust fund of $250,000 was set up to be invested in U.S. interest-bearing bonds, the income from which, at 4 percent in the amount of $10,000 per year, would go to the American Printing House for the Blind in Louisville, Ky. The law also provided that the superintendents of the various tax-supported schools for the blind of the country become ex officio members of the board of trustees of the Printing House, and that books and tangible apparatus equivalent in value to the governmental grant be distributed among the schools for the blind in proportion to their pupil enrollment.

In 1906, the original law of 1879 was changed to provide a direct $10,000 appropriation to the Printing House to be made annually in perpetuity—Public Law 59–288. In 1919, the first appropriation in addition to the original $10,000 was authorized in the amount of $40,000—Public Law 66–24. Later amendments further increased the appropriation authorization to $65,000 in 1927—Public Law 69–584—and to $115,000 in 1937—Public Law 75–339—these sums always to be added to the $10,000 permanent annual appropriation. Then in 1952, Congress increased the authorized annual appropriation to $250,000—Public Law 82–354—thus making the possible total annual grant $260,000. An important change was made in 1956—Public Law 84–922—when the law was amended so as to authorize wider distribution of books and other special instructional material for the blind, thus regularly authorizing the Printing House to make available educational materials on a per capita basis to all blind children, either in special schools for the blind or regular public schools. Before this, regular public schools had received such materials as a result of an opinion handed down on January 30, 1912, stating that these schools were entitled to share in the free distribution of materials under this act. At present, more blind children are being educated in regular public school systems than in special schools for the blind. Furthermore, the law of 1956 increased the authorized appropriation to $400,000 per year, which, with the permanent annual appropriation, could make a total of $410,000.

The act of 1879 vested the control of the appropriation in the Treasury of the United States. The administration of the appropriation to the Printing House was transferred by joint resolution to the Federal Security Agency.

In the present interpretation, the term "books and tangible apparatus," includes books in raised print as well as talking books, talking book reproducers, and books in large type, in addition to special apparatus and devices. The present law is also interpreted to require that all books and apparatus furnished

under its provisions must be manufactured by the American Printing House for the Blind.

Over the years since 1879, when the original law was enacted, there have been very few substantive changes except for the periodic increase in the authorization of appropriations occasioned by the growing population of blind school-age children. Despite the strong trend toward educating blind children in regular public schools with sighted children instead of in special schools for the blind, the law, which belatedly authorized the distribution of books and materials to them, provides only for a per capita quota system of allocating these materials. Thus, the practical effect virtually negates the advantages which should result from this entitlement. The per capita basis for allocating books and materials similarly discriminates against the smaller special schools for the blind and the separate Negro departments in special schools where there is racial segregation, since a substantial portion of the monetary equivalent to which these schools are entitled is used up in purchasing expensive instructional materials, such as braille globes and maps, braille dictionaries, braille writers, and the like. If the allocation is taken in textbooks, then not enough money is left for these equally important but expensive items.

The restriction to items manufactured by the American Printing House for the Blind is also archaic. Three dimensional models of plants, animals, the solar system, and so forth are in regular use in most public school systems for sighted children and are readily available from established scientific supply houses. These would be invaluable educational aids for the tactual instruction of blind children. In order to supply them under the act, the Printing House would have to tool up and manufacture them for a small consumer market, a costly process resulting in a high unit cost compared to purchasing commercially available items manufactured for a mass market. Similarly, the Printing House is prevented from purchasing for distribution under the act special aids and devices made by other agencies for the blind or adapted by commercial manufacturers for the use of blind persons.

In view of the foregoing, we believe that a substantial overhaul of the act of 1879 is highly desirable in order to meet the educational needs of blind children in 1961 and future years in a realistic and efficient fashion consistent with current practices in Federal grant programs. The proposed bill is offered as a means of achieving this objective.

ANALYSIS OF PROPOSED BILL

1. AUTHORIZATION OF APPROPRIATIONS

Section 1 of the proposed bill would increase the authorization of appropriations by removing the present ceiling of $400,000 annually and leaving the annual appropriation to the discretion of the Congress. The sharp growth in number of blind children of school age due to retrolental fibroplasia in premature babies and regular population growth plus increased production costs make the present appropriation of $400,000 woefully inadequate.

In view of the fact that the program has been in existence for more than 80 years and that the Committee on Appropriations has had to approve an annual appropriation for more than 40 years, it would seem that a specific ceiling on appropriations is no longer necessary. Elimination of the ceiling would make it unnecessary for the Congress to take action periodically to increase the authorization in such a long-established and vital program and would have prevented the current situation for fiscal 1961, when it was obvious that the $400,000 annual appropriation would be inadequate, but that nothing could be done until the enabling legislation was amended.

2. RULES AND REGULATIONS

Section 1 of the proposed bill also authorizes the Secretary of Health, Education, and Welfare to make rules and regulations governing the administration of the act. There are presently no such regulations and, therefore, no clear guide on questions involving administrative procedures in carrying out the intent of the Congress. Such regulations would be extremely helpful to everyone interested in the education of blind children and would be consistent with procedures in other Federal grant programs.

3. AUTHORIZATION TO PURCHASE MATERIALS

The phrase "manufacturing and furnishing" and similar phrases have been changed to "manufacturing or furnishing" in order to authorize the American Printing House for the Blind to purchase items of equipment specially adapted or useful in the education of blind children from commercial supply houses and other agencies for the blind. The present law is interpreted to restrict everything furnished under the act to books and devices manufactured by the Printing House itself. As a result, blind children cannot be provided under the act with valuable, tangible educational aids readily available elsewhere. If the Printing House chose to provide these items, it would be required by the law to tool up and manufacture them. The purchasing authority provided under the proposed bill would be a much more economical way of furnishing such items, like three-dimensional tactual models for science instruction mentioned above.

4. ANNUAL APPROPRIATION

Section 2 of the proposed bill merely corrects an oversight when the law was amended in 1919 to provide for an annual appropriation in addition to the permanent annual appropriation of $10,000. The first sentence of section 102 of the act seems to limit the distribution of the books and materials to the value of the $10,000 permanent annual appropriation, whereas the intent of Congress is to distribute the total annual appropriation.

5. PER CAPITA QUOTA

Section 3 of the proposed bill authorizes the distribution of large expensive items of equipment, such a braillewriters, braille dictionaries, braille encylopedias, and the like on a school, classroom, or other practicable basis. This would make it possible for blind children in smaller special schools for the blind or in regular public schools to have the advantage of these essential educational aids without having their quota for textbooks and smaller aids used up. An Advisory Council on the Education of the Blind would determine what equipment would be provided in this manner. Textbooks and smaller educational aids would still be provided on a per capita quota basis determined by the ratio between the number of blind children enrolled in public institutions at the elementary or secondary school level in each State and the total similarly in elementary or secondary schools for the entire country. In addition, the proposed bill would authorize each State to receive up to 10 percent of its per capita quota in actual cash to purchase specific items locally or where available. For example, Hawaii or even Oregon or California could purchase record players for talking book records much more economically in their local areas instead of having such bulky items shipped from the Printing House in Louisville under the quota, with expensive shipping charges adding to the cost and decreasing the amount these States could have for actual items of equipment. The Advisory Council would develop a list of approved items of equipment which could be purchased directly by the States.

The present law provides for a per capita quota system based on the ratio between the number of blind children enrolled in schools below the college level in all of the States and possessions and the number of blind children enrolled in special schools for the blind in each State, as well as a separate quota determined by the ratio of children enrolled in all special schools and regular public schools and blind children enrolled in regular school systems in each State. This cumbersome dual quota would be eliminated in the proposed bill in favor of a single quota system for each State.

The term at the "elementary or secondary school levels" in the proposed bill substitutes for "below college grade" in the present law to plug a loophole by which State-operated rehabilitation centers for blind persons are obtaining books and equipment under the act, which was clearly intended by Congress for blind schoolchildren in elementary and secondary schools. Federal regulations would undoubtedly have prevented this abuse. Federal funds for rehabilitation facilities are available under other laws.

6. STATE OWNERSHIP

Section 3 of the proposed bill not only eliminates the dual quota system for each State, but also gives title to books and equipment to the State receiving them. The State is authorized to assign title, thus providing for flexibility in the use of books and equipment where needed, whether it be in the State's special school for the blind or in regular public schools in the State. Under the present law, equipment and books presumably remain the property of the Federal Government and frequently pile up when use for them

is past instead of being reassigned to another school within or without the State.

7. STATE AGENCY

Section 3 of the proposed bill provides for a State agency or agencies designated by the State to receive and distribute books and materials furnished through the American Printing House for the Blind under the act and otherwise to administer the program at State level. If the State designates more than one agency then the State department of education must attest to procedures for obtaining and distributing books and other materials within the State, in order to provide for coordinated utilization of books and materials by overseeing their transfer to other schools in the State when there is no longer any need for them in a given school.

A State agency administering the program under the act could be the State department of education, the special school for the blind, or any logical agency involved in educational programs for blind children which the State might designate.

8. ADVISORY COUNCIL

The Advisory Council on the Education of the Blind mentioned in sections 3, 4, and 7 of the bill would be established in the Department of Health, Education, and Welfare to select publications, to develop lists of approved tangible apparatus and other educational materials provided under the act, and otherwise to advise the trustees of the American Printing House for the Blind in administering the act.

The Advisory Council would consist of the superintendent of the American Printing House for the Blind, serving as chairman, and 12 members appointed by the Secretary of Health, Education, and Welfare, 4 of whom shall be teachers of blind pupils in special schools for the blind or regular public schools; 4 of whom shall be administrators of educational programs for blind children, such as superintendents of special schools for the blind or the heads of State departments of education; and 4 of whom shall be individuals particularly expert in the development of educational aids and teaching methods for blind children. Thus, the Advisory Council would bring to this program a representative group especially knowledgeable about the problems involved in both types of educational programs for blind children—the special residential schools and the regular public schools. The Council would provide a mechanism which has proved to be effective and efficient in many other Federal grant programs.

The Advisory Council would supplant the ex officio trustees of the American Printing House for the Blind consisting of the superintendents of the special residential schools for the blind, who, under the present law, are responsible for administering the act. This body of ex officio trustees may have been a logical mechanism for supervising the administration of the act in 1879, when there were only 38 States and when blind children who were educated at all were in residential schools for the blind. Now there are 50 States plus Puerto Rico, Guam, the District of Columbia, and the Virgin Islands in the program. Now more than half of all blind children are being educated in regular public school systems rather than in special residential schools. Also, the Department of Health, Education, and Welfare rather than the Treasury Department is the Federal agency to which the Printing House is directly responsible. For these reasons, the representative Advisory Council and the regular seven-member Board of Trustees of the Printing House will provide an effective and efficient mechanism for administering the program as Congress intends in order to serve the blind children of the Nation more adequately.

Furthermore, the existing ex officio trustees mechanism does not provide for representation of educators involved in educational programs for blind children in the regular public school systems, where the problems are completely different from those in special schools. There have been proposals to add the 54 heads of State departments of education—including the District of Columbia, Guam, Puerto Rico, and the Virgin Islands—to the ex officio trustees of the Printing House; but this would create an unwieldy group of more than 100 members. The Advisory Council, consisting of actual practitioners in teaching blind children as well as administrators, is a much more practical solution.

The 12 members of the Advisory Council appointed by the Secretary of Health, Education, and Welfare are to serve for 4-year terms, except for the first group.

9. BUILDINGS, AND SALARIES AND EXPENSES

Section 4 of the bill broadens paragraph 2 of section 102 of the act, which forbids the use of funds for the erection of buildings, to authorize the expenditure of funds for salaries and expenses of experts and other staff to assist the Advisory Council and for the expenses of the Advisory Council and special committees which may be appointed. Under the present law, the Printing House has had to use private funds to pay the salaries and expenses of staff people involved in carrying out the program.

10. SALE AT COST

Section 5 of the bill merely broadens the wording of the act which requires the Printing House to charge only the cost of materials it manufactures and furnishes under the program to conform with the broader authority granted in the bill to permit the Printing House to purchase useful educational aids already available from commercial and other sources. Thus, although commercial sources of finished products would be able to charge a profit on items purchased for distribution by the Printing House in the same manner as suppliers of raw materials to the Printing House do under the present law, the net result would still be more economical than if the Printing House were required to tool up and manufacture items already available, as the present law requires.

11. WITHHOLDING OF FUNDS

Section 6 of the bill simply repeals the existing obsolete provision of paragraph 4 of section 102 of the act, calling for funds to be withheld from the Printing House if they are misused. Other Federal laws make this specific punitive provision in the act superfluous.

12. CONFORMING AMENDMENT

Section 8 of the bill merely corrects an oversight in section 104 of the act which was not corrected by the 1956 amendments and still refers to the Federal Security Agency instead of the Department of Health, Education, and Welfare.

13. EFFECTIVE DATE

Section 9 of the bill makes its amendments effective for fiscal years following enactment of the bill.

SENATE

FRIDAY, MARCH 24, 1961

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

Rev. George J. Bacopulos, director of interchurch relations, Greek Orthodox Archdiocese, New York City, offered the following prayer:

In the name of the Father, and of the Son, and of the Holy Spirit. Amen.

Almighty God and Lord of the universe, who hast created all in wisdom, as this august body convenes, our thoughts first turn to Thee.

We thank Thee for the great natural wealth, for the rich cultural and religious heritage, and for the blessings of liberty, which Thou hast entrusted in the citizens of our great land. We thank Thee, at this 140th anniversary of the independence of our sister republic, Greece, for Thine example of brotherhood and for Thy inspiration to all peoples to labor diligently and faithfully for these inborn rights, granted to them at their creation. Keep us O Lord, vigilantly and ever aware of the eager sacrifice of all those who have labored for the cause of true freedom. Illumine the minds of all who richly benefit by their sacrifice, that we may truly perceive the value of this priceless gift and heritage, and willingly give our lives for its protection and continuation, as our forefathers gave their lives for its establishment.

Heavenly Father, give us faith and courage as a nation to venture ever forward in brotherhood. We believe Thou hast a plan for a righteous community, for a righteous nation. Make fearless pioneers of men of our generation, that we may identify and take the untried step to its fulfillment.

Bless and guide Thy servants in the Senate, that they may never lose sight of the awesome mission which has been entrusted, by Thee, to their hands. Inspire them to labor with patience, wisdom, and courage in the great task for

which they are called; encompass them about by Thy holy angels, so that guided and guarded by them, they may lead and govern us according to Thy commandments and along the pathway of Thy righteousness.

Grant to them and to all peoples profound insight, that we may reverently acknowledge that our help comes not simply from our intellectual might, nor from our material abundance, but from Thee, the Maker of heaven and earth.

For Thine is the kingdom and the power and the glory, forever. Amen.

ENROLLED BILL SIGNED DURING ADJOURNMENT

Under authority of the order of the Senate of March 22, 1961, the Vice President, on March 23, 1961, signed the enrolled bill (H.R. 4806) to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes, which had previously been signed by the Speaker of the House of Representatives.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, March 22, 1961, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on March 22, 1961, the President had approved and signed the act (S. 1173) to authorize the appointment of Dwight David Eisenhower to the active list of the Regular Army, and for other purposes.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 5000) to authorize certain construction at military installations, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled joint resolution (H.J. Res. 176) to provide for the reappointment of Dr. Jerome C. Hunsaker as Citizen Regent of the Board of Regents of the Smithsonian Institution, and it was signed by the Vice President.

HOUSE BILL REFERRED

The bill (H.R. 5000) to authorize certain construction at military installations, and for other purposes, was read twice by its title and referred to the Committee on Armed Services.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual morning hour for the transaction of routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

THE LAOTIAN CRISIS

Mr. MANSFIELD. Mr. President, at his press conference last night, the President made it clear that this Nation, the Soviet Union, and indeed, the entire world, stand on the verge of very grave decisions. The necessity for these decisions arises from the situation in distant Laos. This most remote and unwarlike of nations has become the critical hinge on which the door to world peace will open or close.

At this moment there is in Laos a minor military confrontation of opposing local forces. But the fact that it is minor does not mean it is insignificant. This confrontation has opened a fissure in the membrane of international stability; and behind each side in the local confrontation powerful international forces have begun to accumulate.

If the process that has now commenced in Laos is not checked, it will widen the fissure until it spreads from what is remote and obscure to what is immediate and clear. It will spread from Vientiane to Moscow, Delhi, London, Paris, and Washington. That is the prospect of the crisis in Laos. It is still a small fire, but it is a fire burning in the dry brushwood of a highly unstable world. For that reason, it cannot be played with with impunity by any nation.

Those who mean to have peace will act now to close the Laotian fissure, to put out the Laotian fire. While there may be differences as to how this should be done, there can be no difference on the need to do it at once. There can be no difference on the need for an immediate supervised cease-fire in Laos and the convening of the nations most directly concerned with this situation.

A time of accounting is at hand. Powerful nations may properly be judged by the less powerful on their reactions to this situation. This is a moment for the world to ask bluntly: Who works for peace; and who talks peace, but does not do its work?

There can be no evasion in Laos. What is done there will ring the bell for what is done elsewhere. If the great nations cannot resolve in peace this distant problem, where their particular national interests are remote, how, then, are they to resolve problems where their interests are direct and intimate? A failure to achieve a peaceful settlement in Laos will cast the shadow of impending failure over disarmament negotiations, over peaceful evolution in Africa, over settlement in Europe, over the entire world's hope for peace and progress.

It is clear to us, and I am confident that it will become equally clear to the rest of the world, that the President of the United States is prepared and determined to use every instrument of peace to deal with the situation in Laos. He will do so because he is aware that those instruments, and those alone, can really serve the interests of the Laotian people and the higher interests of all peoples. He is doing so in the expectation that others will also act with the same sense of reality and responsibility.

In the course which the President is pursuing, I am confident that he has the full support of the American people. I wish to interject at this point a tribute to the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN], who yesterday made it clear that on vital questions this Nation must, and will, stand united behind the President. I know that the people appreciate this attitude of the minority leader. I know that the President appreciates the minority leader's high sense of national responsibility, for on the President has fallen, 2 months after assuming office, the burden of grave decisions in this long festering difficulty.

With the President's wise leadership, with united support at home which is typified by the expressions of the distinguished minority leader, with the cooperation of closely allied nations, and with what I am confident will be the growing support of the world's peoples, we may anticipate that all that can be done for the peace of the Laotian people and for the peace of the world will be done.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield to the distinguished acting minority leader.

Mr. KUCHEL. Mr. President, in what the distinguished majority leader has just said, he speaks for all Senators and for all Americans. We deal here not simply with the potential rape and destruction of a neutral and independent nation; we deal here with the potential destruction of freedom in Indochina; and, beyond that, we deal here with a growing and darkening hazard to the cause of free peoples and free nations all over the globe.

The President, speaking for all Americans, laid on the record last night America's desire to seek an honorable peace, and not war. The President referred to the honorable commitments of the Government of the United States, many of which were entered into by his illustrious predecessor, Dwight Eisenhower, who likewise spoke in this field for all the people of our country and for the cause of freedom everywhere.

The obligations the American Government has taken in the cause of peace will be scrupulously discharged.

It was with great distress, I will say to my able colleague, the Senator from Montana, that we heard last night from the lips of the President that a thousand sorties of Soviet aircraft had taken place from the outside into Laos, bringing

there, presumably, instruments of war and technicians to teach any who desired to use them to create strife and to destroy that nation.

It still remains a firm and basic measure of our country's dealings with foreign nations that we look for deeds, and not words. We reject duplicity and deceit by any nation. We stand for honorable peace. And in what the Chief Executive of this country said last night, and in what the able spokesman for the majority party has said here today, there is no line in this Chamber. Our great Senate Republican Leader DIRKSEN iterated this yesterday. Nor is there any cleavage in America for the goal that was well and eloquently stated last night by the President of our country.

Mr. MANSFIELD. I thank the Senator from California, and I appreciate his remarks.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield to the Senator from Kentucky.

Mr. COOPER. Of course, I do not speak as an official of the Republican Party, but I say for myself that I am confident that our party, the Congress, and the people of this country, support fully the statement which the President of the United States made yesterday regarding Laos. It follows the proposal made by Great Britain to the Soviet Union, a proposal which asked that the Soviet Union use its influence to bring about a ceasefire in Laos. Of course, the Soviet Union can do this if it desires peace. Second, the British proposal seeks a reconstitution of the International Commission which was established in 1954, made up of India, Canada, and Poland; the immediate purpose of the Commission would be to verify a ceasefire. If these recommendations are accepted the Conference, established in 1954, would be convened. It brought about the partial settlement, at least of the war in Indochina, which threatened a world conflagration in 1954.

The President's proposal tests Russia, because Russia has been saying, since the new administration came into power, it wanted to establish better relations with the United States, and seeks peaceful solutions. Now Russia's willingness to negotiate fruitfully, and with good faith, on such questions as the majority leader has stated, as disarmament, nuclear tests, Berlin, and other world issues will be laid bare by its action regarding Laos.

We support the efforts of the President to secure a settlement of the troubles in Laos, which is an effort to achieve peace for the people of Laos and self-determination and to prevent a larger war which would threaten southeast Asia and the world. I note Britain suggested that Mr. Nehru, Prime Minister of India, be consulted, and asked to use his influence to secure a peaceful settlement. I believe he can have the greatest influence at this time. I know his concern, for I talked to him in December 1960. I hope very much, and I am confident, that his influence and his efforts will be sought by the United States. But I say today if all efforts fail, and the U.S.S.R. refuses to cooperate in a cease-fire, then grave decisions must be made. I am sure that whatever course of action the President may then take he will have the full support of the Congress, of both parties, and of our people.

The situation is very much like that which existed in 1954. The distinguished majority leader at that time played an outstanding part in the debates regarding Indochina in 1954. It appeared then, that a greater war was in the making. But the Geneva conference settled it, at least temporarily.

Mr. President, we shall support the President, and the Senator from Montana in efforts to achieve peace in Laos, and prevent war. But we will stand solidly behind the President in sterner measures if his peaceful proposals are refused by Soviet Russia.

Mr. BUSH. Mr. President, will the Senator yield before he leaves this subject, for a comment on it?

Mr. MANSFIELD. Yes, if I may.

Mr. BUSH. Mr. President, I wish to congratulate the majority leader on the whole statement he has made with respect to the Lao situation, and particularly to commend him for his generous remarks concerning our minority leader.

I heard the President on television last night in his dramatic appearance, and I was deeply impressed with the sincerity of his statement, with the strength of it, and with the courage which he is showing in these very critical moments.

He made it unmistakably clear to us and the whole world that the United States seeks nothing in Laos and southeast Asia except peace and the freedom of the people in those areas, because we believe that only in freedom can men realize their full destiny in life. I thought his presentation of that important phase of the problem was absolutely superb.

I thank the majority leader for yielding to me.

Mr. MANSFIELD. I thank the Senator. I concur in what he has said.

Mr. KEATING subsequently said: Mr. President, I commend the distinguished majority leader for the excellent statement he made this morning on the situation in Laos.

Mr. President, Laos is a small country and it is on the other side of the world. Yet, as President Kennedy has pointed out, the security of all southeast Asia will be endangered if Laos loses its neutral independence. Even further, if the United States as a member of SEATO does not come to the aid of a nation which has been guaranteed the protection of SEATO, then every one of our allies, and all free nations the world over, will feel themselves in doubt and jeopardy.

I am very glad that the President has made it so clear that the Communists must stop their military operations in Laos and permit that country to return to a free and neutral status. All Americans will stand behind that policy of firmness.

In the past I have suggested that the best way to deal with the crisis in Laos would be through a permanent United Nations force. I still feel that over the long run the only way to prevent Communist inroads is by a United Nations force. But it is clear now that time is running out. There is no force ready and there is no time to wait for one to be set up—especially in view of the delaying tactics which we could expect the Russians to carry on in the U.N. The best vehicle for action in Laos today is unquestionably the SEATO alliance, which is united and prepared to take whatever action may be necessary to block the continued path of Communist aggrandizement.

But over the long run, this crisis reveals plainly that a long-term solution is necessary. We cannot afford to wait until the Communists have already nibbled away at half of a country before the free nations are ready and able to take action.

What we need is a United Nations force, always ready to respond to the appeals of a nation being attacked and infiltrated from without, and always ready to protect the smaller nations of the world from Communist tactics of divide and conquer. Such a force can be set up now, so that after SEATO has accomplished its mission in Laos—if that becomes necessary—a United Nations force can take over the patrol and protection of neutral Laos.

There is another possibility which we must also consider. Suppose the Communist Chinese decide to take advantage of SEATO preoccupation with Laos in order to move forward in a different area, like Korea or the offshore islands? Such a move would be typical of Communist tactics. I hope that U.S. forces and others in SEATO would be prepared for such an eventuality if it arose. But, for the long term, a United Nations force would be the best way to meet these crises while they are still brewing and thereby perhaps prevent them from becoming major cold war struggles in which the lives, security, and welfare of innocent people are endangered. This is or should be a basic long-term responsibility of the United Nations. Provisions should be made as rapidly as possible for meeting this responsibility.

Mr. President, as I have said, Laos is a small country and it is on the other side of the world, but a Communist threat there is a Communist threat to the whole free world. In this connection I am reminded of the immortal words of John Donne:

> No man is an island, entire of itself; every man is a piece of the continent, a part of the main; if a clod be washed away by the sea, Europe is the less, as well as if a promontory were, as well as if a manor of thy friend's or of thine own were; any man's death diminishes me, because I am involved in mankind; and therefore, never send to know for whom the bell tolls; it tolls for thee.

Mr. KUCHEL subsequently said: Mr. President, in connection with the statement which the able majority leader made to the Senate as we commenced our deliberations today, with respect to the President's excellent comments last

night, I have read a news dispatch coming over the wires from Palm Springs, Calif., in which is recited the fact that former President Eisenhower has given his personal endorsement to the firm stand which his successor, President Kennedy, has taken with respect to the Lao crisis. Mr. Eisenhower said he believed his successor, President Kennedy, had made clear that this Nation "is not going to be pushed around."

I ask unanimous consent that the text of the wire story on this subject be printed in the RECORD at the conclusion of the comments I made this morning with respect to the majority leader's statement.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

PALM SPRINGS, CALIF.—Former President Eisenhower today gave his personal endorsement to President Kennedy's firm stand on the Lao crisis and said he believed his successor had made clear this Nation "is not going to be pushed around."

In a press conference on the putting green of Tamarisk Country Club, the former Chief Executive said he had talked with Kennedy by telephone this morning.

Eisenhower said his understanding of Kennedy's statement on Laos at yesterday's press conference was in keeping with that of his own administration on the importance of living up to this Nation's commitments.

It was Eisenhower's first statement on foreign policy since he left office.

Eisenhower stressed his belief that the full measure of responsibility for such major policy decisions rests with the President and that it would be improper to suggest any course without full knowledge of the facts.

But, Eisenhower said, he believed Kennedy's stand followed that of the United States since World War II. He said the Nation sincerely desired peace and its Government took an approach that was "conciliatory but firm."

Eisenhower said that the Lao crisis had been so much in his mind and that of the current President that "we discussed it in the car on the way to the inauguration."

"There has been no change in the U.S. foreign policy," he said. He added he believed Kennedy's administration was ready to live up to its collective agreements and treaty obligations to maintain the free world.

Although a spokesman indicated earlier Eisenhower probably would talk about Laos this morning, the former President said he had no set statement ready to release. But he said Kennedy had telephoned him this morning after reading reports that Eisenhower was planning to say something and wanted to know whether it would relate to the Lao crisis.

Asked about his administration's attitude on neutrality for Laos, he said he did not object if that nation was "truly neutral—not neutral under a false name."

Eisenhower said he did not believe there was a comparison at this stage between the Korean war and the Lao crisis. He pointed out that after World War II, the Nations were not in a comparable position because of disarmament and casualties.

DEATH OF FORMER SENATOR JAMES E. MURRAY, OF MONTANA

Mr. MANSFIELD. Mr. President, it is my sad duty to report to the Senate that yesterday afternoon our distinguished former colleague, James E. Murray, long a Senator from the State of Montana, and to me still a Senator from the State of Montana, passed away after a lingering illness.

It was my honor and privilege to serve 8 years in the Senate with Senator Murray. It was my honor and privilege to work with him as a Member of the Congress, while he was a Senator and I was a Member of the House, for a period of 10 years.

Montana has never had a better nor a more faithful servant. The Nation has never had a better legislator on the national scene. He was a man of great humanity, a man of tenderness, a man of sincerity, a man who had feelings for his fellow man.

We shall miss him, and miss him greatly, because he made so many contributions, and because he was loved by so many of us on both sides of the aisle. We will miss him.

To his family I wish to extend, on behalf of Mrs. Mansfield, my daughter Anne, and myself, our deepest sympathy and condolences in this hour of distress.

Mr. METCALF. Mr. President, it was with profound sorrow that I learned last night of the death of my predecessor, Senator James E. Murray.

For a quarter of a century, Senator Murray was Montana's first citizen. He served longer in this body than any other Montanan, having been elected five times.

He was an inspiration, a leader, a counselor and friend, not only to me personally but also to generations in Montana and throughout the Nation.

He was proud to be known as the dean of the liberals, the dean of the New Dealers.

His imprint is deep on the laws of this Nation. The Murray-Wagner-Dingell health bill did not become law, but most of its provisions were subsequently adopted, and are now praised by many who opposed Senator Murray's original proposal.

He led the fight for a Missouri River Authority, for full development of our Nation's resources. It was my honor to cosponsor education legislation with him last year, and I was proud to be introduced mistakenly, several times, as Mr. Murray Metcalf.

The breadth of Senator Murray's impact on this country is indicated by the chairmanships he held in the Senate. He organized and was first chairman of the Select Committee on Small Business. He was chairman of the Committee on Labor and Public Welfare, and the Committee on Interior and Insular Affairs.

He was a true friend of the Indians, the farmers, and the laborers. He led the fight to save the mining industry of the West. Withal, Senator Murray was gentle and unassuming. He would not carry a grudge. He helped men who attacked and reviled him. One of the greatest laws ever passed by the Congress was the Employment Act of 1946, although few outside this body recognize that it was Jim Murray's vision and work which created this law and its benefits.

Senator Murray had the courage to vote his conscience, and his Nation's welfare, despite the effect back home. He voted for the loan to Britain, early in World War II, despite opposition and criticism back home. As a result, he lost his home county of Silver Bow in the 1942 election, but time proved the correctness of his decision.

Today one can travel the length of Montana and see living memorials to the man, the public buildings constructed under his leadership before he came to the Senate—Buffalo Rapids project, Fort Peck Dam, and Hungry Horse Dam. But most of all, Senator Murray will live on in our hearts as a great humanitarian. He was a friend of man.

Mrs. Metcalf and I and our son extend deepest sympathy to his family.

Mr. HILL. Mr. President, it was with deep regret and a sad heart that I learned of the death of my dear, devoted friend, our late colleague Senator James E. Murray, in Montana on yesterday.

There was no more loyal, generous friend; there was no braver, manlier man than Jim Murray. He was indeed a magnificent man and a magnificent American.

On the occasion of the announcement of his retirement from the Senate last April, I spoke of Jim, of my warm affection for him, and of his many outstanding services to his State and to our country. I ask unanimous consent that a copy of these remarks may be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

SENATOR HILL'S STATEMENT ON RETIREMENT OF SENATOR JAMES E. MURRAY, APRIL 28, 1961

There come times in life when the mouth cannot speak that which the heart would utter. Such a time comes to me as I contemplate the decision of my dear friend and great colleague, Senator James E. Murray, of Montana, that he shall retire from the Senate. The decision saddens my heart.

I have served in the Senate with Jim Murray for more than two decades. Through the years he has been not only my colleague, a steadfast rock of devotion to public service and a constant source of wisdom and encouragement, but he has been more than that; he has been my good friend, a tried and true comrade.

In committee and on the floor of the Senate he has fought the battles to conserve the Nation's natural resources of water and soil and mineral, to develop these resources for the benefit of all the people, and to see that control of them is retained in the hands of the people. He has been in the forefront of the cause.

As a member and as former chairman of the Committee on Labor and Public Welfare, he has worked tirelessly to improve our schools, to help our teachers, to help the aged, to increase safety conditions for our workers, to aid our veterans, to improve conditions for our handicapped, to help the migratory worker and the unemployed, to protect the consumer, to advance the arts and sciences and to improve and protect the health of our people.

Jim Murray came to Montana when the West was still raw pioneer country. In this pioneer setting there grew in him the conviction, the loyalty, the dedication to human needs and human concerns that he has carried with him through his years of service to the people of his State and of the Nation.

As his distinguished colleague, the junior Senator from Montana [Mr. MANSFIELD] has told us, Jim Murray was elected to the Senate in 1934, to fill the the vacancy created by

the death of Thomas J. Walsh, one of the great liberals of the West. In the ensuing decades he has nobly maintained Montana's heritage of liberalism. The people of Montana have expressed their appreciation and their warm affection by returning him four times to the Senate.

I have spoken of the magnificent public record which James Murray, of Montana, has built during his long service in the Senate. But it is of Jim Murray, the man, that I wish to speak—of his integrity, his moral courage, his high honor, his devotion to public duty, his loyalty to his friends, his human warmth and love of his fellow man—in a word, his character.

Let me say to you, Jim, that you will never really leave us. As so often over the past years, so in the years to come we will turn to you for the guidance, the wise counsel, the encouragement and support with which you have always been so generous in the many great battles and the grave crises through which we have gone together. You will never leave us. You will always live in our hearts. God bless you.

Mr. HILL. May I say, Mr. President, that while Jim Murray has left this earth, the example and inspiration of his life, his works and his services will live on.

He will be forever an influence,
A memory, a goal, a high example,
A thought of honor in some noble heart,
Part of his country's treasure and renown,
Oft giving courage unto souls that strive.

Jim Murray's acts are graven on the hearts of his people, and time has no power to obliterate the characters. Great men stand like solitary towers in the city of God. James E. Murray was one of these men.

Know ye not that there is a prince and a great man fallen this day in Israel?

Mr. BARTLETT. Mr. President, this is a day for grieving. We grieve because, for Jim Murray, the mortal curtain of time has descended. But this is likewise, in a sense, a day for jubilation, because we can all be happy that Jim Murray came to this world and lived 84 constructive years, years during which he accomplished much not only for the West—he was a true son of the West—but also for the entire Nation. His name will endure in our Nation's annals, I am sure. His achievements for all of the people in the field of social legislation affected every human being in the United States and will affect every human being for generations to come.

I first knew Jim Murray in 1933, and I came to know him much better from 1945, when I became a Delegate in the House of Representatives from the then Territory of Alaska. Jim Murray was not only friendly and courteous but also he was always most helpful. He was one of the leading advocates of the cause of Alaska statehood and fought for that cause until it prevailed. I regarded him not only as one of the Nation's great legislators but also as a true friend.

Mrs. Bartlett and I wish to express our sympathy and our condolences to those he left behind.

Mr. SYMINGTON. Mr. President, I wish to associate myself with the remarks made this morning by so many of my colleagues with respect to the passing of a great gentleman with whom it was my privilege to serve in the Senate.

When I first came to Washington, D.C., many years ago to serve in the executive branch, Senator Murray was very kind to me. When I became a Member of the Senate he was equally kind, gracious, understanding, and helpful to me, a freshman Senator.

We shall always remember him because he was a great statesman, but even more we shall remember him because he was such a true friend.

My wife and I join in expressions of deep sympathy to the members of his family who will miss him as do we.

Mr. YOUNG of North Dakota. Mr. President, I wish to join the other Senators in honoring our late and most respected colleague, Senator James Murray.

Senator Murray was a very close personal friend of mine, one of the most appreciated I had, and one of the most helpful. Senator Murray was a person to whom one always could go for help. This, I believe, is one of the reasons why he became so well liked not only in this body but in the State of Montana and in all areas where people came to know him.

He was recognized as one of the great liberal leaders of this Nation, as one who always stuck to his principles and the things in which he believed, regardless of how rough the going was.

The Senate will miss Senator Murray for years and years to come. May I express sympathy and condolence to the family of the late Senator Murray at the passing of this great American.

Mr. CHURCH. Mr. President, when Senator Murray announced last year that he would not seek reelection to the U.S. Senate, his colleague from Montana, who is now the majority leader, said of him:

In my mind, he will always be a real partner, a true colleague, and the senior Senator from the State of Montana.

This tribute from Senator MANSFIELD is fully shared by all of us who were privileged to know and to work with Jim Murray. He left a towering monument in the legislation which bears the mark of his vision, his dedication, and his humanity; he left another monument, unseen but real, in our memories.

I have especially poignant memories of Senator Murray's kindness to me and to my staff in the first weeks after we came here, a little more than 4 years ago. He invited us into his office, extending to us the full use of his facilities, until our own space became available. From him, we had our first introduction to the unwritten rules of courtesy and of helpfulness which characterize the Senate, and which he himself epitomized.

For such consolation as it may be to his bereaved family, Jim Murray was loved by the multitude of people he served so well in life; in death his good name and good works will be honored so long as memory lasts.

Mr. MONRONEY. Mr. President, it was with deep regret that I learned of the passing of former Senator James E. Murray. The history of our times will record his forward-looking attitude toward the development of the West with public works, irrigation, and waterpower programs, which always found Senator Jim Murray in the forefront.

In connection with many of the outstanding social gains which were made during the Franklin Roosevelt administrations, the name of Senator Murray would be found as the author of the bills. He was a kindly man; a man who understood and loved his people; a man who was dedicated to his service to the United States.

America has lost a great patriot and a great leader in the death of this outstanding statesman from the Far West.

Mr. McGEE. Mr. President, I speak this morning not for myself alone, but for all the people of my State and our region when we together express our sorrow at the passing of Jim Murray. I was not privileged to know him as long as did some of my colleagues in this body. Yet I knew Jim Murray in quite another way, for in the many years that I spent in the classroom, chapters of our history were written by the courageous efforts of Jim Murray, and they spoke of a man whom one admired even from afar.

With that introduction and admiration for the man, I came to know Senator Murray even better and more personally. I determined then, as one of the newer Members of the Senate, to carry on whenever possible in the traditions that Senator Murray had set down, and to adhere to the guidelines that he had erected. Those of us who carry on from here will have a sense of direction, a vision of goals, and the example of his courage to keep us on the right track for the right principles.

His statesmanship emerged in many areas—public power, public health, education, and conservation—but in no area did he carve out such clear-cut mileposts as in the realm of resource conservation and development in the West. He proposed a mobilization of the Nation's natural resource potential.

He made this proposal to the last session of Congress, and it is still a sort of Magna Carta for those who believe in the full and equitable use of our God-given wealth in this land. I have recently introduced a bill, S. 1415, which is aimed at achieving the same goals. My colleague, Senator ENGLE, has also introduced such a bill.

Thus, those of us who remain here pledge to carry on along the lines that Jim Murray laid out for us. I submit to the Senate today that though Senator Murray has now passed on, his spirit, his magnificent personality, and his wisdom in statecraft will become the real marks of the 1970's and the 1980's and the exciting century of which we are a part.

In addition, I express my personal sorrow at his passing, and ask unanimous consent that a fuller text of my thoughts on this sad day be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR GALE W. McGEE ON THE DEATH OF SENATOR JAMES E. MURRAY OF MONTANA

I was shocked, as all his colleagues must have been, to hear of the untimely death of

Jim Murray. When I came to the Senate in January of 1959, it contained in its membership many men for whom I had already developed a deep respect and affection. This respect was based at that time not so much upon the intimate knowledge of their characters which I have since gained, but rather upon their works. In the estimation of my colleagues which I was able to make at that time, none had a more consistent record of constructive works than Jim Murray. I have taught in American schools since the middle thirties and in my study and teaching I have very often marked the accomplishments of this great Senator. His work in the fields of social security, public housing, public power, fair employment standards, health insurance and Federal aid to schools was known to all, and his record constituted an example which many young Americans in my generation have sought to emulate. During the 86th Congress I had the happy opportunity to get to know Jim Murray and I feel fortunate in having been able to include him in my circle of friends. Jim Murray was, as I came to understand, a consistent and fearless humanitarian. His attitude was one of genuine dedication to the interests of the people of Montana and the Nation. His spirit was gentle and his impulses were always kindly. But let no one suppose that this gentleness caused him to swerve or deviate one inch from the great public causes which he so successfully espoused.

The Nation faces many complex and harrowing problems during the coming decade. But due to Jim Murray's efforts the Nation is and will become a better place to live in than it might have been had he not poured out his talents so generously in the public interest. During the 86th Congress itself, we saw many examples of his work. He was the author of S. 2549, a bill which if it had been enacted would have provided much needed coordination and impetus to the drive to develop, to conserve, and to use wisely, our natural resources. It was a bill which recalled and resembled the Full Employment Act of 1946 for which Senator Murray and Wyoming's own Joe O'Mahoney provided much of the leadership. His death does not leave this project undone however, because Senator ENGLE and I have recently introduced bills modeled on the lines of S. 2549 which will carry forward this great work. My bill is S. 1415, and Senator ENGLE's is S. 239. That we have done so is due to our service on the Senate Select Committee on National Water Resources. This committee was set up pursuant to Senate Resolution 48, a resolution which was prepared and introduced by Senator Murray and his Montana colleague, Majority Leader MANSFIELD. I think the most significant result of the committee study—a study participated in not only by the Senate committee but by thousands of citizens in every State of the Union—is that now the American people appreciate more fully than ever before the relationship between the development of our water resources and the national interest. Another of Jim Murray's works during the 86th Congress was sponsorship of S. 2, the Murray-Metcalf bill which was sponsored in the House by the man who has so ably taken Jim's place in our ranks, LEE METCALF. The bill marked out the way for the provision of adequate funds to provide assistance in the education of the Nation's youth. The aims of this bill will be accomplished and the day will come when the children of every State will have equal educational opportunities. The last of the great areas of Jim's accomplishment during the 86th Congress, which I wish to point out, is his leadership in the fight to provide adequate funds for the conservation of our national forest resources. I was privileged to follow his leadership as chairman of the Senate Committee on Interior and Insular Affairs and that of my chairman, Senator HAYDEN, in the Senate Appropriations Committee as we attempted to provide these funds over the objections of the Eisenhower administration which had itself recognized the need for the money by promulgating the program for the national forests. This is certainly not a complete catalog of Jim Murray's achievements even in the 86th Congress, but in each of the cases I have mentioned, I was privileged to play a minor role, and it is through our work together that I came to know the measure of the man. When Jim Murray announced his retirement I pledged to him that these fights would go on and I renew that pledge now. Jim Murray's work is not done. His career and his record are not finished. It is an extraordinary tribute to any man to be able to say not just that his memory lives after he is gone but to say further that his career, his plans and the inspiration of the future accomplishments he dreamed of and worked for also lives and goes on. America will meet the challenge not only of the sixties, but also of the seventies and the eighties and the other decades that follow. It will meet this challenge successfully in large part because Jim Murray has shown the way and has set before us great plans, great dreams and great goals, which draw the Nation onward.

Mr. THURMOND. Mr. President, I deeply regretted to learn of the death of former U.S. Senator Jim Murray. He was my friend. I had the pleasure of serving in the U.S. Senate with him for a number of years. He was a great man, an able Senator, a true patriot, and a loyal American.

I extend my deepest sympathy to his five stalwart sons.

Mr. HUMPHREY. Mr. President, I was grieved to learn this morning of the death of our beloved friend and late colleague, the distinguished statesman and longtime Senator from the State of Montana, Senator James Murray.

Senator Murray was one of my intimate personal friends. When I first came to the Senate, he was one of those who extended to me the hand of fellowship and friendship. He was always kind, always considerate, and always helpful. Senator Murray's heart belonged to the American people and to people all over the world who were in need of someone with a sense of compassion and social justice.

He was liberal in the best sense of that word. He was always progressive in his thinking. He was always willing to hear both sides of an argument and then would make a decision based upon what he believed were the compelling facts.

Senator Murray, like many persons who take stands on controversial issues, was frequently the subject of unfounded, unbridled, and, at times, vitriolic attack. But he weathered every one of those storms and came out each time stronger in the eyes of his own constituents, and, indeed, in the respect of the Nation. We have lost a wonderful man.

But the work of Senator Murray is here: It is here in the Employment Act of 1946. It is here in the great areas of labor and public welfare legislation. It is here in the housing for persons who needed a home and needed a shelter. The work of Senator Murray is here in a better international understanding and in the strength of the security of this Nation. It must be satisfying to know that one has lived fourscore years and more, and that he has contributed so much to his country.

I might simply add this lighter note: Senator Murray was always very proud of his Irish ancestry. I used to joke with him a bit in the Senate about the days when he would go up to New York and join in the parades for Irish freedom. He had the spirit of the Irish—the happy countenance, the pleasant personality, the sharp mind, and, at times, I may say, the sharp tongue which was necessary to make an argument effective.

I extend to his family, on behalf of Mrs. Humphrey and myself, our sincere condolences and sympathy. It can truly be said that we have lost a friend.

Mr. BEALL. Mr. President, I wish to join my colleagues in expressing deep regrets on the passing of James E. Murray.

Marylanders will always keep a place close to their hearts for Senator Murray. As chairman of the Senate Committee on Interior and Insular Affairs, he was a leader in the field of conservation and preservation of our open spaces. In this field, he leaves perhaps his greatest legacy. Future generations will have much to be thankful for as they enjoy the use of our parks and recreational areas. No man could ask for a more fitting memorial and few men deserve it more than James Murray.

On his passing, the State of Montana and the Nation have lost a great statesman.

Mr. KUCHEL. Mr. President, the entire Nation—but most particularly the Western States of our Union—mourns the passing of a distinguished American, the late able, senior Senator from Montana, James Murray.

I had the pleasure of calling the illustrious predecessor of the present Presiding Officer [Mr. METCALF] my friend. When I first came here, more than 8 years ago, I was assigned to a seat on the Senate Committee on Interior and Insular Affairs, which I have been proud to continue. During most of those days, the committee was headed by the late Senator Murray.

I was interested in proposed legislation in the field of reclamation, a subject which is of particular interest to the people of California. No partisanship interfered with Senator Murray's sympathetic consideration of proposed legislation which I had introduced, and which came before the committee.

With his constant help, problems of the most urgent concern to the State from which I come were favorably considered in the Committee on Interior and Insular Affairs, and then by the Senate itself. They are now the law.

Perhaps, one of the greatest milestones in the full life of our late departed colleague was the leading role he played in fashioning legislation to provide for two additional stars in the flag of our country. The people of Hawaii and Alaska owe gratitude for their full participation in our Union to many of my colleagues. But in a real sense, to the chairman of the Committee on Interior and Insular

Affairs the greatest vote of thanks is forthcoming for his efforts during the years that the Democrat Party was in control of the Senate.

With my family and my colleagues I send to the members of the family of Jim Murray our most profound sympathies and condolences on the great loss which they have sustained.

Mr. BIBLE. Mr. President, the illustrious career of one of America's great citizens drew to a close yesterday when death came to Senator James E. Murray at the age of 84.

The 26 years he served in this body, Mr. President, were indeed momentous ones in our Nation's history. The staggering social problems of the thirties called for drastic action, and James Murray early recognized the need for legislation that would better the lot of all Americans.

He actively associated himself with the aims of President Franklin D. Roosevelt and was instrumental in lending his views and his vigor to the enactment of social security and other legislation in the fields of general welfare.

Upon entering the Senate I was privileged to be appointed to the Interior and Insular Affairs Committee, of which Senator Murray was the able chairman. During the years his warm understanding, helpful guidance, and unfailing courtesy were always a source of satisfaction and encouragement to me and my other colleagues on the committee.

Jim Murray has gone but he has left an imperishable legacy as an unrelenting champion of those who foster the conservation and preservation of our vast natural resources—and as a dedicated and articulate spokesman for the rank and file citizens of America.

Mr. GRUENING. Mr. President, I join my colleagues in paying a warm and heartfelt tribute to Jim Murray. He was a kindly and generous man. It was my good fortune to know him from his earliest days in the Senate, and to follow his great career as an exponent of resource development, as a friend of the worker, as a great conservationist, as a supporter of civil liberties, and as a true liberal in the best sense of the word.

Alaskans will always be grateful to Jim Murray for his vigorous espousal of statehood for the 49th State, beginning in the early days, when the cause was weak and struggling and had relatively few friends. From the earliest days of those efforts to achieve for Alaska the basic American principle of government by the consent of the governed we could count on the support of Jim Murray.

A few months ago, when news of his retirement reached the Senate and tributes were made, I spoke at somewhat greater length than I am doing now. I sought to express my appreciation of the splendid work that Jim Murray had carried on as chairman of the important Committee on Interior and Insular Affairs. To those who live in the West that committee is the most important of all Senate committees. I ask unanimous consent that the text of my tribute delivered a few months ago be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GRUENING

Mr. GRUENING. Mr. President, I deem it a great privilege to associate myself with the many beautiful, eloquent, and deserved tributes which have been paid this afternoon to our great colleague, Jim Murray.

I doubt whether there could be any greater or more heartfelt expression of regret that he has found it necessary to announce that at the end of his present term he is leaving the Senate, where he has served with such great distinction, such great public spirit, such great devotion, such great pertinacity, not merely for the things that he believed in but for the things that were good for our Nation as a whole, for the conservation of its basic resources, for their maximum development, and all through for the preservation and enhancement of that even greater resource, the human resource.

When the history of the Senate is written, the record of Jim Murray will stand out as one who steadily and incessantly has fought the good fight for all the eternal values that we Americans cherish.

He has not been just a Senator from Montana; he has not been just a great western Senator, although he has been that; he has been a national figure. Although he comes from the Mountain States, his interest and the beneficence of his work and the things that he has done and the things that he has brought about through the causes he has espoused have redounded to the benefit of the entire American people.

It has been my privilege to serve under him as a member of the Committee on Interior and Insular Affairs, for the short time I have been a Member of the Senate. But for many years before that time I have known and admired Jim Murray. I have known him to be one of the men one can count on to preserve everything that is best in the American tradition, and to work for it quietly, modestly, without fanfare, but with a devotion which no one could ever challenge.

We shall miss Jim Murray very much. I myself greatly regret his decision to leave the Senate. He has done so much for the West and so much for the conservation of the resources of the country that his leadership will be greatly missed. He has done much for Alaska. He was one of the earliest and ablest protagonists of statehood for Alaska—as he was also for Hawaii. Never did Alaska ask for anything which it deserved to have that Jim Murray could not be counted upon to support.

I hope his leaving will, as my good friend WARREN MAGNUSON has said, prolong his years and let him see that the fruits for which he worked so many years, will come to full ripening.

We shall miss you, Jim. We are grateful to you for all the many kindnesses you have done for us as individuals and for your great and enduring service to our Nation as a whole.

Mr. SCHOEPPEL. Mr. President, I wish to join other Senators who have expressed their deep sorrow at the passing of our distinguished former senior Senator from Montana, Mr. Murray. I served in the Senate with him for 12 years. He was a man who served his Nation and State and area with courage, great distinction and ability. The work he did here in behalf of his section of the country and our Nation will stand as one of the finest tributes to him that any man can expect to have.

Mr. DWORSHAK. Mr. President, I join my colleagues in paying tribute to the late Senator James E. Murray. Coming from an adjoining State, I have been aware of his distinguished services in the Senate and the esteem with which he has been held by the people of Montana.

Having served for many years on the Senate Committee on Interior and Insular Affairs with Senator Murray, I had observed that, while he was an ardent partisan, he also was a gentleman and a loyal friend of those with whom he worked on this committee. Although one might disagree occasionally with his political views, he was charitable and tolerant of others, and he never took advantage of an opponent.

Mr. President, during the 86th Congress, I served as ranking Republican on this committee, and I am extremely grateful for the most harmonious relations which existed between Senator Murray, as chairman, and myself. He was dedicated to the full utilization of our natural resources in the Northwest and was willing to cooperate in every way in promoting this development.

Montana was most fortunate in having such a devoted Senator, and I join its people in expressing heartfelt sorrow over the passing of this stanch American.

He served faithfully his country and fellow men, and I join in extending condolences to his family. His memory will long endure in the hearts of those who were privileged to know him and to serve with him in this body.

Mr. ALLOTT. Mr. President, I could not let this day pass without joining with the many Senators on both sides of the aisle who have paid tribute to former Senator James Murray. It was my great privilege to serve with him in the Senate for 6 years and as a member of the Committee on Interior and Insular Affairs for 4 years.

Certainly in his great career in the Senate, Senator Murray espoused all of those causes which made and promoted the West, particularly those relating to the development of natural resources, reclamation, and mines and mining.

As a younger Senator who joined his committee, I personally shall always remember one thing about Jim Murray: That is, his unfailing goodness in being kind and helpful to the younger members of the committee. I joined with him in the sponsorship of many pieces of legislation; but I shall always remember, above all, the kindness and goodness with which he treated the younger members of the committee, particularly myself.

I extend to his family my very deep sympathy and condolence.

Mr. McNAMARA. Mr. President, when James E. Murray passed on to his reward—the men and women who do our country's work lost a powerful and most consistent champion. All our people lost a wise and gentle and understanding statesman. The Nation lost a patriot devoted to the conservation of its resources and the development of its great potentials.

I shall not, at this time, attempt to recount the many, many services he rendered or the great causes for which he strove. They are well remembered

and loom large in our minds. I would like only to call attention to the fact that throughout his career Jim Murray has been one of those courageous men who takes the lead in fighting for good causes long before they become popular causes. Time after time we have seen him alone or with a very few colleagues take on apparently hopeless tasks against formidable opposition, gradually win converts through his persistence and gentle persuasion and finally win through to victory surrounded by a host of those who found courage only when the victory was in sight. Jim Murray was a man of courage. And because the goals for which he strove were proper ones and fine, those for which he was still striving when death laid him low will also be attained.

We who knew and loved him will carry on the fight. This I can promise you.

To his children and grandchildren I can only say that we share your grief in his passing. For we, too, knew and loved him well. We, too, shall cherish his memory. And we pray that the sorrow which now afflicts you will soon change to pride in the great and noble heritage he has bequeathed you.

Mr. HICKEY. Mr. President, I did not have the privilege of serving in the Senate with Senator James E. Murray, whose death yesterday has saddened the Senate and the Nation, but I have, of course, known of him for many years, and I was honored to meet him upon several occasions when, as an attorney, I came to Washington, D.C., from Wyoming to testify before the Senate Committee on Interior and Insular Affairs.

One of the great liberals of the Senate, Senator Murray leaves a distinguished record of achievement which will be an inspiration to those of us who follow him in this great legislative body. His accomplishments in the causes of conservation and reclamation and the overall development of the natural resources of the West will bear fruit for many years to come, as they have in the past.

A wealthy man himself, the venerable Senator from Montana was known as a battler for that segment of our population which has little of the material goods of this world; he was in the vanguard of the fight for social security, public housing, public power, fair employment practices, health insurance, and adequate education for all.

Senator Murray will be missed by those who knew and worked with him, by the hundreds of thousands who benefited from his work in the Senate, by his State of Montana, and by the Nation.

I join the other Members of this body in expressing my sorrow at his death and in extending my sympathy to his family.

Mr. MORSE. Mr. President, a rugged oak of American statesmanship has been struck by God's lightning. James Murray has gone to his heavenly reward.

I think the most eloquent and fitting eulogy I could pay him would be to use the words of St. Matthew, in chapter VII, verses 16 to 21:

> Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?
>
> Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit.
>
> A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit.
>
> Every tree that bringeth not forth good fruit is hewn down, and cast into the fire.
>
> Wherefore by their fruits ye shall know them.
>
> Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; he that doeth the will of my Father which is in heaven.

Mr. President, as we mourn the passing of this great statesman, I would say to my colleagues in the Senate, that never could it be said with greater truth, "By their fruits ye shall know them."

I shall cite only a few of the many great acts of statesmanship in connection with legislation that Senator James Murray contributed to the life of our country during his 26 years of noble service in the Senate.

Those of us who have been so greatly concerned over the years in regard to the need to conserve, for the benefit of future generations, a rich heritage of our natural resources, recognize that for 26 years Senator Murray was a tower of strength in the Senate. He was always on the side of those who sought to conserve and protect the God-given heritage of the American people in our natural resources.

I believe it particularly fitting that on this occasion I mention Senator Murray's great work in the field of legislation dealing with education. He was a coauthor of the Metcalf-Murray bill. We remember that it was only a year ago that the great Senator Murray, of Montana, stood on this floor and did most effective work in seeking to have written into the statutes of our land the principle of Federal aid to education. I believe it quite appropriate for me to state that in a few weeks, when we enter upon a renewal of that debate, here in the Senate, many of us can reflect with profit on the teachings of Senator Murray on the same subject matter as recently as last year; and I believe we should complete the monument which he began to build by means of the Murray-Metcalf bill. In fact, I should like to say, most respectfully, that probably the most fitting monument we could build to Senator Murray would be the enactment, this year, of the education bill advocated by the Kennedy administration. That bill carries out the identical principles in the field of Federal aid to education for which Senator Murray battled long, faithfully, and effectively, here in the Senate.

Senator Murray was a great liberal. He recognized the responsibility of the Senate to seek to translate into legislation the services so greatly needed in order to promote the general welfare of the people of the United States. Thus, during the past decade or more he made great contributions by his fights for the enactment of adequate legislation in the field of medical care; and also legislation to come to the assistance, in their old age, of the aged of our country, by providing them with a fair and equitable law to provide medical aid to the aged. That is but another of the great hallmarks of Senator Murray's statesmanship.

Mr. President, whenever we became engaged in an effort to enact legislation to implement the constitutional guarantees of first-class citizenship in our Nation, in any form of civil rights legislation, we always knew that Senator Murray would stand with us shoulder to shoulder as we sought to bring constitutional rights to so many millions in our country who at the present time are being denied the full enjoyment of their constitutional guarantees. So it was that in the field of civil rights legislation, this great liberal made a magnificent record.

Of the many other things I could mention in paying tribute to Senator Murray, I shall mention only one more at this time—namely, the outstanding contributions he made again and again, during his service in the Senate, during the period when, for a time, he served as a lieutenant, may I say, of the great Senator Wagner, of New York. Actually, in my judgment, Senator Murray did in a very real sense take on the mantle of Senator Wagner, after Senator Wagner passed on; and Senator Murray became one of the great exponents in the Senate of a fair deal for both labor and management. He recognized that legislation in that field must protect the legitimate rights of both labor and management; and his record bespeaks statesmanship of that kind.

Mr. President, at this time I shall not speak longer, because all we need to do, it seems to me, is repeat the eloquent words of St. Matthew, as recorded in Holy Scripture: "By their fruits ye shall know them."

Mr. President, we really do not need to build a monument to Senator Murray, because he has left his own monument. It is the glorious record of public service dedicated to the general welfare of the American people that he made here in the Senate during his 26 years of great service not only to the people of Montana, but also to the people of the entire Nation.

Mr. MANSFIELD. Mr. President, on behalf of my distinguished colleague, the junior Senator from Montana [Mr. METCALF], and myself, I send to the desk a resolution and ask for its immediate consideration.

The VICE PRESIDENT. The resolution will be read.

The resolution (S. Res. 114) was considered by unanimous consent, and unanimously agreed to, as follows:

> *Resolved*, That the Senate has heard with profound sorrow and deep regret the announcement of the death of Honorable James E. Murray, formerly a Senator from the State of Montana.

Resolved, That the Secretary communicate these resolutions to the family of the deceased.

Resolved, That, as a further mark of respect to the memory of the deceased, the Senate, at the conclusion of its business today, adjourn until Monday next.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

PROPOSED SUPPLEMENTAL APPROPRIATION, TO PAY CERTAIN CLAIMS AND JUDGMENTS RENDERED AGAINST THE UNITED STATES (S. Doc. No. 25)

A communication from the President of the United States, transmitting a proposed supplemental appropriation to pay claims and judgments rendered against the United States, in the amount of $3,248,533 (with accompanying papers); to the Committee on Appropriations and ordered to be printed.

REPORT ON DEPARTMENT OF THE ARMY CONTRACTS FOR MILITARY CONSTRUCTION AWARDED WITHOUT FORMAL ADVERTISEMENT

A letter from the Secretary of the Army, transmitting, pursuant to law, a report of that Department on contracts for military construction awarded without formal advertisement, for the period July 1 through December 31, 1960 (with an accompanying report); to the Committee on Armed Services.

REPORT ON BORROWING AUTHORITY

A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting, pursuant to law, a report on borrowing authority, dated December 31, 1960 (with an accompanying report); to the Committee on Banking and Currency.

AMENDMENT OF FOREIGN SERVICE BUILDINGS ACT, 1926, TO AUTHORIZE ADDITIONAL APPROPRIATIONS

A letter from the Secretary of State, transmitting a draft of proposed legislation to amend the Foreign Service Buildings Act, 1926, to authorize additional appropriations, and for other purposes (with accompanying papers); to the Committee on Foreign Relations.

LAWS ENACTED BY LEGISLATURE OF THE VIRGIN ISLANDS

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, copies of laws enacted by the Legislature of the Virgin Islands in its 1960 regular and special sessions (with accompanying papers); to the Committee on Interior and Insular Affairs.

AUDIT REPORT OF FOUNDATION OF THE FEDERAL BAR ASSOCIATION

A letter from the President, the foundation of the Federal Bar Association, Washington, D.C., transmitting, pursuant to law, a report of the audit of the financial transactions of that association, for the fiscal year ended September 30, 1960 (with an accompanying report); to the Committee on the Judiciary.

REPORT OF NATIONAL COUNCIL, BOY SCOUTS OF AMERICA

A letter from the chief Scout executive, National Council, Boy Scouts of America, New Brunswick, N.J., transmitting, pursuant to law, a report of that organization, for the year 1960 (with an accompanying report); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A joint resolution of the Legislature of the State of New Mexico; to the Committee on Interior and Insular Affairs:

"SENATE JOINT MEMORIAL 21

"Joint memorial requesting the President and Congress of the United States, the Bureau of Reclamation and the Army Corps of Engineers to begin immediate construction of Los Esteros Dam and Brantley Dam

"Whereas Los Esteros Dam to be constructed in Guadalupe County, N. Mex., is needed for flood protection and for irrigation storage for the Carlsbad Irrigation District; and

"Whereas Los Esteros Dam is located in a depressed area of New Mexico and its construction would be of great benefit and aid to the economic conditions of this area; and

"Whereas Brantley Dam to be constructed in Eddy County, N. Mex., is needed for adequate storage facilities for the Carlsbad Irrigation District and for flood protection for the city of Carlsbad and the lower Pecos Valley in New Mexico, and because the present terminal storage dam of McMillan Reservoir is fast losing its efficiency as a terminal storage facility for the Carlsbad Irrigation District due to silting; and

"Whereas construction of Los Esteros and Brantley Dams would result in a saving of irrigation water for the Carlsbad Irrigation District and increase the water available in the States of Texas and New Mexico; Now, therefore, be it

"Resolved by the Legislature of the State of New Mexico, That the immediate construction of Los Esteros Dam and Brantley Dam are necessary for flood control, water conservation and for relieving the problem of a distressed area in Guadalupe County, N. Mex.; and be it further

"Resolved, That a copy of this memorial be sent to the President of the United States, the President of the Senate and Speaker of the House of Representatives of the Congress of the United States, the Bureau of Reclamation of the Department of Interior, and the Army Corps of Engineers.

"TOM BOLACK,
"President of the Senate.
"M. E. MORGAN,
"Chief Clerk of the Senate.
"JACK M. CAMPBELL,
"Speaker of the House of Representatives.
"ALBERT ROMERO,
"Chief Clerk of the House of Representatives."

A resolution of the General Court of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTIONS MEMORIALIZING CONGRESS TO REPEAL THE 10-PERCENT EXCISE (LUXURY) TAX ON TELEPHONE SERVICE

"Whereas as an emergency measure during time of war the United States levied a 10-percent excise tax on telephone service in the nature of a luxury tax; and

"Whereas the state of emergency which gave rise to this tax has long since passed; and

"Whereas the telephone cannot even remotely be considered a luxury, but is instead a vital necessity in the home, office, factory, or public institution; and

"Whereas it is grossly unfair and inequitable to continue to extract such a tax from the citizens of this country: Therefore be it

"*Resolved,* That the Senate and the House of Representatives of the United States and the President be urged to repeal the excise tax on telephone service forthwith; and be it further

"*Resolved,* That copies of these resolutions be forwarded by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of Congress, and to each Member thereof from this Commonwealth.

"Adopted by the House of Representatives March 10, 1961.

"LAWRENCE R. GROVE,
"Clerk.

"Adopted in concurrence by the Senate March 14, 1961.

"IRVING N. HAYDEN,
"Clerk.

"Attest:

"KEVIN H. WHITE,
"Secretary of the Commonwealth."

A concurrent resolution of the Legislature of the State of Texas; to the Committee on Agriculture and Forestry:

"SENATE CONCURRENT RESOLUTION 28

"Whereas the welfare, not only of Texas but of the United States, requires that production of both cane and beets for refining into sugar consumed in the United States be enlarged to the extent that the sugar industry will be enabled to increase production in the United States, and the farmers of the United States be permitted to grow additional sugar beet and cane crops for the refinement of sugar; and

"Whereas such policy would strengthen the farm economy and consequently the national economy of our country; and

"Whereas such a change in our Federal sugar policy would help mitigate the persisting shrinkage in our gold reserve; and

"Whereas such policy would benefit labor throughout the areas of production and refining, as well as in the areas manufacturing and supplying refineries; and

"Whereas this policy would make America independent for a sugar supply as a strategic item in case of international conflict or war; and

"Whereas this policy would properly place an agricultural crop in its rightful position in agriculture; and

"Whereas this policy would take into consideration the ever existing reason for America being independent in its natural resources and other commodities consumed in this country, all of which are with equal force applicable to sugar the same as cotton, wool, wheat, meat or any other product; and

"Whereas this policy would allow for greater crop rotation and alleviate to some extent the overproduction in cotton, wheat, and corn; and

"Whereas this policy would avoid international entanglements to the extent that foreign countries otherwise will insist upon sugar quotas in the hands of our Federal Government, and they cannot understand favoritism of one over the other, while they can understand the American farmer and producer being permitted to produce the sugar consumed in this country; and

"Whereas the $507 million spent for imported sugar is far out of line with all other imports of other products of a competitive nature; and

"Whereas this policy would keep American produced sugar out of the category of subsidized crops so long as the production was held under consumption and administered in the same way as it has been in the past with the quotas actually given to foreign countries: Now, therefore, be it

"Resolved by the Senate of the State of Texas (the House of Representatives concurring), That the U.S. Congress be urged to immediately enact such legislation enabling the sugar industry to increase production in the United States, allowing the farmers of the United States to grow additional sugar beet and cane crops for the refinement of sugar; and, be it further

"Resolved, That copies of this resolution be sent to the President of the United States; to the President of the Senate; to the Speaker of the House of Representatives of the United Sates; and to each of the members of the Texas delegation in Congress.

"BEN RAMSEY,
"President of the Senate.
"JAMES A. TURMAN,
"Speaker of the House.
"CHARLES SCHNABEL,
"Secretary of the Senate.
"DOROTHY HALLMAN,
"Chief Clerk of the House."

A joint resolution of the Legislature of the State of Alaska; to the Committee on Interior and Insular Affairs:

"HOUSE JOINT RESOLUTION 9

"Joint resolution relating to the construction of the Crater-Long Lakes division of the Snettisham hydroelectric power project

"Whereas the economy of southeastern Alaska is in great need of new industry which would provide stable, nonseasonal employment and utilize the vast natural resources of this area; and

"Whereas present and potential developments in the mining and timber industries in southeastern Alaska indicate the need for the prompt construction of additional sources of electrical energy to maintain and encourage the establishment of industry; and

"Whereas the increase in the number of residents in southeastern Alaska resulting from the natural growth and the industrial development of this area will also result in the need for additional sources of electrical energy to guarantee their comfort and well-being; and

"Whereas the Federal Power Commission has estimated that Juneau itself will need more than 30 million kilowatts of additional power by 1970 and more than 60 million kilowatts by 1980 to supplement the 30 million kilowatts of power now being used by Juneau; and

"Whereas the present cost of power is much higher in southeastern Alaska than in most areas in the United States; and

"Whereas preliminary studies by the Bureau of Reclamation indicate that Crater and Long Lakes in the vicinity of Juneau could be economically developed by the United States to provide low-cost power, and that the cost of constructing and operating power projects could be returned to the United States within 50 years by the sale of power to industrial and domestic users: Be it

"Resolved by the Legislature of the State of Alaska in second legislature, first session assembled, That the Congress of the United States is respectfully urged to pass S. 594, which would authorize the construction of the Crater-Long Lakes division of the Snettisham hydroelectric power project; and be it further

"Resolved, That copies of this resolution be sent to the President of the U.S. Senate; the Speaker of the U.S. House of Representatives; the chairman of the Senate Committee on Interior and Insular Affairs; the chairman of the House Committee on Interior and Insular Affairs; and the Alaska delegation in Congress.

"Passed by the house February 16, 1961.
"WARREN A. TAYLOR,
"Speaker of the House.
"Attest:
"ESTHER REED,
"Chief Clerk of the House.
"Passed by the senate February 28, 1961.
"———— ————,
"President of the Senate.
"Attest:
"EVELYN K. STEVENSON,
"Secretary of the Senate.
"Approved by the Governor March 9, 1961.
"WILLIAM A. EGAN,
"Governor of Alaska."

A concurrent resolution of the Legislature of the State of Delaware; to the Committee on the Judiciary:

"SENATE CONCURRENT RESOLUTION 7

"Concurrent resolution relative to the proposed amendment to the Constitution of the United States relating to the granting of representation in the electoral college to the District of Columbia

"Whereas at the 2d session of the 86th Congress of the United States, begun and held at the city of Washington on Wednesday, the 6th day of January, 1960, it was resolved by the Senate and House of Representatives of the United States in Congress assembled (two-thirds of each House concurring therein), that the following article be proposed as an amendment to the Constitution of the United States, which, when ratified by the legislatures of three-fourths of the several States, shall be valid to all intents and purposes as part of the said Constitution, viz.:

"'ARTICLE —

"'SECTION 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

"'A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the 12th article of amendment.

"'SEC. 2. The Congress shall have power to enforce this article by appropriate legislation'; Therefore be it

"Resolved by the House of Representatives of the 121st General Assembly of the State of Delaware (the Senate concurring therein):

"SECTION 1. That the said proposed amendment to the Constitution of the United States of America be, and the same is hereby ratified by the General Assembly of the State of Delaware and shall be to all intents and purposes a part of the Constitution of the United States.

"SEC. 2. That certified copies of this preamble and concurrent resolution shall be forwarded by the Governor of this State to the Secretary of State of the United States, to the presiding officer of the United States Senate, to the Speaker of the House of Representatives of the United States and to the Administrator, General Services Administration, Washington, D.C.

"SEC. 3. That the secretary of the senate and the clerk of the house of representatives be, and they are hereby directed, to deliver to the said Governor certified copies of this resolution at their earliest convenience.

"Approved March 21, 1961."

A joint resolution of the Legislature of the State of Illinois; to the Committee on the Judiciary:

"SENATE JOINT RESOLUTION 12

"Whereas the 86th Congress of the United States of America, at its 2d session, in both Houses, by a constitutional majority of two-thirds thereof, adopted the following proposition to amend the Constitution of the United States of America in the following words, to wit:

"'Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within 7 years from the date of its submission by the Congress.

"'"ARTICLE—

"'"SECTION 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

"'"A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the 12th article of amendment.

"'"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation'"; therefore be it

"Resolved by the Senate of the 72d General Assembly of the State of Illinois (the House of Representatives concurring therein), That the said proposed amendment to the Constitution of the United States of America be, and the same is hereby, ratified; and be it further

"Resolved, That certified copies of this resolution shall be forwarded by the Governor of Illinois to the Administrator of General Services, Washington, D.C., to the President of the Senate, and to the Speaker of the House of Representatives of the Congress of the United States.

"Adopted by the senate, March 8, 1961.
"SAMUEL H. SHAPIRO,
"President of the Senate.
"———— ————,
"Secretary of the Senate,
"Concurred in by the house of representatives, March 14, 1961.
"Speaker of House of Representatives,
"CHAS. F. KERVIN,
"Clerk of House of Representatives."

A joint resolution of the Legislature of the State of Michigan; to the Committee on the Judiciary:

"ENROLLED SENATE JOINT RESOLUTION C

"Joint resolution ratifying the proposed amendment to the Constitution of the United States granting representation in the electoral college to the District of Columbia,

"Resolved by the Senate and House of Representatives of the State of Michigan, That the 86th Congress of the United States

of America, at its 2d session, in both Houses, by a constitutional majority of two-thirds thereof, has made the following proposition to amend the Constitution of the United States:

"'*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein)*, That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within 7 years from the date of its submission by the Congress:

"'"ARTICLE —

"'"SECTION 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

"'"A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the 12th article of amendment.

"'"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.'" Therefore, in the name of, and on behalf of, the people of the State of Michigan, we do hereby ratify, approve, and assent to the proposed amendment to the Constitution of the United States; and be it further

"*Resolved*, That certified copies of this joint resolution be transmitted by the Governor of the State of Michigan, to the President of the United States, the Secretary of State of the United States, the President of the Senate of the United States, and the Speaker of the House of Representatives of the United States.

"FRED I. CHASE,
"Secretary of the Senate.
"NORMAN E. PHILLEO,
"Clerk of the House of Representatives."

A resolution of the Legislature of the State of Georgia; to the Committee on the Judiciary:

"SENATE RESOLUTION 39

"Resolution requesting Congress to propose an amendment to the U.S. Constitution; and for other purposes

"*Resolved by the General Assembly of Georgia*, That the members of the General Assembly of the State of Georgia respectfully request the Congress of the United States to propose to the people an amendment to the Constitution of the United States or to call a convention for such purpose, as provided by law, to add to said Constitution an article providing that:

"'ARTICLE —

"'SECTION 1. Where the legislatures of over one-fourth of the several States conclude that a U.S. Supreme Court decision has transferred powers not authorized by the Constitution of the United States, and where said decision transfers powers from the several States to the Federal Government, said decision shall, upon the application and request of the legislatures of over one-fourth of the several States, be invalid until subsequently approved by the legislatures of three-fourths of the several States: *Provided, however*, That said application and request shall be made within 3 years after the day of said decision.

"'SEC. 2. All provisions of Article 3 of the Constitution of the United States that conflict with this amendment are hereby repealed'; and be it further

"*Resolved*, That certified copies of this resolution shall be sent by the secretary of state to the Governors and members of the legislatures of the several States, the President of the United States, the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, and to each Member of the U.S. Congress."

A resolution of the General Assembly of the State of New Jersey; to the Committee on the Judiciary:

"Whereas the New Jersey Civil War Centennial Commission, on March 9, 1961, adopted the following resolution:

"'Whereas the Civil War, the greatest internal crisis through which this Nation has passed, was fought at tremendous sacrifice to preserve and to amplify the fundamental law of our land, as set forth originally in the Bill of Rights; and

"'Whereas the perpetuation of this Union was guaranteed therewith forever; and

"'Whereas the sons of both North and South have subsequently fought side by side for human freedom, justice, and the dignity of the individual among people everywhere; and

"'Whereas the Civil War Centennial period has been conceived as a period for commemorating these basic American ideas above all; and

"'Whereas the National Civil War Centennial Commission has scheduled its Fourth National Assembly on the dates of April 11 and 12, 1961, in the city of Charleston, S.C.; and

"'Whereas the National Civil War Centennial Commission is a creature of the Congress of the United States; and

"'Whereas custom and/or law in the city of Charleston forbids equal hospitality to members of the Negro race; and

"'Whereas a national assembly under these conditions would abrogate the fundamental law of our land and the fundamental concepts of human decency and the fundamental guarantees of civil liberties under the New Jersey Constitution; and

"'Whereas Mrs. Madaline A. Williams, a member of the Negro race, is a duly appointed member of the New Jersey Civil War Centennial Commission; and

"'Whereas Mrs. Williams has served as an elected member of the Essex County delegation of the New Jersey General Assembly, and is currently serving in the elective post of Essex County Register: Now, therefore, be it

"'*Resolved*, That this commission cannot in good conscience, under its sworn obligations, participate in the Fourth National Assembly; and be it further

"'*Resolved*, That members of all other State Civil War Centennial commissions be urged to call upon their respective congressional delegations to demand that the Fourth National Assembly, as presently conceived, be canceled forthwith as an act of responsible national statesmanship and scheduled for a later date in a location which will respect the fundamental constitutional rights of persons of all races and creeds': Now, therefore, be it

"*Resolved, by the General Assembly of the State of New Jersey*, That the foregoing resolution adopted by the New Jersey Civil War Centennial Commission is approved; and be it further

"*Resolved*, That the clerk of the general assembly provide the New Jersey Civil War Centennial Commission with a copy of this resolution and signed by the speaker of the general assembly attested by him in order that the said centennial commission may forward copies hereof to the other State Civil War centennial commissions; and be it further

"*Resolved*, That the clerk of the general assembly forward copies of this resolution attested by him to the U.S. Senators from New Jersey and the Members of the House of Representatives from the several congressional districts of New Jersey.

"LEROY J. D'ALOIA,
"Speaker of the General Assembly.
"Attest:
"ERNEST T. SCHEIDEMANN,
"Clerk of the General Assembly."

A resolution of the Senate of the State of New Jersey; to the Committee on the Judiciary:

"Whereas the New Jersey Civil War Centennial Commission, on March 9, 1961, adopted the following resolution:

"'Whereas the Civil War, the greatest internal crisis through which this Nation has passed, was fought at tremendous sacrifice to preserve and to amplify the fundamental law of our land, as set forth originally in the Bill of Rights; and

"'Whereas the perpetuation of this Union was guaranteed therewith forever; and

"'Whereas the sons of both North and South have subsequently fought side by side for human freedom, justice, and the dignity of the individual among people everywhere; and

"'Whereas the Civil War centennial period has been conceived as a period for commemorating these basic American ideas above all; and

"'Whereas the National Civil War Centennial Commission has scheduled its fourth national assembly on the dates of April 11 and 12, 1961, in the city of Charleston, S.C.; and

"'Whereas the National Civil War Centennial Commission is a creature of the Congress of the United States; and

"'Whereas custom and/or law in the city of Charleston forbids equal hospitality to members of the Negro race; and

"'Whereas a national assembly under these conditions would abrogate the fundamental law of our land and the fundamental concepts of human decency and the fundamental guarantees of civil liberties under the New Jersey constitution; and

"'Whereas Mrs. Madaline A. Williams, a member of the Negro race, is a duly appointed member of the New Jersey Civil War Centennial Commission; and

"'Whereas Mrs. Williams has served as an elected member of the Essex County delegation of the New Jersey General Assembly, and is currently serving in the elective post of Essex County register: Now, therefore, be it

"'*Resolved*, That this commission cannot in good conscience, under its sworn obligations, participate in the fourth national assembly; and be it further

"'*Resolved*, That members of all other State Civil War centennial commissions be urged to call upon their respective congressional delegations to demand that the fourth national assembly, as presently conceived, be canceled forthwith as an act of responsible national statesmanship and scheduled for a later date in a location which will respect the fundamental constitutional rights of persons of all races and creeds': Now, therefore, be it

"Resolved, by the Senate of the State of New Jersey, That the foregoing resolution adopted by the New Jersey Civil War Centennial Commission is approved; and be it further

"Resolved, That the secretary of the senate provide the New Jersey Civil War Centennial Commission with a copy of this resolution attested by him in order that the said centennial commission may forward copies hereof to the other State Civil War cententennial commissions; and be it further

"Resolved, That the secretary of the senate forward copies of this resolution attested by him to the U.S. Senators from New Jersey and the Members of the House of Representatives from the several congressional districts of New Jersey."

A resolution adopted by the Mississippi Valley Conference of State Highway Departments, at Chicago, Ill., relating to the ability of State Highway Departments to construct the interstate system of highways; to the Committee on Finance.

A resolution adopted by the Texas Society of Professional Engineers, favoring the continuation of a study of land and water resources of eight intrastate river basins of Texas; to the Committee on Interior and Insular Affairs.

A resolution adopted by the Mississippi Valley Conference of State Highway Departments, at Chicago, Ill., relating to the use of and to improve areas adjacent to the interstate system of highways; to the Committee on Public Works.

JOINT RESOLUTIONS OF NEW MEXICO LEGISLATURE

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the RECORD the following joint memorials of the New Mexico State Legislature:

Senate Memorial 2, memorializing the Congress of the United States to extend educational benefits to veterans who entered or who enter military service after February 1, 1955, and to extend educational benefits to all who enter so long as the provisions of the draft law exist.

Senate Joint Memorial 13, asking close examination of the situation created in Gallup, N. Mex., by the absence of overpasses to move pedestrian and vehicular traffic safely across the main lines of the transcontinental railroad bisecting the city; and designing and building of structures which will relieve traffic congestion and permit the city to create a useful plan for its development.

Senate Joint Memorial 14, memorializing the Congress of the United States to amend the Federal Mineral Leasing Act to provide for the distribution of income from the leasing of Federal lands for oil, gas, and other minerals to all States wherein lands are leased thereunder on an equal basis.

Senate Joint Memorial 16, memorializing the Congress of the United States to take legislative action to correct certain inequities existing in the distribution of public lands in the State of New Mexico and in the restrictions placed on the sale, leasing, and use of proceeds from State lands.

Senate Joint Memorial 25, memorializing the President of the United States and the Congress of the United States to take action to establish youth camps within national forest areas.

Senate Joint Memorial 28, requesting the public roadbuilding authorities to consider the economic consequences to smaller communities affected by relocations of public roads.

There being no objection, the joint resolutions were received, appropriately referred, and, under the rule, ordered to be printed in the RECORD, as follows:

To the Committee on Labor and Public Welfare:

"SENATE MEMORIAL 2

"A memorial memorializing the Congress of the United States to extend educational benefits to veterans who entered or who enter military service after February 1, 1955, and to extend educational benefits to all who enter so long as the provisions of the draft law exist

"Whereas millions of veterans of World War II and of the Korean conflict have been educated under the provisions of the veterans' education program established by the Federal Government; and

"Whereas many veterans were able to obtain further education through the benefits of the veterans' education program which would not otherwise have been possible, and

"Whereas the education of millions of veterans has contributed to an increase in the educational level of this country and has produced a major national asset which has contributed much to the economy of this country; and

"Whereas reliable statistics have proved that increased income to veterans arising out of their higher education level will more than reimburse the Treasury of the entire cost of the training program by 1970; and

"Whereas the President of the United States, by Executive order on January 31, 1955, stopped the educational benefits for persons serving in the Armed Forces of the United States after February 1, 1955; and

"Whereas such Executive order has deprived millions of Americans serving in the Armed Forces of the educational benefits previously extended to veterans; and

"Whereas it is believed that as long as the draft is continued that all persons serving in the Armed Forces should be extended the educational opportunities enjoyed by veterans serving prior to February 1, 1955; and

"Whereas it has been demonstrated that the investment in the education of such veterans will be more than repaid to the Public Treasury through increased taxes resulting from higher incomes of such veterans: Now, therefore, be it

"Resolved by the senate of the 25th legislative session of the State of New Mexico, That the Senate of the State of New Mexico does hereby memorialize the Congress of the United States to extend veteran educational benefits to all veterans who entered, or who enter, military services from and after February 1, 1955, and that such educational benefits be extended so long as the provisions of the draft law exist; and be it further

"Resolved, That upon adoption of this resolution that a copy thereof be mailed, by the chief clerk of the senate, to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to each Member of the Congress from the State of New Mexico."

Mr. CHAVEZ presented a joint resolution of the Legislature of the State of New Mexico, identical with the foregoing, which was referred to the Committee on Labor and Public Welfare.

The VICE PRESIDENT laid before the Senate a joint resolution of the Legislature of the State of New Mexico, identical with the foregoing, which was referred to the Committee on Labor and Public Welfare.

To the Committee on Public Works:

"SENATE JOINT MEMORIAL 13

"A joint memorial asking close examination of the situation created in Gallup, N. Mex., by the absence of overpasses to move pedestrian and vehicular traffic safely across the main lines of the transcontinental railroad bisecting the city; and designing and building of structures which will relieve traffic congestion and permit the city to create a useful plan for its development

"Whereas Gallup, N. Mex., is literally a city divided into two geographic halves by the transcontinental railroad line bisecting it; and

"Whereas this condition is detrimental to life and propery by causing frequent interruptions of essential traffic across the city and thereby rendering it impossible for school buses and children, ambulances, police, and firefighting vehicles to get promptly from homes and main stations to other areas of the town; and

"Whereas this situaton has for years created a condition in which numerous individuals have been maimed or killed at unsafe railroad crossings; and

"Whereas lack of adequate overpasses will create a situation in which the traffic on the main arterial highways to the east and west will find it impossible to interchange with the traffic flow north to the rapidly growing communities of the San Juan Basin, or with the traffic southward into the area served by State Road 32 and U.S. 666; and

"Whereas the officials and citizens of Gallup have begun work on a comprehensive plan for the zoning and development of the city; and

"Whereas any such attempts at planning for integrated and useful community development will be delayed or nullified by failure to solve the fundamental traffic problems: Now, therefore, be it

"Resolved by the Legislature of the State of New Mexico, That the New Mexico congressional delegation, the bureau of public roads, the Governor and the State highway commission and its chief highway engineer be urged to begin the building of such overpasses as will secure the integrity of the city's development, the safety of its citizens and the convenience of the traveling public; and be it further

"Resolved, That copies of this memorial be transmitted forthwith to Senator Dennis Chavez, Senator Clinton P. Anderson, Representative Joseph M. Montoya, Representative Thomas G. Morris, the bureau of public roads, Gov. Edwin L. Mechem, the State highway commission and the chief highway engineer."

Mr. CHAVEZ presented a joint resolution of the Legislature of the State of New Mexico, identical with the foregoing, which was referred to the Committee on Public Works.

To the Committee on Interior and Insular Affairs:

"SENATE JOINT MEMORIAL 14

"A joint memorial memorializing the Congress of the United States to amend the Federal Mineral Leasing Act to provide for the distribution of income from the leasing of Federal lands for oil, gas and other minerals to all States wherein lands are leased thereunder on an equal basis.

"Whereas the Federal Mineral Leasing Act, as originally approved February 25, 1920, entitled 'An act to promote the mining of coal, phosphate, oil, oil shale, gas and sodium on the public domain' (c. 85, par. 35, 41 Stat. 450), provided that 37½ percent of all money received from sales, bonuses, royalties and rentals under the provisions

thereof should be paid by the Secretary of the Treasury after the expiration of each fiscal year to the State within the boundaries of which the leased lands or deposits were located, such money to be used by the respective States for the construction and maintenance of public roads or for the support of public schools or other public educational institutions, as the legislatures of the respective States might direct; and

"Whereas the Federal Mineral Leasing Act was amended by the Congress (effective upon admission of Alaska into the Union, Public Law 85–508) to provide that the State of Alaska should receive 90 percent of all money derived from the leasing of lands within the State of Alaska for oil, gas and other minerals under the terms of said act; and

"Whereas over 50 percent of the entire land area of the 11 western public land States is public domain subject to leasing for oil, gas and other minerals under the provisions of the Federal Mineral Leasing Act; and

"Whereas the Constitution of the United States guarantees to the several States and the citizens thereof equal rights with respect to representation and taxation and contemplates that all States should be treated equal and accorded the same rights and privileges with respect to the lands of the United States within their respective boundaries; and

"Whereas New Mexico and the other western public land States are faced with serious financial problems with respect to financing their public schools and State educational institutions, which are becoming increasingly critical due to the great increase in population, and amending the Federal Mineral Leasing Act to change the distribution of the proceeds derived from said act by the respective states from 37½ to 90 percent would materially assist New Mexico and the other western public land States in their struggle to finance their public schools and State educational institutions: Now, therefore, be it

"*Resolved,* That the 25th Legislature of the State of New Mexico does hereby memorialize the Congress of the United States to enact appropriate legislation to amend the Federal Mineral Leasing Act to provide for the distribution to each of the States of 90 percent of all proceeds derived from the leasing of lands for oil, gas and other minerals within the boundaries of the respective States under said act, such proceeds to be used for the support of public schools or other State educational institutions, as the legislatures of the respective States may direct, so that all of such States will be placed on an equal basis; be it further

"*Resolved,* That copies of this joint memorial be forwarded to the Speaker of the U.S. House of Representatives, the President of the Senate and the congressional delegations of the State of New Mexico and the Governors and congressional delegations of the States of Arizona, California, Colorado, Idaho, Montana, Nevada, Oregon, Utah, Washington, Wyoming, Alaska, and Hawaii."

"SENATE JOINT MEMORIAL 16

"A joint memorial memorializing the Congress of the United States to take legislative action to correct certain inequities existing in the distribution of public roads in the State of New Mexico and in the restrictions placed on the sale, leasing and use of proceeds from State lands

"Whereas the people of the State of New Mexico believe that their State is entitled to fair and equal treatment in the manner of distribution of public lands and restrictions placed upon public lands granted to the State at the time of admission of New Mexico to the Union; and

"Whereas with the advent of the admission of the State of Alaska into the Union certain inequities were created in matters relating to public lands; and

"Whereas the following inequities do now exist:

"A. Upon admission into the Union the State of New Mexico was granted approximately 16.6 percent of its total land area and the State of Alaska was granted 30 percent of its total area in addition to certain tidelands rights;

"B. State lands in New Mexico can only be sold or leased at public auction for not less than the appraised value after advertisement for 10 successive weeks except for surface leases for terms of less than 5 years, while no similar restrictions exist on the State of Alaska's lands;

"C. Proceeds from public lands granted to the State of New Mexico can only be used for certain named beneficiaries, specifically the public schools and certain State institutions. Proceeds from public lands granted to the State of Alaska may be used as the Alaska Legislature directs;

"D. New Mexico participates in proceeds from Federal mineral leasing to the extent of 37½ percent of the proceeds. Alaska participates to the extent of 90 percent of the proceeds; and

"Whereas the continuing existence of these inequities greatly hampers the economic growth of the State and has produced an economic crisis in the State's fiscal problems: Now, therefore, be it

"*Resolved by the Legislature of the State of New Mexico,* That the Congress of the United States be memorialized to take immediate steps to correct by legislation the aforesaid inequities; and be it further

"*Resolved,* That certified copies of this memorial be transmitted to the Honorable LYNDON B. JOHNSON, President of the Senate of the U.S. Congress; and the Honorable SAM RAYBURN, Speaker of the House of Representatives of the U.S. Congress; and be it further

"*Resolved,* That certified copies of this memorial be transmitted to the Honorable DENNIS CHAVEZ and the Honorable CLINTON P. ANDERSON, U.S. Senators from New Mexico; and the Honorable JOSEPH M. MONTOYA and the Honorable THOMAS G. MORRIS, Representatives at Large from the State of New Mexico."

Mr. CHAVEZ presented two joint resolutions of the Legislature of the State of New Mexico, identical with the foregoing, which were referred to the Committee on Interior and Insular Affairs.

The VICE PRESIDENT laid before the Senate two joint resolutions of the Legislature of the State of New Mexico, identical with the foregoing, which were referred to the Committee on Interior and Insular Affairs.

To the Committee on Labor and Public Welfare:

"SENATE JOINT MEMORIAL 25

"A joint memorial memorializing the President of the United States and the Congress of the United States to take action to establish youth camps within national forest areas

"Whereas in several areas in the State of New Mexico young men are without employment and have no useful purposes with which to occupy their time and talents; and

"Whereas this situation is deplorable, but due to the economic depression in these areas no employment opportunities are present and no solution to these problems appears in the immediately foreseeable future on a State level; and

"Whereas an increase in the rate of juvenile delinquency and petty crimes in these areas can be directly traced to the existence of the aforementioned environmental and economic conditions; and

"Whereas the male youth of this State should have an opportunity to become useful citizens of the State and productive members of society, but are deprived of their birthright due to existing conditions, not of their own choice; and

"Whereas the establishment of Federal youth work camps in the national forest areas of the State would greatly benefit these young men and would present to them an opportunity for useful employment, exercise of initiative and development of their potential skills and talents: Now, therefore, be it

"*Resolved by the Legislature of the State of New Mexico,* That the President of the United States and the Congress of the United States are memorialized to take effective and immediate remedial steps to correct the aforementioned conditions existing in this State by establishing Federal youth work-camp programs in the national forest areas of the State and employing available young men of these areas in programs to afford them the opportunity to maintain a minimal standard of living and to develop into useful citizens; and be it further

"*Resolved,* That certified copies of this memorial be transmitted to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, President of the Senate of the U.S. Congress; and the Honorable Sam Rayburn, Speaker of the House of Representatives; and be it further

"*Resolved,* That certified copies of this memorial be transmitted to the Honorable DENNIS CHAVEZ and the Honorable CLINTON P. ANDERSON, U.S. Senators from New Mexico; and the Honorable JOSEPH M. MONTOYA and the Honorable THOMAS G. MORRIS, Representatives at Large from the State of New Mexico."

Mr. CHAVEZ presented a joint resolution of the Legislature of the State of New Mexico, identical with the foregoing, which was referred to the Committee on Labor and Public Welfare.

The VICE PRESIDENT laid before the Senate a joint resolution of the Legislature of the State of New Mexico, identical with the foregoing, which was referred to the Committee on Labor and Public Welfare.

To the Committee on Public Works:

"SENATE JOINT MEMORIAL 28

"A joint memorial requesting the public roadbuilding authorities to consider the economic consequences to smaller communities affected by relocations of public roads

"Whereas there are small communities of less than 10,000 inhabitants in the State which have suffered grave economic consequences through the relocation of public roads which served these communities; and

"Whereas it is the belief of the legislature that the future economic growth, livelihood, development, safety, and general welfare of the smaller communities should be considered in the planning of public roads in the State: Now, therefore, be it

"*Resolved by the Legislature of the State of New Mexico,* That the State highway department and the Bureau of Public Roads be requested to give serious consideration to the possible economic consequences and the effect on the future growth, livelihood, development, safety and general welfare of the

smaller communities in the State and consult with the governing bodies of the communities when expending public funds for the construction of highways, bypasses or relocation projects diverting traffic and commerce from existing State highway routes through the smaller communities; and be it further

"Resolved, That copies of this memorial be sent to the State highway department, the Bureau of Public Roads, and the New Mexico congressional delegation."

Mr. CHAVEZ presented a joint resolution of the Legislature of the State of New Mexico, identical with the foregoing, which was referred to the Committee on Public Works.

By Mr. CHAVEZ:

A resolution of the Senate of the State of New Mexico; ordered to lie on the table:

"SENATE MEMORIAL 7

"A memorial memorializing the Congress of the United States to give favorable consideration relative to the employment of John A. Martinez as a page in the House of Representatives or the Senate of the United States

"Whereas John A. Martinez of Santa Fe, N. Mex., has rendered outstanding service as a page in the New Mexico State Senate during the regular sessions of the 24th and 25th legislatures, and in the house of representatives in the 23d session of the legislature; and

"Whereas the cheerful, efficient service, as well as the ambition and loyalty of John A. Martinez as a page in the New Mexico State Senate have endeared him to the entire membership of the senate; and

"Whereas John A. Martinez is a boy of the highest character, and is outstanding in his academic studies in the Santa Fe municipal schools; and

"Whereas John A. Martinez has shown all the normal tendencies of a teenage boy in his love of sports, animals, and outdoor life; but also a highly developed sense of responsibility in saving his money toward a college education: Now, therefore, be it

"Resolved by the Senate of the State of New Mexico, That the Congress of the United States be memorialized to give favorable consideration relative to the employment of John A. Martinez as a page in either the House of Representatives or the Senate of the United States; and be it further

"Resolved, That a copy of this memorial be transmitted to the President of the U.S. Senate, the Speaker of the House of Representatives, to each Senator and Representative in Congress from New Mexico, and to John A. Martinez."

The VICE PRESIDENT laid before the Senate a resolution of the Senate of the State of New Mexico, identical with the foregoing, which was ordered to lie on the table.

By Mr. SMITH of Massachusetts:

A resolution of the General Court of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO REDUCE THE ELIGIBILITY AGE OF PERSONS ENTITLED TO OLD AGE BENEFITS UNDER THE SOCIAL SECURITY ACT TO 62 YEARS

"Resolved, That the General Court of Massachusetts hereby respectfully urges the Congress of the United States to enact legislation whereby the age at which persons become entitled to receive old age or retirement benefits under the Social Security Act shall be reduced from 65 years to 62 years; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of the Congress and to each Member thereof from this Commonwealth."

The VICE PRESIDENT laid before the Senate a resolution of the General Court of the Commonwealth of Massachusetts, identical with the foregoing, which was referred to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BYRD of Virginia, from the Committee on Finance, without amendment:

H.R. 4363. An act to amend Public Law 86–272 relating to State taxation of interstate commerce; (Rept. No. 87).

By Mr. HILL, from the Committee on Labor and Public Welfare, without amendment:

H.R. 3980. An act to amend the transitional provisions of the act approved September 6, 1958, entitled "An act to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in food of additives which have not been adequately tested to establish their safety," and for other purposes; (Rept. No. 86).

SUPPLEMENTAL APPROPRIATION BILL—REPORT OF A COMMITTEE

Mr. HAYDEN. Mr. President, by direction of the Committee on Appropriations I report to the Senate, with amendments, the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and I submit a report—No. 85—thereon. There are a number of emergency situations connected with this subject, and I hope that the bill may be taken up promptly.

The PRESIDING OFFICER (Mr. METCALF in the chair). The report will be received and printed, and the bill will be placed on the calendar.

REPORTS CONCERNING UTILIZATION OF FOREIGN CURRENCIES AND U.S. DOLLARS

Mr. HAYDEN. Mr. President, in accordance with the Mutual Security Act of 1954, as amended, I submit for printing in the RECORD the reports of the Senate delegation to the sixth NATO Parliamentarians' Conference in Paris, and the Interparliamentary Union Meetings in Athens and Geneva concerning the foreign currencies and U.S. dollars utilized in 1960 in connection with foreign travel.

The PRESIDING OFFICER. Without objection, the reports will be printed in the RECORD.

The reports are as follows:

Report of expenditure of foreign currencies and appropriated funds by Senate delegation to the 6th NATO Parliamentarians' Conference, Paris, France

[Expended between Jan. 1 and Dec. 31, 1960]

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ERVIN:

S. 1416. A bill relating to the elections under section 333 of the Internal Revenue Code of 1954 by the shareholders of the G. L. Bernhardt Co., Inc., of Lenoir, N.C.; to the Committee on Finance.

S. 1417. A bill for the relief of San Kong Chen; to the Committee on the Judiciary.

By Mr. KUCHEL (for Mr. SCOTT and Mr. CLARK):

S. 1418. A bill to provide additional lands at, and change the name of, the Fort Necessity National Battlefield Site, Pennsylvania, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. KUCHEL when he introduced the above bill, which appear under a separate heading.)

By Mr. ALLOTT (for himself and Mr. CARROLL):

S. 1419. A bill to extend the purchase program for beryl ore under the Defense Production Act of 1950 to include other forms of beryllium ore; to the Committee on Banking and Currency.

By Mr. YOUNG of North Dakota:

S. 1420. A bill for the relief of Mr. and Mrs. Henry Ruff; to the Committee on the Judiciary.

By Mr. WILLIAMS of New Jersey:

S. 1421. A bill for the relief of Romano Lakovic; and

S. 1422. A bill for the relief of Ante Svorinic; to the Committee on the Judiciary.

By Mr. MUNDT:

S. 1423. A bill to amend title II of the Social Security Act to raise the amount of outside income recipients of insurance benefits thereunder are permitted to earn, and to lower the age after which outside earnings are no longer considered for purposes of deductions from benefits; to the Committee on Finance.

(See the remarks of Mr. MUNDT when he introduced the above bill, which appear under a separate heading.)

By Mr. BIBLE (by request):

S. 1424. A bill to amend the District of Columbia Business Corporation Act;

S. 1425. A bill to amend the District of Columbia Income and Franchise Tax Act of 1947, as amended, and the District of Columbia Business Corporation Act, as amended, with respect to certain foreign corporations; and

S. 1426. A bill to amend the law relating to indecent publications in the District of Columbia.

By Mr. BIBLE (for himself and Mr. BEALL) (by request):

S. 1427. A bill to amend the District of Columbia Alcoholic Beverage Control Act; to the Committee on the District of Columbia.

By Mr. BENNETT (for himself and Mr. BYRD of West Virginia):

S. 1428. A bill to amend the Mutual Security Act of 1954, as amended, so as to require that all of the coal purchased for delivery to Korea under such act be purchased from independent coal producers in the United States; to the Committee on Foreign Relations.

(See the remarks of Mr. BENNETT when he introduced the above bill, which appear under a separate heading.)

By Mr. KEFAUVER:

S. 1429. A bill for the relief of Dr. Lourdes Casas Ocampo, Cely Carrillo Onrubia (Maria Celia O. Carrillo Onrubia), Mrs. Carmen Ocampo Carrillo and her three minor children, Tomas Antonio Jesus Carrillo, Maria Corinta Asuncion Carrillo, and Marie Cecile Carrillo;

S. 1430. A bill for the relief of Terez Kaszap; and

S. 1431. A bill for the relief of Clara Negrea; to the Committee on the Judiciary.

By Mr. GRUENING (by request):

S. 1432. A bill for the relief of Shau Ying Lin, and her children, Gee Chek Lin, Gee Ming Lin, and Chi Fong Lin; to the Committee on the Judiciary.

By Mr. McCARTHY:

S. 1433. A bill to provide that in determining the amount of retired pay, retirement pay, or retainer pay payable to any enlisted man, all service shall be counted which would have been counted for the same purposes if he were a commissioned officer; to the Committee on Armed Services.

By Mr. DOUGLAS (for himself, Mr. HUMPHREY, Mr. JAVITS, Mr. CASE of New Jersey, Mr. MORSE, Mr. KUCHEL, Mr. CARROLL, Mr. HART, Mr. McCARTHY, Mr. ALLOTT, Mr. GRUENING, Mr. MOSS, Mr. YOUNG of Ohio, Mr. ENGLE, Mr. WILLIAMS of New Jersey, Mrs. NEUBERGER, Mr. LONG of Missouri, and Mr. PELL):

S. 1434. A bill to effectuate and enforce the constitutional right to the equal protection of the laws, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. DOUGLAS when he introduced the above bill, which appear under a separate heading.)

RESOLUTIONS

DEATH OF FORMER SENATOR MURRAY OF MONTANA

Mr. MANSFIELD (for himself and Mr. METCALF) submitted a resolution (S. Res. 114) relative to the death of former Senator James E. Murray, of Montana, which was considered and agreed to.

(See the above resolution printed in full when submitted by Mr. MANSFIELD, which appears under a separate heading.)

SELECT COMMITTEE ON CONSUMER INTERESTS

Mrs. NEUBERGER submitted a resolution (S. Res. 115) to create the Select Committee on Consumers Interests, which was referred to the Committee on Government Operations.

(See the above resolution printed in full when submitted by Mrs. NEUBERGER, which appears under a separate heading.)

ESTABLISHMENT OF SELECT COMMITTEE ON FEDERAL SUBSIDIES

Mr. LAUSCHE submitted a resolution (S. Res. 116) to establish the Select Committee on Federal Subsidies, which was referred to the Committee on Government Operations.

(See the above resolution printed in full when submitted by Mr. LAUSCHE, which appears under a separate heading.)

ADDITIONAL LANDS FOR, AND CHANGE OF NAME OF, THE FORT NECESSITY NATIONAL BATTLEFIELD SITE, PA.

Mr. KUCHEL. Mr. President, the distinguished junior Senator from Pennsylvania [Mr. SCOTT], and his colleague, the distinguished senior Senator from Pennsylvania [Mr. CLARK] are both necessarily absent from the Senate today. I have been asked by them to introduce in their behalf a bill and ask that it be appropriately referred.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1418) to provide additional lands at, and change the name of, the Fort Necessity National Battlefield Site, Pa., and for other purposes, introduced by Mr. KUCHEL [for Mr. SCOTT and Mr. CLARK], was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

OUTSIDE EARNING LIMITATION APPLICABLE TO BENEFICIARIES UNDER THE SOCIAL SECURITY PROGRAM

Mr. MUNDT. Mr. President, I introduce for reference to the appropriate committee a bill increasing the outside earning limitation applicable to beneficiaries under the social security program. This bill would increase that limitation so as to allow beneficiaries to earn $2,400 per annum without suffering any corresponding reduction in their monthly benefit checks.

For many years this reduction on outside earnings has been set at a figure of $1,200 per annum. Last year the Congress adopted a series of amendments to the Social Security Act, which were approved as Public Law 86–778, and included in these amendments was a modest change in the outside earning limitation which had the practical effect of allowing social security beneficaries between the ages of 65 and 72 to earn $1,350 per annum.

I submit, Mr. President, that this very modest increase in the outside earning limitation is entirely inadequate to compensate for the reduced purchasing power suffered by our elder citizens through the devaluation of the American dollar which has occurred since the adoption of the Social Security Act in 1935. Many of our elder citizens now receiving benefits under the Social Security program began contributing to the program when the American dollar had a valuation of 100 cents. That valuation has now diminished to approximately 47 cents, and it seems to me that good faith obliges Congress to increase the outside earning limitation to a level which will realistically compensate our elder citizens for the reduced valuation of the American dollar.

I sincerely hope that the Senate Finance Committee and the House Ways and Means Committee will give this matter their serious attention in considering further amendments to the Social Security Act.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1423) to amend title II of the Social Security Act to raise the amount of outside income recipients of insurance benefits thereunder are permitted to earn, and to lower the age after which outside earnings are no longer considered for purposes of deductions from benefits, introduced by Mr. MUNDT, was received, read twice by its title, and referred to the Committee on Finance.

AMERICAN MINES SHOULD PROVIDE DEFENSE SUPPORT COAL

Mr. BENNETT. Mr. President, on behalf of myself and the Senator from West Virginia [Mr. BYRD], I introduce for appropriate reference, a bill which would require that all defense support coal purchased for Korea under the Mutual Security Act of 1954 shall be obtained from coal mines located within the United States. The bill is virtually identical to S. 3014 which I introduced in the last Congress, except that instead of requiring that at least 50 percent of the coal be purchased from domestic mines, the bill I am introducing requires that all such coal be so purchased.

I feel that this change is more than justified, both because of the favorable impact which it would have on our western coal mining industry and also because of the present deficit in our balance of payments with other countries. A good portion of the Korean coal purchased by the International Cooperation Administration has come from Australia.

It should be emphasized that the defense support coal purchased by ICA is given to Korea and is not a loan program. Since the coal is purchased with money made available to the Republic of Korea by the taxpayers of the United States, including American coal miners and producers, it seems only fair that it should come from our American mines. This is particularly true in light of the serious economic problem currently confronting our coal industry. In the important coal mining area of Carbon and Emery Counties in Utah, for example, current unemployment runs at 10.8 percent of the work force. This labor surplus is attributed almost solely to loss of coal markets since 1950. In the last decade, 1200 jobs have been lost in the Carbon-Emery area, and it should be emphasized that the unemployment figures which I have used do not include 380 to 400 displaced workers engaged in subsistence farming.

During calendar year 1960, ICA purchased 166,818 tons of coal for delivery to Korea. Of this, only 10,264 tons were purchased from American mines. Because this coal was purchased from other countries, our coal miners lost 12,734 man shifts of work opportunity and were denied an additional payroll of $308,800.

In calendar year 1959, 190,000 tons of coal went to Korea under the defense support program, but not even 1 pound came from the United States. All of it came from Australia and Formosa. This meant a loss to our American coal miners of 14,504 man shifts of labor and a payroll of $351,722. In 1958, 138,000 tons were purchased for Korea, but only 5,000 tons came from the United States, with yet another major loss to our domestic coal operators and miners.

It is my understanding that Korea is the only country for which defense support coal is being purchased. However, if this purchase program is broadened to include other countries, then I shall amend my bill to cover all such purchase programs to require that all of the coal thus purchased come from the United States.

I am sure that the Senate will understand the often bitter feeling of our Utah coal miners and producers caused by seeing their tax money being used to aid other countries when they are not permitted to furnish the commodity purchased with that money. I therefore sincerely hope that the Senate will take early favorable action on my bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1428) to amend the Mutual Security Act of 1954, as amended, so as to require that all of the coal purchased for delivery to Korea under such act be purchased from independent coal producers in the United States, introduced by Mr. BENNETT (for himself and Mr. BYRD of West Virginia), was received, read twice by its title, and referred to the Committee on Foreign Relations.

SELECT COMMITTEE ON CONSUMERS INTERESTS

Mrs. NEUBERGER. Mr. President, I submit a resolution for the creation of a select committee of the Senate on consumer interests.

Last year, Mr. President, personal consumption expenditures in the United States amounted to some $328 billion. This figure represents very nearly two-thirds of our gross national product. Economists have estimated that for 1961, personal consumption expenditures will rise another $10 or $11 billion, to about $338 or $339 billion.

Often the complaint has been made that the consumer is unrepresented in Government at the Federal level. It has been argued that there is a representative for the productive segments of the economy, agriculture, commerce, and labor. Nobody, however, stands up for the consumer.

It is for this reason that I am so pleased by the story on the first page of this morning's Washington Post by Julius Duscha. In this story, Mr. Duscha indicates that President Kennedy will establish an Office of the Consumer Counsel. I am particularly delighted to see that Dr. Persia Campbell, a distinguished economist with a background in public service as a member of the former Gov. Averell Harriman's cabinet, is being considered for the post.

Consumer interests are represented in government, Mr. President. But, their efforts are so scattered, their operations so varied and diffuse, that we are truly in a situation where the right hand may not know what the left hand is doing.

Mr. President, the expenditure of some $328 billion is a significant annual event. And because of this significance, there is justification for the Senate to look into this matter to determine that this money has been spent effectively. It is the proliferation of problems such as deceptive advertising, phony pricing, deceptive packaging, improper labeling, and unobserved standards of purity and wholesomeness that requires the continuing careful oversight by the Senate operating in the interest of the consumer.

I ask unanimous consent, Mr. President, that the text of the proposed resolution be printed in full at the conclusion of my remarks together with the excerpt of the article I have mentioned. I ask further unanimous consent, Mr. President, that my resolution lie on the table until March 31, so that other Senators desirous of joining as cosponsors of this resolution may have an opportunity to do so.

The PRESIDING OFFICER. The resolution will be received and appropriately referred; and, without objection, the resolution and excerpt will be printed in the RECORD, and the resolution will lie on the table, as requested by the Senator from Oregon.

The resolution (S. Res. 115) was referred to the Committee on Government Operations, as follows:

Resolved, That (a) there is hereby created a select committee to be known as the Committee on Consumers Interests and to consist of fifteen Senators to be appointed in the same manner and at the same time as the chairman and members of the standing committees of the Senate at the beginning of each Congress, except that the chairman and members of the committee for the 87th Congress shall be selected as soon as may be practicable after the adoption of this resolution.

(b) It shall be the duty of the committee to conduct a continuing, comprehensive study, by means of research and investigation, with respect to—

(1) the nature and extent of overall economic problems of the consumer as the ultimate spender of personal income;

(2) the relationship of prices, quality, packaging, labeling, standardized units of measure and identity, laws relating to credit, usury and bankruptcy, advertising, and methods and costs of production and distribution to the effective expenditure of personal income;

(3) the specific problem of most direct and immediate concern to the consumer throughout the United States;

(4) the extent to which authority heretofore conferred by law upon executive, administrative and regulatory agencies of the United States provides currently effective means for the solution of consumer problems;

(5) the development of any new or additional legislative or other measures necessary or desirable for the solution of such problems, except that no proposed legislation shall be referred to such committee and such committee shall have neither the power to report by bill nor any other legislative jurisdiction; and

(6) the necessity or desirability of establishing within the executive branch of Government an agency exclusively devoted to the interests of consumers.

(c) The committee shall publish for both the use of the Senate and the public its hearings and any studies conducted by it. The committee shall report from time to time to the Senate the results of its studies and investigations, together with its recommendations for any new or additional legislative or other measures which it may determine to be necessary or desirable for the solution of consumer problems.

(d) The committee shall adopt rules of procedure not inconsistent with the rules of the Senate governing standing committees of the Senate, and from time to time may establish such subcommittees thereof as it may determine to be required for the performance of its duties. A majority of the

members of the committee, or of any subcommittee thereof, shall constitute a quorum thereof for the transaction of any business, except that such committee or subcommittee may fix a lesser number thereof as a quorum for the purpose of taking sworn testimony relative to the subjects enumerated in section 2.

SEC. 2. (a) The committee, or any duly authorized subcommittee thereof, is authorized to (1) hold such hearings; (2) sit and act at such times and places during the sessions, recesses, and adjournment periods of the Senate; (3) require, by subpena or otherwise, the attendance of such witnesses and the production of such correspondence, books, papers, and documents; (4) administer such oaths; (5) take such testimony either orally or by deposition; and (6) employ and fix the compensation of each technical, clerical, and other assistants and consultants as it deems advisable, except that the compensation so fixed shall not exceed the compensation prescribed under the Classification Act of 1949, as amended, for comparable duties.

(b) With the prior consent of the executive department or agency concerned and the Committee on Rules and Administration, the committee, or any duly authorized subcommittee thereof, may utilize the services, information, and facilities of any such department or agency, and may employ on a reimbursable basis the services of such personnel of any such department or agency, as it deems advisable. With the consent of any other committee of the Senate, or any subcommittee thereof, the committee may utilize the facilities and the services of the staff of such other committee or subcommittee whenever the chairman of the committee determines that such action is necessary and appropriate.

SEC. 3. Until an appropriation is made for the payment of the expenses of the committee, such expenses, in an amount not to exceed $——, may be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

The excerpt presented by Mrs. NEUBERGER is as follows:

[From the Washington Post, Mar. 24, 1961]

CONSUMERS' AID PLANNED BY KENNEDY—WHITE HOUSE UNIT TO AID IN POLICY, AGENCY DECISIONS

(By Julius Duscha)

President Kennedy is to set up a White House Office shortly to represent consumers' interests.

The Office will probably be headed by a woman. The leading candidate for the job is Persia Campbell, an economist who was consumer adviser to Averell Harriman when he was Governor of New York.

Mrs. Campbell is preparing a report for the President outlining the functions of a Presidential Office of Consumer Counsel. She is now professor of economics at Queensboro Community College in New York.

The Counsel backed by a staff of lawyers and economists, will represent consumers' interests in proceedings before regulatory agencies as well as in the formulation of broad economic policies.

Consumer advisory committees will be established in such Departments as Agriculture, Labor, Commerce, Health, Education, and Welfare.

These committees will work with the White House office to make sure that the consumer point of view is reflected in the consideration of Government policies.

It is expected, however, that the consumer counsel will be most effective as a people's counsel in proceedings before regulatory agencies.

The Democratic platform supported a "consumer counsel, backed by a suitable staff, to speak for consumers in the formulation of Government policies and represent consumers in advisory proceedings."

PROMISED IN SPEECH

In a campaign speech in the Bronx on November 5, Mr. Kennedy promised to appoint a consumer counsel in the White House to represent the interests of consumers in the administrative procedures of the Government.

"One of the first tasks of the consumer counsel," Mr. Kennedy told an audience made up largely of Bronx housewives, "will be to help formulate economic policies which will keep a general rise in the price level from having a discriminatory effect upon the wage earners of the United States and their families."

Other functions of the consumer counsel that were listed by Kennedy included scrutinizing the activities of all governmental agencies which have a responsibility of regulating business activities in the public interest, representing consumer interests before congressional committees; and keeping the President informed about any deficiencies in administration harmful to the consumer.

"I believe," Mr. Kennedy concluded, "that such a consumer general, perhaps a woman familiar with consumer problems, will be the surest safeguard of the public interest in a Government where private interests are well represented."

OFFICE EXISTED IN FORTIES

In the early 1940's such an office existed briefly in the Agriculture Department. The wartime Office of Price Administration also had a section representing consumers. There has never been a consumers' office on the scale planned by the President, however.

Paul Rand Dixon, the new Chairman of the FTC, is particularly concerned over consumer problems. So are Secretary of Agriculture Orville L. Freeman and HEW Secretary Abraham H. Ribicoff. Freeman had a consumer counsel when he was Governor of Minnesota, as did Ribicoff when he was Governor of Connecticut.

SELECT COMMITTEE ON FEDERAL SUBSIDIES

Mr. LAUSCHE. Mr. President, I submit, for appropriate reference, a resolution to establish a Senate select committee to be known as the Select Committee on Federal Subsidies.

I introduced a similar resolution a year ago, but due to the lateness of the session and urgency for an early adjournment, the resolution was not acted upon.

In the meantime, Mr. President, the Joint Economic Committee did make a very, very brief study of this subject, and as a result made a report which, while barely scratching the surface of this vast and deeply entrenched practice, did give a picture of its magnitude and the billions of dollars involved.

Mr. President, I am not at all critical of the efforts or of the report of the Joint Economic Committee. To the contrary, I believe they did an excellent piece of work as far as they went. It is significant that the report clearly points to the need of a comprehensive and exhaustive study and analysis of subsidy and subsidylike programs of the U.S. Government.

The introductory paragraph on page 1 of the committee report, which I shall read, clearly and emphatically points to the need for a more complete study.

Federal programs aimed at supporting or improving the economic position of particular groups or industries should be constantly reevaluated in the light of changing circumstances. Whatever their initial justification, subsidy programs should be so contrived as to eliminate the necessity for their continuation. The broad changes which must be expected in our economy require frequent revision in the scope and character of these programs if they are to achieve their purposes. Failure to adapt the substance of subsidies to changing demands and opportunities may be expected to prevent most efficient use of resources in the subsidized activities as well as in other types of economic endeavor. Where this is the case, the subsidy not only fails of its immediate objective but also imposes real costs on the entire economy over the long run.

There is not available anywhere a compilation of general and analytic information on the subject of subsidies and subsidylike programs and special concessions in which the Federal Government is entrenched, and which in only the past several decades have involved the expenditure, directly or indirectly, of more than $100 billion, and now, relatively speaking, annually total many more known or unrevealed billions of dollars.

From the very limited material available on this general subject, it is impossible fairly and prudently to evaluate the effectiveness of the many subsidy and subsidylike programs, either as to their possible curtailment or their expansion.

It appears that both subsidies and subsidylike programs were born of emergencies, and prudently would have expired at the expiration of the emergencies. Few have ceased to exist, however. Most of them are continuing, some far beyond the period of necessity.

Federal subsidies throughout the years have been expanded and broadened by the Congress without the benefit of a definite policy or formula, or without the benefit of data or other material on the history and analysis of the ultimate effect on the recipient, the Federal Government, or the taxpayer.

Mr. President, our interest in the subject of Federal subsidies, in which billions of dollars are annually involved, either through moneys given away directly or through moneys lost indirectly through tax dispensations, ought to be directed primarily toward an accumulation and documentation of the history of and the experience with all programs which fall into this category.

If the Congress and the executive branch had available to them documented reports on the history of the many programs of this type and analyses of their effects, they could more prudently and effectively determine their future courses of action, not only relative to existing subsidies, but also in evaluating the need for their continuation, and for future programs.

Mr. President, with world trade growing more competitive, our balance of payments fluctuating from plus to minus, our Federal expenditures reaching new peacetime peaks, and with the Federal Government entering into new services and programs, it now becomes imperative that we immediately review the past, in order that we may have the

facilities and the recorded experience to enable us properly and prudently to guide our future course.

Mr. President, briefly, the composition of this select committee would be as follows:

It will be a 12-man committee, to be composed of three members of the Committee on Finance, three members of the Committee on Interstate and Foreign Commerce, three members of the Committee on Government Operations, and, finally, three members to be chosen at large from the Senate body, and who would not be members of any of the three aforementioned committees. The members who would represent the three committees would be chosen by the chairmen of those committees.

Mr. President, I ask unanimous consent that the text of this resolution be printed in the RECORD following my remarks.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

The resolution (S. Res. 116) was referred to the Committee on Government Operations, as follows:

Resolved, That (a) there is hereby established a select committee of the Senate to be known as the Select Committee on Federal Subsidies (referred to hereinafter as the "committee").

(b) The committee shall be composed of three members of the Committee on Government Operations, three shall be members of the Committee on Finance, three shall be members of the Committee on Interstate and Foreign Commerce, all such members to be designated by the chairmen of the respective committees, and three members shall be appointed by the President of the Senate from Members of the Senate who are not members of any such standing committees, and at least one member from each of the above committees and those appointed by the President of the Senate shall be selected from the minority membership thereof. The chairman of the committee shall be chosen by the members thereof.

(c) Vacancies in the membership of the Committee shall not affect the authority of the remaining members to execute the functions of the Committee, and shall be filled in the same manner as original appointments thereto are made.

(d) The Committee shall adopt rules of procedure not inconsistent with the rules of the Senate governing standing committees of the Senate. A majority of the members of the Committee shall constitute a quorum thereof for the transaction of business, except that the Committee may fix a lesser number as a quorum for the purpose of taking sworn testimony.

(e) No legislative measure shall be referred to the Committee, and it shall have no authority to report any such measure to the Senate.

(f) The Committee shall cease to exist on January 30, 1963.

SEC. 2. (a) It shall be the duty of the Committee to conduct comprehensive study and investigation with respect to—

(1) the identity, nature, and effects of existing laws and programs of the Federal Government under which subsidies (including grants, payments, benefits, allowances, concessions, and relief in the nature of or having the effect of subsidies) are accorded to firms, enterprises, or organizations, or to classes of firms, enterprises, or organizations, engaged in or affecting the domestic or foreign trade or commerce of the United States;

(2) the extent to which each such subsidy is productive of public benefits commensurate with the cost of burden thereof; and

(3) legislative and other means whereby the cost or burden of such subsidies may be reduced or may be employed to greater public benefit.

(b) On or before January 30, 1962, the committee shall transmit to the Senate a preliminary report concerning its activities and its findings and conclusions upon the subjects described in subsection (a). In January 1963 the committee shall transmit to the Senate a final report of its findings and conclusions upon those subjects.

SEC. 3. (a) For the purposes of this resolution, the committee is authorized to (1) make such expenditures; (2) hold such hearings; (3) sit and act at such times and places during the sessions, recesses, and adjournment periods of the Senate; (4) require by subpena or otherwise the attendance of such witnesses and the production of such correspondence, books, papers, and documents; (5) administer such oaths; (6) take such testimony orally or by deposition; and (7) employ and fix the compensation of such technical, clerical, and other assistants and consultants as it deems advisable, except that the compensation so fixed shall not exceed the compensation prescribed under the Classification Act of 1949, as amended, for comparable duties.

(b) Upon request made by the members of the committee selected from the minority party, the committee shall appoint one assistant or consultant designated by such members. No assistant or consultant appointed by the committee may receive compensation at an annual gross rate which exceeds by more than $1,200 the annual gross rate of compensation of any individual so designated by the minority members of the committee.

(c) With the prior consent of the executive department or agency concerned and the Committee on Rules and Administration, the committee may (1) utilize the services, information, and facilities of any such department or agency, and (2) employ on a reimbursable basis the services of such personnel of any such department or agency as it deems advisable. With the consent of any other committee of the Senate, or any subcommittee thereof, the committee may utilize the facilities and the services of the staff of such other committee or subcommittee whenever the chairman of the committee determines that such action is necessary and appropriate.

(d) Subpenas may be issued by the committee over the signature of the chairman or any other member designated by him, and may be served by any person designated by such chairman or member. The chairman of the committee or any member thereof may administer oaths to witnesses.

SEC. 4. The expenses of the committee under this resolution, which shall not exceed $125,000, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

Mr. LAUSCHE. Mr. President, I suggest the establishment of this select committee to study the subject of subsidies primarily because in the committees of which I am a member, and especially the Interstate and Foreign Commerce Committee, practically at every meeting some new proposed subsidy is mentioned, or some old Federal subsidy is mentioned with the suggestion that the subsidy be increased.

I have especially in mind the fact that the railroads of the United States, which for years have been without subsidies, have now come before the committee and are suggesting that the taxpayers of the United States must contribute to the railroads' funds, if those railroads are to continue to exist.

I think it is a grave problem. I think it has reached the stage where too many segments of our economy are saying to the taxpayers of the United States, "Unless you give, out of your pocket, as a donation to our industry, we cannot continue in existence."

I believe a study ought to be made so we shall know what we have done in the past, and what we are heading into in the future.

Now, Mr. President, in view of the fact that there so clearly is in evidence a great need for the study proposed in my resolution, and in view of a report that due to the already exceedingly heavy schedule of the Joint Economic Committee no further study is to be made, I urge early consideration and adoption of this resolution.

MASS TRANSPORTATION — ADDITIONAL COSPONSOR OF BILL

Mr. WILLIAMS of New Jersey. Mr. President, in my statement at the time of introduction of S. 345, a bill to improve mass transportation service in urban areas, the distinguished senior Senator from California [Mr. KUCHEL] was listed as a cosponsor. Through an inadvertence, however, his name was omitted from the bill as printed. Mr. President, I ask that the Senator's name be added at the time the bill is next printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROPOSED LEGISLATION RELATING TO MIGRATORY LABOR—ADDITIONAL COSPONSORS OF BILLS

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent that the senior Senator from New York [Mr. JAVITS] be added as a cosponsor to bills S. 1122, minimum wage for agricultural workers, and S. 1129, stabilization of the farm work force; and that the junior Senator from Rhode Island [Mr. PELL] be added as a cosponsor to bills S. 1123, child labor provisions; S. 1124, education of migrant children; S. 1125, education of migrant adults; S. 1129, stabilization of the farm work force; and S. 1131, grants for migrant children day care facilities.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROPOSED CIVIL RIGHTS LEGISLATION—ADDITIONAL COSPONSOR OF BILLS

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the name of the junior Senator from New Jersey [Mr. WILLIAMS], be added as a cosponsor to the civil rights bills which I introduced on March 8, S. 1253 through S. 1259.

The PRESIDING OFFICER. Without objection, it is so ordered.

COORDINATION OF FEDERAL AND STATE INHERITANCE, ESTATE, AND GIFT TAXES—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 14, 1961, the names of Senators METCALF, MAGNUSON, COOPER, Moss, CASE of New Jersey, HOLLAND, JACKSON, BARTLETT, BUSH, GRUENING, KEATING, and JAVITS were added as additional cosponsors of the bill (S. 1344) to amend the Internal Revenue Code of 1954 to provide an increase in the amount for which a credit may be allowed against the Federal estate tax for estate taxes paid to States, introduced by Mr. MUSKIE on March 14, 1961.

NOTICES OF MOTIONS TO SUSPEND THE RULES—AMENDMENTS TO THIRD SUPPLEMENTAL APPROPRIATION BILL

Mr. HAYDEN submitted the following notice in writing:

In accordance with rule XL of the Standing Rules of the Senate, I hereby give notice in writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes, the following amendment; namely:

On page 23 after line 16 insert:

"ADMINISTRATIVE PROVISION

"The nine paragraph under the heading 'Administrative Provisions' in the appropriations for the Senate in the Legislative Branch Appropriation Act, 1957 (2 U.S.C. 127), is amended to read as follows:

" 'The contingent fund of the Senate is hereafter made available for the payment of mileage, to be computed at 10 cents per mile by the nearest usual route, between Washington, District of Columbia, and the residence city of the Senator involved, for not to exceed four round trips originating and terminating in Washington, District of Columbia, made by employees to each Senator's office in any fiscal year, such payment to be made only upon vouchers approved by the Senator containing a certification, by such Senator, that such travel was performed in line of official duty.' "

Mr. HAYDEN also submitted an amendment, intended to be proposed by him, to the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes, which was ordered to lie on the table and to be printed.

(For text of amendment referred to, see the foregoing notice.)

Mr. HAYDEN also submitted the following notice in writing:

In accordance with rule XL of the Standing Rules of the Senate, I hereby give notice in writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes, the following amendment; namely:

On page 25 after line 13 insert:

"GENERAL PROVISION

"Effective as of July 12, 1960, the paragraph immediately preceding the short title in the Legislative Branch Appropriation Act, 1961, which related to expenses of travel by Senators and Representatives between the District of Columbia and their home States or districts (2 U.S.C. 43c), is repealed."

Mr. HAYDEN also submitted an amendment, intended to be proposed by him, to the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes, which was ordered to lie on the table and to be printed.

(For text of amendment referred to, see the foregoing notice.)

NOTICE OF HEARING ON NOMINATION OF WILLIAM P. DANIEL TO BE GOVERNOR OF GUAM

Mr. ANDERSON. Mr. President, I would like to announce that on next Wednesday, March 29, at 10 a.m. in the Interior Committee room 3110, New Senate Office Building, the Committee on Interior and Insular Affairs will hold public hearings on the nomination of William P. Daniel to be Governor of Guam. I ask unanimous consent that a biographical sketch of Governor-designate Daniel be printed in the RECORD.

There being no objection, the biographical sketch was ordered to be printed in the RECORD, as follows:

BIOGRAPHICAL SKETCH OF BILL DANIEL

Place of Birth: Dayton, Tex.

Date of Birth: November 20, 1915.

Education: Public schools of Liberty and Fort Worth, Tex.; completed undergraduate and law studies at Baylor University.

Marital status: Married; 4 children.

Legal residence: Texas.

Present address: Liberty, Tex.

Experience: Private law practice for 22 years; until 1947 associated in firm with Gov. Price Daniel; served as city attorney for Liberty County, Tex.; also served three terms as member of the Texas House of Representatives.

THE BUDGET—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 120)

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the message received from the President today, having been read in the House of Representatives, be appropriately referred and ordered to be printed in the RECORD without being read.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Minnesota? The Chair hears none, and it is so ordered.

The message from the President was referred to the Committee on Appropriations, as follows:

To the Congress of the United States:

I. BASIC FISCAL POLICIES

This administration intends to adhere during the course of its term of office to the following basic principles:

1. Federal revenue and expenditures levels must be adequate to meet effectively and efficiently those essential needs of the Nation which require public support as well as, or in place of, private effort. We can afford to do what must be done, publicly and privately, up to the limit of our economic capacity—a limit we have not even approached for several years.

2. Federal revenues and expenditures—the Federal budget—should, apart from any threat to national security, be in balance over the years of the business cycle—running a deficit in years of recession when revenues decline and the economy needs the stimulus of additional expenditures—and running a surplus in years of prosperity, thus curbing inflation, reducing the public debt, and freeing funds for private investment.

3. Federal expenditure and revenue programs should contribute to economic growth and maximum employment within a setting of reasonable price stability. Because of the limits which our balance of payments deficit currently places upon the use of monetary policy, especially the lowering of short-term interest rates, as a means of stimulating economic growth and employment, fiscal policy—our budget and tax policies—must assume a heavier share of the responsibility.

4. Each expenditure proposed will be evaluated in terms of our national needs and priorities, consistent with the limitations and objectives described above and compared with the urgency of other budgetary requirements. We will not waste our resources on inefficient or undesirable expenditure simply because the economy is slack—nor, in order to run a surplus, will we deny our people essential services or security simply because the economy is prosperous.

5. As the Nation, its needs and their complexity continue to grow, Federal nondefense expenditures may also be expected to increase, as predicted by a 1960 Bureau of the Budget study, and as indicated by the nearly 45 percent increase from fiscal 1953 to fiscal 1961 in expenditures other than national security. But we must not allow expenditures to rise of their own momentum, without regard to value received, prospective revenues, economic conditions, the possibilities of closing out old activities when initiating new ones, and the weight of current taxes on the individual citizen and the economy. It is my determined purpose to be a prudent steward of the public funds—to obtain a dollar's worth of results for every dollar we spend.

II. THE FISCAL 1961 BUDGET INHERITED BY THIS ADMINISTRATION

While this message is concerned primarily with the budget for fiscal 1962 now before the Congress, necessary perspective and background are supplied by a reexamination of the fiscal 1961 budget, adopted by the Congress last year, reviewed in my predecessor's January budget message and inherited in its final stage by this administration.

When originally submitted in January of 1960, the fiscal 1961 budget showed a surplus of $4.2 billion. By the time of the midyear budget review, the estimated surplus had shrunk to $1.1 billion. In the final budget message in January it was estimated to be less than $80 million. Without any change in substantive content or policy, that budget upon later examination proved to be substantially out of balance. These changes reflect the recession-induced decline in revenues as well as the difficulty always present in making budget and economic forecasts. The

January restatement of the 1961 budget, simply in terms of its own programs and estimates and without regard to any new decisions or policies by this administration—

Optimistically estimated fiscal 1961 tax revenues by assuming a much rosier economy;

Unrealistically assumed that the Congress would enact a record (though necessary) postal rate increase totalling some $843 million a year in time to take effect April first and provide $160 million additional in the current fiscal year;

Substantially underestimated the normal flow of defense expenditures under the then-existing policies and commitments by at least half a billion dollars; and

Similarly underestimated the amount of funds which would be required to pay unemployment benefits to ex-servicemen and Federal employees, to meet the demand for authorized veterans' housing loans, and to fulfill the existing commitments of the Export-Import Bank.

The deficit thus inherited by this administration for fiscal 1961, augmented by the essential antirecession and national security steps already taken or recommended to the Congress, is now estimated to total over $2 billion (in contrast with the $4.2 billion surplus originally predicted). But it must be remembered that fiscal 1961 is clearly a recession year, with all of the consequent effects upon both revenues and expenditures. The deficit of nearly $12.5 billion in fiscal 1959 serves as a recent reminder of the difficulties of balancing the budget in a recession year.

III. BALANCING THE BUDGET FOR FISCAL 1962

On January 30 I made the following pledge to the Congress:

"A new administration must of necessity build on the spending and revenue estimates already submitted. Within that framework, barring the development of urgent national defense needs or a worsening economy, it is my current intention to advocate a program of expenditures which, including revenue from a stimulation of the economy, will not of and by themselves unbalance the earlier budget."

This message is designed to review my recommended budgetary revisions within the framework of that pledge. Omitting any increase in the defense budget too urgent to be denied by budgetary restrictions, and assuming that our review of the economy late in April does not require either a reduction in taxes or additional increases in expenditures, enactment of the new nondefense programs and appropriations I have transmitted will not unbalance the budget previously submitted by my predecessor—

If the Congress enacts or continues in effect all the revenue measures requested in that earlier budget, or preferably the alternative measures that I am requesting to achieve the same amount of revenue;

If that earlier budget contained accurate estimates of the revenue to be produced by those measures, based on accurate assumptions about prospective economic conditions;

If the Congress enacts no spending measures committing the executive branch to outlays in excess of those requested; and

If the earlier budget contained accurate estimates of those expenditures which must necessarily be incurred in fiscal 1962 under existing commitments covered by that budget, regardless of congressional or Executive decisions—for example, entirely apart from any policy changes, a large proportion of the Department of Agriculture budget depends upon the effects of economic, crop and weather conditions which must be predicted in advance.

I have already indicated in my message on the state of the Union that my predecessor's budget for fiscal 1962 "will remain in balance only if an earlier and sharper upturn in the economy than my economic advisers now think likely produces the tax revenues estimated." Nevertheless the present message, and the fiscal 1962 budget revisions it summarizes, are based upon a commitment of balancing revenue and expenditures under an assumption that the January predictions with respect to these four conditions are a valid starting basis for a new administration.

The point I wish to stress in this message is that any budgetary unbalance at the close of fiscal 1962 will not be the result of any nondefense programs I have submitted, for they have been carefully limited to a pattern of expenditures no greater than the revenues estimated by the earlier budget, as supplemented by those additional revenues which enactment of this program can reasonably be expected to stimulate, according to Treasury estimates, in fiscal 1962. Other measures I have requested—such as improvements in unemployment compensation, highway construction, social security, and health insurance for the aged—are all accompanied by their own self-financing provisions. In short, new defense recommendations aside, should there be a deficit in 1962, it will be the consequence of the overestimation of revenues and underestimation of expenditures in the January budget, and not the result of new policies or programs proposed by this administration.

In summary, the total expenditures estimated in the January budget were $80.9 billion. My proposals, apart from defense, will add about $2.3 billion for a total of $83.2 billion. The effects of my economic program on the economy would be reflected in additional revenues of about $900 million which, added to the January budget figures, would make a total of $83.2 billion of receipts, and leave the budget in balance.

At the same time, it would be unrealistic to fail to recognize that the January budget estimate of receipts was overoptimistic. Based on a more realistic economic outlook and including the effect of my economic proposals, it appears more likely that the revenues for fiscal year 1962 will be about $81.4 billion. However, as the economy returns to satisfactory high levels of economic activity, the position of budget balance will be restored. Indeed, given full recovery, the present tax system would generate revenues substantially in excess of the proposed levels of budget expenditure. This, then, is the revised budget—apart from defense additions—that I now present to the Congress:

A budget that is in balance in terms of my pledge of January 30;

A budget that is likely to be in deficit unless economic conditions rapidly improve to meet the levels predicted in the January 16 budget;

A budget that would be in surplus if the economy were operating at or near its full potential.

IV. OMISSIONS AND ASSUMPTIONS IN THE PREVIOUS BUDGET FOR FISCAL 1962

For fiscal 1962, however, the January budget submitted by my predecessor assumed a higher rate of economic activity during this calendar year than is presently in sight, and thus a balanced budget. As already stated, that earlier budget and its assumptions are necessarily the starting point for a new administration. It was on this basis that I made to the Congress on January 30 the commitment quoted earlier in this message.

But before any new programs or budget increases could even be considered by this administration—and wholly apart from the overly optimistic economic assumptions of the January budget—we found upon a closer scrutiny of that budget that it omitted provision for substantial expenditures for which that administration was committed, and was based upon fundamental policy and program assumptions which neither this administration nor the Congress could possibly accept, and which had to be altered at considerable cost to what little budgetary leeway remained.

For example:

1. The previous administration committed itself, as we have also, to extend $100 million in assistance to Chile for reconstruction and rehabilitation in the wake of a devastating earthquake. But no estimate of expenditures to meet this commitment was included in the budget.

2. The earlier budget recommended, as I do also, the construction of a new $114 million linear electron accelerator for high energy physics research. But appropriations to initiate this project were not specifically recommended in the budget.

3. The earlier budget based its estimate of expenditures for the Department of Agriculture's Commodity Credit Corporation on the assumption that price supports on every major commodity would be reduced to the lowest level permitted by law—reductions which were never formally recommended by the then Secretary of Agriculture, which would never be permitted by the Congress and which would have been absolutely ruinous to our farm economy. Without having to actually take such a move, the earlier budget assumed a reduction of cotton price supports from 75 percent to 70 percent of parity, a reduction of milk from 80 percent to 76 percent, rice from 75 percent to 70 percent and peanuts from 78.6 percent to 75 percent. Compared to the average levels of the last 5 years, which indicate how far the former Secretary of

Agriculture was actually able and willing to push supports down when in office, these recommendations are down some 9.3 parity points for cotton, 5.5 for peanuts, 2.4 for milk and 7.9 for rice.

4. The earlier budget recommended a program of Federal aid to public schools, limited to aid for construction. But, under a highly unusual fiscal proposal, the budget itself included practically no expenditures for this activity. Instead it proposed that States and localities float loans which Federal taxpayers would help pay off through installment payments of school bond interest as well as principal over the next 30 years.

5. Similarly, aid to higher education was contained in the earlier program, as in mine. But again the effect on that budget was deferred by the device of a 20- to 35-year period of installment payments.

6. The earlier budget assumed, completely contrary to our urban and economic needs, congressional termination of the Federal farm housing loan programs; no new authority for low-income housing; a cutback in veterans' and college housing loans; and no expansion in urban renewal. In short, before funds could be found to finance new and urgently needed housing programs, merely meeting the needs of existing programs required further additions to the budget.

7. The Federal Government, under the previous administration as well as this, has an obligation to meet the educational needs of Indian children on reservations. The fact is that several thousand such children in New Mexico, Arizona, and Alaska have been without any schools at all—but wholly inadequate funds to meet this obligation were included in the earlier budget.

8. The earlier budget proposed that the Congress would cut back sharply on its program for constructing airports, on the electric and telephone loan programs of the REA and on the loan programs of the Farmers Home Administration. I do not believe the Congress would have or should now cut back these essential programs, and I have recommended their expansion.

V. CHANGES IN THE FISCAL 1962 BUDGET

This message is not intended to present a wholly new budget. For reasons already stated that is not possible for this fiscal year. Nor is it intended to propose any new programs or expenditures in the nondefense area. With but a few exceptions, the items covered by this message and the attached table have been previously communicated, with full explanation, to the Congress. This message is primarily intended to share with the Congress my review of the nondefense changes in Federal activities and expenditures already recommended to meet our Nation's needs.

The funds previously recommended for each department and agency have been scrutinized as carefully as time would permit, from the viewpoint of both the needs of the Nation and the adequacy and efficiency with which these needs are being met. With the exception of the national defense program, that review is now largely complete, and the new programs and amendments resulting therefrom have been transmitted to the Congress or will be shortly.

As already emphasized, these changes of themselves will not unbalance the earlier budget—that is, their cost in fiscal 1962, assuming the accuracy of the previous expenditure estimates, will be covered by the revenue previously estimated and the new revenues generated by the program. But despite this restraint and the further limitations imposed by the assumptions or omissions already mentioned, these changes nevertheless represent what we regard to be advances in areas of high priority. While the entire list is summarized on the attached table, among the most significant are the following:

Aid to education: The largest single increase is in the field of education. Our educational needs have become too urgent to overlook. The Federal Government must do more to help finance improvements in this field—both for elementary and secondary education, and for higher education.

Funds for scientific research: My recommendations, largely in the form of amendments to the 1962 budget, provide a series of increases for scientific research—for oceanography, for high energy physics, for saline water conversion, for medical research, for National Science Foundation grants for basic research and science education, and for various other purposes. These increases reflect my strong belief that advances in scientific research are of the utmost importance to the growth of our economy, to the welfare of our people, and to the preeminence of our scientific achievements, and my conviction that the Federal Government must of necessity play a sizable role in supporting such research.

Health: I have proposed significant measures to strengthen, improve and lower the cost of health care—with self-financed health insurance for the aged under social security at a net savings to the budget, assistance to medical schools and students, and grants to the States for expanded community health services and facilities.

Housing and community development: I have recommended enactment of a program designed to greatly strengthen urban renewal and other existing programs, and add needed new authority in such important areas as moderate-income housing, rehabilitation and improvement of existing housing, and the preservation of open spaces. We are also obliged to increase Federal assistance for local airport construction. The additional expenditures thus entailed, in my judgment, are necessary in our Nation's future.

Area redevelopment: The tragedy of our chronically depressed areas, and the enormity of their challenge to our economy, require no less than the very reasonable program for aid to depressed areas which I have recommended and which I am confident that the Congress will soon enact.

Natural resource development: It is not economical to be foolishly wasteful rather than prudently conservationist toward the country's natural resources. I have proposed modest but symbolic increases in funds for conservation and development of forests and public domain lands, for the national park system and seashore recreational areas, and for navigation and flood control activities; and reprograming of other funds will permit additional reclamation activities.

Agriculture: In the field of agriculture we propose to move vigorously in a wholly new direction, to alter fundamentally the pattern of the Nation's agricultural economy with an eventual reduction of governmental outlays. Meanwhile, in the short run, it is necessary to take various actions which will increase the 1962 expenditures over those seriously understated in the January budget, as already discussed. The increases are for price supports, Rural Electrification Administration and Farmers Home Administration loans, the school lunch program and special milk program, and surplus food distribution at home and abroad. These expenditures will raise farm income and increase the use of our surplus agricultural commodities.

Veterans: I am recommending that the Congress enact a selective increase in compensation rates for veterans with the more severe service-connected disabilities, to offset the rises in the cost of living since the last increase in 1957 and to adjust rates in some categories which are out of line. My budget estimates include provision for this purpose.

Budgetary transfer authority: To achieve greater effectiveness and savings in the use of the taxpayers' funds, the heads of the several Government departments and agencies should have the authority to exercise some flexibility in the course of a fiscal year to meet new situations or changing circumstances. Therefore, I am asking the Congress, in enacting appropriations for each department and agency, to provide the necessary authority for the transfer of a modest amount or percentage of the funds and personnel available to an agency head for operating expenses, to be used only as needed to meet unforeseen high priority requirements, and to be controlled by the Bureau of the Budget through the regular budgetary apportionment process. In this way, the funds appropriated by the Congress can be utilized with the utmost efficiency.

VI. FEDERAL REVENUES

Mention has already been made of the revenue estimates for fiscal 1962 and the necessity for congressional enactment of all measures necessary to produce those revenues. My earlier message on highways contained recommendations for the user taxes needed to assure a satisfactory rate of progress on highway construction at levels previously recommended by my predecessor. This administration will not permit funds for this program to be diverted from general revenues. Other tax recommendations, designed to stimulate modernization of plant and equipment, and to achieve greater tax equity without any material change in overall revenues, will be contained in a subsequent message.

Three additional points are more appropriately contained in this message:

1. Postal rates: The January budget submitted by my predecessor called for an additional $843 million in postal revenues to eliminate the deficit in that Department's operations. Such an increase must be effective July 1 to close the gap between postal expenditures and postal revenues; and, building on the previous budget, this administration's budget requires an equal amount. I urge the Congress to close this gap; and I have directed the Postmaster General to review carefully and intensively all services and activities of the Post Office with a view toward improving efficiency and reducing costs.

2. Tax enforcement: I want to reemphasize my earlier request to the Congress for additional funds for the Internal Revenue Service. More and better qualified agents can both increase the collection of Federal revenues and help curb corruption in and out of Government, racketeering and organized crime.

3. The debt limit: My predecessor's message in January, even in assuming balanced budgets in both fiscal 1961 and 1962, pointed to the seasonal pattern of tax collections as necessitating another increase in the debt limit. The permanent debt limit of $285 billion, presently exceeded, has been superseded by a temporary limit of $293 billion which expires next June 30.

Inasmuch as the Federal debt will exceed $285 billion on June 30, a new increase in the ceiling will be required before that date.

I urge the Congress to enact an increase that will provide sufficient flexibility to permit sound management of the debt and of our budget expenditures. I am delaying the specific recommendation until early May so that we may have the advantage of the very latest estimates of revenues and expenditures.

CONCLUSION

This message reviews the current budget outlook and describes my philosophy concerning budget and fiscal policy. We seek to achieve the vigorous and sustained growth of the economy that will make possible a balance in the Federal budget. If we use our fiscal resources wisely, we can make tangible progress toward the achievement of our national and international objectives. Toward this end, I ask the cooperation of the Congress and the American people.

JOHN F. KENNEDY.

THE WHITE HOUSE, *March 24, 1961.*

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. HUMPHREY:

St. Patrick's Day address by Senator PELL delivered before Friendly Sons of St. Patrick.

By Mr. BEALL:

Address entitled "The United Nations in a Time of Transition," delivered by the Honorable Douglas Dillon, Secretary of the Treasury, at the annual dinner of the United Nations Association of Maryland, Hotel Emerson, Baltimore, Md., Wednesday, March 22, 1961.

LEGISLATIVE PROGRAM ON MONDAY

Mr. MANSFIELD. Mr. President, in regard to the report made today by the distinguished chairman of the Committee on Appropriations of the supplemental appropriation bill, I have discussed the matter with the leadership, and it is our intention to bring up the supplemental appropriation bill on Monday next.

On the same day we intend to bring up Calendar No. 72, S. 107, to authorize the Secretary of the Interior to construct, operate, and maintain the Navajo Indian irrigation project and the initial stage of the San Juan-Chama project, as participating projects of the Colorado River storage project, and for other purposes.

RESTORATION OF FORMER ARMY RANK TO DWIGHT D. EISENHOWER

Mr. MANSFIELD. Mr. President, the Vice President has received and transmitted to me a message from the former President of the United States, Mr. Dwight D. Eisenhower, or, more correctly, General Eisenhower. It is a message addressed to all the Members of the Senate, as well as to all the Members of the House; and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

I am most grateful to you for your important part in securing a practically unanimous approval of the bill to restore my former Army rank. As soon as I return to the United States and to better communications, I shall send you a personal expression of my thanks. In the meantime, I hope the Speaker and Vice President will convey my gratitude to all the Members of both Houses who by their votes paid me this compliment.

OBSERVATIONS OF ARTHUR F. LAMEY, ALTERNATE DELEGATE FOR THE UNITED STATES TO 15TH SESSION OF THE GENERAL ASSEMBLY OF THE UNITED NATIONS

Mr. MANSFIELD. Mr. President, at the 15th session of the General Assembly of the United Nations, one of the alternate delegates of the United States was Mr. Arthur F. Lamey, a distinguished resident and lawyer of Billings, Mont. Mr. Lamey is a very thoughtful and perceptive man. As a result of his experiences at the U.N., he has communicated to me certain observations which should be of considerable value in the operation of future delegations. I have transmitted a copy of these observations to the Department of State and to the chairman of the Committee on Foreign Relations; and I ask unanimous consent that they be printed at this point in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

SOME OBSERVATIONS OF ARTHUR F. LAMEY, AN ALTERNATE DELEGATE FOR THE UNITED STATES TO THE 15TH SESSION OF THE GENERAL ASSEMBLY OF THE UNITED NATIONS

Since my return from serving as an alternate delegate for the United States at the 15th session of the General Assembly of the United Nations, I have spoken frequently to groups in Montana. The great interest manifested and the many intelligent questions asked by those attending meetings, indicated a keen interest in the United Nations. The wide publicity given the visits of heads of states and the threats of Mr. Khrushchev and others to rule or ruin the U.N., have caused many to seek more knowledge about the objects, purposes and potentials of the U.N. There is an awakening to the realization that there must be value in an institution which Communist nations would hamstring, if not destroy.

Because we have a vital stake in the future of the United Nations, I have tried to reflect on our mistakes and accomplishments in the recent session and advance some suggestions for improvement. What I have to say is offered with no thought of criticizing any official or individual. All with whom I associated were loyal, intelligent, dedicated and hardworking. Too, I realize full well my limited experience, having served for only 3 months at the recent session. Be that as it may, one is bound to have views on how we might make our efforts more effective in the U.N.

DELEGATES BRIEFING

It was generally said that our delegation worked together exceptionally well. There was a unity of effort, each accepting the task assigned without hesitation or question, and doing his best to accomplish the desired result. By the same token, I am sure, each delegate felt he might have done better.

It is not for me to judge if the delegation should be made up solely of trained diplomats or include some inexperienced members of average citizen level. In either event, a longer period for briefing the delegates should precede the meeting of the General Assembly. Briefing for 2 or 3 days is not adequate.

The first briefing could be in Washington, followed by meetings at the mission in New York. At these meetings, there should be outlined the general problems which may arise, our position, plans and strategy. This would allow delegates and staff to become acquainted and get off to a good start on the opening day of the General Assembly session.

If it is felt that the expense for assembling the delegates earlier is not justified, surely appointed delegates and alternates would gladly pay their expenses in order to be better prepared to do a creditable job.

COMMITTEE ASSIGNMENTS

Committee assignments were made only a day or two before the opening of the recent session. They should be made much earlier. This would enable the delegate to study and obtain specific briefing on the committee agenda items. Here again, while discussing the agenda items, strategy, and the problems expected to arise, the delegate and advisers would become better acquainted and learn to work together effectively.

In the work of committees some reasonable latitude should be allowed the delegate and his advisers, especially on procedural questions. I have been pleased to note that Secretary of State Rusk told the Senate committee and others that he did not propose getting into a rigid position on every question. If this spirit is carried down to the delegates and advisers in the committees

of the U.N., I am sure our prestige will be enhanced and our influence increased.

Members of other delegations have mentioned the inflexibility of our position on questions arising in the U.N. They apparently have the feeling that we cannot move without prior consultation with Washington. In fact, I heard a foreign delegate say he thought we would be better off if the U.N. were in some distant land where telephoning would be more difficult. Everyone will concede that major decisions must be coordinated between the mission and the State Department; however, there are minor areas where prompt action can win or lose friends and prestige. It is here that delegates and their advisers should be more free to act. Although difficult to pinpoint the basic causes, I must confess that within our delegation there was a conscious feeling of inflexibility in many of our approaches to problems in the 15th session. It is interesting to note that delegates of some Communist countries will, during debate, agree on amendments or changes without the consultation and delay which frequently ensues when we are faced with similar decisions.

With better preparation many statements of our delegates in committees would be improved. Too often a speech is finally prepared only minutes before delivery. Again I note with approval the Secretary of State's remark that something more is needed than ability to read a speech thrust into your hand. Needless to say, our statements should always be well considered and of high quality.

"NEUTRAL" DELEGATES

For want of a better designation we may refer to the delegations of the many small nations and particularly the Afro-Asians as "neutrals." At any rate the many delegations, who refuse to be alined with East or West, can greatly influence the balance of power in the U.N. In committees we are brought in close contact with many of them. There was evidence in Committee Three that many wanted to cooperate more closely with us, but could only do so when we had our course well charted, which was not always the case. It is important that we do all within our power on every level to make it convenient for these delegates to work with us, thereby establishing the habit of association. In this area procedural matters are often as important as substantive ones; and here again flexibility and timing become vital.

ENTERTAINMENT OF OTHER DELEGATIONS

The United Nations Headquarters being in New York places the United States in the position of host Government. Admittedly the great influx of delegates from new African States posed an unusual responsibility, which required much time and attention from members of our delegation and mission at the last session; perhaps to the neglect of friendly delegations of long standing. At top echelon there may have been social contacts of which I was not aware. However, on committee level, I am sure, we were not organized to make certain that at least one luncheon was had for each friendly delegation. Unless our total effort is coordinated some delegations may be entirely neglected. Delegates being human have normal sensibilities which we as hosts must respect.

It was with some surprise as a delegate, that I heard repeated warnings of a budget so limited that entertainment should be kept at a minimum. In fact, in some instances it was discontinued. Surely no one would advocate lavish entertainments as a desirable or necessary budget item. Rather I have in mind a modest luncheon or dinner which an average American host would be pleased to serve his guest.

In visiting with delegates I found many who had not gone beyond New York and Washington. What a pity to have them return home without at least a glimpse of the greatness of our country, sensing the serenity of a wooded valley or the immensity of a rolling plain, seeing the majesty of a snow-capped mountain and above all feeling the warmth of the kindly, generous, and tolerant American heart typified by our citizens on the farm, in the factory and on the main street of our smaller towns and cities. African delegates who accepted our invitation to travel in the United States, returned grateful and enlightened.

An investment in cordiality, modest entertainment and a view of our country in its true light could pay dividends in good will and understanding.

CONCLUSION

Realizing full well my limited experience in diplomacy and international organizations and probable lack of originality, I have reluctantly set forth these observations. However, I have been persuaded by the hope that each succeeding delegation, benefiting from the experience of its predecessor, may improve, in more effectively representing our country in the councils of the United Nations, where only our best efforts will suffice.

GREEK INDEPENDENCE DAY

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent that a statement regarding Greek Independence Day, prepared by the distinguished Senator from Illinois [Mr. DIRKSEN], be included in the body of the RECORD at this point. He has been necessarily detained from attending the session today.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DIRKSEN

On March 25, 1821, the Greek people declared their independence from the Ottoman Empire that controlled southeastern Europe since 1453. The struggle for freedom was fought on for a number of years just as the colonists on July 4, 1776, declared their independence but fought on until the British surrendered on October 19, 1781, at Yorktown.

Just as there was a great similarity in the struggle for independence, there are similarities between the United States and Greece. Both nations have fought side by side in World Wars I and II and the Korean conflict. Both nations believe in government of the people—a republican form of government based on the principles of democracy as enunciated in the golden ages of ancient Greece and handed down to peoples and governments through the ages.

Since Greek is a basic language, Greek is taught at colleges and other schools throughout America and the trend is for greater expansion in the teaching of Greek in the public schools of America in this era of missiles, atomic energy, and outer space.

Time does not permit the enumeration of the many well known and great contributions of Greece to the world and to America, nor the many fine contributions of Americans of Hellenic descent to this country of ours in times of war, peace, and progress. Many of my colleagues in Congress will raise their voices in praise of the Greek people and their descendants throughout the world on their independence day.

Before closing, I would like to mention one present and future contribution to America by Greek-Americans in the form of the Hellenic University of America now being developed in Brookline, Mass., for the educational needs of Americans of all faiths, creeds, races, and nationalities, as well as foreign students who may attend.

As the leaders of the Hellenic University drive, Archbishop Iakovos, Spyros Skouras, and Judge John C. Pappas, have stated repeatedly, the American Helenes desire to build a living monument of higher learning to produce great Americans for the future, to the glory of Greece and America which dwells in the hearts of these fine people.

When statistics show that our colleges of the future will be overcrowded, the Hellenic University of America is being initiated at an appropriate time to meet this great demand for higher learning. I wish them well in their noble objective.

In conclusion, I say all honor to Greece and her people who, from time immemorial, have been one of the great innovators of the many facets of our civilization of today.

Mr. SMITH of Massachusetts. Mr. President, next Saturday, all Americans observe the 140th anniversary of Greek independence. Throughout the centuries, the name of Greece has been synonymous with the finest tradition of democracy. The word itself had its origin in the Greek language and our own democratic heritage was founded in large part on concepts of freedom which originated in Greece centuries ago.

The Founding Fathers were well acquainted with these concepts when they wrote them into the basic documents of our Nation. In recent centuries many Greeks have also left their home shores to come here and play a vital role in the building of this Nation.

After the Second World War, this country was able to repay this debt in part by helping Greece through the Marshall plan. Greece and the United States are now joined in NATO in the common cause of protecting Europe from the forces of communism that would wipe out democracy throughout the world.

Thus the people of this country have joined the Greeks in defending the tradition which they once created. These traditions of freedom and democratic government are the mainstays of both the Greek and American ways of life and create an imperishable bond between our countries. I hope my colleagues will join me in paying tribute to this ally of ours to whom we owe so much.

THE MENACE OF COMMUNISM

Mr. SCHOEPPEL. Mr. President, in these days of uncertainty and tension, many of our fellow countrymen have reason for alarm when they observe the latest move of Communist forces throughout the world.

Only yesterday President Kennedy pointed out boldly and honestly to the American people the crisis which exists in another section of the world.

Recently there appeared on the Manion Forum a distinguished businessman from my section of Kansas, Mr. Fred C. Koch, who is one of the greatest Kansas industrialists. On that occasion he described how the Reds plan to take us over.

I ask unanimous consent that the text of the broadcast of Sunday, March 5, 1961, on the Manion Forum network be printed in the body of the RECORD as a part of my remarks.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

AMERICAN BUSINESSMAN DESCRIBES HOW REDS PLAN TO TAKE US OVER

Dean MANION. Recently, I received an illustrated, 40-page booklet that is as frightening as it is informative. It is entitled "A Businessman Looks at Communism" and it is my sincere hope that all businessmen will look at this pamphlet.

Our apparent helplessness in the meshes of the Communist conspiracy is a bad mixture of ignorance and wishful thinking. We so ardently hope that this Red menace will melt away that many are pathetically eager to fall into every trap of appeasement that the Kremlin sets for us.

Although we are surrounded with obvious evidence that this diabolical enemy has sentenced all of us to death, we go right on telling ourselves a hundred times a day there is nothing about the threat of Communism that cannot be cured by worldwide disarmament and a more just distribution of this world's goods.

Ever so many American businessmen will tell you—as they tell me—that the accomplishment of a workable peace with this thing called communism is merely a matter of businesslike production, wider distribution and more intelligent public relations, here and all over the world.

These men will have contempt for you if you tell them that they are believing what the Communists want them to believe. Those who blind themselves to the horrible facts about communism with such handy rationalizations do so because of their subconscious terror of the truth. They forget what Christ said, namely, that only the truth will make us free and that this kind of slick self-deception merely conditions us for slavery.

With me at this microphone now is the experienced and successful American businessman who has dared to look at communism in this 40-page booklet. He is Fred C. Koch, of Wichita, Kans., president of the Rock Island Oil & Refining Co., Inc. This author has fought for American freedom ardently, continuously, and effectively for years. And all the while, he has administered and directed a half-dozen American business enterprises that reach all over the world. Mr. Koch, how and where did you find the time to learn so much about communism?

Mr. KOCH. Thank you, Dean Manion. I do not pretend to know much about communism as it is such a vast subject. For years I was a member of a consulting engineering firm which built oil refining equipment over much of the world.

During 1929, 1930, and 1931, we erected 15 oil-cracking stills in the Soviet Union in Grozny, Tuapse, Batoum, Baku, and Yaroslavl. I spent several months in the U.S.S.R. in 1930 inspecting our several installations, and found it a land of hunger, misery, and terror. One of the old Bolsheviks, a man named Jerome Livshitz, was detailed by the Soviet Government to go around with me.

Dean MANION. How did you learn about communism?

Mr. KOCH. Livshitz taught me much about communism. He had taken part in the revolution of 1905, and had then escaped to the United States, where he spent 12 years as a revolutionary, most of the time in jails. Wherever there were labor troubles, Livshitz would go, inciting hatred, trying to get fights started, or preferably someone killed.

He was sentenced to prison for sedition in World War I, but jumped his bail and went to Vladivostok where he took part in the revolution of 1917. He outlined to me in great detail how the Communists intended to subvert the United States of America by infiltrating the schools and universities, the churches, the labor unions, Armed Forces, and U.S. Government. He said: "We will make you rotten to the core."

I believe that due to his American experience he was one of the original architects of the Communist plan of subversion of our country which has succeeded far better than most people have any idea of.

We pulled him from an overturned automobile in Tiflis and he was amazed. "Why did you save my life?" he said. "We are enemies. I would not have saved yours." He thought awhile and said: "Perhaps when the revolution comes to your country, and I go back there, I may spare your lives."

He told me that if his own mother stood in the way of the revolution he would strangle her with his bare hands. This is the mark of a hardcore Communist. They will do anything—anything. Livshitz will never see communism take over our country as Stalin had him shot along with Zinoviev, Kamenev, and Piatokov about 1936.

Dean MANION. Do you think the average American really understands the menace of communism to our country?

Mr. KOCH. The average American knows very little about communism. The three important branches of Communist philosophy are: (1) Historical materialism, (2) dialectical materialism, and (3) economic determinism. You will never understand communism until you understand these.

In economic determinism the Communist believes that the entire personality of an individual is determined by the economic system under which he grew.

If the Communists take the United States, by subversion or war, what are they going to do with the people who are contaminated by capitalism, who are hopeless from a Communist point of view? They will murder everyone contaminated by capitalism whom they regard as incurably diseased. They estimate this will be one-third of the people—the greatest blood bath in history.

COMMUNISTS USE SET PATTERN

Dean MANION. Have the Communists adhered to one pattern of conquest in China and Cuba?

Mr. KOCH. Yes, the steps are the same and are as follows:

1. The conquest of the student mind.
2. The organization of students into the intelligentsia of the Communist Party.
3. A scientific survey of what the common people want and need most, and then promise those things to them.
4. Revolution, war, and conquest.
5. Minority dictatorship and universal slavery.

In China, after the conquest of the student mind, the Communists knew the peasants wanted most, land and to be free from debt. After the revolution succeeded, the Communists kept their promises for a while, as they always do, and divided the land among the peasants. After all opposition, real and potential, was eliminated by murder the land was taken away and the peasants put in the horrible communes. China was conquered with the invaluable help of treasonous Americans in the American Embassy and State Department.

The Communist takeover of Cuba closely paralleled that of China. Castro was typed as a Robin Hood as Mao Tse-tung was as an agrarian reformer. A former Assistant Secretary of State told me that individuals in the U.S. State Department helped put Castro in power and guide his every move. A Communist Cuba poses the most dangerous threat to our country that has ever occurred in our national existence.

Dean MANION. What was the situation in Iraq?

Mr. KOCK. I was in Iraq in 1958. During an hour's conference with the Foreign Minister, Dr. Mohammed Fadhil al Jamali, he told me there are many people in the United States prostituting the Bill of Rights in order to destroy it.

Some months after I left Baghdad, the Communist revolt and takeover began. They first murdered the royal family, including the women and children, and all political figures who could form a government. They sentenced Dr. Jamali to death but I learned recently his sentence had been commuted to 10 years' imprisonment.

An American friend of mine who was manager of the Daura oil refinery went through it all. The most unbelievable thing about the takeover in Iraq was the fact that the people who one least suspected of being Communists turned out to be the biggest ones. This was also the case in China and Czechoslovakia and will be the case if the Communists ever take over our country.

The biggest Communists in the refinery turned out to be Iraqi engineers educated in English and American universities. A girl working in the laboratory was the chief denouncer for the secret police.

Dean MANION. Do you think the Communists are disposed to rest on their laurels in peaceful coexistence or are they determined to conquer the world?

Mr. KOCH. They are fanatically determined to conquer the world. Lenin said: "We will first take Eastern Europe, then the masses of Asia. We will surround the United States which will be the last bastion of capitalism. We will not have to attack. It will fall like overripe fruit into our hands."

You only have to look at the map to see how far along the Communists are on their world program.

Dean MANION. What methods do you think will be effective in taking over the United States of America?

Mr. KOCH. I have outlined some potential methods of Communist takeover in the United States by internal subversion. This list does not pretend to be complete by any means.

1. Infiltration of high offices of government and political parties until the President of the United States is a Communist, unknown to the rest of us, of course, when as Commander in Chief of the Army and Navy he could control us. Even the Vice Presidency would do, as it could be arranged for the President to commit suicide.

2. General strike as combination of the Teamsters, Bridges' Longshoremen, Steelworkers, United Auto Workers, United Electrical Workers, etc., could bring our country to its knees. Think what would happen to your city if the electrical power were cut off.

3. Infiltration of Armed Forces until civil war is brought about, with seizure of the large cities, such as Washington, New York, Chicago, Detroit, by means of student and race riots.

4. World Government, World Court, United Nations pitch. This I consider the most likely at this time as it is the indirect approach and has such an idealistic appeal. Notice the present concentrated effort to effect the repeal of the Connally amendment to the World Court Act. To relinquish our national sovereignty by degrees until we back into world communism. UNESCO and foreign aid are part of this plan.

5. Inflation, depression, chaos, etc.

6. Build up fear of nuclear war by propaganda. Fear of the power of the Soviet Union. To induce surrender by nuclear blackmail.

7. Collapse of the Government due to Communist infiltration in all branches. The decay of moral values, determination, and will to resist. This is what Livshitz meant when he said: "We will make you rotten to the core."

FOREIGN AID HELPS COMMUNISM

Dean MANION. Do you think our foreign aid has been effective in checking Communism?

Mr. KOCH. When foreign aid was originally conceived to pull friendly nations out from the depth of the destruction of war it served a useful purpose and parts of it are still useful, such as the point 4 programs to show people how to help themselves, but it has since been prostituted by Socialists, Internationalists, and Communists, and is a device to spend us into bankruptcy.

Dean MANION. What are some of the soft spots in our American institutions which the Communists are using to destroy us?

Mr. KOCH. 1. Labor unions have long been a Communist goal.

2. Many of the large tax-free foundations are managed by socialistic intellectuals and socialism is communism's little brother.

3. The unbelievable pro-Communist decisions of the U.S. Supreme Court have wrecked the internal security of our country.

4. The atmosphere in most of the large universities is definitely socialist if not pro-Communist. The universities have been one of the breeding grounds of recruits for the Communist Party.

5. The United Nations has been a tool of the Communists and will bring us into communism by the world government route if we continue in our membership. Hungary is the exact measure of U.N. impotence, enemy infiltration and Communist control of the U.N. Secretariat.

6. Some national church organizations have been infiltrated by Communists with devastating effect.

7. The stage, screen, radio, and television have had Communist infiltration for years.

8. The Communists have been in the heart of politics in both the Democratic and Republican Parties.

9. Newspapers and magazine have been highly infiltrated. Ex-Communists say there is probably no important magazine or newspaper without some degree of Communist penetration.

10. Many branches of the U.S. Government have been a Communist goal: the State Department, the armed services, the Agriculture Department, the Atomic Energy Department, etc.

11. The Communists are fishing furiously in the troubled waters of integration—on both sides. The Communists are not interested in the aspirations of the Negro except as a means to stir up racial hatred in order to enslave both the black and the white man.

Dean MANION. In your judgment, what is the most constructive thing one can do to prevent the Communist conquest of our country?

Mr. KOCH. The first thing for any American to do is to get informed so he knows what communism is, what its programs are, and what it is doing. So often we are deceived by propaganda as we were about Mao Tse-tung and Castro. For instance, the Communists are now making a determined effort at this time to destroy the House Un-American Activities Committee.

The most effective anti-Communist society I know of is the John Birch Society of Belmont, Mass.

Many Americans who are expert in these matters believe the Communists plan to get control of the United States in the next few years all in the name of anticommunism. My friends, if we through our apathy, selfishness, and ignorance let this wonderful, wonderful country of ours, which has given us so much freedom and material blessings the like of which the world has never seen, go down the Communist drain, we will shed the bitterest tears we have ever shed in our lives.

BANK MERGERS

Mr. ROBERTSON. Mr. President, as the patron of the bill that sought to put additional restrictions upon bank mergers, I have been a bit disturbed by the recent increase in the number of bank mergers and what would appear in some instances to be a basis of merger that, instead of promoting economy and efficiency in order that the banks may gradually reduce charges made to borrowers, they appear to be actually moving in the opposite direction.

I have in mind particularly the pending merger between the Hanover of New York and the Manufacturers Trust Co. Both of these banks are large banks and their operations would more or less complement each other, as Hanover deals primarily with large corporations and the Manufacturers Trust with smaller individual loans. But, I understand, that one of the terms of the merger is to give to the chairman of the board of the Manufacturers Trust Co. what would appear to be about a million-dollar bonus. I understand that with practically no duties to perform he will first be carried on the payroll of the merged institution at a salary of $125,000 per year. Then he is to be retired to what is called a position of consultant, at a salary of $50,000 a year. At the end of that 10-year period he is to receive a bonus for each of the 10 years at a rate of $25,000 per year, or a total of $250,000. But throughout the entire period he is to have at the bank's expense a private airplane, a private limousine with liveried chauffeur, and a de luxe suite at the Waldorf-Astoria, not only for himself, but for all members of his immediate family. And over and above all else the bank will carry on his life a large insurance policy for the benefit of his estate.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. ROBERTSON. I yield.

Mr. HUMPHREY. Is that job open? [Laughter.]

Mr. ROBERTSON. If the Senator can throw in some stock in behalf of the merger, he might be considered.

Mr. HUMPHREY. I certainly want to be considered.

Mr. ROBERTSON. The Senator from Virginia merely wished to mention what some of our big moneychangers are doing in this field. What is hapepning indicates that the Federal authorities would be well advised to look a little more closely at what is going on, if we are to carry out the purpose of any merger bill, which was to permit banks to merge whenever they could give more efficient service, or be more efficient in taking care of their responsibilities which have increased with the depreciated value of the dollar; effect economies, and give the consumer a lower rate of interest.

DO EVEN THE PENGUINS NEED US?

Mr. PROXMIRE. Mr. President, I just received from a constituent a letter which I regard as one of the most amusing and effective satires on Government spending that I have read in a long time. Because it is so remarkable, I take the unusual course of reading it in full on the floor of the Senate:

MARCH 20, 1961.

DEAR SENATOR PROXMIRE: Word flashed to Milwaukee today by radio indicates male penguins in the Antarctic are in serious trouble. Each year these magnificent birds take on the task of incubating the single egg laid by each of the female birds. To perform this feat, father penguin holds the egg against his body with one foot to keep it warm. He stands on the other foot. Father penguin does without food or water during the entire 60-day incubation period. This is because mother penguin leaves him and he cannot go swimming and keep the egg warm at the same time. Naturally, at the end of 60 days, he's pretty weak from hunger.

How can we, living in considerable luxury, ignore the plight of this majestic being? Can't we start a modest program to relieve the suffering and hunger of these poor dwellers of the south? I propose we start slowly and merely put grain feeders close to the nesting birds. This will get them accustomed to a perpetual handout from the citizens of this great land.

Later, as conditions permit, we can install heated shelters for the birds to include comfortable padded nests so they won't need to hold the egg for 60 days. Naturally, the birds may protest some, but then we shall have to insist on certain reforms in return for all this aid. After all we New Frontier thinkers know how to run their affairs better than they do.

When the birds finally become accustomed to their new life, they may not be up to the South Pole weather, and they may be reluctant to leave the heated shelters. No matter, we have lots of grain and we can build more shelters to house the increasing population.

I urge serious consideration of this plan for the following reasons:

1. It's bold.

2. Our grain surplus will be reduced.

3. We will emerge as great humanitarians in the eyes of downtrodden birds of the world.

4. It will provide domestic employment producing shelters and transporting them to the South Pole.

5. It will give us the perfect opportunity to institute penguin birth control programs.

6. The Russians haven't thought of it yet and we can be first in this vital area.

7. It will give us the opportunity to impose democracy in the land of ice and snow. We may even be able to persuade mother penguin help hatch the egg and, thus, permit scheduled reduction in aid. Then, again, she may tell us to mind our own business. When you think about it, that's not a bad idea.

Very truly yours,

CLIFFORD E. SHAW.

MILWAUKEE, WIS.

Mrs. NEUBERGER. Mr. President, I should like to comment briefly on the letter the Senator from Wisconsin [Mr. PROXMIRE] read. It sets forth a very interesting allegory, and I am sure Members of the Senate did not fail to get the point.

But, Mr. President, in all seriousness I should like to have the Senator from Wisconsin tell his constituent of an incident wherein our Government did come to the rescue and aid of penguins.

An expedition was sent from my State, at some expense, and with a great deal of interest, to the Antarctic, to bring back some penguins for the Portland, Oreg., zoo.

There was great interest in the arrival of the penguins; and zoo experts from all over the country came to see the arrival, and even to purchase some of the penguins.

Very shortly after they arrived, a mysterious disease began to affect them. My husband called the Fish and Wildlife Service, in Washington, and asked them whether they could send someone to look after the penguins, which seemed to have a sort of asthmatic condition.

I am happy to report that they were able to control the disease, or infection.

I still hear from the eminent biologist who then went to Portland. He is now in the Pribilof Islands, looking after the seals there, which have a mysterious ailment.

But these penguins in the Portland Zoo have been a delight, and have given a great deal of pleasure to a great many visitors to the Portland Zoo; and I am happy to report the successful conclusion of the penguin story.

PERMANENT POLICY AGAINST FIRST USE OF NUCLEAR WEAPONS—RESOLUTION BY FEDERATION OF AMERICAN SCIENTISTS

Mr. PROXMIRE. Mr. President, a few weeks ago, the Council of the Federation of American Scientists unanimously adopted a resolution urging that our Government adopt a permanent policy against the first use of nuclear weapons. Their resolution was accompanied by a detailed explanatory statement setting forth the reasons and the alternatives.

Because of the significance of the resolution and statement, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the resolution and statement were ordered to be printed in the RECORD, as follows:

STATEMENT BY FEDERATION OF AMERICAN SCIENTISTS

The Council of the Federation of American Scientists (FAS) unanimously adopted the following resolution:

RESOLUTION

"We urge the Government to decide and publicly declare as its permanent policy that the United States shall not use nuclear weapons of any kind under any circumstances except in response to the use of nuclear weapons by others. We urge that the strategic plans and the military deployments of the United States and its allies be brought as rapidly as possible into a condition consistent with the overall policy of not using nuclear weapons first."

EXPLANATORY STATEMENT

In adopting this resolution, we are not under the illusion that we are expressing the unanimous opinion of scientists. Still less do we imagine that our Government could implement the resolution without prolonged private study and intense public debate. We present the resolution now as the considered view of a group of people who have examined the problems of defense and disarmament and have come gradually to certain basic points of agreement. We differ sharply among ourselves concerning many questions. Some of us place primary emphasis on immediate steps toward disarmament, while others believe our best hope of peace lies in negotiating from positions of strength. But we have all, from our several points of view, arrived at the conclusion that continued reliance on nuclear weapons for defense against nonnuclear attack is unwise and dangerous.

We are aware that weighty arguments can and will be brought against our position. Present U.S. policy is to deploy troops and ships armed with tactical nuclear weapons, without any publicly announced doctrine to govern the use of these weapons. The intent has been to deter military aggression, even of a nonnuclear type, by the implied threat of nuclear retaliation. Some will justify this policy by claiming that it has preserved the peace, and that FAS is advocating moving from a situation of proved short-term stability into a new region of precarious equilibrium and unknown risk. It may be that our present policy has been an important factor in maintaining a precarious status quo. However, we believe that our principal deterrent (in Europe and elsewhere) has been our willingness to intervene and take whatever action might be necessary. The United States surely has the basic capability to do so without resort to nuclear weapons.

Our arguments against the present policy cannot be brief or simple. Basically, we believe that our nuclear shield, in Europe, Formosa, and elsewhere, is or will shortly become ineffective, and that our nuclear deterrence of nonnuclear war will become illusory. The threats most likely to occur in the years ahead are the kind for which nuclear countermeasures would be disastrously inappropriate and could not be used without serious risk of involvement in nuclear war; few military planners still believe it possible to keep a limited nuclear war from escalating into a general conflict. This realization, coupled with serious doubts of the military advantages to the United States of attempting to conduct such a war, has led to a growing belief that the United States would not, in fact, use nuclear weapons to defend Europe against a nonnuclear attack, and that the United States would discourage its allies from using such weapons.

On the other hand, a strongly stated policy of determination to resist small-scale aggression against neutral and allied countries by appropriate nonnuclear forces would be a far stronger shield. We shall be better off, purely from a military point of view, if we officially abandon the crumbling shield of nuclear deterrence and reestablish our nonnuclear forces as our first line of defense. To continue to behave as if a nuclear shield and deterrent were adequate is dangerous. Only if we have the courage to abandon such a policy are we likely to have the will to substitute an effective nonnuclear shield in its place. This is the meaning of the second sentence in the FAS resolution.

In the minds of most of us, the military arguments in favor of our resolution are already strong. But the political arguments are equally compelling. There are three quite distinct, but mutually reinforcing, political arguments.

First, a declared "no first use" policy by the United States would ease considerably the pressures within nonnuclear nations to attain an independent nuclear capacity. At the same time, the present nuclear powers would feel less need to equip their allies either with nuclear weapons or with the know-how and materiel to produce them. We recognize that such a declaration would not have equal impact on all nonnuclear countries and, in particular, that such a declaration would not be expected to prevent China's emergence as a nuclear nation. Nevertheless, to the extent that the dispersion of nuclear weapons is retarded, so too are the dangers of accidental and catalytic nuclear wars reduced.

Second, a declared "no first use" policy by the United States, coupled with unequivocal evidence of U.S. determination to formulate realistic disarmament proposals, will enhance the possibility of achieving agreements on disarmament. The reorientation of our forces and the deemphasis of nuclear weapons envisioned by this statement will ease the tensions which surround the world's trouble spots. In such an improved international atmosphere it should be possible to negotiate the disarmament agreements which alone are capable of providing long-term security.

Lastly, although most people feel some assurance that the United States would not initiate an all-out nuclear war, there is no similar assurance with respect to the U.S. use of small nuclear weapons in response to aggressions which may occur in, e.g., Berlin, Laos, or Formosa. The acknowledged willingness of the United States to initiate the use of nuclear weapons in certain circumstances creates much of the distrust and resentment felt by others toward us. Rejection by the United States of any first use of nuclear weapons would increase the respect, and decrease the suspicion, which a large part of the world, including many of our allies, feel toward us.

FAS believes that renunciation of first use of nuclear weapons by the West, coupled with appropriate adjustments in military policy and seriously conceived disarmament proposals, would enhance the effectiveness of our deterrent and increase the likelihood of some major disarmament. At least, this is an urgent and unequivocal first step along the road to general, complete, and controlled disarmament. Pending an international convention providing for the controlled reduction of nuclear arms, unilateral declarations by the major nuclear powers will be a useful stopgap. We emphasize that the unprecedented situation of an expanding nuclear arms race calls for new thinking and careful consideration of unprecedented policy decisions.

The council of the Federation of American Scientists adopted the foregoing resolution at its annual New York meeting earlier in February. The resolution had been proposed by Dr. Freeman J. Dyson, a member of the council and a mathematician at the Institute for Advanced Study at Princeton, N.J. After lengthy discussion, the resolution was passed unanimously.

The FAS is a nationwide organization of more than 2,000 scientists and engineers of all fields concerned with the impact of science on world affairs. Officers of the federation are: chairman, M. Stanley Livingston, M.I.T.; vice chairman, William C. Davidson, Argonne National Laboratory; treasurer, Edward D. Korn, National Institutes of Health; secretary, Leonard S. Rodberg, University of Maryland.

THREE HUNDRED AND TWENTY-SEVENTH ANNIVERSARY OF FOUNDING OF STATE OF MARYLAND

Mr. BEALL. Mr. President, March 25 is the birthday of the great State of Maryland. It was 327 years ago that our State had its beginning, for it was on March 25, 1634, that colonists first landed on an island just off where St. Mary's City now stands. Here they founded what subsequently became the State of Maryland.

Our State became known as the Free State because Lord Calvert's first important edict was that every person had the right to worship according to the dictates of his own conscience. Furthermore, the Maryland Act of Toleration of

1649 was the first such public document to espouse the idea of freedom of religion. This became a basic principle and was the forerunner of the theme of freedom in the American Constitution.

There are many outstanding landmarks in Maryland's history. In 1783, Annapolis became the temporary National Capital. A month later, in Annapolis, George Washington resigned his commission. In 1791, Maryland ceded to the United States the land for the District of Columbia. The national anthem was written at Fort McHenry on September 12, 1814. The first railroad in America and the first telegraph line in America were established in Maryland.

Maryland, perhaps more than any other State, has represented down through our Nation's history the ideals, principles, dreams, accomplishments, and the heart and soul of America.

OWNERSHIP AND DISPOSITION OF ELECTRIC ENERGY

Mr. BRIDGES. Mr. President, the recent elections exploded the myth that public ownership of the business of manufacturing and selling electric energy is a politically appealing issue. In the 17 Western States where the Democratic hopes for victory were keyed to this program, only three, Nevada, New Mexico, and Texas supported the Democratic ticket—for reasons far removed from public power.

In fact the theory and practice of State ownership of the means of production, keystone of the doctrine of socialism, is in full retreat throughout the free world—in Great Britain, New Zealand, and even in its early homeland, Germany.

It is noteworthy that the federated republic of West Germany has initiated a program of "privatization" of the huge federally owned industrial empire inherited from its predecessors. This is being done by offering for public sale to lower income citizens the shares of these great corporations. The success of the first experiment in Preussig, a mining and smelting company, 2 years ago accelerated the program so that today the "privatization of Volkswagen," the leading automobile manufacturer in Germany, is almost completed, completed with more than two million new shareholders, few of whom had held a previous similar stake in the national economy. Prussian Electric Co., a federal power corporation often called the German TVA, with 13 hydro plants well supported by steam, is also on the list for early denationalization.

We are indebted to the editors of the Saturday Evening Post, in an editorial in this week's issue entitled "Socialism Would Be a Strange Export for the U.S.A.," for bringing into sharp and dramatic focus the strange paradox of the administration's recent suggestion that the TVA idea should be an item of foreign aid export from America, the world symbol of the free enterprise system and its rich rewards.

Mr. President, I request unanimous consent that this editorial be printed in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post, Mar. 25, 1961]

SOCIALISM WOULD BE A STRANGE EXPORT FOR THE UNITED STATES OF AMERICA

In announcing the appointment of a new member to the Board of the Tennessee Valley Authority, President Kennedy urged that organization to study ways in which the lessons it has learned in the Tennessee Valley may be exported abroad. While few dispute the accomplishments of TVA as an engineering achievement, it would be less than accurate to send abroad the impression that only by tax-consuming, semisocialistic projects have we taken long leaps forward.

Actually the most striking progress in this industry, as in most others, has been made by private-investor companies. Despite taxes and interest rates which favor public power, with more to come in the new administration, at least 80 percent of our electric power is produced by private-enterprise companies. The Idaho Power Co.'s Hells Canyon dams add enormously to the power resources of the area and, incidentally, pay $10 million in Federal, State, and local taxes. Experimentation in the use of nuclear fuel for electric-power production is being carried on—with the money of American savers and investors—by a number of power companies. Seventeen nuclear plants are in construction at a cost of about $700 million.

Obviously a vast publicly financed and virtually tax-exempt enterprise like TVA can produce electricity, but the message which one might expect an American Government to send abroad is the fact that the most significant American economic progress, including that in the electric-power industry, has been made by private corporations and individuals. Sometimes one is tempted to believe that many American politicians have forgotten this fact. On the other hand, it is difficult to find much public support for socialized industry. Last November in the so-called public-power States in the western part of the country—despite the effort of Democratic candidates to make public power an important campaign issue—Republicans won in most of these States. It is not insisted that efforts to plug public power account for the defeat of Democratic candidates in these States—only that the alleged issue did not generate enough steam to elect them.

It is curious that politicians should place so much emphasis on public power and public projects generally when in other countries the passion for socialist adventures is fading. Great Britain's exercise in denationalizing its formerly nationalized industries has given that country a new birth of economic freedom which has left the Labor Party with no issue worth fighting for except getting the Americans and their Polaris missile off the island. New Zealand has retired its Socialist regime of many years' standing, and West Germany, whose prosperity is driving the Communists crazy, is well launched on a series of "privatizations" of its Government-owned industries, including Volkswagen.

What the West Germans have been doing ought to be of great interest to Americans, because it suggests a page out of our own "people's capitalism." In the recent denationalization of Volkswagen, investors were limited to those with incomes of no more than $3,200 a year. They were encouraged to hang onto their stock by promise of a big dividend after 2 years. The program, worked out by Economic Minister Ludwig Erhard, is called eigentum für jedermann (property for everybody) and up to now has been an enormous success. Already some 216,000 Germans own pieces of Preussig, a mining-and-smelting firm long owned by the Government. They bought the shares for $34 each and, according to the Wall Street Journal, the recent price is about $65. The Volkswagen deal went through in January and resulted in the distribution of ownership of Hitler's prize state corporation among probably 500,000 people. This, of course, isn't everybody, but after all, investing isn't compulsory.

Coming soon will be a public offering of stock in Prussian Electric, the nearest thing in Germany to our TVA. A few years back former Senator Edward Martin, of Pennsylvania, proposed a similar disposal of TVA, arguing, among other things, that this would give the Government and local authorities a chance to tax TVA revenues and properties. The German Government appears to lack that reason for denationalizing Prussian Electric, for that power complex in 1958 paid 37 percent of its gross revenues in taxes. This compares with an average of 23 percent paid by American investor power companies and, of course, distances TVA completely.

If the New Frontier wants to do something handsome for other countries, why not let them in on some of the things our people have been doing for themselves without bureaucratic interference? Actually delegations from all over the world visit our private powerplants, as well as TVA, to get ideas on engineering, management, and finance. It looks as if some other countries have done their homework on this subject and may wonder why the capitalistic United States should attempt to educate them on the virtues of socialism.

FORTY-THIRD ANNIVERSARY OF THE INDEPENDENCE OF BYELORUSSIA

Mr. LAUSCHE. Mr. President, March 25 will be celebrated by Byelorussions as the 43d anniversary of the proclamation of independence of the Byelorussian Democratic Republic. It was at Minsk in 1917 that these proud freedom-loving people proclaimed their independence. They enjoyed their freedom but for a little while as the Communist armies occupied the land and drove the government into exile.

An abortive attempt to regain their independence during World War II was quickly crushed by the Soviet.

Today, as the Soviet Government broadcasts attacks on the United States accusing our Nation of "imperialism" and "colonialism," it is instructive to examine the Soviet's own aggressive colonialism.

In Byelorussia, the Soviet has established a fictitious Byelorussian Soviet Republic. Let us examine the record of the Soviet's 43 years of domination over this little nation.

In governmental affairs, the Byelorussian people are deprived of their national rights. Their constitution as well as all governmental organs of the Byelorussian S.S.R. exist only on paper. All important branches of life in Byelorussia are directly subordinated to Moscow. At the present time, the liquidation of the Ministry of Justice of the B.S.S.R. by an enactment of February 21, 1960, proves this in the best way. In the B.S.S.R., all branches of government are occupied by Russians and other non-Byelorussians. The representative of the B.S.S.R. at the United Nations is a Russian by the name of F. Griaznoff.

The ethnographical territory of Byelorussia has been divided by Moscow among neighboring nations. About

one-half of Byelorussian land has been annexed by the Russian S.F.S.R.; and the western part Byelorussia has been annexed by Poland, Lithuania, and Latvia. The rest of the Byelorussian territory is the present Byelorussian S.S.R. The existing partition Byelorussia, as well as previous partitions have been carried out by the Moscow government without participation of Byelorussian representatives.

Soviet Russia imperiously carries out the Russification of Byelorussian people. Russian language is being used in all administration; in schools of all grades only some of the elementary schools are using their native Byelorussian language—theaters, movies, and in the press and publications. Only a small part of the printed matter and a few movie productions are in Byelorussian. The rich Byelorussian song folklores are being set aside and, instead, songs are composed and printed with Russian swings and interpretations as if they were Byelorussian.

In Byelorussia, religious activities of all denominations are suppressed, and are constantly persecuted by authorities and baited by press and communistic organizations. To deceive the free world, a small part of religious life is being tolerated in order to increase the Russification.

In economic developments, Byelorussia stands on cloudy end. Predominantly military installations are being built there, to be used for aggressive purposes against Western Europe. In 1960, the standard of living per capita in the B.S.S.R. was 35 percent lower than it was in the R.S.F.S.R.—according to the official budget of the U.S.S.R. This gave to the R.S.F.S.R. 6.6 additional billion of rubles—in new currency—or over one-fourth of her annual budget for 1960. The Byelorussian natural resources are extremely exploited since they are at the disposal of Moscow and are not controlled by Byelorussians. Economic calculation, monetary transactions, and trade between the B.S.S.R. and the R.S.F.S.R. are secrets; if they were not, they would openly show the colonial exploitation of Byelorussia by Soviet Russia. The Moscow Government does not care about the economic developments of Byelorussia and, therefore, it is no wonder that the standard of living there is so low.

In regard to population of B.S.S.R. Soviet Russia has exterminated a great number of the intelligentsia and peasants who were the basic national components of the Byelorussian people. The new dominating class in Byelorussia—the Communist oligarchy, the high bureaucracy, and technical and military personnel, consists of Russians, or was drawn up from other nations who are completely Russified, and loyal to Soviet Russia. Byelorussian collective farmworkers, industrial laborers, and low-ranking intelligentsia compose a mass having no influence on the social, political, or economic life of their country.

In Byelorussia, the occupational policy of Soviet Russia is being carried out by means of an all-embracing police terror. The police apparatus and the adherent forces consist of non-Byelorussians. During the time of the Communist rule, Soviet Russia has exterminated over six millions of Byelorussian populations: by shooting, jailing, in concentration camps, and deportations.

The Byelorussian people have always been against the Soviet Russian occupation and have constantly struggled for their national freedom and independence. The results of this struggle have been evident in the history of Byelorussia. In 1917, in Minsk, the capital of Byelorussia, the first all-Byelorussian congress convened. On March 25, 1918, in Minsk, the independence of the Byelorussian Democratic Republic was proclaimed. The Byelorussian armed forces fought the Soviet armies in Sluzk Province in 1920. In 1944, in Minsk, the second all-Byelorussian congress convened. The organized Byelorussian national guards fought against Soviet Russia.

Although Soviet Russia occupies Byelorussia and carries out her hostile policy against the Byelorussian people, nevertheless, she has not exterminated all national forces in Byelorussia; neither has she changed the Byelorussian people to one Soviet Russian people, nor has she annihilated completely the national spirit for freedom and independence.

We believe that at the convenient time, the Byelorussians will again open the fight against Soviet Russia for their independence.

The day of March 25 is being celebrated by the Byelorussians in the whole free world as a symbol of liberation, because on that day 43 years ago, there was proclaimed the independent Byelorussian Democratic Republic.

Mr. President, let us assure the Byelorussian peoples of our friendship and concern. It is our belief that in the divine design the Byelorussian Republic will again achieve its sovereignty and freedom.

Mr. KEATING. Mr. President, tomorrow is the 43d anniversary of the proclamation of independence by the Byelorussian National Republic. Their political independence was short lived, but the love of freedom and aspirations for independence still live in the hearts of these brave people. Today they are enslaved by Communist dictators, but someday, we hope and trust, the freedom which they so eminently deserve will be theirs once more.

I ask unanimous consent to include a commemorative statement at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Byelorussian people have been living under Russian regimes for more than 400 years. During all that time, except for a brief period of about 3 years, they suffered under the worst excesses of autocratic czarist regime and also under that of tyrannical Communist totalitarianism of the Kremlin. Theirs has been an unenviable lot, for under Russians they have suffered more than almost any other national minority group. In all this misery and misfortune they have maintained their national identity, and their love of freedom. They suffered hardships, privation, exile, and death, but they clung to this noblest of human ideals, freedom, and independence. For centuries they worked and struggled for the attainment of their freedom, and the First World War gave them the chance, the opportunity which they had been seeking for a long time.

Toward the end of that war and as the result of the Russian revolution of 1917 the decrepit czarist regime in Russia was overthrown. Then all non-Russian subject peoples of Russia were freed. One by one they all declared their independence. The Byelorussians were one of the first to do this; they proclaimed their independence on March 25, 1918, and set up the Byelorussian National Republic. That was a historic event, a real turning point in Byelorussian history, for the establishment of the Republic ushered in a new era for them.

During the next 3 years, hard as they were working in the rebuilding of their new state and harrassed as they were under the threats of their foes, they were happy in the enjoyment of their freedom. Then early in 1921 the country was attacked by the Red Army, quickly overrun and made part of the Soviet Union. Thus ended the free and independent Byelorussian National Republic and thus began the enslavement of the Byelorussians under Soviet tyranny.

Today these stouthearted and liberty-loving Byelorussians are held down in their historic homeland by Communist totalitarianism. They do not even have the freedom to observe the anniversary of their Independence Day. We in the free world celebrate the anniversary of that historic event and thus echo the genuine sentiments of the people of Byelorussia.

CUBAN REVOLUTIONARY COUNCIL

Mr. KEATING. Mr. President, I have been heartened in recent days to read of steps taken by free Cuban exiles toward a unification of the principal elements of anti-Castro exiles in the United States. Today it is recognized by most diplomatic observers that Castro's popularity with the Cuban people has waned considerably. It is highly questionable whether he has the support of a majority of his people. Effective control in Cuba is maintained only through the use of tactics much worse than ever envisioned under the harsh Batista regime.

The formation of a Cuban Revolutionary Council under the leadership of Dr. Miro Cardona appears to have given impetus to a solidification of the anti-Castro forces throughout the Western Hemisphere. Editorial comment on this group is made today by the New York Herald Tribune. The overthrow of Castro cannot and should not be accomplished by intervention of the United States; however, I am sure that the efforts of this group will have the support of the American public.

In a recent Senate speech, I called for the formation of a Cuban forum by anti-Castro forces, out of which it was hoped that a Cuban Government in exile would grow. These steps have been taken and now it is the time for the Organization of American States to again express its distaste for dictatorship in the Caribbean through the use of economic sanctions. An economic embargo against Cuba by the Organization of American States would lend significant moral support to the oppressed people of Cuba. At the same time, it would place the OAS on record against dictatorship of any form in Latin America.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the editorial, entitled, "A Rallying Point for Cuban Exiles," from the New York Herald Tribune of March 24, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A RALLYING POINT FOR CUBAN EXILES

The formation of a Cuban revolutionary council uniting the principal elements among anti-Castro exiles in this country provides a definite rallying point for the diversity of Cubans who have found the increasingly Communist orientation and style of the present Government in Havana intolerable.

It was obviously not enough for these exiles to be against Castro. They had to have something to substitute for him, something that would be as untainted by the old dictatorship of Batista as by Castro's own extremism. To that end they have assembled under the leadership of Dr. Miro Cardona, once a supporter of the Castro revolution, and published a program which promises social justice, which was Castro's original avowed aim, with freedom and democracy.

The first goal of the revolutionary council is naturally to overthrow Castro and gain control of Cuba, presumably by armed invasion. This is a tall order (although there is Castro's own example to prove it can be done). But the exiles would need widespread support among the Cuban population. It is not something which at this stage they can take for granted.

To this uncertainty must be added the classic dangers which attend all organizations of political exiles—disunity and factional quarrels. Unity among Cuban exiles from earlier regimes has not been notable, and the council must exercise a vigilant self-discipline if it is to offer an effective alternative to Castro.

As for the United States, there is a legal prohibition against our recognizing such a group as a genuine government. This is just as well. Although we may be in sympathy with the council's aspiration and although we are certainly out of sympathy with Castro, we do not want to accept a blanket responsibility for expeditions bent on overthrowing him and, more important, to be in the position of imposing his successors.

If there is to be a new revolution in Cuba, it will have to be a genuinely Cuban revolution.

THE 23D AMENDMENT

Mr. KEATING. Mr. President, today's New York Times contains a very informative editorial on the proposed 23d amendment. The editorial reflects the sentiments of many of us who felt that the other body made undesirable changes in the District of Columbia vote resolution. It will be recalled that the Senate-approved amendment, which I had the privilege of sponsoring with Senator BEALL and Senator CASE of South Dakota, would have given the District of Columbia the same representation in the electoral college and in the House of Representatives as it would have if the District were a State.

Under the form of the amendment approved in the House, subsequently accepted by the Senate, and now pending ratification, representation in the House of Representatives was completely eliminated and representation in the electoral college was limited to a maximum of three electors. As the New York Times editorial points out, this is a discrimination, since there are a dozen or so States which have a smaller population than the District of Columbia.

The same editorial also criticizes the lack of home rule in the District of Columbia. It emphasizes that the right to vote amendment, which is on the eve of final ratification, is not a substitute for home rule which I have always favored.

The District of Columbia vote amendment will be a substantial improvement over the present situation and its ratification will be enthusiastically welcomed by all Americans interested in the forward progress of democracy. But it is important to keep in mind that it does not remove all the problems in democracy in our Nation's Capital.

Mr. President, I know this editorial will be of interest to many Senators. Therefore, I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE 23D AMENDMENT

Within a week or so residents of the District of Columbia may acquire a right which they have never had except as they kept voting residence outside the District. Thirty-six States have ratified the 23d amendment to the Federal Constitution and two more are expected to come along. Under this amendment citizens whose occupations made it convenient for them to live on the banks of the Potomac, or Anacostia Creek, or thereabouts, will no longer be treated like ex-convicts, Indians on reservations, or unnaturalized foreigners. They will be allowed to vote for candidates for the electoral college. This privilege is hedged somewhat by the requirement that they shall not be entitled to more electors than are allowed the least populous State. This is a discrimination, since there are a dozen or so States which have a smaller population than the District of Columbia.

Another discrimination remains. The 23d amendment does not give the District of Columbia home rule or a voting representation in Congress. In this respect the people of the District will not be as well off as those of Vermont, Alaska, or Nevada, each of which has about one-third of the District's population. The District will not be as self-governing as it was between 1871 and 1874, when it was administered more or less like a territory. In those days it had a territorial assembly of which one chamber was elected and the other appointed by the President. It also had an elected though nonvoting delegate to the House of Representatives. The plan didn't work, according to the standards of the time, and since 1874 people who admit that they live in the District have less to say about their own affairs than they had 87 years ago.

One impediment to full-scale citizenship in the District is that it has a majority of Negro citizens. Some southern legislators who have their own peculiar views about human rights would rather not see the District of Columbia governed by a majority. In the light of what is already in the Constitution and in view of today's situation, this position is dangerous nonsense. When the 23d amendment has been duly incorporated in the Constitution it might be well to see if a little additional democracy might not be introduced into the Federal City.

ALASKA POWER PROJECTS

Mr. GRUENING. Mr. President, the administration of President John F. Kennedy has made unmistakably clear that it stands for resource development, that it favors the development of our water resources, and that it favors the development of our hydroelectric potentials. It rejects the policy of "no new starts." These views have been made clear by the President, both before and after his election, and by his able and dedicated Secretary of the Interior, Stewart Udall.

In a recent statement, Secretary Udall pointed to one difference between this administration and the preceding one. He said that his predecessor regarded public power as a necessary evil, whereas the present administration considers it to be a necessary good.

An important hydroelectric project which has been thoroughly studied by the Bureau of Reclamation, and now is ready, from an engineering standpoint, to go, lies in southeastern Alaska, in the heart of the Tongass National Forest. It is proposed to harness the waters from two lakes high in the Coastal Range—Long Lake and Crater Lake—and to carry their falling water to tidewater. The project lies some 20 miles south of Juneau, the capital of Alaska.

The Gastineau Channel area—which includes the capital city of Juneau, the adjacent city of Douglas, and the developments along the Glacier Highway, extending some 30 miles to the north, and some 8 miles to the south, and on Douglas Island from Treadwell to Fish Creek—is running short of power. Unless it is supplied, these communities cannot meet their expanding needs—not merely their domestic requirements, but also the requirements of the headquarters of the State government and those of the Federal Government agencies in the State capital. Not only do they need the additional power which this project will supply; in addition, adjacent mining and timber developments will require this electric power.

There is at present only one public power project in Alaska. It is the Lake Eklutna project, some 40 miles north of Anchorage. It was initiated under the Truman administration. This project supplies power to Anchorage, Alaska's rapidly growing metropolis, and to the adjacent REA cooperatives, the Chugach and the Natanuska. All of them, too, are running short of power. Various projects are under study, hydro and thermal—the latter variously from coal, oil, or natural gas—so that at the proper time we may take the necessary steps, legislatively and otherwise, to supply this need.

These areas are not the only ones in Alaska that are short of power; Fairbanks, Cordova, Ketchikan are only a few of them, and present power costs are too high. And the needs of all of these areas require study and early attention, to bridge the interval until the great dam at Rampart on the Yukon comes into being.

Meanwhile, Mr. President, I have introduced a bill, cosponsored by my colleague, Mr. BARTLETT, to authorize the

Secretary of the Interior to construct the so-called Long Lake-Crater Lake-Snettisham project.

A House joint resolution favoring this legislation was passed by the Alaska Legislature. I ask unanimous consent that the new resolution be printed at this point in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE JOINT RESOLUTION 9

Joint resolution relating to the construction of the Crater-Long Lakes division of the Snettisham hydroelectric power project

Whereas the economy of southeastern Alaska is in great need of new industry which would provide stable, nonseasonal employment and utilize the vast natural resources of this area; and

Whereas present and potential developments in the mining and timber industries in southeastern Alaska indicate the need for the prompt construction of additional sources of electrical energy to maintain and encourage the establishment of industry; and

Whereas the increase in the number of residents in southeastern Alaska resulting from the natural growth and the industrial development of this area will also result in the need for additional sources of electrical energy to guarantee their comfort and well-being; and

Whereas the Federal Power Commission has estimated that Juneau itself will need more than 30 million kilowatts of additional power by 1970 and more than 60 million kilowatts by 1980 to supplement the 30 million kilowatts of power now being used by Juneau; and

Whereas the present cost of power is much higher in southeastern Alaska than in most areas in the United States; and

Whereas preliminary studies by the Bureau of Reclamation indicate that Crater and Long Lakes in the vicinity of Juneau could be economically developed by the United States to provide low-cost power, and that the cost of constructing and operating power projects could be returned to the United States within 50 years by the sale of power to industrial and domestic users: Be it

Resolved by the Legislature of the State of Alaska in second legislature, first session assembled, That the Congress of the United States is respectfully urged to pass S. 594, which would authorize the construction of the Crater-Long Lakes division of the Snettisham hydroelectric power project: and be it further

Resolved, That copies of this resolution be sent to the President of the U.S. Senate; the Speaker of the U.S. House of Representatives; the chairman of the Senate Committee on Interior and Insular Affairs; the chairman of the House Committee on Interior and Insular Affairs; and the Alaska delegation in Congress.

Passed by the house February 16, 1961.

WARREN A. TAYLOR,
Speaker of the House.

Attest:

ESTHER REED,
Chief Clerk of the House.

Passed by the Senate February 28, 1961.

———— ————,
President of the Senate.

Attest:

EVELYN K. STENMAN,
Secretary of the Senate.

Approved by the Governor March 9, 1961.

WILLIAM A. EGAN,
Governor of Alaska.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of executive business, to consider the nominations on the Executive Calendar.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVES MESSAGES REFERRED

The PRESIDING OFFICER laid before the Senate messages from the President of the United States submitting sundry nominations, and withdrawing the nominations of Tom Killefer, of California, to be First Vice President of the Export-Import Bank of Washington, and James Smith Bush, of Missouri, to be a member of the Board of Directors of the Export-Import Bank of Washington, which nominating messages were referred to the appropriate committees.

(For nominations this day received, see the end of the Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. BYRD of Virginia, from the Committee on Finance:

Boisfeuillet Jones, of Georgia, to be Special Assistant on Health and Medical Affairs to the Secretary of Health, Education, and Welfare;

John M. Leddy, of Virginia, to be an Assistant Secretary of the Treasury;

Robert Huntington Knight, of Connecticut, to be General Counsel for the Department of the Treasury;

Wilbur J. Cohen, of Michigan, to be an Assistant Secretary of Health, Education, and Welfare; and

Thomas D'Alesandro, Jr., of Maryland, to be a member of the Renegotiation Board.

The PRESIDING OFFICER (Mr. METCALF in the chair). If there be no further reports of committees, the nominations on the Executive Calendar will be stated.

DEPARTMENT OF THE INTERIOR

The legislative clerk read the nomination of Frank P. Briggs, of Missouri, to be Assistant Secretary for Fish and Wildlife, Department of the Interior.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

DEPARTMENT OF COMMERCE

The legislative clerk read the nomination of John W. Bush, of Ohio, to be an Interstate Commerce Commissioner for the remainder of the term expiring December 31, 1964.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of William H. Tucker, of Massachusetts, to be an Interstate Commerce Commissioner for the remainder of the term expiring December 31, 1967.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

NOMINATION PASSED OVER

The legislative clerk read the nomination of Ralphael M. Paiewonsky, of the Virgin Islands, to be Governor of the Virgin Islands.

Mr. MANSFIELD. Mr. President, I ask that this nomination go over until Monday.

The PRESIDING OFFICER. Without objection, the nomination will go over, as requested.

THE COAST GUARD

The legislative clerk proceeded to read sundry nominations in the Coast Guard.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations in the Coast Guard be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations in the Coast Guard will be considered en bloc; and, without objection, they are confirmed.

COAST AND GEODETIC SURVEY

The legislative clerk proceeded to read sundry nominations in the Coast and Geodetic Survey.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations in the Coast and Geodetic Survey be considered en bloc.

The PRESIDING OFFICER. Without objection, these nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the action taken by the Senate.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

INTER-AMERICAN CHILDREN'S INSTITUTE

Mr. MANSFIELD. Mr. President, I ask unanimous consent for the immediate consideration of Calendar No. 73, Senate Joint Resolution 66.

The PRESIDING OFFICER. The resolution will be read by title, for the information of the Senate.

The LEGISLATIVE CLERK. A joint resolution (S.J. Res. 66) to amend the joint resolution providing for membership and participation by the United States in the Inter-American Children's Institute.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the joint resolution (S.J. Res. 66) to amend the joint resolution providing for membership

and participation by the United States in the Inter-American Children's Institute.

Mr. MANSFIELD. Mr. President, the Senate passed an identical measure in 1959.

The pending joint resolution was reported with the unanimous approval of the Foreign Relations Committee, and has the full support of the minority leadership.

I ask unanimous consent to have printed at this point in the RECORD an excerpt from a memorandum on this subject.

There being no objection, the excerpt from the memorandum was ordered to be printed in the RECORD, as follows:

In 1959 the Department of State requested legislation to remove the ceiling of $25,000 per annum on U.S. contributions to the Inter-American Children's Institute. The Senate agreed to action by the House which raised the ceiling to $50,000 for the fiscal years 1961 and 1962, but which made no provision for any subsequent contributions.

PURPOSE OF SENATE JOINT RESOLUTION 66

The purpose of Senate Joint Resolution 66 is to continue authority for contributions at the present ceiling of $50,000 per annum. Failure to enact some legislation would, in effect, end U.S. participation in the Inter-American Children's Institute to which the United States has belonged since 1928. The percentage of the U.S. contribution is 40 percent of total assessments. The Department of State, in a letter dated March 9, 1961, expressed its continued support for the proposed amendment.

WORK OF THE INSTITUTE

The Department's letter of January 18 describes the Institute as follows:

"The Inter-American Children's Institute is an entity whose proven technical abilities and whose contributions to the well-being of the children of the participating American states have been recognized throughout the Americas. * * * Within the framework of its primary purpose as a center for technical consultation, advisory services, to foster a helpful publications program and for the dissemination of information on all matters pertinent to the welfare of the children of the Americas, the Inter-American Children's Institute has recently staged successful seminars on child nutrition which in turn have stimulated several Latin American countries to sponsor national seminars on the subject. * * * It is giving active support to reconstruction efforts in Chile by helping to plan and staff centers for child care training in Chilean disaster areas."

Mr. MANSFIELD. Mr. President, I ask for the passage of the joint resolution.

The PRESIDING OFFICER. The joint resolution is open to amendment.

If there be no amendment to be proposed, the question is on the engrossment and third reading of the joint resolution.

The joint resolution (S.J. Res. 66) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of February 16, 1960 (74 Stat. 3), which amended the Act of May 3, 1928, as amended (22 U.S.C. 269b), is hereby amended by deleting the phrase "for the fiscal years 1961 and 1962".

NIKE-ZEUS PROGRESS REASSURING

Mr. MUNDT. Mr. President, in the event my colleagues may have missed it, I would like to call to the attention of the Senate a March 15 story by UPI Correspondent Darrell Garwood concerning the anti-satellite capabilities of the Nike-Zeus.

Mr. Garwood's story reports on the appearance of Brig. Gen. David C. Lewis, Director of Special Weapons in the Office of the Army's Chief of Research and Development, before a recent meeting of the National Rocket Club. In response to a question, General Lewis advised that with minor modification the Nike-Zeus would have an antisatellite capability at a range of 200 miles, and that with major modification this range could be extended to 1,200 miles.

Mr. President, this report, indicating great progress under the Nike-Zeus program is, indeed, reassuring to me. I know that all of my colleagues must be gratified by this report. It is additional evidence to support the fact that we are making remarkable advancement in the state of the art in anti-missile-missile systems under the Nike-Zeus program. When one considers that the actual design of the Nike-Zeus system was begun only 4 years ago, it is nothing short of amazing that this system is now on the threshold of an anti-satellite capability at these remarkable vertical ranges. The thanks of all Americans should go out to Gen. Arthur Trudeau, his staff, and the fine industry team, who, in developing the Nike-Zeus, have contributed immeasurably to the strength of our overall defense posture.

So that all of my colleagues may be more fully informed on the Nike-Zeus, I am today sending to each Member of the Senate an excellent question-and-answer interview with General Trudeau, which appeared in a recent issue of Sperryscope, an informative periodical published by the Sperry Rand Corp., an outstanding member of the Army industry team.

At my request, Sperry Rand very generously provided reprints of this informative interview so that I might make them available to the Members of the Senate. I am sure that each of you will find this to be a valuable document.

Mr. President, I ask unanimous consent that Mr. Darrell Garwood's news account of the Nike-Zeus antisatellite capability be printed in the RECORD immediately after my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WASHINGTON, March 15.—A top Army research officer said today the Army's Nike-Zeus antimissile can be modified to shoot down earth satellites at altitudes as great as 1,200 miles.

Brig. Gen. David C. Lewis, Director of the Army's Office of Special Weapons, said a minor change would give the Zeus an antisatellite range of 200 miles and that a major modification would produce the 1,200-mile range. He estimated that the major changes could be completed by 1967.

Lewis appeared on a panel discussion with representatives of the Defense Department and the other armed services before the National Rocket Club.

Asked to describe the Zeus' anti-satellite possibilities Lewis described the subject as "embarrassing" because of the controversy over whether the Zeus should be put into production before full-scale tests are completed in 1962.

VETERANS OF FOREIGN WARS ENDORSE COLD WAR GI BILL; CONNELL AND McKELVIE STATEMENTS

Mr. YARBOROUGH. Mr. President, opponents of the cold war GI bill have claimed that the large veterans' organizations are opposed to the cold war GI education and readjustment bill. These claims are without proper basis. No large veterans organization opposes the plan. On the contrary, the Veterans of Foreign Wars has endorsed this principle through its national commander, Ted C. Connell, and its national legislative committee, headed by the Honorable John McKelvey.

National Commander Ted Connell, a successful businessman with a distinguished war record, issued a statement endorsing educational and readjustment benefits for veterans of the cold war in a radio interview in the following language:

Senator, the position of the Veterans of Foreign Wars, 1,300,000 strong is, of course, in sympathy with this. We shall support this particular type of legislation. We believe that this legislation will be a tremendous asset to the people who have their life interrupted by being drafted or entering the service this modern day. We will certainly be behind this bill.

My opinion is very positive after about 3 hours with the Admiral (Rickover). At no time in history has the V.F.W. ever opposed this type of legislation and further, we believe that when we came back from the war, we had a readymade GI bill of rights. We would like to pass this great inheritance to the people who are serving in our services today.

Hon. John E. McKelvey, a Texas attorney, who is well known statewide for his long study of veterans' problems, now chairman of the national legislative committee of the Veterans of Foreign Wars, has written the endorsement of his committee on March 17, 1961. I ask unanimous consent that the letter be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. YARBOROUGH. Mr. President, I ask that my remarks and the letter be printed in the Appendix of the RECORD, rather than in the body.

The PRESIDING OFFICER. Without objection——

Mr. YARBOROUGH. Mr. President, on the suggestion of the able majority whip the Senator from Minnesota [Mr. HUMPHREY], I ask that the material be printed in the body of the RECORD, rather than the Appendix.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. HUMPHREY. The reason why I made the suggestion is that the legislation to which the Senator has referred is pending, and such testimony in the RECORD is very important. I am delight-

ed the Senator has seen fit to put the various statements in the RECORD.

Mr. YARBOROUGH. There has been a great deal of debate over the country on this question, and it has been said that the veterans' organizations are opposed to the enactment of the legislation. The chairman of the national legislative committee of the Veterans of Foreign Wars has stated in the letter which I have had placed in the RECORD:

After extensive study of the cold war GI bill which you have introduced into the U.S. Senate, the Veterans of Foreign Wars of the United States by its national legislative committee has endorsed the general principle of this legislation and urges its passage and adoption. Commander in Chief Ted C. Connell has added his personal endorsement to this legislation, as do I as chairman of the national legislative committee.

The PRESIDING OFFICER. The time of the Senator has expired. Without objection, the material referred to by the Senator will be printed in the body of the RECORD.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that I may be extended an additional 1½ minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. YARBOROUGH. I read from Mr. John E. McKelvey's letter to me of March 17, 1961, in respect to the allegation of the opposition of the veterans' organizations to this proposed legislation:

May I commend you, the members of your subcommittee, and those Senators who have joined you as cosponsors of this legislation—

Thirty-seven Members of this body have cosponsored the measure, including the distinguished occupant of the chair, the Senator from Montana [Mr. METCALF], and the distinguished majority whip, the Senator from Minnesota [Mr. HUMPHREY]—

who by their actions in approving and joining with you in the introduction of this legislation have demonstrated their compassion and understanding of the problems of those servicemen who will be eligible for benefits under your bill and the gain that this country as a whole will realize from their scholastic attainment.

May I offer my services to you and to your committee in any manner in which you might see fit to utilize me toward the passage of this needed and necessary legislation.

Mr. President, I commend Commander Connell and Chairman McKelvey and their committees and entire organization for their good judgment, fairness, and patriotism in aiding in this veterans' readjustment program, so badly needed in this period of unemployment, when one-third of all the unemployed are under 25 years of age, with veterans forming an inordinately high percentage of these.

(EXHIBIT 1)

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
NATIONAL LEGISLATIVE COMMITTEE,
Electra, Tex., March 17, 1961.

The Honorable RALPH YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: After extensive study of the cold war GI bill which you have introduced into the U.S. Senate, the Veterans of Foreign Wars of the United States by its national legislative committee has endorsed the general principle of this legislation and urges its passage and adoption. Commander in Chief Ted C. Connell has added his personal endorsement to this legislation, as do I as chairman of the national legislative committee.

May I commend you, the members of your subcommittee, and those Senators who have joined you as cosponsors of this legislation, who by their actions in approving and joining with you in the introduction of this legislation have demonstrated their compassion and understanding of the problems of those servicemen who will be eligible for benefits under your bill and the gain that this country as a whole will realize from their scholastic attainment.

May I offer my services to you and to your committee in any manner in which you might see fit to utilize me toward the passage of this needed and necessary legislation.

Again, I warmly congratulate you for the continued interest in veterans and servicemen which you have shown throughout your public life.

Yours very sincerely,

JOHN E. MCKELVEY.

MENOMINEE TERMINATION AMENDMENTS

Mr. PROXMIRE. Mr. President, on Wednesday, March 22, I referred to the recently published report by the Commission on the Rights, Liberties, and Responsibilities of the American Indian, entitled "A Program for Indian Citizens." The commission was established by the Fund for the Republic, and spent the past 4 years studying American Indian affairs, in an effort to promote a better understanding of the Indian people and their problems. Their recommendations have a special significance, because one member of the distinguished five-man commission was Mr. W. W. Keeler, who is now heading President Kennedy's Task Force on Indian Affairs in the Department of the Interior. The other members of the commission were Prof. Karl N. Llewellyn, of the University of Chicago, Prof. Emeritus Arthur M. Schlesinger, Sr., of Harvard, Mr. Charles A. Sprague, editor and publisher of the Oregon Statesman, and the chairman, O. Meredith Wilson, president of the University of Minnesota.

I observed on Wednesday that the section of the commission's report dealing with termination policies has a very immediate relevance to the situation facing the Menominee Tribe of Wisconsin, who are scheduled to be terminated on April 30, just 5 weeks from now. At the tribe's request, I have introduced two bills to amend their Termination Act, S. 869 and S. 870. I was joined in sponsorship of these bills by my senior colleague, the Senator from Wisconsin [Mr. WILEY].

The report criticized the termination policy as not always being in the best interests of the Indians. I asked that the section of the report dealing with termination be placed in the RECORD at the close of my remarks. Unfortunately, the printer failed to include the most important section, which spelled out the commission's recommendations. I therefore ask unanimous consent that the "Recommendations on Termination" be printed at this point in the RECORD.

There being no objection, the recommendations were ordered to be printed in the RECORD, as follows:

PROGRAM FOR INDIAN CITIZENS

(Summary report by the Commission on Rights, Liberties, and Responsibilities of the American Indian, established by the Fund for the Republic, Inc.)

TERMINATION—RECOMMENDATIONS

Avoidance of undue haste

Termination of the long-established relations between the Federal Government and the Indians should occur only after there is adequate information before the Federal Government, the Indians, the local people and their governments as to what will happen to all four parties at interest if the tribe is terminated. This requires the solution of legal, governmental, financial, and human problems. Adequate time must be allowed for the Indians, their neighbors, State and local units, and all others who might be affected by the change to work out the necessary adjustments.

Indians should be allowed full hearings before the appropriate congressional committees.

The Government's responsibility should be relinquished only when the Indians are no longer in the lower segment of our culture in education, health, and economic status. The tribesmen must also be qualified and willing to take on the additional responsibilities and be ready to take advantage of the wider social, economic, and political benefits on a comparable basis with their neighbors and without discrimination.

Collaboration of Indians

In order that Indians may be able to make their own decisions, cooperate in the execution of a plan, and take responsibility for the results, they should participate fully at every turn. The participation should consist in working out the procedure from its earliest stages and continuing with the discussions during the maturing of the program, as well as in voting for or against the final formulation. Effective Indian collaboration in the development of a plan of termination should be a prerequisite to acceptance by the Congress. The process should involve not only leaders but the tribesmen as well. Testing should determine to what extent the people affected actually know what is being planned or presented. The freedom of Indians to accept or reject a program should not be tied to offers of payment from federally held tribal funds, or, in the case of favorable action, to offers of later payment. A tribe should not be terminated without its consent.

Ordinarily, any per capita or other payments should be distributed in small sums over a period of time so that there is an opportunity for the recipients to learn how to handle cash before all assets are dissipated.

A termination plan should safeguard the interests of individual members whether they wish to remain as a tribal core or to withdraw when the majority rejects termination.

Economics—Resources

Final decisions affecting termination should be preceded by plans acceptable to the tribe for managing, utilizing or dividing tribal properties. To this end, Indians should have competent and skilled assistance, paid for when necessary by the United States. The desirability and probable consequences of each plan should be discussed in advance and thoroughly understood by the Indians, the other people of the area, and the State and local officials.

Firm assurances that the plans can be carried out under State law should be obtained. If State law must be amended to permit the execution of an economic plan,

the amendments should be secured before termination.

The termination measure should authorize the Indians to form a business corporation under a general Federal law, so as to provide a model for all tribes instead of a particular model in the case of each State; and it should further give express jurisdiction to the Federal courts in lawsuits brought by or against the corporation.

Where termination involves the disposition of natural resources and their subsequent use, Congress should give consideration to all its consequences such as the conservation of land and wildlife, watershed protection, the economy of Indian and surrounding communities, and all other matters relevant to the national interest.

Water rights

There should be no termination of Federal responsibility for Indian water rights until tribal rights and those for allotted lands are either adjudicated or agreed upon as to quantity and priority among the Indians, the United States, the State and other users. This should apply to water already being put to beneficial use as well as to rights for future development.

The legislation should expressly recognize that the Indian rights do not derive from the State but exist independently of State law. Legislation should insure the Federal courts exclusive jurisdiction over any lawsuit arising, as long as the land remains in Indian ownership.

Taxes

If extinguishment of the trust should subject the land to local taxation, then, before termination, it should be ascertained whether it is economically feasible for the Indians to pay the taxes required by local laws. If there is doubt about this, the land should continue to be tax-exempt until Congress provides otherwise. Equitable arrangements should be made for payments by the United States and by the Indians, to the extent of their capacity, until it is determined that the land, properly used, can support taxation.

Treaties

Termination legislation should in no case conflict with any existing treaty or agreement with a tribe, unless it expressly waives, in writing, the matters in dispute.

Services after termination

Before the United States surrenders its responsibilities, studies should ascertain the ability and willingness of State and local governments to furnish services to Indians equal to those hitherto given from Washington. The relationships between the State and local governments, on the one hand, and the United States and the Indians, on the other, should be set out clearly. The State and local governments should as a minimum provide for the financing of those commitments to Indians which the Federal Government has theretofore met. If this cannot be done, the Federal Government should continue such financing or call off the termination.

Any termination act should provide enforceable standards for the quantity and quality of education, health, and other public services to be furnished by the State and local governments. The standards should bar any discrimination in rendering services.

TRIBUTE TO DR. SPENCER M. SMITH, JR.

Mr. HUMPHREY. Mr. President, last Tuesday, March 21, the junior Senator from Wisconsin [Mr. PROXMIRE] invited the attention of the Senate to the testimony of Dr. Spencer M. Smith, Jr., and Michael Boake Carter, before the Small Business Subcommittee of the Banking and Currency Committee in support of S. 636. The bill is an effort to accelerate the participation of small businesses in defense contract awards, and the arguments of Dr. Smith were sufficiently compelling to the junior Senator from Wisconsin that he had his testimony printed in the CONGRESSIONAL RECORD.

I have read that testimony. In my mind, it was a very effective presentation in behalf of the bill introduced by the Senator from Wisconsin [Mr. PROXMIRE]. I am pleased that such was the case, for I find Dr. Smith's arguments to be equally compelling to me as to the Senator from Wisconsin.

It has been my pleasure to know Dr. Smith for a number of years. Prior to his coming to the University of Maryland, he was a member of the Department of Economics of the University of Minnesota. He has been a long-time student of the problems of small business and the protection of natural resources. I know Dr. Smith to be honest and able. He is also known for his care in arguing a case and the courage to state the results, irrespective of whether they find favor with one group or another. I am pleased that a person of Dr. Smith's abilities is concerned about the problems confronting small business. I express my thanks for his courageous testimony. I am equally pleased that he is interested in doing something about the problems.

NATIONAL INSTITUTE OF CHILD HEALTH

Mr. HUMPHREY. Mr. President, in January the President's Task Force on Health and Social Security made a number of important recommendations, among them the establishment of a National Institute of Child Health.

I am happy to report that the Department of Health, Education, and Welfare is giving careful attention to this excellent recommendation, and preliminary action is already underway with the establishment of a Child Health Center within the General Medical Sciences Division of the National Institutes of Health.

Recently I received a letter from Dr. John A. Anderson, chairman of the Department of Pediatrics at the University of Minnesota Medical School, in support of the proposed National Institute of Child Health.

Mr. President, I ask unanimous consent that the recommendation of the task force and the fine letter from Dr. Anderson be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the recommendation and letter were ordered to be printed in the RECORD, as follows:

RECOMMENDATION NO. 6 OF TASK FORCE ON HEALTH AND SOCIAL SECURITY

CREATION OF A NATIONAL INSTITUTE OF CHILD HEALTH

As an important new step in a broader program for the improvement in family and child health and welfare services, the Surgeon General, with the approval of the Secretary, should, by administrative action, establish a National Institute of Child Health within the National Institutes of Health. Such action would recognize the administration's concern not only with the welfare of the aged, but with its children and youth.

The establishment of the National Institute of Child Health would not require additional federal expenditures for research for the fiscal year 1962. An allocation from existing funds should be made for an initial administrative organization. Subsequent allocations of funds would be included within the budget of the National Institutes of Health.

The high incidence of mental disease, the terrifying problems of juvenile delinquency, the burden on family and community resources for the care of the mentally retarded, all attest to the need for a concentrated attack on problems of the development of the child. Research into the physical, intellectual and emotional growth of the child is at present severely handicapped by the absence of a central focus for research that exists in other fields such as heart disease and cancer. Within this Institute will be concentrated research workers in the fields of genetics, obstetrics, psychology and pediatrics as well as basic scientists who will channel their efforts into the study of the normal processes of human maturation from conception through adolescence.

Such a research program will have a profound impact on the medical care and practice in this Nation by emphasizing the care of the whole individual rather than the fragmentation of the patient into particular diseases. The research grants from this Institute will stimulate programs necessary to ascertain those genetic and environmental factors that lead to the development of a physically and mentally healthy adult. Such an Institute should help bring to each child of this Nation—normal, gifted, or retarded—complete fulfillment of his true potential.

LETTER IN SUPPORT OF INSTITUTE OF CHILD HEALTH

MARCH 16, 1961.

DEAR SENATOR HUMPHREY: Those of us concerned with medical research and medical education of importance to the welfare of infants and children, were delighted to learn of President Kennedy's authorization to establish an Institute of Child Health in the National Institutes of Health. This is a very important move and will strengthen immeasurably our efforts to obtain knowledge concerning problems of health and disease in infants and children. Emphasis in this area at a national level will lead to new knowledge which can be applied during the early developmental years of life with the hope of preventing in the future many of the health problems which are now present in our child and adult population.

Confronted with the anticipated increase in population, a sustained birth rate, and a relatively increased percent of school age children, a real need to vigorously attack problems related to growth and development exists. As you know, one of the large and as yet unpenetrated areas in medicine consists of the problems of congenital defects both hereditary and acquired; the problems of mental deficiency, convulsive disorders, mongolism, the problem of prematurity with the high incidence of developmental limitation, and many others.

APPROPRIATION URGED

Surgeon General Terry, on authority of the President, I understand, has just authorized the establishment of a Child Health Center in the General Sciences Division of the National Institutes of Health. This is an excellent step and, no doubt, must be followed by an appropriation for intramural programs for the proposed Child Health Center and also an appropriation for the Child Health Institute recommended by President Kennedy.

The establishment of this Institute to promote and support research and special

training in the area of human developmental biology has long been necessary. Your support of an appropriation for such an institute and support of the recommendation of the President to establish the Child Health Institute in the National Institutes of Health is earnestly solicited.

EXTENSION OF KNOWLEDGE

The application of effective medical knowledge of importance to the welfare of infants and children is predominantly in the hands of the general practitioner of medicine and the qualified specialist in pediatrics. The standard of medical care for infants and children is determined by the level of knowledge, present in these practitioners, concerning developmental processes in the growing infant and child. The suppression of disease, the specific aspects of the prevention and the management of disease vary relative to the level of development and function of the respective processes of growth and differentiation as they proceed from infancy to maturity.

The ultimate objectives of medical science are prevention of disease, early recognition of disease, and the management of disease in its incipiency. These can best be achieved on a background of knowledge which provides the fullest understanding of human biology from a growth and developmental standpoint. During the past 30 years we have just begun to learn that knowledge concerning man and his health welfare must be obtained in a prospective manner by following the sequence of events for all of his functioning capacities from birth to maturity. We have more recently become convinced of the importance of even looking intensely into the processes of growth and development from conception up to birth if we are to reduce the occurrence of a large number of developmental conditions, which, heretofore, have not as yet been effectively modified.

PEDIATRICS RESEARCH NEEDED

As an educator and researcher in the field of pediatrics, I would of course be prejudiced in favor of an approach which prevents disease, anticipates the occurrence of disease, and permits the earliest management of disease. This is not to discredit the tremendously effective approaches in the field of heart, cancer, diabetes, mental disease and so on, now being supported by Federal and public organizations. I am confident that all pediatric educators and researchers in medical schools and in other institutions in the United States will support my enthusiasm. This group of individuals now have the responsibility for producing the future educators and researchers in the field of pediatrics that will be required to fill the many new medical schools which must be developed to meet the needs of the people in the future. This group will have the responsibility for training the general practitioners and the specialists in the field of pediatrics who are required to go out and offer the public the highest level of medical services possible.

As research and education must always go hand in hand in medicine, this group is well aware of the fact that the development of research activity in the field of human growth and development in its broadest sense establishes the standard of education that will be given the practitioners of medicine in the future. This group is also well aware of the need for training opportunities in the field of pediatrics and in pediatric research and the limitations provided by the existing National Institutes of Health for such opportunities.

As you know, a young medical student who has completed an internship and is interested in an advanced clinical training program in psychiatry or in neurology or in certain aspects of surgery, can obtain fellowship support from the respective categorical institutes of the National Institutes of Health. His classmate, on the other hand, may have an interest in the field of pediatrics. He is unable to obtain such an opportunity through the existing Institutes at present. This omissive discrimination creates many problems in the advanced specialty training programs in medical schools.

UNEQUAL STIPENDS

There is not only the economic but also the morale factor within the Institutions. For instance, the stipends paid for National Institutes of Health trainees in the field of neurology and psychiatry are far in excess of the stipends paid to the same level trainee in the field of pediatrics. Funds for pediatric trainees are obtained from hospital funds primarily for the purpose of meeting service obligations to patients. In addition, the number of opportunities that are available to those interested in pursuing the discipline of pediatrics are less than the number of opportunities available in these other disciplines.

An Institute for Child Health providing support for the establishment and the improvement of training programs in pediatrics, for advanced scientific research training and for research, would be a most advantageous addition to the existing National Institutes of Health. Equal opportunities in these areas could then be provided to those in obstetrics interested in human developmental embryology and genetics, to those in pediatrics interested in human growth and development, and to those in internal medicine interested in human biology on the same basis as the opportunity now available to those interested in cancer, heart disease, and psychotic or neurologic disorders.

Your support and aggressive interest in the establishment of an Institute for Child Health and an effective appropriation for its functioning is most earnestly solicited.

Most respectfully yours,

JOHN A. ANDERSON, M.D.,
Department of Pediatrics, University of Minnesota Medical School.

WE MUST LIVE UP TO GOALS OF HOUSING ACT OF 1949

Mr. YOUNG of Ohio. Mr. President, one of the most farsighted legislative acts of the postwar era was the Housing Act of 1949. It established as a goal for our Nation "a suitable living environment and a decent home for every American family."

We have fallen far short of this goal in the decade since the passage of this act. Too little has been done, and there has been a great unwillingness to implement it.

I express the hope that we, as Senators, responsible to the American people, shall move quickly and effectively to correct the errors of the past in order to assure a better future for Americans.

A hard look at the facts gives convincing evidence that housing conditions in the United States are rapidly becoming a national calamity.

Today, nearly 22 million of our citizens live in urban slums or near slums—gray, dismal cores of ugliness in the hearts of our great cities. Only through direct massive public housing assistance by the Federal Government can these people hope to climb out of the squalor of slum living. No other approach has solved the problem. No other approach can solve it.

Action is needed immediately not only to improve present conditions but also to prevent their spread, should we fail to take action soon. It might well be too late to cope with the mounting housing problems which are choking our cities and already creeping into our suburbs.

The United States is the most prosperous nation in the world, and has come far along the road to industrial prosperity. Still there are many families who have not been able to share in this high standard of living and who cannot meet one of man's most basic needs, adequate housing.

A glance at the tragic slum conditions in any of our cities or a drive through any of the thousands of blighted rural areas, would easily convince us this is a problem for all Americans and as such demands Federal assistance.

A nation with millions of its citizens ill housed cannot long remain strong. We must rise to meet this challenge with all the resources at our command.

We must reverse the tight-money, high-interest-rate policies of the Eisenhower administration to encourage increased homebuilding and to make it easier for Americans to purchase homes.

At the same time, Mr. President, we must embark upon an extensive, well-planned, urban-renewal program to sweep from our cities the ugliness and degradation of blight.

Presently, 3 of every 4 Americans—135 million of us—now live in cities or suburbs. In 15 years, experts predict, more than 190 million will live in and around our cities. Not one major city in this Nation is prepared to, or can afford to, meet the towering problems which accompany rapid population increases and dramatic population shifts.

Furthermore, Mr. President, the separate States cannot command resources necessary to do the job which must be done.

President Kennedy has assured the American people that he supports a forward-looking, progressive housing program, one which will begin to meet our needs and reverse the neglect of the past 8 years.

There is no overnight solution for so massive a problem. But we must begin now to live up to the goals established 11 years ago by the Housing Act of 1949.

FEDERAL JUDGESHIPS FOR THE STATE OF CALIFORNIA

Mr. KUCHEL. Mr. President, a few weeks ago the Committee on the Judiciary of the Senate approved four additional Federal district court judgeships for the State of California. The Senate approved the action of its Judiciary Committee.

It is with very real regret and considerable apprehension that the State bar of California has learned the Judiciary Committee of the other body has chopped the decision of the U.S. Senate in half and has reported proposed legislation to provide that the State of California receive only two additional judges. I share the regret and the apprehension of the California bar.

The State bar of California has earnestly recommended favorable consideration by the Congress for four additional judges for the State of California. The Judicial Conference for the Ninth Circuit has made that in the form of a recommendation. The Judicial Conference of the United States, meeting only a few days ago, reiterated precisely the same recommendation to the Congress.

I very much hope, Mr. President, that when Congress finally shall have disposed of the proposed legislation to create new judgeships in this country it shall have seen fit to give to the courts which have tremendously overcrowded calendars in both northern and southern California an opportunity to dispense justice in a timely fashion by doing what the Senate has done and what, as I say, both the judicial conference in my section of the country and the Judicial Conference of the United States have recommended.

I have just received a letter from the State bar of California setting forth a resolution along the lines I have been discussing. I ask unanimous consent that the text of that letter addressed to me under date of March 21 be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE STATE BAR OF CALIFORNIA,
Los Angeles, Calif., March 21, 1961.

Hon. THOMAS H. KUCHEL,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KUCHEL: You have previously been informed of the resolution of the board of governors of the State Bar of California, adopted at its November meeting, reading as follows:

"*Resolved*, That the board of governors of the State Bar of California earnestly recommends for favorable consideration by the Congress of the United States the proposal to add two additional judges to the District Court of the United States for the Northern District of California and to add two additional judges to the District Court of the United States for the Southern District of California."

We are now advised that the Judicial Conference adopted such a recommendation in its entirety, but that, according to the newspaper accounts, the House Judiciary Committee has reduced the recommended number from four to two additional judges for California.

The State Bar of California believes that California needs four additional judges, and hopes that you will persevere in your attempts to see that California receives four rather than two additional judges.

Yours respectfully,
JAMES C. SHEPPARD.

Mr. HUMPHREY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HUMPHREY. Mr. President, I ask that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ESTABLISHMENT OF BICYCLE PATHS BY STATES AND CITIES

Mr. THURMOND. Mr. President, advanced technology in industry has produced a myriad of ingenious devices, all designed to reduce, if not completely eliminate, physical exertion in the performance of everyday tasks of life. We are all aware of the many varied tasks which, when we were children, required much time and effort on our part to perform. However, in this modern age these same tasks can be performed by our children with a minimum of effort and in a much shorter time. This necessarily has resulted in an increase in the leisure time which the younger generation enjoys.

Never let it be said that American industry is not to be congratulated for these labor- and time-saving devices which provide for us the easy life. But, Mr. President, all that glitters is not gold, and I fear that as a result of this easy life the United States is becoming a nation of "softies." In a large segment of our population, the exercise of good honest work has been eliminated, and so far nothing has arisen to take its place.

Recent tests conducted by the American Association for Health, Physical Education, and Recreation, indicate that American children in the 10–17 year age bracket displayed considerably less physical prowess than their European and Japanese counterparts. Those areas tested included leg and arm strength, speed and agility, and endurance for sustained activity. For all tests and at all ages the British boys finished 14 percent higher than the American average. British girls, on the average, finished 23 percent ahead of the American girls. It is also significant to note that in the endurance for sustained activity category, the British girls outscored the American boys.

In its report on these tests the association noted:

The physical fitness of a nation definitely is not displayed in the showing of its Olympic team, nor by its economic or literate stature, but by what its individuals can do. U.S. youth certainly does not display good physical fitness when looked at by this criterion.

These tests show that there is a desperate need for a well-rounded program of physical education in this country. Even though these tests dealt only with the youth of the Nation, this sad state of affairs is by no means limited to them. It is the adult population which derives the most benefits from the modern laborsaving devices, therefore they suffer the most from lack of exercise. We must keep this fact in mind, in attempting to arrive at a solution to the problem, and encourage sports which can be engaged in by old and young alike.

President Kennedy has shown that he is cognizant of the fact that a serious health problem exists in the United States today. In an article in the December 26, 1960, issue of Sports Illustrated he says:

The harsh fact of the matter is that there is also an increasingly large number of young Americans who are neglecting their bodies—whose physical fitness is not what it should be—who are getting soft. And such softness on the part of individual citizens can help to strip and destroy the vitality of a nation.

President Kennedy lauds General Eisenhower's efforts to correct the situation while he was in office, but President Kennedy goes further in outlining his own four-point program. Included in this program he proposes a White House Committee on Health and Fitness to formulate and carry out a program to improve the physical condition of the country. I would welcome any research and advice which might be forthcoming from such a committee; however, I feel that it is entirely within the realm of the individual States to implement any plan which might be proposed.

There is much to be said for physical exercise, for not only is it one of the basic steps toward a healthy body, but it facilitates dynamic and creative intellectual activity. Although there is yet much to be learned on the subject, even the ancient Greeks recognized the fact that intelligence and skill can function at peak efficiency only when the body is healthy and strong.

We all know that diseases of the heart and blood vessels continue to take a greater toll of lives in this country than any other ailment. We tend, however, to forget that exercise is one of the major factors in the prevention and treatment of arteriosclerosis, or hardening of the arteries. Dr. A. L. Chapman, of the U.S. Public Health Service, has given a very clear and interesting description of the value of exercise. He states:

The blood vessels are lined with smooth muscle fibers and if these smooth muscles don't get exercise, they atrophy just like any other part of the body. Now, the only way you can exercise a blood vessel is to put a demand on the blood stream for oxygen. Your heart has to beat faster to pump along a new supply of oxygen-carrying blood to meet the demand.

As your heart increases its pumping action it pushes more blood through the system. The blood vessels expand to allow this more profuse circulation. Later they contract. And this expansion and contraction, is after all, exercise.

One of the major concerns at this juncture is in considering and evaluating the many possible solutions to the problem. It is true that there is no one panacea which can accomplish an overnight cure for the ills of the country. We must, however, seek a sensible and practicable beginning. Most of us can remember riding bicycles as boys. For many this was a primary mode of transportation. But children of today, especially those who live in the city, if they own and ride bicycles at all, must do so either in limited areas or at the peril of their lives. The number of cars filling our roads, and the speed at which these vehicles travel, make them dangerous companions to bicycles.

Surely no one will argue that the extinction of the bicycle is a desirable outcome of greatly increased car travel. Luckily, these two modes of transportation are not mutually exclusive. We do not have to give up the bicycle as a relic,

outmoded and forgotten. Indeed there is good indication that in limited areas bicycle riding still holds its own as one of the more pleasurable sports. According to the Bicycle Institute of America, 22 million bicycles are in use today. Approximately 90 percent of these are used by young people, and the rest by adults. Probably the safest and most enjoyable riding is done in those parts of the country "where the bicycle is king"—or where there are bicycle paths. I was interested to learn that there are some 25 miles of bicycle paths in and around New York City.

Unfortunately this is not true throughout the country. Most of our highway systems make no provision for cyclists, and the volume of traffic makes bicycle use of the highways highly dangerous. Last year, I indicated that I considered the establishment of bicycle paths along these highway systems a necessary development.

It was my hope that the individual cities and States would take the initiative in providing these paths, especially along their major streets and highways, and along areas of greatest beauty and interest. I want to repeat that plea at the present time, and further adjure the individual cities and States to follow the example set by New York and many European cities and countries.

We hear much talk of the pressures of our modern society. Our age is one clouded by the threat of imponderable nuclear force. The incredible advances in communications have shrunk the world, and have accelerated the pace of our lives. But at the same time we enjoy a shorter working day. We have more hours of leisure at our disposal. It is of the utmost importance that we look for ways to mitigate the pressures of our lives, and take the fullest advantage of our time for relaxation. This is true for young and old alike.

What could be more in keeping with our need for enjoyable recreation than the availability of pleasant areas in which to ride bicycles. While keeping in mind the enjoyable aspects of this sport, we must not overlook the therapeutic benefits derived therefrom. A manual for bicycle riders in 1892 quoted the following remarks of a physician on the helpful aspects of the sport:

> Any exercise that brings in play the greatest number of muscles and exercises them evenly is the best to take. This is found in cycling; no one muscle or set of muscles is overtaxed in riding. Also it takes the cycler out of doors, where fresh air and plenty of it can be breathed; it gives him or her a change of scene; the change of landscape adds pleasure to a ride, and before the rider knows it he is wheeling along enjoying the country while his muscles are getting the benefits of a ride.

Dr. Paul Dudley White, the noted cardiac specialist, has indicated that more than a half century has not changed medical opinion on the beneficial value of this sport. Dr. White has said:

> I would like to put everybody on bikes not once in a while, but regularly, as a routine.

During his term of office, General Eisenhower advocated the bicycle as a means of raising the Nation's physical standards. Shane McCarthy, Executive Director of General Eisenhower's Council on Youth Fitness, made the comment that "no sport is more appropriate than cycling to unite the efforts of children and parents for health and happiness."

Taking all these factors into consideration, cycling emerges as one of the better forms of exercise, if not the best. Recently Dr. W. W. Bauer, director of the department of health education of the American Medical Association, discussed the advantages of this form of activity for fitness. He reported to the American Public Health Association meeting that cycling was far more popular in Europe than in America. He stated that bicycling would be a more popular form of exercise in this country if parallel paths were provided on highways for cyclists' use. Dr. Bauer emphasized the need for the development of a personal sport or activity during youth, which could be carried on into adult life when participation in team sports becomes difficult or impractical. He mentioned cycling as an adult activity which does not demand too much time, space, or equipment—and to that list we might add money. In fact, cycling is a good recreational activity which can be engaged in by anyone without having to purchase membership in an expensive country club.

Bicycles have become the most numerous class of vehicles on the roads of England, France, Germany, Holland, Italy, Belgium, and Denmark. It is interesting to note that these countries are all among the countries of the world with the greatest life expectancy. Persons living in any one of these nations can expect to live for 65 years or more from birth.

Anyone who has ridden a bicycle in certain of these Western European countries must have been impressed with the number of facilities provided for the convenience of the bicycle rider. In most cases, the pressure of traffic is not nearly what it is on the roads of this country. I do not believe that there is anything inherently European about bicycling. I am convinced that tens of thousands of persons in this country would be grateful for the opportunity to pursue this sport if the threat of danger from the heavy automobile traffic is eliminated. We can accomplish this end at a relatively small cost merely by providing a safe place for bicycling along our streets and highways.

We must be grateful also for the quality of our modern bicycles. It is a far cry from the contraption that the Scotsman, Kirkpatrick MacMillan, introduced in the 1840's. Several decades of research and development have resulted in a safe, practical, and agreeable mode of transportation.

The fact that both President Kennedy and former President Eisenhower have expressed their awareness of the situation serves to point to the urgent need for the kind of program which I have been, and still am, advocating. It is imperative that we arouse the interest of the public to this need. Shane McCarthy made the following comments on the hazards of our modern society to the goal of youth fitness:

> Buttons and dials are just a tiny evidence of this age of automation. The crowded conditions in which people live complicate further the fitness problems. This should not be interpreted to mean that youth fitness problems pertain only in the city. Mechanized agricultural methods and school buses combine to make life on the farm much less demanding. All modern means of communication and transportation tend to give an aspect of urbanization to rural living. Thus, if the present pattern continues into the future, if the trend of automation reduces further the need for human health, exertion of mind and body, if the stress is to continue on the means of living over the ends of living, human softness will accelerate to our own loss as man becomes more and more an automation of his own making.

I do not ask that our cities and States ignore their highway development program. I only ask that we do not ignore the health and well-being of our citizens. It is even possible to combine speedways with bicycle paths. One adds to and complements the other. And I am sure that there are many who would sigh with relief to view an occasional cyclist on his hurried trip along a turnpike.

I have already mentioned Dr. Paul Dudley White's concern with the problem of exercise as a preventive measure against heart disease, and his desire to see people of all age groups riding bicycles. He believes that a bicycle is a pleasant answer to the problem adults have in finding suitable exercise. He has recognized, too, the danger involved in riding on our streets and highways as they are now. Dr. White has appealed to the mayors of Chicago, Baltimore, San Francisco, Richmond, and New York to construct the same kind of bicycle paths which are provided in London and other European cities.

I express my thanks to Dr. White and join him in this plea. I believe that this is the type plan which lends itself to successful implementation on the city and State levels. Well-planned networks of bicycle paths throughout the cities and States would add immeasurably to the joy of the sport, and the rewards would far outweigh the costs of manpower and material necessary to construct and maintain these simple paths. I think we would gladly transfer an infinitesimal part of the costs of juvenile delinquency and heart disease programs to build these bicycle paths. It is my hope that others will join with me in this fight to raise the physical and health standards of our Nation.

THE PRESIDENT'S BUDGET MESSAGE

Mr. WILLIAMS of Delaware. Mr. President, I wish to comment briefly on the message of the President which has just been sent down. First, I quote from the message:

> This message is designed to review my recommended budgetary revisions within the framework of that pledge. Omitting any increase in the defense budget too urgent to

be denied by budgetary restrictions, and assuming that our review of the economy late in April does not require either a reduction in taxes or additional increases in expenditure, enactment of the new nondefense programs and appropriations I have transmitted will not unbalance the budget previously submitted by my predecessor—

First he says omit taking into account any increase in the defense budget. That item alone is $1 billion in extra money that he has asked for, and certainly such an item in any calculations cannot be omitted.

Continuing, he said that he is now submitting to the Congress "a budget that is in balance in terms of my pledge of January 30."

Then he explains that a balanced budget would be accomplished "if"—and he gives four "ifs," one of which is—

if the Congress enacts no spending measures committing the executive branch to outlays in excess of those requested.

Apparently the President refers to the amounts requested in the Eisenhower budget.

I do not know how President Kennedy intends to reconcile that statement with the fact that he himself has asked Congress to enact many new spending measures which, if we follow his recommendations, will cost the country $8 billion over and above the amount recommended by the previous administration.

Is the President now asking Congress to defeat his recently proposed measures, or is he merely trying to forget them in the computation of budgetary costs?

For example, in the appropriation bill which will be before us on Monday there is a request for an extra $1½ billion, all of which is to pay for new expenditures which have been authorized at the request of the new President. These are for expenditures over and above those contained in the Eisenhower budget.

One billion dollars of that amount is requested for the extended unemployment benefits. The President had rejected the proposal of a tax formula which would have made the program self-financing. Approximately $1 billion will be necessary to implement that measure.

Congress upon the request of President Kennedy enacted a feed grains bill. The following day we received a request for $442 million in additional funds to finance that legislation.

The President has requested $1.4 billion for Federal aid to education to be paid out in 1961 and 1962. If he is sincere in asking for those measures, certainly he must know that their implementation will cost something. Yet he keeps boasting of the balanced budget he will have "if" Congress does not enact them.

The depressed areas measure which the President has requested would cost $394 million. The aid-to-dependent-children program would cost $305 million. One could keep going down the line through the many spending proposals which have been requested since we crossed the new frontier. The President is seeking an increase in social security benefits which, if enacted as requsted, would cost $1¾ billion in the next 2 years over and above the previous estimated budget. He has suggested no provisions to pay for these benefits.

The President is also asking for the enactment of a medical care bill which would cost another $1 billion over and above the previous request. Again billion dollar promises which he says will not cost anything "if" Congress will just not enact them.

If there is any sincerity on the part of the man in the White House in asking Congress to enact these measures, let him assume the responsibility for the cost. It is greatly misleading to the American people to send a budget message to Congress and the public stating that the budget will be in balance when he knows that if the Congress approves all his requests there will be at least a 10 billion dollar deficit during the next 2 years.

The President concludes by saying "if" Congress will reject all of those requests for additional expenditures which he is asking for the budget would be in balance. I believe the President ought to make up his mind whether he is sincere in asking for these proposals and if he is, to put the price tag on them and stop trying to kid the American people as he leads them in the untrod paths of the New Frontier.

EXECUTIVE SESSION

Mr. SYMINGTON. Mr. President, I move the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE REPORT OF COMMITTEE ON AERONAUTICAL AND SPACE SCIENCES

Mr. SYMINGTON. Mr. President, from the Committee on Aeronautical and Space Sciences, I submit the nomination of Dr. Edward C. Welsh to be Executive Secretary of National Aeronautics and Space Council, and ask for its immediate consideration.

The PRESIDING OFFICER. The nomination will be stated.

The legislative clerk read the nomination of Dr. Edward C. Welsh to be Executive Secretary of the National Aeronautics and Space Council.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. SYMINGTON. Mr. President, it is a privilege to urge Senate approval of the nomination of Dr. Edward C. Welsh, as Executive Secretary of the National Aeronautics and Space Council.

With the nomination of Dr. Welsh, the President has continued the practice of choosing men of the highest qualifications and ability to serve in the new administration.

Dr. Welsh has served as my legislative assistant since 1953, and his contributions in the field of space and defense are well known to the Members of the Senate.

He assisted in drafting the Space Act in 1958. He is one of the experts in the field of space organization and coordination.

Dr. Welsh was staff director of the Airpower Subcommittee of the Senate in 1956, and was also staff director of the Committee for Defense Reorganization appointed by President Kennedy last fall.

In 1950–52 Dr. Welsh served as my executive assistant in the National Security Resources Board and the Reconstruction Finance Corporation.

He began his career in the field of economics, teaching that subject for 12 years at Tufts College, the University of Cincinnati, and Ohio State University.

He served as an economist for the National Resources Committee in 1937 and the Temporary National Economic Committee in 1940.

Dr. Welsh's distinguished career in public service began in 1942, when he became regional price executive for the OPA. He then became Director for Price Operations for the United States, and finally Deputy Administrator for the OPA and Assistant Commissioner of the Office of Temporary Controls.

In 1947, he went to Japan, where he served as Chief of the Antitrust and Cartels Division on the staff of Gen. Douglas MacArthur. For this work, Dr. Welsh received a special citation from General MacArthur for "major contributions to development of private enterprise in Japan."

Throughout his career in private and public life, Dr. Welsh has displayed outstanding ability and high character. He has brought to bear on a variety of tasks an objective and analytical mind, and the uncompromising integrity so essential for those in responsible positions in our Government.

We will miss Ed Welsh both in my office and in the Senate, but are fortunate to have had the benefit of his service and dedication.

I congratulate Vice President JOHNSON and this administration for their wisdom in choosing for this critically important job an able public servant—Dr. Edward C. Welsh.

Mr. DOUGLAS. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield to the able Senator from Illinois.

Mr. DOUGLAS. I think all of us most heartily endorse the words of the distinguished Senator from Missouri about Edward Welsh. All of us in the Senate have known him as a man who has a very accurate and penetrating mind and as a man of unfailing kindness and courtesy in his entire conduct. It has been a real privilege for all of us to have had the benefit of his service on the Hill.

I feel certain Dr. Welsh would be the first to say that he has learned much from the Senator from Missouri during his long years of association with him. Together with the Senator from Missouri, I think the country is to be congratulated upon the appointment of Dr. Welsh.

Mr. SYMINGTON. I thank the able Senator from Illinois. I believe, however, that I have learned more from Dr.

Welsh than he has learned from me. However, inasmuch as the great Senator from Illinois is, like this nominee, also an economist of the first rank I know Dr. Welsh will deeply appreciate his comments.

Mr. KEFAUVER. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield to the able Senator from Tennessee.

Mr. KEFAUVER. I join with the distinguished Senator from Missouri and the distinguished Senator from Illinois in their commendation of Dr. Edward Welsh. I have been associated with him personally and know of his work on committees and commissions in the legislative as well as the executive branches of the Government for a number of years. I have had the opportunity to talk with him about many problems of government. He is a man of sterling character and great ability, a man who has a fine concept of public service.

I, too, congratulate the administration upon what I believe to be a very fine, outstanding appointment.

Mr. SYMINGTON. Mr. President, I am also grateful to the Senator from Tennessee. I am certain that Dr. Welsh also will be grateful when he reads this RECORD.

At this time, I pay tribute to Mrs. Welsh. As is the case with so many of us, much of our possible success results from good fortune in marriage. Much of why Dr. Welsh has had such an outstanding career is due to the lady whom he was fortunate to marry, and whom so many of us know and admire. I thank my colleagues for their remarks.

Mr. YOUNG of Ohio. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I am glad to yield to the able Senator from Ohio.

Mr. YOUNG of Ohio. I, too, hold Dr. Welsh in the highest esteem. I believe the Nation is fortunate that the President, in his wisdom, submitted this nomination. I can speak only in praise of Dr. Welsh. He has been dedicated in the service of his country. I know that in his new appointment he will make an outstanding record.

Mr. SYMINGTON. We all know of the gracious courtesy and intelligence of the distinguished Senator from Ohio. I know Dr. Welsh will appreciate the kind remarks the Senator has made.

The PRESIDING OFFICER. Without objection, the President will be immediately notified of the confirmation of the nomination.

LEGISLATIVE SESSION

Mr. DOUGLAS. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

CIVIL RIGHTS ACT OF 1961

Mr. DOUGLAS. Mr. President, I introduce, for appropriate reference, a bill to give effect to the constitutional right of American children to equal opportunity in desegregated public schooling and to assure the equal protection to the laws in other respects under the 14th amendment. I ask unanimous consent that the bill lie on the desk for a week, for additional cosponsors.

I introduce this measure, entitled the "Civil Rights Act of 1961," in behalf of the senior Senator from Minnesota [Mr. HUMPHREY], the senior Senator from New York [Mr. JAVITS], the senior Senator from New Jersey [Mr. CASE], the senior Senator from Oregon [Mr. MORSE], the senior Senator from California [Mr. KUCHEL], the junior Senator from Colorado [Mr. CARROLL], the junior Senator from Michigan [Mr. HART], the junior Senator from Minnesota [Mr. MCCARTHY], the senior Senator from Colorado [Mr. ALLOTT], the Senator from Alaska [Mr. GRUENING], the junior Senator from Utah [Mr. MOSS], the junior Senator from Ohio [Mr. YOUNG], the junior Senator from California [Mr. ENGLE], the junior Senator from New Jersey [Mr. WILLIAMS], the junior Senator from Oregon [Mrs. NEUBERGER], the junior Senator from Missouri [Mr. LONG], the junior Senator from Rhode Island [Mr. PELL], and myself.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Illinois.

The bill (S. 1434) to effectuate and enforce the constitutional right to the equal protection of the laws, and for other purposes, introduced by Mr. DOUGLAS (for himself and other Senators), was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. DOUGLAS. Mr. President, the substance and form of this bill are the same as S. 810 of the 86th Congress, which I introduced with 16 other colleagues as cosponsors in 1959, and which I have outlined twice before in the Senate.

This measure is devised to give effect to some of the basic protections of the 14th amendment to the Constitution. That amendment provides not only that those born or naturalized in our country are full-fleged citizens both of the United States and of the State in which they live, it also explicitly forbids any State to deny to any person within its jurisdiction the equal protection of the laws and provides that Congress shall have power to enforce the provisions of the amendment by appropriate legislation.

As all of us know, the Supreme Court and lower Federal courts have acted to give effect to these rights in a whole series of cases beginning most importantly with the Supreme Court decision in the Brown case in 1954. But the courts should have the support of Congress and the executive branch of the Government in implementing the 14th amendment, and the measure I am introducing today would furnish such support.

This measure provides for technical, financial, and administrative assistance through the Department of Health, Education, and Welfare in school desegregation cases. It also authorizes injunctive relief in suits brought by the Attorney General—the so-called part III proposals from prior measures in Congress—against denials of equal protection of the laws in school and other situations. It thus aims to mobilize our resources of technical knowledge, financial assistance, legal representation, and basic good will to meet the complex problems of desegregation. It does this in a positive rather than punitive manner.

It would thus range the Congress and the executive branch of the Government alongside the Supreme Court in making good the promises of the 14th amendment.

It would not leave the initiative for the protection of human rights solely in the hands of individuals, who are all too often confronted with enormous social and economic pressures to block their action.

It would, in brief, help to put our moral house in order before the eyes of the world and greatly strengthen our country's leadership in the struggle for freedom in the world against Communist tyranny.

NEED FOR LEGISLATION IS URGENT

Congress has not enacted the prior proposals for such assistance with desegregation into law, but has instead concentrated its attention both in 1957 and in 1960 on measures relating to voting rights. The events of the last 2 years, however, have served to demonstrate the increasing importance of this legislative action under the 14th amendment for equal protection of the laws in regard to education and other public services and facilities.

The most recent summary made by the Southern Education Reporting Service of Nashville, Tenn., and reported in the Southern School News for December 1960, reveals that the progress of desegregation has slowed almost to a walk. Negro students numbering 195,625 are now estimated to be in public school classes with white students in States where segregation used to be the rule. This is only 6.3 percent of the total Negro enrollment in those schools, and over 95 percent of this number is to be found in the District of Columbia and the border States of Missouri, Maryland, West Virginia, Kentucky, Oklahoma, and Delaware.

While the number represents an increase of 14,605 over last year, the report indicates that in view of the increase in school enrollments, it is about the same proportion of the total as last year. In order that the full summary may be available to those who read the RECORD, I ask unanimous consent that it be printed in the RECORD as an appendix to my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. DOUGLAS. Mr. President, the report of the Civil Rights Commission, issued in January of this year, with reference to the progress of desegregation in the public colleges reveals a growing degree of progress but determined resistance to the application of the constitutional principles in substantial areas and only token compliance in others. I

ask unanimous consent that the excerpts from the Commission's report, as carried in the New York Times for January 16, be printed in the RECORD as a second appendix to these remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. DOUGLAS. Mr. President, it is estimated by the Southern School News that over 300 new laws and resolutions have been adopted by the legislatures of 15 States in an effort to prevent, restrict, or control school desegregation. A summary of these measures as carried by the January 1961 issue of the Southern School News indicates the wide variety and scope of these official efforts to prevent the enjoyment of constitutional rights by some of our citizens. I ask that this summary be printed in the RECORD as appendix 3 to my remarks. It is in the face of this slowdown in the progress of compliance and this continuation of the official resistance in many States that the need for congressional and executive action to back up the courts becomes so obvious.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. DOUGLAS. Mr. President, as I have said on other occasions, the problem is not one which exists in one area of the country alone. Difficulties are encountered not only in the highly publicized incidents in New Orleans and in Athens, Ga., but also in New Rochelle, N.Y., and other parts of Northern States where citizens and public officials sometimes seek to circumvent the principles laid down by the Constitution. In this connection, I ask unanimous consent to have printed as a fourth appendix to these remarks the excerpts from the ruling by Federal Judge Irving R. Kaufman, of New York, in the recent New Rochelle School case, as printed in the New York Times for January 25.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4.)

Mr. DOUGLAS. I hardly need point out again the importance of our making progress in this area to the foreign policy objectives of the United States and the free world. After one of the recently headlined incidents of mob resistance to desegregation in one of our American cities, a Foreign Service official who had just served in one of the countries in southeast Asia remarked to a friend, "There goes all my work of the last 3 years."

Surely, Congress should not ignore the imperative needs of the free world to counteract the Communist propaganda which claims that the high principles of freedom outlined in our Constitution are betrayed by our actions. I ask that a moving speech by the distinguished attorney from the Carolinas, Marion A. Wright, on the importance of the image of the United States at home and abroad to our own domestic moral strength, and to our international leadership, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 5.)

BILL PRESENTS CONSTRUCTIVE APPROACH TO DESEGREGATION PROBLEMS

Mr. DOUGLAS. I think it important to point out that in its proposals for technical and financial assistance to local school authorities in developing and applying their plans for desegregation, this measure goes less far than some of the proposals of the Civil Rights Commission, which were concurred in by several of its southern as well as its northern members. Thus, the Civil Rights Commission recommended that funds under various programs of Federal assistance to higher education be disbursed only to such institutions as do not discriminate on grounds of race, color, religion, or national origin.

Instead of cutting off any such assistance—which may well be justified—as proposed by the Commission, the measure which we have today introduced offers instead only inducements and aids to the local school districts to help them come in line with the Constitution, not penalties for their failure to do so.

The necessity to authorize the Attorney General to institute injunction suits in the name of the United States in behalf of individuals who are denied their equal educational rights is also made clear in the Civil Rights Commission's report when it declares:

> In other States, however, there has been no desegregation except as a result of litigation, and in still others none can be foreseen before some hardy and tenacious Negro has obtained from the courts a declaration of his rights.
>
> LONG AND BURDENSOME
>
> Examination of the individual lawsuits upon which progress in desegregation has so largely depended and will continue to depend shows that they are often long and burdensome affairs. The time that has elapsed in such cases between the date when the Negro plaintiff first sought admission to a white institution and the date when he obtained a court order finally upholding or denying his right to be admitted has been as long as 9 years.

And three of the six Commissioners—Chairman Hannah and Commissioners Hesburgh and Johnson—have explicitly proposed:

> That the Congress consider the advisability of granting the Attorney General statutory authority to institute or intervene in civil actions to enforce the constitutional rights of individual persons not to be denied equal protection of the laws with respect to public higher education.

This, of course, is the principle upon which the part III provisions in titles 5 and 6 of the current measure are based. It is interesting to me also to note that, although the previous administration virtually withdrew its support for this proposal at the end of the 1957 Senate debate on the civil rights bill, and throughout the entire 1959–60 debate on civil rights measures, nevertheless, in his final press conference, former Attorney General William P. Rogers endorsed this proposal on January 16 in a kind of deathbed repentance. He stated:

> If the power of the State is to be thrown into the scales [to obstruct compliance with the Supreme Court decision], it is unfair to put the whole burden on the individual.

I hope at long last that we can develop widespread bipartisan support for this part III principle. It is not a force bill, as will be asserted by its opponents. Such injunction provisions, on the contrary, are to be found in over 50 other Federal enactments and are a very commonplace procedure for the protection of rights deemed to be important by the Congress.

Mr. President, I request that a fuller summary of the bill's constructive provisions be printed at this point in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF THE BILL'S PROVISIONS—THE POSITIVE AIDS WHICH IT WOULD OFFER FOR SECURING COMPLIANCE WITH THE 14TH AMENDMENT TO THE CONSTITUTION

A. FEDERAL LEGAL AND MORAL RESPONSIBILITY

Title I

In title I there are specific finds to the effect that the Supreme Court decisions on racial segregation in public education "express the moral ideals of the Nation and the world and point the way to a Nation enhanced in strength and dignity at home and enhanced in honor and prestige throughout the world"; that the decisions are being resisted in many areas of the Nation where there has been a failure to make a prompt and reasonable start toward compliance; and that legislative and executive action is necessary to safeguard the rights involved.

It is further specifically found that these rights will be more widely accepted and more fully enjoyed when it is generally recognized that the Constitution as interpreted by the Court is the law of the land, that all officials are bound by their oaths to support it, and that the Federal legislative and executive branches will act to protect those rights.

And finally after the other basic findings concerning the Federal responsibility, the Congress "declares its intention that the right to the equal protection of the laws guaranteed by the Constitution against deprivation by reason of race, color, religion or national origin and affirmed by the anti-segregation decisions of the Supreme Court, shall be protected by all due and reasonable means."

B. CONSTRUCTIVE STEPS FOR EQUAL TREATMENT IN PUBLIC SCHOOLS

Through authority conferred upon the Secretary of Health, Education, and Welfare, the bill will furnish to the officials and private citizens of good will in all parts of the country the tools with which to accelerate in our public schools the growth of equal treatment for all of our citizens, without regard to race.

Title II

This title authorizes the Secretary to assist, through the compilation and distribution of data, the making of surveys, the arrangement of conferences, the appointment of advisory councils, the provision of specialists' services, and the development of community understanding for desegregation programs that are in harmony with the Constitution.

Appropriations up to $2.5 million a year for 5 years are authorized for these purposes.

Title III

This title authorizes the Secretary to make grants for school facilities in areas where the chief problem preventing or hindering effective compliance is the lack of adequate buildings or other physical equipment.

It also authorizes grants for employing additional teachers, inservice teacher training, employment of specialists, short-term train-

ing courses, and other additional educational measures undertaken to eliminate segregation, while at the same time assuring that existing educational standards will not be lowered.

Funds would also be available to local communities that wish to comply with the Court's decisions, but where, as in Georgia and Virginia, the State threatens to cut off funds or close the schools.

Appropriations of not more than $40 million a year for 5 years are authorized to cover the costs of the grant programs.

Title IV

The bill further provides in title IV that when other methods fail, the executive branch of the Government, acting through the Secretary of Health, Education, and Welfare, shall assume responsibility for initiating the development of desegregation plans to accomplish the objectives of the Court's decisions. In the development of both the tentative and approved plans, however, there are express provisions for the fullest possible local consultation and participation.

The responsibility to go forward in a situation in which officials are hostile is now almost entirely in the hands of private individuals and organizations. Experience has shown that this problem will not become any less troublesome if we countenance the resulting delay.

C. FEDERAL ASSISTANCE IN LEGAL REMEDIES

The bill also provides for Federal assistance in legal remedies under titles V and VI.

In the history of America's advance toward equal justice, court proceedings have been the means of making many of our greatest forward steps. They are still an indispensable part of our protections against racial discriminations.

A growing group of States, however, have passed so-called antibarratry laws which make it much more difficult for civil rights groups or others to assist persons in bringing or maintaining lawsuits for the vindication of their civil rights. Other forms of pressure—such as organized boycotts, threats, and intimidation—have also been used to deter such legal actions.

Since the persons who are denied their rights to equal protection are more often than not poor persons, unable alone to sustain the heavy costs of litigation, and more subject than others to hostile pressures, these laws and pressures will increasingly padlock out of court the Negroes and also the Spanish-speaking Americans of the Southwest in their efforts to maintain suits to carry out the law of the land.

To meet this situation, the proposed legislation would authorize the Attorney General of the United States to start civil actions for preventive relief against those who deprive persons of their rights to equal protection of the laws on account of race, color, religion, or national origin.

This authority is much like that provided in part III of the 1957 bill, H.R. 6127, and in the 1956 measure, H.R. 627. As I have said, on two occasions it was overwhelmingly approved by the House. The authority is more explicitly and clearly set forth here, however, in titles V and VI.

Title V

Title V confers the power to file compliance actions in school cases in connection with approved desegregation plans when the Secretary certifies that all efforts to secure compliance by conciliation, assistance, and otherwise have failed.

Title VI

Title VI first authorizes preventive action against those State and local officials and others acting under color of State law in cases involving denial of equal protection generally, including school cases, by reason of race, color, religion, or national origin; but it provides that the Attorney General may sue only upon a signed complaint and when, in his judgment, the person aggrieved is unable to seek effective legal protection for himself—section 601.

Suits are also authorized by the Attorney General against those who attempt to prevent local officials from according persons equal protection of the laws, or who act to hinder the execution of court orders for equal protection—section 602. Action to deprive persons of their rights under the 14th amendment because such persons are opposing denial of the rights of others, is also made a basis for legal action by the Attorney General—section 603. In addition, the Attorney General is explicitly authorized to intervene in cases brought by others for relief against the denial of equal protection of the laws, because of race, color, religion, or national origin—section 604.

Thus, in the field of legal remedies also, this measure would extend a significant helping hand of the national Government to the safeguarding of constitutional rights.

Mr. DOUGLAS. Finally, Mr. President, may I remind my colleagues on both sides of the aisle that the principles, objectives, and methods of this proposal were endorsed and explicitly stated in the platforms of both political parties as adopted in their national conventions in July 1960. To quote from the Democratic Party platform, "The Rights of Man":

The Constitution of the United States rejects the notion that the rights of man means the rights of some men only. We reject it, too.

The right to vote is the first principle of self-government. The Constitution also guarantees to all Americans the equal protection of the laws.

It is the duty of the Congress to enact the laws necessary and proper to protect and promote these constitutional rights.

We believe that every school district affected by the Supreme Court's school desegregation decision should submit a plan providing for at least first-step compliance by 1963, the 100th anniversary of the Emancipation Proclamation.

To facilitate compliance, technical and financial assistance should be given to school districts facing special problems of transition.

For this and for the protection of all other constitutional rights of Americans, the Attorney General should be empowered and directed to file civil injunction suits in Federal courts to prevent the denial of any civil right on grounds of race, creed, or color.

Or again, if my Republican colleagues will permit, may I quote from the civil rights section of their party's declaration:

Equality under law promises more than the equal right to vote and transcends mere relief from discrimination by government. It becomes a reality only when all persons have equal opportunity without distinction of race, religion, color or national origin, to acquire the essentials of life—housing, education and employment. The Republican Party—the party of Abraham Lincoln—from its very beginning has striven to make this promise a reality. It is today, as it was then, unequivocally dedicated to making the greatest amount of progress toward that objective.

We pledge:

We will propose legislation to authorize the Attorney General to bring actions for school desegregation in the name of the United States in appropriate cases, as when economic coercion or threat of physical harm is used to deter persons from going to court to establish their rights.

Our continuing support of the President's proposal to extend Federal aid and technical assistance to schools which in good faith attempt to desegregate.

I ask unanimous consent that the civil rights sections of the two national party platforms of 1960 be printed as an appendix to my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 6.)

Mr. DOUGLAS. Mr. President, I believe that our country must in good conscience move on to the point where all its citizens, regardless of race, religion, or color, will enjoy the right to the equal protection of the laws which the Constitution guarantees them and the equality of opportunity prescribed by the Declaration of Independence. Despite their complexities, we hope that the voting rights measures passed in 1957 and in 1960 will assist in this development. But it is time for Congress to move ahead in the fields of education and other public services. If Congress does not act, we leave the leadership of the movement for equality of opportunity to those forces which themselves will take the initiative. Courageous as they may be, this is not enough. The sponsors of this bill, therefore, hope that the committee to which it is referred and the Senate, when it again considers the subject of civil rights, will act affirmatively on these constructive proposals. I believe the representatives of all sections of our country must turn their best thought to discover solutions to these demanding problems so that all of our people may enjoy first-class citizenship and the United States may stand before the world as the true symbol of freedom.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I

SHORT TITLE AND FINDINGS

SEC. 101. This Act may be cited as the "Civil Rights Act of 1961."

SEC. 102. (a) The Congress hereby finds that—

(1) recent decisions of the Supreme Court of the United States holding racial segregation unlawful in public education, public transportation, and public recreational facilities (hereinafter referred to as the antisegregation decisions) as a denial of the constitutional right to the equal protection of the laws express the moral ideals of the Nation and the world and point the way to a nation enhanced in strength and dignity at home and enhanced in honor and prestige throughout the world,

(2) these antisegregation decisions are being resisted in many areas of the Nation most directly affected by them and indirectly evaded in other areas, thereby denying to millions of Americans within our borders the constitutional right to the equal protection of the laws,

(3) many States, municipalities, school districts, and other local governmental units have failed to make a prompt and reasonable start toward full compliance with the

Supreme Court's decisions in the field of public education despite the substantial time which has already elapsed since the promulgation of those decisions in 1954 and 1955,

(4) the constitutional right to the equal protection of the laws is being denied to many persons because of race, color, religion, or national origin in fields other than education, transportation, and recreation,

(5) these denials of the constitutional right to the equal protection of the laws restrict millions of Americans to second-class citizenship and deprive the Nation of the maximum development and maximum benefits that can be contributed by such persons, and

(6) legislative and executive action (A) is necessary to safeguard and guarantee to all Americans the constitutional right to equal protection of the laws and (B) will aid in expediting universal compliance with the antisegregation decisions of the Supreme Court.

(b) The Congress further finds that the rights protected by the Constitution, as declared by the antisegregation decisions, will be more widely accepted and more fully enjoyed in all areas of the Nation, and particularly in those areas of the Nation most directly affected by the decisions, when it is generally recognized and understood that—

(1) the Constitution, as declared by the antisegregation decisions, is the supreme law of the land,

(2) all Federal and State officials are bound by their oaths or affirmations to support the Constitution, and

(3) the legislative and executive branches of the Federal Government are acting and will continue to act, with such Federal authority as is found necessary, to protect the constitutional rights upheld by those decisions of the judicial branch of the Government.

(c) The Congress further finds that—

(1) the present system whereby individual plaintiffs in the Federal courts bear the burden of protecting constitutional rights, as declared by the antisegregation decisions, is neither the exclusive nor the most effective means of protecting those constitutional rights and the public interest in safeguarding those constitutional rights, and has resulted in local restrictive and punitive measures against the individuals and organizations engaging in, and supporting, efforts in the courts to assert those constitutional rights, and

(2) specific authorization to the executive branch of the Federal Government to act in support of the constitutional rights upheld by the antisegregation decisions (A) will provide a more rational, uniform, just, and effective system of protecting constitutional rights than the present procedure under which the safeguarding of constitutional rights is determined by the varying resources and courage of individuals and organizations and by the varying State statutory restrictions placed upon them, and (B) will render less effective, and hence tend to reduce, hostile community pressures upon individuals and organizations seeking to safeguard constitutional rights.

(d) The Congress hereby recognizes it to be the initial responsibility of all States, municipalities, school districts, and other local governmental units to safeguard the constitutional right to the equal protection of the laws as declared by the antisegregation decisions of the Supreme Court and to administer their systems of public education, public transportation, and public recreational facilities in accordance with the Constitution of the United States, but the Federal Government, to maintain a more perfect union, to extend justice, to promote the common defense, and to secure the blessings of liberty to all persons, has a coordinate responsibility to guarantee the constitutional right to the equal protection of the laws, to prevent denials of the right when State or local authorities cannot or will not do so, and thus to enhance the Nation's internal strength and its position throughout the world.

(e) Recognizing its authority and responsibility under the fifth section of the fourteenth amendment to the Constitution of the United States and its obligation to uphold the coordinate authority and responsibility of the judicial branch of the Government, the Congress hereby declares its intention that the right to the equal protection of the laws guaranteed by the Constitution against deprivation by reason of race, color, religion, or national origin and affirmed by the antisegregation decisions of the Supreme Court, shall be protected by all due and reasonable means, and to that end enacts the following provisions of this Act.

TITLE II

TECHNICAL ASSISTANCE BY SECRETARY OF HEALTH, EDUCATION, AND WELFARE

SEC. 201. The Secretary of Health, Education, and Welfare (hereafter in this Act referred to as the "Secretary") is hereby authorized to render technical assistance to States, municipalities, school districts, and other local governmental units to eliminate denials of constitutional rights in the field of public education by reason of race, color, religion, or national origin and to come into compliance with the decisions of the Supreme Court in the field of public education by—

(a) assembling, publishing, and distributing information which, in his judgment, will prove helpful in obtaining public understanding of, and compliance with, the Constitution and decisions of the Supreme Court in the field of public education;

(b) surveying the progress made in eliminating segregation in public education in various parts of the country and making available to public agencies, private organizations, private individuals, and the general public the results of such surveys, including wherever possible successful case histories of desegregation and the ways and means utilized to bring about desegregation in such instances.

(c) planning, calling, and holding local, State, regional, and national conferences attended by State and local officials, representatives of private organizations, and private citizens, to discuss ways and means of eliminating segregation in public education generally or in any particular State, municipality, school district, or other local governmental unit;

(d) appointing local, State, regional, and national advisory councils to assist the Secretary in carrying out his duties under this Act and to offer their assistance to any State, municipality, school district, or other local governmental unit to come into compliance with the Constitution and the decisions of the Supreme Court in the field of public education;

(e) reporting to the Congress, at least semiannually, concerning the progress being made in eliminating segregation in public education in various parts of the country; and

(f) assisting, by such other related means as he deems appropriate, States, municipalities, school districts, and other local governmental units to eliminate segregation in public education.

SEC. 202. The Secretary shall recruit, employ, and train specialists in preparing, putting into effect, and carrying out plans for eliminating segregation in public education and shall offer the services of the specialists to States, municipalities, school districts, and other local governmental units. Upon request of any State, municipality, school district, or other local governmental unit, the Secretary shall make available to the requesting governmental unit the services of one or more specialists for such periods of time and in such numbers as the Secretary deems necessary and appropriate in the light of the particular needs of the requesting governmental unit.

SEC. 203. (a) The Secretary is authorized to reimburse any State or local official, representative of a private organization, or private citizen who is invited by him to attend any local, State, regional, or national conference held under the authority of section 201(c), and any member of an advisory council appointed under the authority of section 201(d) who is carrying out authorized functions, for travel expense incurred, and to pay to any such person per diem in lieu of subsistence, in the same amounts as authorized by law (5 U.S.C. 73b-2) for persons in the Government service serving without compensation.

(b) The Secretary is authorized to reimburse any State or local official who, with the approval of the Secretary, is invited to confer with one or more specialists employed by the Secretary under section 202 for travel expenses incurred in attending such conference, and to pay to any such official per diem in lieu of subsistence, in the same amounts as authorized by law (5 U.S.C. 73b-2) for persons in the Government service without compensation.

SEC. 204. There are hereby authorized to be appropriated for the fiscal year beginning July 1, 1961, and for each of the four succeeding fiscal years, such amounts not to exceed $2,500,000 in any fiscal year as may be necessary for carrying out the purposes of this title.

TITLE III

GRANTS TO AREAS WHERE DESEGREGATION IN PUBLIC EDUCATION IS BEING CARRIED OUT

SEC. 301. (a) The Secretary is authorized to make grants to States, municipalities, school districts, and other local governmental units which maintained racial segregation in their public schools on May 17, 1954, and which make application for such grants, to assist in meeting the costs of additional educational measures undertaken or to be undertaken to further the process of eliminating segregation in the public schools of the applicant State, municipality, school district, or local governmental unit, while at the same time assuring that existing educational standards will not be lowered.

(b) Grants may be made under this section for—

(1) the cost of employing additional schoolteachers,

(2) the cost of giving to teachers and other school personnel in-service training in dealing with problems incident to desegregation.

(3) the cost of employing specialists in problems incident to desegregation and of providing other assistance to develop understanding by parents, schoolchildren, and the general public of plans and efforts for eliminating segregation in the schools in order to reduce the possibility of community hostility or unlawful resistance to such plans and efforts, and

(4) other costs directly related to the process of eliminating segregation in public schools, including the replacement of State payments to a school district or other political subdivision withdrawn because the applicant district or subdivision is eliminating, or is starting to eliminate segregation.

(c) Grants may also be made under this section for the construction, enlargement, or alteration of school facilities when the Secretary finds that lack or inadequacy of existing facilities makes the carrying out of any reasonable plan for desegregation without lowering existing educational standards impracticable or materially more difficult.

(d) Each application made for a grant under this section shall provide such detailed breakdown of the additional educational measures for which financial assist-

ance is sought as the Secretary may by regulations prescribe.

(c) Each grant under this section shall be made in such amounts and on such terms and conditions as the Secretary shall prescribe, which may include a condition that the applicant expend funds in specified amounts for the purpose for which the grant is made. In determining whether to make a grant, and in fixing the amount thereof and the terms and conditions on which it will be made, the Secretary shall take into consideration—

(1) the amount available for grants under this section and the other applications which are pending before him.

(2) the financial condition of the applicant and the other resources available to it,

(3) the nature, extent, and gravity of its problems incident to desegregation,

(4) whether the additional educational measures undertaken or to be undertaken are reasonably and effectively designed to further the process of eliminating racial segregation, while at the same time assuring that existing educational standards will not be lowered, and

(5) such other factors as he finds relevant.

SEC. 302. The Secretary is further authorized to make grants to public or other nonprofit educational institutions of higher learning to meet or assist in meeting the cost of short-term training courses or institutes, not to exceed four weeks in duration, for personnel of public schools or of educational agencies engaged in or about to undertake desegregation, designed to enable such personnel to deal more effectively with problems incident to desegregation. Such grants may also be used by such institutions to establish and maintain fellowships for such training courses or institutes, covering tuition, fees, and such stipends and allowances (including travel and subsistence expenses) as may be determined by the Secretary.

SEC. 303. Payments of grants under sections 301 and 302 may be made in advance or by way of reimbursement, and at such intervals and on such conditions as the Secretary may determine.

SEC. 304. (a) There are hereby authorized to be appropriated for the fiscal year beginning July 1, 1961, and for each of the four succeeding fiscal years, such sums, not exceeding $40,000,000 for any fiscal year, as may be necessary to carry out the provisions of this title.

(b) In making grants from funds appropriated for any fiscal year for the purposes specified in section 301 (b), the Secretary may disregard applications received after August 31 in that fiscal year, or may subordinate such applications to applications received before that date. In the event that he receives, either before or after that date, applications which he considers would materially contribute to carrying out the purposes of this title, but which he cannot grant because of lack or inadequacy of available funds, he shall forthwith report this fact to the Congress and to the President, together with his recommendation with respect to the appropriation of additional funds.

(c) In the event that the Secretary receives applications for grants for the purpose specified in section 301(c) which he considers would materially contribute to carrying out the purposes of this title, but which he cannot grant because of lack or inadequacy of available funds, he shall forthwith report this fact to the Congress and to the President, together with his recommendation with respect to the appropriation of additional funds.

TITLE IV

ADMINISTRATIVE ACTION DIRECTED TOWARD ELIMINATING SEGREGATION IN PUBLIC EDUCATION

SEC. 401. The Secretary shall make every effort to persuade States, municipalities, school districts, and other local governmental units to make a start toward eliminating segregation in public education and to carry out in full such programs as they may start, and to this end he shall utilize the authority provided in titles II and III.

SEC. 402. Whenever the Secretary shall find that all efforts under titles II and III and under section 401 of this title have failed, and continue to fail, in bringing about a start toward the elimination of segregation in public education in any State, municipality, school district, or other local governmental unit, the Secretary is authorized to prepare a tentative plan for the elimination of segregation in public education in such State, municipality, school district, or other local governmental unit. In preparing such a tentative plan, the Secretary shall seek the advice and assistance of public officials, private organizations, and private citizens in the area and of any local, State, regional, or national advisory council appointed pursuant to section 201(d); and he shall carefully consider such advice and assistance wherever available. Tentative plans prepared by the Secretary under the authority of this section shall take into account the need of the particular area for time to make an orderly adjustment and transition from segregated to desegregated schools.

SEC. 403. (a) Whenever the Secretary has prepared a tentative plan for the elimination of segregation in public education in any State, municipality, school district, or other local governmental unit, he shall forward the plan to the Governor, mayor, or other appropriate official, as the case may be. If the State, municipality, school district, or other local governmental unit agrees to put into effect the tentative plan as proposed by the Secretary or as modified by the State, municipality, school district, or other local governmental unit with the consent of the Secretary, the Secretary shall utilize the authority granted in titles II and III assist the State, municipality, school district, or other local governmental unit in putting into effect the tentative plan.

(b) If the State, municipality, school district, or other local governmental unit (1) does not agree to put into effect the tentative plan as proposed by the Secretary or as modified with his consent, or (2) after agreeing to the tentative plan as so proposed or modified, does not, in the judgment of the Secretary, carry out such tentative plan, the Secretary shall hold a public hearing upon the tentative plan. Notice of such hearing shall be given to the local authorities concerned by registered mail and notice shall be given to private organizations and private citizens within the area by publication in one or more newspapers. Local authorities, private organizations, and private citizens shall be permitted to participate in the hearing and present evidence and argument in favor of the tentative plan, in favor of amendments to the tentative plan, or in opposition to the plan or to any plan, but cumulative evidence may be excluded in the discretion of the Secretary. Anyone shall be permitted to file a written statement with the Secretary in addition to, or in lieu of, personal appearance at the public hearing.

(c) After the hearing provided in subsection (b) has been concluded, the Secretary shall prepare and issue an approved plan for eliminating segregation in public education in the State, municipality, school district, or other local governmental unit. He shall publish the approved plan in the Federal Register and in one or more newspapers in the area affected thereby and shall transmit a certified copy thereof to the appropriate official of the State, municipality, school district, or other local governmental unit involved.

(d) In order that the proceedings under this title shall expedite the elimination of segregation in any State, municipality, school district, or other local governmental unit, the Secretary shall handle all proceedings under this title as expeditiously as possible. The Secretary shall complete any proceedings hereunder within one year from the time that a tentative plan is forwarded to the governor, mayor, or other appropriate official under section 403(a), or, in case a State, municipality, school district, or other local governmental unit agrees to a tentative plan but does not carry it out, within six months from the time that the Secretary determines that such State, municipality, school district, or other local governmental unit is not carrying out such tentative plan.

SEC. 404. There are hereby authorized to be appropriated for the fiscal year beginning July 1, 1961, and for each of the four succeeding fiscal years, such amounts as may be necessary for carrying out the purposes of this title.

SEC. 405. The Secretary is authorized to carry out his responsibilities and exercise his authority under this title and under titles II and III through designated personnel in his own office or through any existing bureau, division, or agency of the Department of Health, Education, and Welfare or through a new office created by him for the special purpose of exercising the Secretary's responsibilities hereunder, except that the Secretary shall personally review and sign any approved plan issued under section 403(c).

TITLE V

AUTHORIZATION TO THE ATTORNEY GENERAL IN THE FIELD OF PUBLIC EDUCATION

SEC. 501. (a) Whenever (1) the Secretary has published in the Federal Register an approved plan for the elimination of segregation in public education in any State, municipality, school district, or other local governmental unit pursuant to section 403(c), (2) the State, municipality, school district, or other local governmental unit has rejected the plan or has refused or failed to act in accordance therewith, and (3) the Secretary has certified to the Attorney General that all efforts to secure compliance with the Constitution and the Supreme Court's decisions by conciliation, persuasion, education, and assistance under titles II, III, and IV have failed, the Attorney General of the United States is authorized to institute for or in the name of the United States a civil action or other proceeding for preventive relief, including an application for an injunction or other order, against the appropriate officials of the State, municipality, school district, or other local governmental unit, and any individual or individuals acting in concert with such officials to enforce compliance with the approved plan.

(b) The Attorney General is authorized to move to dismiss or discontinue any action brought under subsection (a), or to propose or to agree to a decree adopting a plan for elimination of segregation in public education which is different from the approved plan, whenever he determines that the State, municipality, school district, or other local governmental unit is making, or is prepared to make, a prompt and reasonable start toward full compliance with the Constitution and the Supreme Court's decisions in the field of education and to work toward full compliance with all deliberate speed.

(c) Any interested party may, with the leave of the court, intervene in any action brought under subsection (a), and the court shall consider any proposals by the intervenors, as well as by the defendant or defendants, in determining its final decree.

TITLE VI

OTHER AUTHORIZATIONS TO THE ATTORNEY GENERAL

SEC. 601. (a) Whenever the Attorney General receives a signed complaint that any person or group of persons is being deprived of, or is being threatened with the loss of, the right to the equal protection of the laws by reason of race, color, religion, or national origin and whenever the Attorney General certifies that, in his judgment, such person or group of persons is unable for any reason to seek effective legal protection for the right to the equal protection of the laws, the Attorney General is authorized to institute for or in the name of the United States a civil action or other proceeding for preventive relief, including an application for an injunction or other order, against any individual or individuals who, under color of any statute, ordinance, regulation, custom, or usage, of any State or Territory or subdivision or instrumentality thereof, deprives or threatens to deprive such person or group of persons of the right to equal protection of the laws by reason of race, color, religion, or national origin and against any individual or individuals acting in concert with them.

(b) A person or group of persons shall be deemed unable to seek effective legal protection for the right to the equal protection of the laws within the meaning of subsection (a) not only when such person or group of persons is financially unable to bear the expenses of the litigation, but also when there is reason to believe that the institution of such litigation would jeopardize the employment or other economic activity of, or might result in physical harm or economic damage to, such person or group of persons or their families.

(c) Nothing contained in titles IV and V shall limit the authority of the Attorney General to institute and maintain an action under subsection (a).

SEC. 602. The Attorney General is authorized to institute for or in the name of the United States a civil action or other proceeding for preventive relief, including an application for injunction or other order, (1) against any person or persons preventing or hindering, or threatening to prevent or hinder, or conspiring to prevent or hinder, any Federal, State, or local official from according any person or group of persons the right to the equal protection of the laws without regard to race, color, religion, or national origin, or (2) against any person or persons preventing or hindering, or threatening to prevent or hinder, or conspiring to prevent or hinder the execution of any court order protecting the right to the equal protection of the laws without regard to race, color, religion, or national origin.

SEC. 603. The Attorney General is authorized, upon receipt of a signed complaint, to institute for or in the name of the United States, a civil action or other proceeding for preventive relief, including an application for injunction or other order, against any individual or individuals who, under color of any statute, ordinance, regulation, custom, or usage, of any State or territory or subdivision or instrumentality thereof, deprives or threatens to deprive any person or group of persons or association of persons of any right guaranteed by the fourteenth amendment of the Constitution because such persons or group of persons or association of persons has opposed or opposes the denial of the equal protection of the laws to others because of race, color, religion, or national origin.

SEC. 604. Whenever a suit is brought in any district court of the United States seeking relief from the deprivation of the right of equal protection of the laws because of race, color, religion, or national origin, the Attorney General is authorized to intervene in such action with all the rights of a party thereto and to seek compliance with any lawful order issued by such district court.

TITLE VII

MISCELLANEOUS PROVISIONS

SEC. 701. The district courts of the United States shall have jurisdiction of proceedings instituted under sections 501, 601, 602, and 603 of this Act and shall exercise the same without regard to whether any administrative or other remedies that may be provided by law shall have been exhausted and, in the case of proceedings instituted under sections 601 and 602, without regard to whether any administrative proceeding is pending or contemplated under title IV, it being the purpose of title IV to expedite, not delay, the elimination of segregation in public education throughout the Nation. In any proceeding hereunder, the United States shall be liable for costs the same as a private person.

SEC. 702. Nothing in this Act or in any administrative proceeding hereunder shall be construed to impair any right guaranteed by the Constitution or laws of the United States or any remedies already existing for their protection or enforcement, nor to prevent any private individual or organization from acting to enforce or safeguard any constitutional right in any manner now permitted by law.

SEC. 703. If any provision of this Act or the application of such provision to any person or circumstance is held invalid, the remainder of this Act or the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

EXHIBIT 1

[From the Southern School News, December 1960]

NEW SUMMARY NOTES CHANGES IN ENROLLMENT

Public schools in the South now provide classes with whites for 195,625 Negroes—an increase of 14,605 over last year.

The increase was one of several reported in the latest edition of Southern Education Reporting Service's semiannual summary of statistics relating to developments in education arising from the U.S. Supreme Court decision in the public school segregation cases. Data is given on enrollments, teachers, colleges, litigation, and legislation.

The Negroes attending desegregated schools make up 6.3 percent of the 3,097,534 Negroes enrolled in the 17 Southern and border States, plus the District of Columbia—the area maintaining school segregation by law at the time of the U.S. Supreme Court's ruling in 1954.

About the same proportion of Negro students attended biracial classes last school year when the region's Negro enrollment was 3,020,727. Negroes continue to make up 23 percent of the total enrollment.

TEN MILLION MARK

White enrollment cleared the 10 million mark, reaching 10,165,246. The last school year ended with 9,984,192 whites in attendance. These increases in white and Negro students raised the area's combined enrollment to 13,262,780, as compared to 12,914,919 in 1959–60.

Seven border States and the District of Columbia, where the first desegregation occurred, continue as the principal areas of biracial classrooms. Delaware, the District, Kentucky, Maryland, Missouri, Oklahoma, Texas, and West Virginia conduct racially mixed classes for a total of 194,849 Negroes.

The remainder of the desegregated Negro students—776—reside in Arkansas, Florida, Louisiana, North Carolina, Tennessee and Virginia. In each case, the Negroes involved are 1 percent or less of the Negro enrollment.

Louisiana's initial desegregation in New Orleans in November marked the first in the State and in the Deep South, although the State had some previous desegregation at the college level. Alabama, Georgia, Mississippi, and South Carolina remain as the only States with complete segregation, which extends from elementary grades through college. Thirty-six percent of the South's Negro pupils live in these four States.

DESPITE DECREASE

Despite a decrease in the overall number of districts, the number desegregated increased from the 1959–60 figure of 749 to 777 in the current term. This is one-fourth of the biracial districts—those having members of both races.

Consolidations cut the number of districts from the 7,016 noted in last May's summary to 6,664 this year. At the same time, biracial districts dropped from 2,850 to 2,839.

Districts desegregated in practice or principle have 681,763 Negroes and 3,013,019 whites enrolled. Last year, the districts in this category had about 2½ million white students and just over one-half million Negroes.

The number of Negroes in classes with whites increased in nine States, doubling since last year in three instances. North Carolina, which had 34 Negroes in this classification last year, reported 82 this year. Tennessee's increased from 169 to 342, and in Virginia the figure rose from 103 to 208.

ONLY DISTRICT

Florida experienced a decrease in the number of Negroes in biracial schools. The State's only desegregated district, Dade County, had 512 Negroes in two schools with whites last year; but one school, Orchard Villa, became all Negro this term when the lone white child withdrew. That left Florida with 27 Negroes attending classes with whites.

Public school faculties remain segregated in nine States, including five that have desegregated classes, the statistical summary reports. Eight other States and the District of Columbia reported some degree of desegregation among faculties, although in five of these States several teachers lost their jobs in the change to biracial schools.

The public school systems in the region employ 494,054 teachers, about 20 percent of them Negroes.

Of the 228 predominantly white tax-supported colleges and universities in the region, 138 in 13 States are desegregated in practice or principle. Fifteen of the 49 predominantly Negro schools are desegregated. This makes 153 of 277 institutions of higher learning that will accept students of another race.

NUMBER UNKNOWN

The number of white and Negro students involved in the desegregation at this level is unknown since most of the border States no longer report enrollment by race. However, the South's public colleges have 528,606 whites and 57,886 Negroes enrolled, compared with 523,988 and 50,717, respectively, last year.

The new SERS summary lists the titles of 174 cases filed in Federal and State courts on segregation, desegregation and related issues.

The legislatures of 15 States have adopted almost 300 new laws and resolutions to prevent, restrict or control school desegregation. Most of the legislation has been passed since 1954, although a few laws were enacted in anticipation of the U.S. Supreme Court's 1954 decision.

Only Oklahoma has taken legislative action to encourage desegregation. The Missouri and West Virginia legislatures removed racial designations from their school laws, recognizing desegregation as an accomplished fact. In 1959, Maryland ratified the 14th amend-

ment to the U.S. Constitution, giving approval to the amendment on which the desegregation decisions were based.

Alabama, Georgia, Louisiana, Virginia, and North Carolina have adopted tuition grant laws. Legislatures in nine States have set up pupil placement laws. Legislators in eight States have approved interposition resolutions.

SERS publishes the "Statistical Summary" twice a year. The 20-page booklet is available on a subscription basis at $1 a year.

Segregation-desegregation status

State	School districts			Enrollment		In desegregated districts		Negroes in schools with whites

EXHIBIT 2

[From the New York Times, Jan. 16, 1961]

EXCERPTS FROM CIVIL RIGHTS REPORT ON U.S. HIGHER EDUCATION

Discrimination in higher education, as at the public school level, centers today on the American Negro, who represents more than a tenth of the total population. The relatively few members of other non-Caucasian races in the population seeking public higher education do not appear to be the object of discriminatory admission practices at this time.

The public colleges of the Northern and Western States are not free of suspicion of discrimination against Negroes. Some 20 percent of the public institutions in those States inquire as to the race of an applicant or ask for a photograph, or both, and, if the requirement of a personal interview is counted as another possible method of determining the race of an applicant, the proportion providing themselves with this information increases to 33.2 percent. Moreover, it appears that at least some of these institutions, in fact, use this information for discriminatory purposes.

Still, the heart of the problem of discrimination against the Negro today lies in the Southern States. Here, a pattern of racially segregated colleges developed in the last quarter of the 19th century, and complete separation—although not equality—of the races in public education was the rule until 1936, when Donald Murray was admitted to the University of Maryland Law School upon an order of the Maryland Court of Appeals. In the years since then, the walls of segregation have been breached repeatedly, first by lawsuit and then in some cases by voluntary action, until, in the academic year 1959–60, 118 of the 162 public institutions formerly for white students only in 13 of the 17 Southern States had admitted Negro students at the graduate or undergraduate level or claimed to have adopted a nondiscriminatory admission policy. The District of Columbia merged its white and Negro public teachers colleges in 1954 and 1955, thus eliminating segregation in public higher education in the District of Columbia. The 118 desegregated institutions in 13 States include all of the public colleges and universities in Delaware, Kentucky, Maryland, Missouri, Oklahoma and West Virginia; 47 of the 76 in the States of Arkansas, North Carolina, Tennessee, Texas and Virginia; and 5 of the 20 in Florida and Louisiana. All 49 of the public higher educational institutions for white students in Alabama, Georgia, Mississippi, and South Carolina, however, maintain strict exclusion policies, as do 37 institutions in Arkansas, Florida, Louisiana, North Carolina, Texas and Virginia. The status of segregation or desegregation in only 7 of the 211 formerly white public institutions in the 17 Southern States is unknown to the Commission.

SOME PROGRESS NOTED

Compliance in some degree with the requirements of the equal-protection clause in 55.9 percent of the formerly segregated public white colleges and universities of the South is progress indeed, but, unfortunately, in many of these institutions compliance is not complete. In some, Negroes are admitted only to the graduate division; in others, they are admitted to the undergraduate division, but only if they wish to enroll in a course of study not offered in the college for Negroes maintained by the State. Such limitations are clearly in violation of the 14th Amendment.

The extent to which discrimination may continue, even when compulsory segregation has been officially disavowed, is indicated by the number of public institutions in the Southern States that supply themselves with information regarding the race of those who apply for admission. Sixty-nine percent of southern public institutions ask the race of applicants or require photograph, or both, as compared with 20 percent of those in the Northern and Western States. If the requirement of a personal interview is included as a means of learning the race of an applicant, the percentage in the South supplying themselves with information as to the race of applicants increases to 77 percent as compared with 53 percent in the North and West.

The most serious equal-protection problem in public higher education, however, does not arise from the occasional instances of discrimination that occur, but from overt official resistance to any desegregation at all. In almost all the Southern States, such resistance had initially to be overcome by means of lawsuits brought by individual Negroes seeking admission to particular institutions, but, once a start was so compelled, some of the States proceeded voluntarily to open other formerly white public colleges to Negroes. In other States, however, there has been no desegregation except as a result of litigation, and in still others none can be foreseen before some hardy and tenacious Negro has obtained from the courts a declaration of his rights.

LONG AND BURDENSOME

Examination of the individual lawsuits upon which progress in desegregation has so largely depended and will continue to depend shows that they are often long and burdensome affairs. The time that has elapsed in such cases between the date when the Negro plaintiff first sought admission to a white institution and the date when he obtained a court order finally upholding or denying his right to be admitted has been as long as 9 years.

Although there is substantial discrimination in some public institutions of Arkansas, North Carolina, Tennessee, Texas, and Virginia, the hardcore States are Alabama, Georgia, Mississippi, and South Carolina. It is also true that, as of the college year 1959–60, Negro residents had been able to secure entrance to public colleges in Florida and Louisiana only by court order, to one and four, institutions respectively. The Commission has called these six States collectively the resistant States.

Examining the means used by these States in their official resistance to desegregation, the Commission has found not only exhaustive litigation in the courts, but also a variety of legislative and administrative measures designed to impede or prevent any Negro from entering a public institution maintained for white students. These measures range from laws providing for the closing of desegregated colleges or cutting off their financial support, through the establishment of new admission requirements designed to exclude Negroes, to intimidation of teachers and students.

The Commission also examined the separate colleges maintained in the resistant States to compare the quality of the public higher education offered to the two races. This examination shows that educational opportunity for Negroes is not equal to that provided white residents, when measured by such tangible criteria as number and location of colleges, financial support, type of program offered, degrees granted, or accreditation status of the public colleges for the two races. In some States the deprivation to the Negro students is much greater than in other States, but in all of the resistant States, as a result of compulsory segregation, education for Negroes is inferior to that provided by the State for white students.

SCHOOLS FOUND UNEQUAL

The Commission has found that in the six resistant States education for the Negro is indeed separate and unequal, not only at the college level but in preparation for college. The public high schools of the States, which are still entirely segregated by race, present a picture of deprivation carrying in degree from a low of 2.6 percent Negro high schools approved by the Southern Association of Colleges and Secondary Schools, as compared with 52.4 percent white in Mississippi, to a high of 53.9 percent Negro and 84.1 percent white high schools so approved in Florida.

This inferior preparation of the Negro high school student in the segregated high school of the South helps perpetuate the problem of segregation and discrimination at the college level. Proportionately fewer academically talented Negroes have the educational foundation required for success in a first-rate college. The graduates of segregated and inferior high schools tend, therefore, in overwhelming numbers to attend segregated and generally inferior colleges. So deprivation at one level leads to deprivation at another, and since the teachers of segregated Negro schools are, for the

most part, trained in segregated colleges, these deprivations are self-perpetuating from generation to generation.

The Commission has received evidence that educational deprivation of Negroes is similarly transmitted from the educationally, economically, and culturally deprived parent to the child. The Commission board at its Second Annual Conference on Problems of Schools in Transition from the Educator's Viewpoint of the educational handicap of the child whose parents lacked educational opportunity; the lower goals and aspirations transmitted from one deprived generation to the next.

FEDERAL ROLE CRITICIZED

The Commission has examined the role of the Federal Government in this picture of continued denial of equal protection of the laws in public higher education. It has found that the Federal Government has been a silent partner in the creation and perpetuation of separate colleges for Negroes. As to land grant colleges particularly, the Federal Government has been heavily involved, not only because of its sponsorship of separate colleges in the second Morrill Act of 1890 and its financial support to such colleges ever since the first Morrill Act of 1862, but because it has allowed southern legislatures to channel almost all Federal funds for specific programs in such institutions to the separate white colleges. The Federal Government bears a heavy responsibility for the resulting discrimination against past and present generations of Negroes.

Other current programs of Federal aid to higher education have had a similar tendency to support discrimination and to maintain the disparity in educational opportunities offered by some States to their citizens. Five types of Federal programs were analyzed by the Commission as to their civil rights impact. In none of these programs is any consideration given by the Federal Government to the presence or absence of discrimination by the recipient institution. (1) The college housing program was examined as an example of general support to higher education, and found to underwrite segregation. (2) The programs of institutes to improve the quality of education at the secondary and college level, both those administered by the Department of Health, Education, and Welfare under the National Defense Education Act and those of the National Science Foundation, were found to have the effect of improving education for the white student while doing comparatively little for the segregated Negro in the resistant States. (3) Similarly, it appears that in the basic research programs financed by the Federal Government in colleges and universities for the benefit of the health and safety of the Nation as a whole, Negro students in the resistant States have no opportunity to participate except in two States where there have been limited breakthroughs of desegregation. (4) On the other hand, fellowships for advanced study under Federal sponsorship granted on individual merit, and (5) individual aid based on need (student loans) and Federal obligations (VA and war orphans' assistance), have all been found to be nondiscriminatory at the Federal level.

DISCREPANCY INCREASED

The total impact of Federal aid to public higher education in these States has been to increase the discrepancy between the amounts spent by the States themselves for white institutions as compared with Negro institutions.

It is apparent that Federal funds allocated, granted, or disbursed under contract to higher educational institutions without regard to the discriminatory policy of the recipient institution accentuate the disparity of educational opportunity for the American Negro in the six States studied, whether such funds are measured as support per student or by resident of the State.

FEDERAL FUNDS IN SUPPORT OF HIGHER EDUCATION

Findings

1

The Federal Government is deeply involved financially in the higher education of its citizens. Its expenditure for general support of colleges and universities; for aid to students, teachers, and institutions for specific educational programs; and for research in or by colleges and universities is estimated to be $1.5 to $2 billion a year.

2

Insofar as applicants to publicly controlled colleges and universities are denied admission on such arbitrary grounds as their race, religion, or national origin, they not only are denied equal protection of the laws under the Constitution, but also are denied the opportunity to participate, directly or indirectly, in the benefits resulting from the use by such institutions of Federal funds.

3

Insofar as the Federal Government, whether by allotment, grant, or contract, disburses funds to publicly controlled colleges and universities practicing racial exclusion, whether of Negro students or white, it is supporting operations in violation of the Constitution.

4

The Supreme Court has held that the Federal Government is prohibited by the Constitution from maintaining racially segregated educational institutions. It is not sound policy for the Federal Government to subsidize the unconstitutional operations of others; to do indirectly what it is not permitted to do directly.

5

It is not a sound policy for the Federal Government to disburse public funds in such a manner that it increases the adverse effects on some citizens of denials of equal protection of the laws by States and political subdivisions thereof.

6

In its study of Federal programs, of aid to higher education, the Commission has found that programs of direct assistance to individual students on the basis of merit (NSF fellowships), need (National Defense Education Act students' loans), and Federal obligation (VA and war orphans' assistance) are not administered so as to be discriminatory on grounds of race, religion, or national origin.

7

Other Federal programs in support of higher education, however, by reason of the failure of the Federal Government to give any consideration to the presence or absence of discriminatory practices by the recipient institution, have the effect of supporting racial segregation, and continue the educational deprivation of those excluded from such institutions. In five of the programs studied by the Commission, college housing, national defense fellowships, National Defense Education Act, educational media, NSF institutes, and agricultural research and extension, 62 percent or more of the funds expended in seven selected Southern States went to institutions which exclude applicants solely on the basis of race. In five other such programs, National Defense Education Act counseling and guidance institutes, National Defense Act language institutes, NIH grants under contract, NSF grants in support of basic research, AEC grants for research fellowships and other training, 40 to 50 percent of the funds expended in the seven States were received by such institutions.

8

The disbursement of Federal funds under these and other programs to segregated white institutions in the four States maintaining complete segregation at the higher education level increases the disparity between the public financial support of colleges for white students and colleges for Negroes. In fiscal year 1958, for instance, the amount of Federal funds expended in support of public white institutions, per student enrolled, exceeded the amount expended for public Negro institutions by $130.99 in Alabama, $171.33 in Georgia, $179.50 in Mississippi, and $141.89 in South Carolina. The effect of this discrepancy is to contribute to the continuation of inferior segregated institutions and to magnify the disparity between the quality of the public higher education offered to white students and that offered to Negro students in such States. The same situation exists in other States, but, owing to desegregation in some degree of one or more public colleges or universities the effect on a statewide basis is not so great.

Recommendation No. 1

Therefore, the Commission recommends that the Federal Government, either by Executive or, if necessary, by congressional action, take such measures as may be required to assure that funds under the various programs of Federal assistance to higher education are disbursed only to such publicly controlled institutions of higher education as do not discriminate on grounds of race, color, religion, or national origin.

The Commission agrees that in any such Federal action taken it should be stipulated that no Federal agency or official shall be given power to direct, supervise, or control the administration, curricula or personnel of an institution operated and maintained by a State or a political subdivision thereof.

Concurrences noted

(At this point the report included concurring statements by the Commission's Vice Chairman, Robert G. Storey, and by Commissioner Rankin.

(Among other things, Mr. Storey contended that it had not been Congress' intent up to the present to approve the withholding of funds to institutions that discriminated. Mr. Rankin noted that his concurrence was one of principle but that he did not support certain procedures suggested by the Commission.)

Dissenting statement

Commissioner Doyle E. Carlton: I join the Commission in commending the staff on the detailed and well-documented study of the legal developments in connection with the matter of denial of rights in public higher education. The report reflects great progress made in this area over the last 20 years. However, much remains to be done. Our real question is how best to obtain our objective.

As to recommendation 1, it is my opinion that this objective will not be attained by any action which has the effect of withholding public funds from institutions that do not conform to a Federal pattern. The withholding of such funds is to me unsound from a political, governmental and moral standpoint. I cannot approve the withholding of money, coming as it does to the Federal Government from the taxpayers of the several States, as a club to force any fixed pattern set forth by a Federal agency. Such action would impede rather than advance public higher education. It would also create resentment, and ill will to the injury of both races. Progress can be made on the basis of goodwill without such arbitrary action.

ENFORCEMENT OF CONSTITUTIONAL RIGHTS

Findings

1

The long process of eliminating segregation in the public colleges and universities of the seventeen southern States began at the graduate and professional school level in 1936. In the following 18 years the State universities in three States opened their graduate divisions voluntarily to all qualified students without regard to race. The graduate divisions, or specific schools herein, were similarly opened in certain public institutions in eight additional States by court action. Likewise, the undergraduate division of some 4-year colleges and junior colleges, formerly for white students only, in four States were voluntarily opened on a nondiscriminatory basis before the Supreme Court's decision in the school segregation cases in 1954. Undergraduate students were also admitted by Federal court order to certain public colleges in four States prior to 1954.

2

In 1954 and 1955, following the Supreme Court's decision in the school segregation cases, six States and the District of Columbia officially all voluntarily abolished all racial designations for their State colleges and universities and declared them open to all qualified students. Voluntary desegregation since 1955 has been limited to such action by individual colleges and universities after a Court order had required desegregation of another public institution in the same State. However, in the academic year 1959–1960 racial segregation was still maintained in at least 86 public colleges and universities in Southern States. Further extension of voluntary compliance with constitutional requirements does not now seem probable; future gains will depend increasingly upon individual court suits to compel the dropping of racial barriers.

3

At present, action to secure admission to a public college or university by Court action is a long, arduous, and costly affair. The average length of such suits in Federal district courts (excluding the few cases in which the defendant did not file an appeal from an order admitting the plaintiffs to all cases finally determined since May 1954) is slightly more than 2½ years.

4

An individual should not be subjected to such delay in securing a judicial determination of his constitutional rights. In the case of a college applicant, the delay causes irreparable harm to the individual and also to the Nation that needs to realize the highest potential of its manpower.

5

The application of a State law, custom, or practice in such a way as to deny constitutional rights involves a question of State-Federal relationship of delicacy and importance comparable to that involved in a challenge to the constitutionality of a State statute. In the latter case the Congress, in order to assure an adequate hearing and full deliberation of the issue, has provided for an expeditious hearings by a court composed of three judges, and a direct appeal to the U.S. Supreme Court. Such a procedure, long established and familiar to judges and lawyers alike, could be extended to include cases presenting a factual issue of denial of equal protection of the laws and would promote the speedy and correct determination of such cases.

Recommendation No. 2

Therefore, the commission recommends that Congress consider the advisability of authorizing the use of three-judge courts under section 2284 of the United States Judicial Code (U.S.C., title 28) to cases presenting a substantial factual issue as to whether persons are being denied equal protection of the laws with respect to public education.

DISSENTING STATEMENTS

Vice Chairman Storey: This recommendation affects jurisdiction of the Federal courts which should not be disturbed. Delays in litigation are often due to causes other than jurisdiction. In vesting a fact-finding function in the three-judge Federal court for all public education cases it is, in effect, recommending the transferral of the duties of the United States District Courts to other Federal courts.

Commissioner Carlton: I see no reason for this recommendation. Our courts are ample and are proving repeatedly that the problem is being handled efficiently.

AFFIRMATIVE FEDERAL ACTION TO ALLEVIATE ACADEMIC HANDICAPS

Findings

1

The overall effect of segregation in public education, at both the college and the public school levels, has been to give a substantial portion of the population the opportunity to obtain only an inferior education. Moreover, the effects of such deprivations are self-perpetuating: that is, students from inferior schools can attend only inferior colleges, where they are often trained as inferior teachers, and from which they return to teach in the same inferior schools.

2

It is in the national interest in this time of world crisis to educate and train all citizens to the utmost of their abilities and talents.

3

The Federal Government sponsors various programs having as their general objective improvement of the quality of education and other programs which are designed to identify and assist talented students. These have been of little value to Negroes in some Southern States because of the discriminatory admission policies of the institutions in which they were sponsored. Recommendation 1 above, if implemented effectively, should eliminate discrimination in such programs in the future, but it would not wipe out the cumulative effects of years of educational deprivation. Affirmative attack against inferior educational opportunities is needed to break the vicious circle of self-perpetuating inferiority.

4

Programs could be designed that aim at raising the quality of education throughout the Nation by giving assistance to persons, both teachers and students, who have potential talent but are academically handicapped as a result of the inferior educational opportunities that have been available to them. Such programs might include, among others: (1) Institutes to improve the competence of public school teachers in English, history, and social sciences, similar to those now sponsored in science, mathematics, and foreign languages; (2) summer institutes conducted by public colleges for incoming students of potential ability whose academic preparation is inadequate for college-level work; (3) special academic-year institutes conducted by colleges and universities or by outstanding secondary schools for talented but academically deficient high school graduates to prepare them for college.

Recommendation 3

Therefore, the commission recommends that the Federal Government sponsor in the several States, upon request from the several States, educational programs designed to assist public school teachers and students of native talent and ability who are handicapped professionally or scholastically as a result of inferior educational opportunity and training.

EXHIBIT 3

[From the Southern School News, January 1961]

FEW NEW SCHOOL LAWS EXPECTED AS 14 STATE LEGISLATURES CONVENE

(By Tom Flake)

NASHVILLE, TENN.—Few new laws concerning school segregation and desegregation were in prospect as legislatures of 14 Southern and border States prepared to convene during 1961.

The probability of a legislative letup came after almost 7 years during which nearly 300 laws, resolutions, and State constitutional amendments have emerged in Southern States in efforts to prevent, restrict, or control school desegregation. A few such measures were passed in anticipation of the Supreme Court's 1954 desegregation decision.

These actions have included pupil placement (assignment) laws, provisions for private schools, and for tuition grants, authority to close schools, repeal of compulsory attendance laws, and penalties against organizations and individuals who advocate desegregation. Protests against the Court decision have ranged from resolutions of interposition to statements deploring judicial trends.

Only in Louisiana, where legislators were to continue in their third consecutive extraordinary session, and in Georgia were there early indications of major actions on the subject this year. Their courses are related closely to developments in New Orleans and Atlanta, where Federal courts have ordered desegregation.

State legislative sessions were scheduled for 1961—most of them to begin this month—in Delaware, Maryland, Missouri, Oklahoma, and West Virginia, and border States; in the middle States of Arkansas, North Carolina, Tennessee, and Texas; and in five Deep South States—Alabama, Florida, Georgia, Louisiana, and South Carolina.

All the border and middle States have desegregated public schools, although in widely varying degrees. In the lower part of the South, Florida and Louisiana each have biracial schools in one district by court order; Alabama, Georgia, Mississippi, and South Carolina retain completely segregated schools.

REASONS DIFFER

Reasons given for the expected lack of legislation on the subject differ somewhat according to geography.

The border States, now proceeding in the main toward nonracial school policies, have made few legislative moves in the wake of the U.S. Supreme Court's desegregation decisions. Exceptions have been several instances of repealing or modifying laws containing requirements for segregated schools.

Lawmakers in those States show little inclination now to touch on the subject. This is true in Oklahoma, for instance, despite the fact that statutes specifying separate schools for whites and Negroes remain unrepealed while the State pursues a definite policy of compliance with the desegregation decree. The reason: officials consider segregation measures void in any event and prefer not to open the school code to amendments which might invite dissension about other school issues.

Farther south, the paucity of legislative proposals in most States is not attributed necessarily to any lessening of official reluctance to desegregate—nor to any appreciable letup in several States' attitude of all-out resistance.

Rather, it appears to be largely a matter of (1) reliance on existing statutes, at least for the time being or (2) watchful waiting to see what happens before making further major moves. Some lawmakers believe they have legislated virtually to the limit of feasibility and indicate they find it difficult to produce new ideas; others make it clear that they will recognize no limit and will continue to be quite prolific.

NINE SOUTHERN STATES USE PUPIL ASSIGNMENT PLANS

A prime factor in the prospect for legislative lulls in a number of instances is the pupil placement (assignment) plan. Nine States in the area have such laws, all similar, which list various factors other than race for guided administrative decisions on which school a child shall attend.

Three of these laws have withstood somewhat limited Federal court tests, and their legal future is believed probably to be contingent upon the role that race plays when the factors are applied (Eugene Wyatt's article, Southern School News, December).

Such laws are on the statute books of Alabama and North Carolina (both held "not unconstitutional" on their face). Arkansas (held constitutional on its face), Florida, Louisiana, Tennessee, Texas and Virginia. (In Tennessee, a court noted in 1958 without passing on constitutionality that the law does not preclude racial distinction from being taken into account and that nothing in the act is "inconsistent with a continued policy of racial segregation.")

SURVIVED LITIGATION

Having survived litigation at least up to a point, placement thus is considered by some officials, legislators and school administrators to be a means of minimizing bi-racial school attendance within sanction of the Federal courts.

In the middle Southern States, placement laws are being applied increasingly by local school boards, with approbation or at least acquiescence of State governments. For some of them, pupil placement evidently was "the end of the row."

In the Deep South, however, except possibly in Florida, there were clear indications that lawmakers were unwilling to stand only on pupil placement provisions.

With token desegregation under Florida's pupil placement law limited to a single county, legislators looked toward their April session with a tentative don't-rock-the-boat attitude. However, some—particularly those from the northern part of the State—appeared to be less willing to stand pat with placement as they reacted to continued sit-in demonstrations by Negroes in the cities.

DIFFERENT COURSE

The Louisiana Legislature, which reenacted its 2-year-old placement law in 1960 with modifications, has pursued a different course as placement provisions were followed in New Orleans schools. The majority of the assembly continues its pitched battle against the court-ordered grade-a-year plan for New Orleans embracing the placement statute.

After producing a host of measures in addition to pupil placement, seeking to maintain completely segregated school systems, only to have most of them enjoined and then declared unconstitutional in Federal district court, Louisiana's assembly began 1961 in the midst of the third consecutive extraordinary session called by Gov. Jimmie H. Davis.

The administration held to its purpose: to block desegregation. More and more measures were enacted during December. (See Louisiana.)

In Georgia, where the Atlanta school system faces a court order to begin desegregation next fall in grades 11 and 12, some officials and key legislators indicated preference for a wait-and-see policy during the regular session, which starts this month. They spoke of reconvening later in the year to take up school desegregation issues after a court decree is handed down in the Atlanta case. In mid-December, however, there were contrary indications. Sentiment was voiced for legislative action ahead of the court decree.

A SECOND LOOK

The court has deferred its decree to give the legislators a chance for a second look at its stand on school closing in the event of desegregation, along with possible reconsideration of its previous enactments on other related issues. (See Georgia.)

In Alabama, where Gov. John Patterson last month promised an all-out battle to prevent any school desegregation, there nevertheless was little discussion of new legislation. However, Governor Patterson was expected to renew his request for authority to close schools on his own motion.

Local boards in Alabama have school-closing authority, and opponents of conferring it upon the Governor contend that such an action might render the placement law and other school segregation measures inoperative and becloud their constitutionality. Governor Patterson sought the authority in 1959 but a measure to provide it died in a senate committee after passing in the house of representatives.

In Tennessee, one measure had been suggested by an east State senator in late December for the general assembly's biennial session opening this month. It is a proposal for a States rights commission similar to the sovereignty commissions established in five other States. Such a measure failed in the 1959 legislature.

GROUPS OF STATES APPROVE SIMILAR LEGISLATION, POLICIES

Many of the legislative actions of 1954–59 are identical or similar in groups of States, having moved across State lines in a sort of chain reaction. Others have come about only in individual instances to fit one-State patterns or limited policies.

Pupil assignment laws are an example of pattern legislation. Several other types of measures exist in clusters of States.

At least a half-dozen State legislatures have acted at various times to protest officially the Supreme Court decision, most of them during the 3 years after it was handed down, and some have called for major changes in court jurisdiction and power.

Georgia legislators in 1955 began to advocate an amendment to the U.S. Constitution which would give individual States sole control over public schools, and such an action still is proposed in Washington by Senator HERMAN TALMADGE, Democrat of Georgia. Another suggestion: to deny the Federal Government power over school operations.

ASK IMPEACHMENT

That same year, Mississippi lawmakers asked Congress to limit the jurisdiction of the courts. In 1956, Georgia called for impeachment of six U.S. Supreme Court justices and Florida solons condemned that tribunal's usurpation of powers.

In 1957, Alabama legislators adopted resolutions asking the Supreme Court to modify its school desegregation decree; urged the Court to reverse its tendencies and restore the rule of law; proposed limited terms for U.S. judges and urged the President to respect States rights.

Also in 1957 came the Tennessee manifesto, a legislative document protesting what the general assembly called encroachments by the Federal Government on rights reserved to the States. Texas legislators urged that law and order as well as school operations be left exclusively to the States, and that a set of qualifications be established for the Federal judiciary. The Texas Senate commended the American Bar Association's criticism of the Supreme Court's alleged tendencies toward federalism at the expense of the States and toward going beyond strictly legal interpretations of laws and the Constitution.

RATIFY AMENDMENT

On the heels of the South's barrage of criticism, Maryland legislators in 1959 voted to ratify the 14th amendment to the Constitution—the basis for the desegregation decisions, which some Southern legalists have contended never was constitutionally put into effect because of its Reconstruction aspects after the Civil War.

Eight States, including the half-dozen comprising the Deep South, have moved toward application of the doctrine of interposition—a historic concept of interposing State authority between the people and the National Government. An effort by the Louisiana Legislature to apply interposition was voided by a Federal court in the New Orleans school litigation in November.

In addition to Louisiana, States with interposition resolutions on their legislative journals include Alabama, Arkansas, Florida, Georgia, Mississippi, South Carolina, and Virginia.

Arkansas voters not only amended their constitution in 1956 to require the legislature to adopt a resolution of interposition; they also spelled out a declaration that the Supreme Court desegregation ruling was void.

STATE TUITION GRANTS GAIN OVER PRIVATE SCHOOL PLANS

Dozens of legislative actions have dealt with proposed alternatives to biracial schools or with actions designed to pave the way toward those alternatives. Most of them either have specified private schools in lieu of desegregated public schools, to be subsidized with State funds, or have provided for tuition grants from the State for pupils individually to pay for their own educations. A trend has been toward tuition grants because of court decisions against public-subsidized private schools. Various legal questions as to tuition grants remain to be litigated fully (Gene Wyatt's article, Southern School News, December).

Ten Southern States have enacted laws dealing variously with the right to close public schools in the face of court orders to desegregate; five have provided specifically for removal of compulsory attendance laws and six others either have modified attendance laws or enacted other laws affecting attendance requirements. Six States have enacted tuition grant provisions, although such a measure in Arkansas was declared unconstitutional after having been tied into a school-closing law.

Alabama has removed from its constitution all requirements of school segregation but has enacted measures permitting (1) local school boards to close schools and the affected children to apply for tuition grants; (2) allocation of educational funds to areas where public school funds are not available because of desegregation; (3) individual schools to secede from local and State systems and organize their own independent, autonomous districts. Another Alabama statute, authorizing separate schools for white or Negro children whose parents "voluntarily elect" them, remains untested although a similar "parents' preference" law in Tennessee was declared unconstitutional on its face.

PERMIT SCHOOL CLOSINGS

Arkansas enacted laws in 1958 not only to permit school closing but to require it in cases of orders to desegregate, with tuition grants for affected pupils. Both laws were used by Gov. Orval Faubus in the closing of Central High School at Little Rock but both were voided in the courts. However, another law to authorize tuition grants was enacted in 1958, not tied in with school-closing features. Arkansas voters recently

turned down a proposed constitutional amendment that would have allowed a district to close all its schools to avoid a court order for desegregation.

A Florida statute enacted 4 years ago gives the Governor authority to close any school where violence is threatened because of court-ordered desegregation. The State also has a private school corporation law. Gov. LeRoy Collins vetoed a measure that would have permitted parents to close any court-desegregated school by means of an initiated referendum.

Georgia has supplemented its constitutional prohibition of racially mixed schools with statutes to (1) forbid State or local funds for schools expected to desegregate; (2) authorize the Governor to suspend compulsory attendance laws and to use extraordinary powers to suppress violence; and (3) close a single school if it is desegregated. A majority of Georgians voted in 1954 to permit the State to make individual grants for education in order to establish private schools in the event of court-ordered desegregation. Since then have come measures to (1) extend teacher retirement benefits if they are in nonpublic school status, and (2) allow leasing of public school property for private schools. Later measures would allow income tax credits for private schools and would assure teachers of their pay if public schools are closed.

IN CONSTANT SESSION

Louisiana legislators, in almost constant session during recent weeks as desegregation proceeded in New Orleans, enacted a law in 1958 to authorize closing of desegregated schools and to establish a program for financing private schools, with State grants. Another act provided for paying teachers of closed schools. The school-closing law was declared unconstitutional by a Federal court last August. Among others thrown out were measures to specify segregated schools under the State's police powers; to prohibit State grants to desegregated schools; to authorize school closing by the Governor and their sale to private interests. Not yet used is a measure which would provide grants-in-aid to nonsectarian private schools. U.S. district court of New Orleans has enjoined and then invalidated a series of recent measures proposing a number of closing plans and setups for "private" education.

Mississippi, where efforts toward desegregation have been fewer than in any other State, recently ratified a constitutional amendment to remove a requirement that the legislature provide public schools. Compulsory school attendance has been off the statute books since 1956. Local school trustees are authorized to close public schools, and the Governor also has authority to close public schools and colleges.

North Carolina by constitutional amendment and by implementing laws (1) permits voters of a local school district to decide whether they prefer school closings or desegregation; (2) makes possible State tuition grants for nonsectarian private school education of children whose parents object to their attending biracial schools. Neither measure prohibits school desegregation; they afford a choice for each locality in the State.

DELETES REQUIREMENT

Souh Carolina's Legislature in 1954 ratified a constitutional amendment, approved by voters a year and a half before, deleting a requirement that the State provide "a liberal system of free public schools." Compulsory attendance laws were repealed in 1955, although "visiting" teachers were designated to use persuasion in advocating school attendance. Sale or lease of public school property is authorized. Another 1955 measure would deny public funds to any school involved in a child's transfer by court order, and from 1956 to 1960 State appropriations carried a specification that funds should be "for racially segregated schools only." Legislators agreed to remove the specification in an effort to prevent desegretion advocates from charging that it would be futile to seek administrative reassignment of pupils.

Texas enacted a law in 1957 to authorize closing of schools when troops are sent there or violence is threatened.

Virginia's "massive resistance" plan, based on a "package" of laws declared unconstitutional a year ago, included automatic closing of desegregated schools and provision of tuition grants for children affected by such closings, along with removal of compulsory attendance. The State's present "freedom of choice" plan allows local school systems the option of abandoning public schools, and localities may provide direct aid to private schools. Any child not wanting to attend the public school where he or she is assigned may get a local-State tuition grant to attend either a private nonsectarian school or a public school in another community.

STRESS LOCAL CONTROL

Tennessee, which has enacted relatively little legislation dealing with segregation-desegregation and which stresses local control of schools, passed a single law on that subject in 1959, making local school boards responsible for enforcement of compulsory attendance. That law permits parents to withdraw their children from a school, with the school board's consent, "for any good and substantial reason," provided the children are enrolled elsewhere within 30 days.

Five States have established sovereignty commissions—groups whose purpose is to seek a reduction of Federal participation in State and local affairs. They are called specifically soverignty commissions in Arkansas, where the body had not functioned and was crippled by a State court decision, and in Louisiana and Mississippi. Georgia and Virginia have commissions on constitutional government. A similar group proposed for Tennessee would be called a States rights commission.

While sovereignty commissions are set up to deal with various sorts of Federal-State issues, their creation has come in the wake of the disputes over Federal judicial action on school policies.

SEVEN STATES MOVE AGAINST BARRATRY, RACIAL LOBBYING

At least seven Southern States have moved in recent years against "barratry" (solicitation of lawsuits), lobbying on racial issues and activities of the National Association for the Advancement of Colored People or groups advocating desegregation.

Arkansas legislators have produced a number of measures along these lines. A law that would have required teachers to list organizations to which they belong was declared unconstitutional last month. One 1959 statute made it unlawful for NAACP members to be employed by State or local governments or school districts. A series of laws, drawn by State Attorney General Bruce Bennett, dealt with such things as membership lists of organizations and activities of non-Arkansas corporations, including their tax payments and so-called "practice of law." An ordinance reportedly enacted by 39 Arkansas cities, requiring names and addresses of all members and contributors to an organization, has been declared unconstitutional. Bennett stated that this and similar measures were for the purpose of keeping NAACP busy defending itself.

Georgia recently stiffened its penalty for barratry, and it is prohibited under laws enacted during the past 5 years in Mississippi, South Carolina, and Virginia. Tennessee law calls for information to be filed on those "soliciting for litigation," and registration is specified for "racial" organizations, although neither these nor several other pro-segregation measures in that State have been invoked. Mississippi has a law requiring school personnel to list memberships.

INVESTIGATE CORPORATIONS

South Carolina in 1958 authorized its attorney general to investigate records of foreign and domestic nonprofit corporations, in a move directed largely at the NAACP. Earlier, the legislature enacted a law requiring that applicants for public jobs list their membership in various organizations. This substituted for a court-challenged law forbidding public employment of NAACP members. Several counties have special laws which, if strictly enforced, would require organizers to obtain local permits before soliciting funds or members.

Texas in 1957 got a law allowing county judges to obtain membership lists from organizations seeking to influence school operations. Virginia's 1956 enactments included a requirement for registration of advocates of either segregation or desegregation, and that State's anti-barratry measures are extended to direct the State bar to punish persons found guilty of unethical or unauthorized law practice.

VARIETY OF LAWS PASSED IN PAST HALF-DOZEN YEARS

Dozens of other laws passed in most of the Southern and border States during the past half-dozen years can scarcely be categorized. Here is a partial summary of these miscellaneous measures, State by State:

Arkansas: Provision has been made for easier recall of school board members on petition of 25 percent of the voters. School attendance figures for previous years may be used in calculating State aid for schools closed because of desegregation problems. Blood for transfusions is to be labeled by race. Protection of retirement benefits is provided for public school teachers moved into private schools.

Florida: County school boards have been given authority to cancel tenures of teachers on educational, sociological, psychological or other ground. Stiff penalties are prescribed for conviction of maliciously injuring buildings or structures with gunpowder. Wearing of hoods or masks in public is prohibited.

SET AGE LIMIT

Georgia: College undergraduates over the age of 21 and graduates over 25 are ineligible to enroll except in special cases. Retirement benefits have been extended to teachers transferring to nonpublic schools. Ad valorem taxes for mixed schools are banned. Trespassing on property of closed public schools is forbidden.

Mississippi: Speeches by advocates of antistate action are banned at State institutions. Interracial marriages are voided. Public disturbances and telephone threats are banned.

Missouri: Pre-1954 segregation laws were repealed after being declared unenforceable by the State attorney general.

North Carolina: Teachers' continuing contract law was repealed, making teachers' contracts subject to annual renewal. All references to race were eliminated from the general education law, and titles to school buses were transferred from the State to the counties.

END SEPARATE SYSTEMS

Oklahoma: A constitutional amendment adopted in 1955 eliminated separate school systems in effect by removing dual taxing and budget provisions and substituting a countrywide tax levy for all schools. Legislation enacted that same year authorized schools on military reservations to conform with Federal requirements.

South Carolina: A 1957 law vested the Governor with enlarged authority in maintaining the public peace. Legislation in 1959

made it a felony to bomb any church, school, private residence or other structure or to make threats or give false information about such bombings.

Tennessee: A legislative package of 1957 included permission for segregation of the sexes in high schools.

Texas: A 1957 statute provides for local option elections on whether to desegregate schools. (Five school districts have desegregated by election and several others, including Dallas, has voted against it. The State attorney general held that districts which desegregate under court orders despite referendum disapproval may retain their State school aid.)

West Virginia: References to West Virginia College as a Negro institution were eliminated, along with racial restrictions for admission to the school for the deaf and blind and all other references in law to segregated education. The former Negro bureau of welfare and statistics was abolished in 1958, leaving no special group to represent Negroes in the State government.

[From the New York Times, Jan. 25, 1961]

EXCERPTS FROM THE RULING ON NEW ROCHELLE SCHOOL

(By Federal Judge Irving R. Kaufman)

After hearing and observing the witnesses, and carefully examining the large amount of documentary evidence submitted, I conclude that the defendant's conduct has violated the Constitution, denying the plaintiffs the right to the equal protection of the laws guaranteed by the 14th amendment.

I find that the board of education of New Rochelle, prior to 1949, intentionally created Lincoln School as a racially segregated school, and has not, since then, acted in good faith to implement desegregation as required by the 14th amendment; and that the conduct of the board of education even since 1949 has been motivated by the purposeful desire of maintaining the Lincoln School as a racially segregated school.

The years between 1949 and 1960 have been 11 years of agitation for New Rochelle. For 11 years, responsible civic-minded organizations and groups have urged that something be done to correct the Lincoln situation; for 11 years the board has discussed the problems, hired experts, made surveys, and constantly reiterated its belief in racial equality and the necessity for equal opportunities.

But, in these 11 years, it has taken no action whatsoever to alter the racial imbalance in the Lincoln School. It has met the problem with mere words, barren of meaning, for they were never followed by deeds.

A NEW EPOCH

In 1954, the Supreme Court rendered its opinion in *Brown* v. *Board of Education, supra.* This decision heralded a new epoch in the quest for equality of the individual. It called for responsible public officials throughout the country to reappraise their thinking and policies, and to make every effort to afford Negroes the more meaningful equality guaranteed to them by the Constitution.

The Brown decision, in short, was a lesson in democracy, directed to the public at large and more particularly to those responsible for the operation of the schools. It imposed a legal and moral obligation upon officials who had created or maintained segregated schools to undo the damage which they had fostered.

And, compliance with the Supreme Court's edict was not to be less forthright in the North than in the South; no double standard was to be tolerated.

The Brown decision also increased the public agitation for change in New Rochelle. But the board paid little heed to the Brown doctrine.

This, then, complete the picture of board intransigence and refusal to act through the years. The "freeze" placed by the board in 1949 on the already gerrymandered boundaries of the Lincoln district remained unchanged, despite 11 years of public agitation, pleas and advice from distinguished educators and sociologists. And, what is more, the board has not evidenced any intention to change its policies in the future.

DISCUSSES THE LAW

Any discussion of the applicable law must begin with the case of *Brown* v. *Board of Education, supra.* Principles long accepted by psychologists and sociologists were given the stature of the law of the land.

The Supreme Court made it clear that in the field of public education, separate but equal was inherently unequal, and hence violative of the Constitution. Thus, the operation of separate schools for whites and Negroes was proscribed.

Those school authorities throughout the country which had operated such separate schools were instructed to implement desegregation, in good faith, "with all deliberate speed."

I hold that the Board of Education of New Rochelle, by its conduct in the years prior to 1949, created and established the Lincoln School as a segregated, Negro school. Thus formulated, the present case falls squarely within the plain meaning of the Brown decision.

The board contends that since Lincoln School is not in form a component of a dual system of education for whites and Negroes such as was invalidated by Brown, and since the school contains 94 percent Negroes rather than 100 percent Negroes, there can be no violation of the 14th amendment or of the Brown principles.

But this contention misconstrues the underlying premise of the Brown rationale. That opinion while dealing with a State-maintained dual system of education, was premised on the factual conclusion that a segregated education created and maintained by official acts had a detrimental and deleterious effect on the educational and mental development of the minority group children.

CHILD'S FEELINGS CITED

The unanimous court, speaking through Chief Justice Warren, declared that segregation of Negro children, especially in their formative years "generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone."

The court further emphasized the necessity of giving these minority-group children the opportunity for extensive contact with other children at an early stage in their educational experience, finding such contact to be indispensable if children of all races and creeds were to become inculcated with a meaningful understanding of the essentials of our democratic way of life.

That the benefits inherent in an integrated education are essential to the proper development of all children has been reiterated time and again by the many witnesses in the present case, including those called by the defendant.

With these principles clear in mind, I see no basis to draw a distinction, legal or moral, between segregation established by the formality of a dual system of education, as in Brown, and that created by gerrymandering of school district lines and transferring of white children as in the instant case. Cf. *Comillion* v. *Lightfoot, supra.*

The result is the same in each case: the conduct of responsible school officials has operated to deny to Negro children the opportunities for a full and meaningful educational experience guaranteed to them by the 14th amendment. Further, the fact that the Lincoln School contains approximately 6 percent whites surely cannot divest Lincoln of its segregated character.

OPPORTUNITY LACKING

In a community such as New Rochelle, the presence of some 29 white children certainly does not afford the 454 Negro children in the school the educational and social contacts and interaction envisioned by Brown.

The Constitution imposed upon the board the duty to end segregation, in good faith, and with all deliberate speed. It is patently clear that this obligation has not been fulfilled.

The board argues that the study which it has given to the problem, and the surveys which it has requested, conclusively indicate its good faith. But, history is made, and constitutional rights vindicated, by deeds, not by talk, resolutions, and fine phrases. As already indicated, the board has discussed the problem, hired experts, made surveys, and constantly reiterated verbally its belief in racial equality and the necessity for equal opportunities.

But the fact remains that, in 11 years, not one single act was taken to implement these expressed principles. And, the board's attitude, as indicated by its overt conduct, has been one of negation; it has publicly disclaimed all responsibility for the Lincoln problems.

REBUILDING DISCUSSED

The board urges, however, compliance with an obligation to desegregate. In fact, this seems the one sure way to render certain continued segregation at Lincoln.

The board attempts to excuse its inaction on the ground that admittedly there is no "ideal" solution to the Lincoln problem. But, inability to find a perfect answer is hardly justification for refusal to do anything.

Its decision to rebuild the Lincoln School on the same site constitutes a start in the right direction.

It is most difficult to conceive of the rebuilding of the Lincoln School as good faith.

I cannot accept the proposition that in this relatively small community in the North, men of good will, wisdom, and ingenuity could not have devised a plan for the orderly desegregation of the Lincoln School.

If school boards could satisfy their obligations under the 14th amendment merely by waiting complacently until an "ideal" solution presented itself, the Brown decision, and the advances in the area of individual equality which it represents, would be a virtual nullity.

Brown, if it meant anything, meant much more than this. Necessarily implied in its proscription of segregation was the positive obligation of eliminating it. This obligation requires both good faith and action with dispatch, and I am compelled to the conclusion that the Board of Education of New Rochelle has complied with neither of these requirements in the present case.

I also conclude that if a board of education enters into a course of conduct motivated by a purposeful desire to perpetuate and maintain a segregated school, the constitutional rights of those confined within this segregated establishment have been violated.

This principle has already been recognized by the courts.

MOTIVATION CALLED VITAL

If such motivation is present, it makes no meaningful difference whether the segregation involved is maintained directly through formal separation, or indirectly, through over-rigid adherence to artificially created boundary lines, as in the present case.

Similarly, it is of no moment whether the segregation is labeled by the defendant as

"de jure" or "de facto," as long as the board, by its conduct, is responsible for its maintenance.

Constitutional rights are determined by realities, not by labels or semantics. The Supreme Court has affirmed that courts must look through the guise in which school officials seek to clothe their unconstitutional conduct.

Turning to the realities of the instant case, the inference is inescapable that the board's deliberate intransigence and inflexibility for the last eleven years in the face of public pressures and expert advice were motivated by a desire to continue Lincoln School as a racially segregated school, and thus not to alter the racial balance in the city's other elementary schools.

This becomes especially clear when the board's conduct subsequent to 1949 is examined against the background of the pre-1949 gerrymandering and transfer of white children. No other rational purpose can be attributed to the board's almost fanatically rigid adherence to district lines which were established in the first instance out of desire to separate whites and Negroes.

This does not necessarily mean that individual members of the board are segregationists or racists. But it is apparent that they have failed to accept or recognize their moral and legal responsibilities and have chosen instead to yield to pressures of certain groups who wish to avoid an influx of Negro children into the schools in their districts.

The defendant argues, however, that the neighborhood school policy is a reasonable and educationally sound one and thus that it is not violating the Constitution in adhering to it.

But this argument ignores the essential nature of the plaintiffs' position. They are not attacking the concept of the neighborhood school as an abstract proposition. They are, rather, attacking its application so as to deny opportunities guaranteed to them by the Constitution. It is a legal truism that "acts generally lawful may become unlawful when done to accomplish an unlawful end."

The neighborhood school policy certainly is not sacrosanct. It is valid only insofar as it is operated within the confines established by the Constitution. It cannot be used as an instrument to confine Negroes within an area artificially delineated in the first instance by official acts. If it is so used, the Constitution has been violated and the courts must intervene.

The board raises several other contentions in an attempt to justify its conduct. With respect to its refusal to institute permissive zoning, or to allow the Negro children to register at other schools at the start of the 1960 school year, the board argues that it would be violative of the law to accord Negroes special privileges not allowed to other minority groups.

OTHER SCHOOLS CITED

It points to the fact that several other elementary schools in New Rochelle have student compositions which are primarily of one religious or national-origin group, and argues that if permissive zoning privileges were afforded to the Lincoln pupils, the same privileges would have to be given to these other minorities. This, it says, would produce chaos throughout the school system.

But the Constitution is not this color-blind. The Brown decision dealt only with Negroes; it was based on factual findings which may not be applicable to other minority groups. Furthermore, the chaos envisioned by the board seems more fanciful than real, since no other groups or persons in New Rochelle have requested permission to attend schools outside the district in which they reside.

Nor is there evidence that any other school district was gerrymandered or deliberately set up to embrace an ethnic group. In addition, there are instances where it is not only justified, but necessary to provide for such allegedly "unequal treatment" in order to achieve the equality guaranteed by the Constitution.

REFERENDUM DISCUSSED

The board also contends, with respect to its decision to rebuild Lincoln School on its present site, that it is empowered by State law with the authority and duty to select locations for schools. The existence of this authority, however, is not questioned by the plaintiffs. But this power, like any other, must be exercised in accordance with the demands of the Constitution.

Similarly, the fact that the people of New Rochelle overwhelmingly approved this proposal by referendum is of no legal significance. Constitutional rights can certainly never be made dependent upon public choice; the consequences, if they were, need hardly be labored.

Finally, the board's principal contention, which it has asserted throughout these proceedings, is that the existence of an all-Negro or a predominantly-Negro school is not, in and of itself, a violation of the Constitution. The constant reiteration of this argument indicates the board's preoccupation with semantics at the expense of realities. This is not a case where the existence of an all-Negro school is an unfortunate fortuity.

The Lincoln School was established as an all-Negro school by the gerrymandering of district lines, and by the transfer of white children residing in the district to schools outside the district.

The Board of Education of the City of New Rochelle was responsible for both of these policies. Subsequent to 1949, the board, by its arbitrary rejection of all proposals for change, has purposefully maintained Lincoln as a segregated school. This decision is rendered on the facts in this case and holds that, in the instant situation, constitutional rights have been violated.

Litigation is an unsatisfactory way to resolve issues such as have been presented here. It is costly, time consuming—causing further delays in the implementation of constitutional rights—and further inflames the emotions of the partisans.

Men of good will, such as the individual members of the board submit they are, could have solved and still can solve the problem by exercising the judgment and understanding for which they presumably were chosen. The school board is a public body charged with a public responsibility.

This responsibility must be exercised solely in the best interests of the children attending the schools. The board cannot relieve itself of this responsibility by giving the community whatever result might gratify the impulse of the moment. Nothing can be permitted to conflict with the board's moral and legal obligation.

DIRECTS COMPLIANCE

In determining the manner in which the Negro children residing within the Lincoln district are to be afforded the opportunities guaranteed by the Constitution, I will follow the procedure authorized by the Supreme Court in *Brown* v. *Board of Education*, and utilized by many district courts in implementing the Brown principles.

Thus, I deem it unnecessary at this time to determine the extent to which each of the items of relief requested by plaintiffs will be afforded. Instead, the board is hereby ordered to present to this court, on or before April 14, 1961, a plan for desegregation in accordance with this opinion.

EXHIBIT 5

THE IMAGE OF THE UNITED STATES AT HOME AND ABROAD

(Address by Mr. Marion A. Wright, member of the board of directors and former chairman of the Southern Regional Council, and member of the North Carolina Advisory Committee to the U.S. Commission on Civil Rights, before the 1960–61 Leadership Clinic, November 17, 1960, Detroit, Mich.)

In a Scottish village some time ago a 16-year-old boy was roughly handled by two policemen. His injuries were minor and superficial. From the viewpoints of force employed and damage inflicted, the incident was not one of gravity.

But, in the British view, the facts that any unnecessary force was employed and any damage was inflicted in themselves made the incident one of extreme public concern. The local Scottish authorities seemed to move slowly in imposing discipline upon the officers. Throughout the British Isles there developed a tide of public sentiment demanding that action be taken. Summit conferences, the cold war, the conquest of space, of course received a share of British attention. But they were secondary to one case of official mistreatment of a lone youth.

Debate erupted in the House of Commons. Prime Minister Macmillan turned his attention from cosmic matters long enough to make a statement on the floor. Government created a board of inquiry to learn the facts and recommend appropriate action. Traditional British justice found full expression.

Mr. Churchill upon another occasion, when the Empire stood in mortal peril from searing and scalding bombs, referred to that as being Britain's finest hour. Time will tell. But surely a profound national concern with the invasion of rights of a single Scottish boy reflects a quality in Englishmen no less praiseworthy than the physical courage with which they bore the ordeal from the skies.

What American did not receive a momentary lift of spirit from the incident? Who among us was not proud to have a relationship by blood, by tradition, or by nurture upon the same common law, with the people who employed the full resources of government to redress a trivial wrong?

I refer to this incident because we are concerned here tonight with national images. What happened in the case of the Scottish boy served to help create in our minds an image of Great Britain, more particularly, of British justice. One swallow doesn't make a summer and one incident doesn't make an image. But we can dredge up from depths of memory other incidents illustrating British concern with the civil rights of British subjects.

From a synthesis of these there emerges a conception of a nation resolute always that the full power of government shall be employed to maintain the rights of the humblest citizen.

National images arise, then, from acts of government. We have been through some weeks of debates of the national prestige. Is it an alltime high, an alltime low, or just middlin', as we say down my way? I listened to all of the debate, as I am sure you did. We heard much of missiles, of satellites, of nuclear-powered submarines, of the national economy. The assumption seemed to be that prestige could be statistically computed; it was largely a matter of warheads and stockpiles.

I don't want to resurrect that debate. Certainly, I don't want to get into a semantic question involving prestige and image. But, diffidently, I suggest to Mr. Nixon and Mr. Kennedy that, above all other, the image which we should strive to create abroad is of a nation deeply concerned with strict and literal enforcement of the rights of every citizen of this Republic.

Of course, I do not limit that concern to the Federal Government. Any single American State can create a national image. Virginia, with its massive resistance; Arkansas, with its use of the National Guard to keep a few Negro pupils out of public schools; Louisiana, with its special legislative session; North Carolina, with its token integration; Mississippi, with its Emmet Till case; Georgia and Alabama, with their callous mistreatment of Dr. Martin Luther King; South Carolina, with its patrolmen turning firehoses on peaceful demonstrators—all of these and more besmirch the national image.

Foreign nationals do not think of individual States as perpetrators of these infamies. In view of the dual nature of our citizenship, they are merely practical when they attribute to the Nation, as a whole, responsibility for such outrages.

A favorite phrase of southern politicians is "northern meddling in our affairs." The idea seems to be that Yankees should keep their cottonpicking hands off affairs that are none of their business. But, of course, they are your business. The persons against whom official persecution is directed are, of course, citizens of particular States. They are no less citizens of America. Indeed, they are, in a broader sense, citizens of the world. There will come a time when world government will concern itself with injustice done to any citizen of this globe.

Of course, one of the great differences between North and South is that, in the South there remains in constitutions and statute books a formidable array of laws designed to preserve segregation. I think it does not take an expert in constitutional law to declare that these laws will ultimately be struck down. But much time will be required; meanwhile one violates them at his peril. Outside of the South, if I may risk the generalization, no such laws obtain. Hence, I will assume that there is not to be found here an actual exertion of State power to operate detrimentally against any member of a minority group.

I am not so sure about your cities, because I do not know where the line is drawn between official municipal action and mere mass public pressure. But, I must say that we in the South occasionally read of serious resistance in New York, Detroit and elsewhere to integration of public schools and in housing. We read of exclusion from hotels and other forms of racial discrimination. Let me say to you quite frankly that such events are joyfully hailed by the southern segregationist. They bring him aid and comfort. They strengthen his hand.

But we are here concerned with national images. Such may be created by city action. I mention the names of certain cities—Little Rock, Ark.; Clinton, Tenn.; Montgomery, Ala.; Poplarville, Miss.; Tuscaloosa, Ala. Those may be lovely and charming cities, but their names evoke sordid memories. In all countries the names are familiar. They and the train of ideas of which they are the core contribute to the picture we present to the rest of the world. They help to create the national image.

Let no city, then, indulge the fiction that what it does—distinctions which it makes in the treatment of its citizens—have no extramural effect. Consequences of municipal action may develop in the world's remote corners. They help to create abroad, not merely an image of a city, but an image of this Nation as well.

Activities of the Nation, the State, and the city by no means complete the picture, tell the whole story. There remains the role of the private citizen, the largest role of all.

In more than a figurative sense, each one of us is an ambassador of his country. We represent, speak for it. The American abroad viewed by other nationals, carries with him a fraction of his country's essence. And, at home, seen in his native habitat by a foreigner, he is part of a composite embodiment of national aim and purpose.

All of us, of course, are not ugly Americans. But the species exists in sufficient number to have impact on world opinion. There is, for example, the hotel clerk determining what guests he will accept; the real estate broker deciding what people shall live in certain sections of a city; the lunch counter operator choosing the color of his customers; the ticket seller passing judgment on who shall see what shows and where he will sit; the taxi driver selecting his fares, and so on—in the keeping of these, in the decisions made by little men and women, rest the Nation's name and fame.

Our Supreme Court, of course, announces vastly important decisions affecting men's relations with each other. No one would detract for one moment from the significance of such pronouncements. But they come from men who are no cross section of the country's thinking, who are aloof and scholarly, who write from chill and distant heights. We will not be wholly judged abroad by the decisions of such men.

But the American genius, the spirit and character of our people, is revealed in the day-to-day decisions of average men and women, their opinions, expressions, gestures, laughs and frowns—whatever discloses, consciously or subconsciously, their predelections, biases, prejudices, likes and dislikes, their attitudes toward their fellows.

But it is more than decisions themselves; it is in part the manner in which they are made and announced.

Recently I rode through North Carolina with a Negro friend whose son was one of a few nonwhites attending a State university. My friend asked his son, "Why do you come home every weekend?" The reply was, "To get out of that icebox."

It seems that the boy's fellow students were punctilious in their relations and attitudes. But they withheld the warmth and informality of full friendship and acceptance.

The icily correct may wound as deeply as the vulgarly brutal.

So, then, the image of a nation is found in the conduct of its government—at all levels—and the manners of its citizens. Perhaps more in the manners. For, as Emerson observed, "Your manners are always under examination and by committees little suspected * * * but are awarding or denying you very high prizes when you least think of it."

A welter of private acts, fully as significantly as official edicts, determines our Nation's place and acceptance in the forum of world opinion.

For example, no official act of President Theodore Roosevelt advanced the cause of civil rights half so effectively as his entertainment of Booker T. Washington at the White House, a purely private activity. I have in recent years, when some cities are selling their golf courses, rather than permit Negroes to play, and other cities are throwing Negro players into jail—I have thought how electric would have been the effect of the President's example if a Negro friend had been a member of his foursome out at Burning Tree.

The example of the private citizen, of course, carries no such weight. But he is not thereby relieved of responsibility to set the example. Examples are the stuff of which public policy is fashioned. And the sum total of the examples creates the image of the Nation.

There is a further feature about example. The effect is not limited to the area of action in which it occurred. It invades other areas.

The White Citizens Councils of the South were formed for the sole purpose of "keeping the Negro in his place," of preserving racial segregation. They were not effectively rebuked. Many southern politicians nestled close to them. They achieved a certain respectability. But not too long a time elapsed until synagogues were bombed, and, in all of the area which they infest, in the recent political campaign religious bigotry was most intense and virulent. Examples of racial intolerance move the suggestible to demonstrate intolerance in religion, and, indeed, in the whole realm of thought and conviction.

It was almost 200 years ago that Thomas Jefferson wrote that we must "have a decent regard to the opinion of mankind." The phrase has lain somewhat dormant in consciousness. Why have we so suddenly begun to appreciate its wisdom?

Is it not because of the present balance of power in the world and the competition between systems?

On a day in September 13 new African nations became members of the United Nations. The nations of Africa and Asia now constitute almost 50 percent of the membership. They are nonwhite members. Their destinies have heretofore been very largely in white hands. The converse could become true. I hope it will be more consistent with truth to say that the color of hands will not enter into the destiny of any nation, or any individual, for that matter, but that the combined wisdom of all men, distilled at the United Nations, will shape the destinies of us all.

But certainly the emergence of nonwhite peoples throughout the world, their new position of international authority, has a lesson for all of us. We need desperately to get along with these new fellow members in the family of nations. We need their sympathy and support, as, indeed, they need ours. Our attitude can be crucial in securing and holding sympathy and support.

Now, the civil rights movement in this country is designed to guarantee the constitutional rights of all people—including colored people. You may be sure that the peoples of Asia and Africa know what is happening to their brethren in this country. The Russian propaganda machine sees to that. So they are aware of the resistance movement in the South, aware of speeches made in Washington and in the State capitols, aware of the shabby and fraudulent tricks used to deny rights to people of color in the South, aware of burnings, boycotts and bombings, aware of resistance to school integration in Detroit.

Let us suppose that the colored citizens of Ghana were simultaneously informed of certain facts. They were told that the U.S. Government had made a grant to Ghana for the purpose of building a dam. They were also told that a State had announced no Negro should attend its law school; or that Negroes must ride in the back end of buses in a certain city; or that another city sold its golf course rather than permit Negroes to play on it; or that a United States Senator gave active support to an organization set up to keep Negroes in their place. And so on indefinitely. Which kind of facts, do you suppose, would have the larger impact upon the minds of Ghana citizens? You and I know that the personal insult to men of color would far outweigh the national gesture.

So the bold and stirring program of aid to the new African nations which President Eisenhower presented to the United Nations may be completely nullified by the official policy of a lone State. The world may be plunged into chaos or holocaust, men by millions may be seared and pulverized, because Negroes are kept out of schools.

The choice may not be between integration and segregation. It may be between integration and disintegration.

There is appreciation of this solemn and evident truth. Both political parties in their platforms went far beyond prior commitments. Such southern Democratic political stalwarts as Byrnes, Byrd, Talmadge, and

Eastland were overwhelmed. The courts, too, give evidence that their patience with southern delaying tactics is wearing thin. These have been developments of the year 1960. But these events are dwarfed by a movement having no political, judicial or legal origin.

Perhaps the greatest compliment ever paid one man by another was that paid Benjamin Franklin by Tom Paine. When asked where he was born, Paine replied, "I was born in a cafe in Paris the night I met Ben Franklin."

In a real sense the culminating drive against segregation had its birth at a lunch counter in Greensboro, N.C., on February 1, 1960, when some Negro college students ordered a cup of coffee.

The year 1960 may have interest to the historian for many reasons. Not the least of these will be because an idea emerged in the South—an idea which had application to the entire region.

You will note that I do not say the idea was then and there conceived. I say it emerged and it had application. For the idea itself—nonviolent resistance to tyranny—was old when the pyramids were raised. Nebuchadnezzar made his great image of gold and set it up on the plains of Babylon. He issued his decree, directing that "at what time ye hear the sound of the cornet, flute, harp, sackbut, psaltery, dulcimer, and all kinds of music, ye fall down and worship the golden image that Nebuchadnezzar the king hath set up."

But Shadrach, Meschach, and Abednego to his face told Nebuchadnezzar "Be it known unto thee, O king, that we will not serve thy gods, nor worship the golden image thou hast set up."

And so they walked unscathed through the fiery furnace.

So on the plains of Babylon there was born an idea. Some centuries later, in the city of Jerusalem, it was expressed: "Render unto Caesar the things that are Caesar's and unto God the things that are God's." And so, by way of Walden Pond in the words of Thoreau, by way of India in the salt marches of Gandhi, by way of Montgomery, Ala., in the person and example of Martin Luther King, the idea on February 1, 1960, entered a lunch counter in Greensboro, N.C.

There is epic drama in the emergence of such an idea at such a time and place. It emerged in the South in the year 1960. There is a jarring contrast between the gentle and humane philosophy of nonviolence and the prevailing spirit and mood. A Sophocles or a Shakespeare would have arranged it thus.

Traditionally, the South is wedded to violence. It would be an exercise in morbidity to lead you through the maze of figures which indicate the southern tendency to rely upon guns and clubs and dynamite as substitutes for due process of law. It may be sufficient for our purposes to point out that, in the Southern States, the per capita rate for crimes of violence varies from one and a half to one and three-fourth times the national average. It is substantially higher than the rate of such uncivilized and benighted communities as Chicago and New York. More than incidentally, violence has often been the ready tool of some segregationists.

We hear much of our way of life. I am never sure what our friends mean, but it is the way of violence.

It was against this backdrop of raw, red violence, into this world of bared fangs and claws, that the idea of nonviolence entered a Greensboro lunchroom on February 1.

Here, then, for the resistant South, is a completely new concept, certainly a completely new tactic in securing social change.

It is an exclusively Negro conception. The movement that rocked the South was the product of brains of Negro boys in a college dormitory at Greensboro. Inevitably the insistent question will be asked throughout the South: If Negro brains can conceive and execute so unorthodox and masterly a campaign, could not such brains be profitably utilized in all other phases of southern life?

We are concerned with the national image. That image acquired new luster from the conduct of college boys and girls, calm, poised and resolute, who demonstrated that moral power alone, schooled, channeled and disciplined, is the inevitable and ultimate victor over oppression.

The initial reaction to demand for lunch-counter service was to close the counters. Mark the same reaction in other fields. Close the golf courses. Close the swimming pools. Close the parks. Close the libraries. Close the schools.

Now, if civilization does not inhere in such public instrumentalities, they are at least its expressions. Snip them off one by one, and, one step at a time, you withdraw from civilization. Finally, at the end of this somber process, you have attained complete savagery. Never before in human history have men openly advocated an inversion of the evolutionary process.

That is, not for human beings, I understand that a few scientists are crossbreeding horses in an effort to reproduce the dwarfed and stunted Eophippus, primal ancestor of the breed of present-day horses. The bunglers who propose to close schools and libraries would make cavemen of us all.

Few among us go that far. But those who seek to preserve segregation, in the South or in Detroit, retard, if they do not reverse, the normal evolution of society into finer forms.

Men grow by experience, by contact, by absorption. Segregation limits the area of contact, the range of experience. Shut out from the lives of white and Negro alike has been the rich and rewarding experience of acquaintance with those who would bring to association and friendship a wealth of new background and social potential. Whites should realize that they, too, are victims of the order they have created.

Occasionally one reads of a demented parent who has for years kept his child secluded in some attic or basement, shut off from contact or association with other humans. The police find the child, undernourished, stunted, filled with fantasies and delusions, ridden with misconceptions and fears. Such life becomes when the world is shut out.

Members of both races, without awareness of it, have undergone an isolation differing only in degree from that of the unfortunate child. We, too, have lived without the mainstream of life. The circle of those whom we might have known, who might have enlarged the range of our sympathies and understanding, who might have enriched our lives by imparting into them a new breadth and depth—that circle has been racially constricted. We, too, have lived in a world of myth and fantasy and fear. We devise our own delusions of grandeur and of inferiority.

We begin now to tug at the bonds. We seek escape and exit into a brighter and better world. When, happily, full release has been achieved, we will laugh at the fears which so long possessed us and begin, at last, to devote our lives to noble purposes and happy ends.

EXHIBIT 6

[From the Democratic platform adopted July 12, 1960]

THE RIGHTS OF MAN

IV

On its values and goals the quality of American life depends. Here above all our national interest and our devotion to the rights of man coincide.

Democratic administrations under Wilson, Roosevelt, and Truman led the way in pressing for economic justice for all Americans.

But man does not live by bread alone. A new Democratic administration, like its predecessors, will once again look beyond material goals in the spiritual meaning of American society.

We have drifted into a national mood that accepts payola and quiz scandals, tax evasion and false expense accounts, soaring crime rates, influence peddling in high Government circles, and the exploitation of sadistic violence as popular entertainment.

For 8 long critical years our present national leadership has made no effective effort to reverse this mood.

The new Democratic administration will help create a sense of national purpose and higher standards of public behavior.

Civil rights

We shall also seek to create an affirmative new atmosphere in which to deal with racial divisions and inequalities which threaten both the integrity of our democratic faith and the proposition on which our Nation was founded—that all men are created equal. It is our faith in human dignity that distinguishes our open free society from the closed totalitarian society of the Communists.

The Constitution of the United States rejects the notion that the rights of man means the rights of some men only. We reject it too.

The right to vote is the first principle of self-government. The Constitution also guarantees to all Americans the equal protection of the laws.

It is the duty of the Congress to enact the laws necessary and proper to protect and promote these constitutional rights. The Supreme Court has the power to interpret these rights and the laws thus enacted.

It is the duty of the President to see that these rights are respected and that the Constitution and laws as interpreted by the Supreme Court are faithfully executed.

What is now required is effective moral and political leadership by the whole executive branch of our Government to make equal opportunity a living reality for all Americans.

As the party of Jefferson, we shall provide that leadership.

In every city and State in greater or lesser degree there is discrimination based on color, race, religion, or national origin.

If discrimination in voting, education, the administration of justice, or segregated lunch counters are the issues in one area, discrimination in housing and employment may be pressing questions elsewhere.

The peaceful demonstrations for first-class citizenship which have recently taken place in many parts of this country are a signal to all of us to make good at long last the guarantees of our Constitution.

The time has come to assure equal access for all Americans to all areas of community life, including voting booths, schoolrooms, jobs, housing, and public facilities.

The Democratic administration which takes office next January will therefore use the full powers provided in the Civil Rights Acts of 1957 and 1960 to secure for all Americans the right to vote.

If these powers, vigorously invoked by a new Attorney General and backed by a strong and imaginative Democratic President, prove inadequate, further powers will be sought.

We will support whatever action is necessary to eliminate literacy tests and the payment of poll taxes as requirements for voting.

A new Democratic administration will also use its full powers—legal and moral—to insure the beginning of good-faith compliance with the constitutional requirement that

racial discrimination be ended in public education.

We believe that every school district affected by the Supreme Court's school desegregation decision should submit a plan providing for at least first-step compliance by 1963, the 100th anniversary of the Emancipation Proclamation.

To facilitate compliance, technical and financial assistance should be given to school districts facing special problems of transition.

For this and for the protection of all other constitutional rights of Americans, the Attorney General should be empowered and directed to file civil injunction suits in Federal courts to prevent the denial of any civil right on grounds of race, creed, or color.

The new Democratic administration will support Federal legislation establishing a Fair Employment Practices Commission to secure effectively for everyone the right to equal opportunity for employment.

In 1949 the President's Committee on Civil Rights recommended a permanent Commission on Civil Rights. The new Democratic administration will broaden the scope and strengthen the powers of the present Commission and make it permanent.

Its functions will be to provide assistance to communities, industries, or individuals in the implementation of constitutional rights in education, housing, employment, transportation, and the administration of justice.

In addition, the Democratic administration will use its full executive powers to assure equal employment opportunities and to terminate racial segregation throughout Federal services and institutions, and on all Government contracts. The successful desegregation of the armed services took place through such decisive executive action under President Truman.

Similarly, the new Democratic administration will take action to end discrimination in Federal housing programs, including federally assisted housing.

To accomplish these goals will require Executive orders, legal actions brought by the Attorney General, legislation, and improved congressional procedures to safeguard majority rule.

Above all, it will require the strong, active, persuasive, and inventive leadership of the President of the United States.

[From the Republican platform adopted July 27, 1960]

BUILDING A BETTER AMERICA

CIVIL RIGHTS

This Nation was created to give expression, validity, and purpose to our spiritual heritage—the supreme worth of the individual. In such a Nation—a Nation dedicated to the proposition that all men are created equal—racial discrimination has no place. It can hardly be reconciled with a Constitution that guarantees equal protection under law to all persons. In a deeper sense, too, it is immortal and unjust. As to those matters within reach of political action and leadership, we pledge ourselves unreservedly to its eradication.

Equality under law promises more than the equal right to vote and transcends mere relief from discrimination by government. It becomes a reality only when all persons have equal opportunity without distinction of race, religion, color or national origin, to acquire the essentials of life—housing, education, and employment. The Republican Party—the party of Abraham Lincoln—from its very beginning has striven to make this promise a reality. It is today, as it was then, unequivocally dedicated to making the greatest amount of progress toward that objective.

We recognize that discrimination is not a problem localized in one area of the country, but rather a problem that must be faced by North and South alike. Nor is discrimination confined to the discrimination against Negroes. Discrimination in many, if not all, areas of the country on the basis of creed or national origin is equally insidious. Further we recognize that in many communities in which a century of custom and tradition must be overcome heartening and commendable progress has been made.

The Republican Party is proud of the civil rights record of the Eisenhower administration. More progress has been made during the past 8 years than in the preceding 80 years. We acted promptly to end discrimination in our Nation's Capital. Vigorous Executive action was taken to complete swiftly the desegregation of the Armed Forces, veterans' hospitals, Navy yards, and other Federal establishments.

We supported the position of the Negro schoolchildren before the Supreme Court. We believe the Supreme Court school decision was right and should be carried out in accordance with the mandate of the Court.

Although the Democratic-controlled Congress watered them down, the administration's recommendations resulted in significant and effective civil rights legislation in both 1957 and 1960—the first civil rights statutes to be passed in more than 80 years.

Hundreds of Negroes have already been registered to vote as a result of Department of Justice action, some in counties where Negroes did not vote before. The new law will soon make it possible for thousands and thousands of Negroes previously disenfranchised to vote.

By Executive order, a Committee for the Elimination of Discrimination in Government Employment has been reestablished with broadened authority. Today, nearly one-fourth of all Federal employees are Negro.

The President's Committee on Government Contracts, under the chairmanship of Vice President Nixon, has become an impressive force for the elimination of discriminatory employment practices of private companies that do business with the Government.

Other important achievements include initial steps toward the elimination of segregation in federally aided housing; the establishment of the Civil Rights Division of the Department of Justice, which enforces Federal civil rights laws; and the appointment of the bipartisan Civil Rights Commission, which has prepared a significant report that lays the groundwork for further legislative action and progress.

The Republican record is a record of progress—not merely promises. Nevertheless, we recognize that much remains to be done.

Each of the following pledges is practical and within realistic reach of accomplishment. They are serious—not cynical—pledges made to result in maximum progress.

1. Voting: We pledge—

Continued vigorous enforcement of the civil rights laws to guarantee the right to vote to all citizens in all areas of the country.

Legislation to provide that the completion of six primary grades in a State accredited school is conclusive evidence of literacy for voting purposes.

2. Public schools: We pledge—

The Department of Justice will continue its vigorous support of court orders for school desegregation. Desegregation suits now pending involve at least 39 school districts. Those suits and others already concluded will affect most major cities in which school segregation is being practiced.

It will use the new authority provided by the Civil Rights Act of 1960 to prevent obstruction of court orders.

We will propose legislation to authorize the Attorney General to bring actions for school desegregation in the name of the United States in appropriate cases, as when economic coercion or threat of physical harm is used to deter persons from going to court to establish their rights.

Our continuing support of the President's proposal, to extend Federal aid and technical assistance to schools which in good faith attempt to desegregate.

We oppose the pretense of fixing a target date 3 years from now for the mere submission of plans for school desegregation. Slow-moving school districts would construe it as a 3-year moratorium during which progress would cease, postponing until 1963 the legal process to enforce compliance. We believe that each of the pending court actions should proceed as the Supreme Court has directed and that in no district should there be any such delay.

3. Employment: We pledge—

Continued support for legislation to establish a Commission on Equal Job Opportunity to make permanent and to expand with legislative backing the excellent work being performed by the President's Committee on Government Contracts.

Appropriate legislation to end the discriminatory membership practices of some labor union locals, unless such practices are eradicated promptly by the labor unions themselves.

Use of the full-scale review of existing State laws, and of prior proposals for Federal legislation, to eliminate discrimination in employment, now being conducted by the Civil Rights Commission, for guidance in our objective of developing a Federal-State program in the employment area.

Special consideration of training programs aimed at developing the skills of those now working in marginal agricultural employment so that they can obtain employment in industry, notably in the new industries moving into the South.

4. Housing. We pledge action to prohibit discrimination in housing constructed with the aid of Federal subsidies.

5. Public facilities and services: We pledge—

Removal of any vestige of discrimination in the operation of Federal facilities or procedures which may at any time be found.

Opposition to the use of Federal funds for the construction of segregated community facilities.

Action to insure that public transportation and other government authorized services shall be free from segregation.

6. Legislative procedure: We pledge our best efforts to change present rule 22 of the Senate and other appropriate congressional procedures that often make unattainable proper legislative implementation of constitutional guarantees.

We reaffirm the constitutional right to peaceable assembly to protest discrimination in private business establishments. We applaud the action of the businessmen who have abandoned discriminatory practices in retail establishments, and we urge others to follow their example.

Finally we recognize that civil rights is a responsibility not only of States and localities; it is a national problem and a national responsibility. The Federal Government should take the initiative in promoting intergroup conferences among those who, in their communities, are earnestly seeking solutions of the complex problems of desegregation—to the end that closed channels of communication may be opened, tensions eased, and a cooperative solution of local problems may be sought.

In summary, we pledge the full use of the power, resources and leadership of the Federal Government to eliminate discrimination based on race, color, religion or national origin and to encourage understanding and good will among all races and creeds.

THE UPPER COLORADO RIVER STORAGE PROJECT

Mr. McGEE. Mr. President, one of the key points in the platform of President Kennedy and his administration was the development of western resources. There is a need for expanded economic growth, rising to the level which our own expectations and international frontiers now require, which has commanded from us a searching inquiry into a new economic base to sustain such a responsibility.

We believe that a portion of this new economic base can be found in a fuller utilization of the resources of the West. Particularly in some of the Western States, our concern centers on the upper Colorado River storage project. In respect to this project, we have felt that up to now, there has been reluctance to examine the power revenue potential of the project realistically in light of these needs. Without such an examination, we cannot move ahead fast enough to keep pace with these mounting needs. In this regard, recently I have engaged in correspondence with the Department of the Interior.

I am delighted to report that as a result of an exchange with the Department of the Interior we have received assurances from the Department, that such a reexamination, in the form of a new economic analysis of the future power revenues of the project, will be undertaken forthwith.

I extend my praise and my warm words of congratulation to the new administration for bringing this breath of fresh air directly from the New Frontier to the potential of a new West. I should like also to thank Secretary Udall and Under Secretary Carr personally for the understanding of the problems of the upper basin which they have demonstrated.

Mr. President, I ask unanimous consent that my letter requesting this study and Mr. Carr's reply be printed in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JANUARY 24, 1961.

The Honorable STEWART L. UDALL,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: The States of the Upper Colorado River Basin have a very strong interest in the rapid development of the upper Colorado River storage project. If these States are to provide the livelihood for a rapidly increasing population, the tax base for vital public programs on the local State and Federal level and the increase in productive capacity, which is necessary to the sound growth of the American economy, it is necessary that this project proceed as rapidly as possible.

Many of us who represent these States in the Congress have become gravely concerned with the future of the project because of our awareness that progress relies upon Department of Interior estimates of the future availability of the project's power revenue.

The financing of repayment contracts for project participating units can only proceed as fast as the Department's economic judgment of these future revenues will allow. The judgment which is now used is contained in an economic analysis undertaken in 1958. It is my opinion that this judgment was conditioned by an overly conservative administration view of the rate at which western and U.S. economic development was likely to proceed.

It seems probable that the policies of the new Kennedy administration will provide a stimulus to economic growth which will increase this rate and which will make the 1958 analysis even more inaccurate.

In addition, the former Secretary of Interior has approved recently, a report which recommends the construction of a Federal transmission system for the project which should be the means for strengthening marketing of project power; it should, for example, make possible more advantageous firming arrangements. By these and other means, the States of the upper basin should secure, not only better service to power users, but also materially enhanced revenues available to aid reclamation development. The November 15, 1960, report of the engineering committee of the Colorado River Basin Consumer's Power, Inc., indicates that an all-Federal transmission system like the one approved by the Secretary of the Interior on January 17, 1961, might yield as much as $650 million more than would a non-Federal system in revenues.

Reexamination of the future power revenue potential of the project which almost certainly discloses other factors which, taken together with those which I have mentioned, make the 1958 analysis a poor basis indeed upon which to plan the rate of construction of these participating units.

As it now stands, the 1958 analysis constitutes an unjust obstacle to the economic development not only of my own State, but of the whole Upper Colorado River Basin. I therefore urge strongly that the Department, under your leadership, undertake a new economic analysis of the future power revenues of the upper Colorado River storage project. Only, it seems to me, if we obtain a new judgment which is more consistent with the economic potential of our area, will we be able fully to meet the challenge of reaching that potential.

Sincerely,

GALE W. MCGEE.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 17, 1961.

Hon. GALE W. MCGEE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MCGEE: Mr. Charles Whittemore, of your office, called on March 14 and we discussed in more detail your request that the Department restudy the 1958 economic analysis regarding the Colorado River storage project.

In view of our discussions, I want to inform you that we will make a thorough reexamination of the future power revenue potential of the project and in so doing we will keep in mind that one of the assumptions will be the type of dynamic power marketing programs advocated by the President and Secretary Udall. There is evidence that the overall growth rate of the area and the country will rise rapidly in the next few years. Public and private power suppliers in meeting this sustained expansion may be called upon to supply nearly three times as much power as early as 1980.

In view of these conditions and the items pointed out in the President's message on natural resources, we believe that a new look is entirely justified. In making this reanalysis, we will certainly approach it from the broadest possible view. This Department is, of course, very much aware of the part that the State of Wyoming has played in reclamation development and we welcome your deep interest in the subject. You realize, I am sure, that to make the type of analysis outlined in our discussions will require several months. However, we will be reporting to you as soon as practicable.

Sincerely yours,

JAMES K. CARR,
Under Secretary.

THE PEACE CORPS

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Sheridan, Wyo., Press of March 20, 1961, in respect to the President's Peace Corps.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SAME ENDS IN THE SAME SPIRIT

The Kennedy Peace Corps, a pool of trained men and women sent overseas to help foreign nations meet urgent needs for skilled manpower, has lit the imagination of the public, particularly its younger segment.

President Kennedy first struck the spark in a message to Congress March 1, in which he recommended establishment of a permanent Peace Corps, and announced a pilot program. He said:

"Throughout the world the people of the newly developing nations are struggling for economic and social progress, which reflects their deepest desires. Our own freedom, and the future of freedom around the world, depended, in a very real sense, on their ability to build growing and independent nations where men can live in dignity, liberated from the bonds of hunger, ignorance, and poverty.

"One of the greatest obstacles to the achievement of this goal is the lack of trained men and women with the skill to teach the young and assist in the operation of development projects—men and women with the capacity to cope with the demands of swiftly evolving economies, and with the dedication to put that capacity to work in the villages, the mountains, the towns, and the factories of struggling nations."

Kennedy visualizes the Peace Corps as a group that will supplement technical advisers by offering technical skills needed by developing nations.

They would teach in primary and secondary schools, especially as part of national English language teaching programs. They would participate in the worldwide program of malaria eradication. They would provide instruction and operation of public health and sanitation projects, and would aid in village development through school construction and other programs. They would help farmers to use modern implements and techniques in agriculture.

The corps would not be limited to the young, or to college graduates. All Americans, who qualify, would be eligible. Peace Corps personnel would be made available through private voluntary agencies, through oversea programs of colleges and universities, through assistance programs of international agencies, through programs of the U.S. Government, through programs of the corps itself.

Applicants would be thoroughly screened, and each recruit would receive training varying from 6 weeks to 6 months. Corps members would receive no salary, but would receive an allowance sufficient to meet basic needs. Basic to the program, as the President outlined it, is that corps members live simply and unostentatiously among the people they help.

The Peace Corps idea, because it offers service for service sake, because it taps a deep reservoir of heart, because it offers experience people often dream about, and because it represents a real opportunity to build democracy, while building nations, has reaped a heavy and favorable response.

And it merits this response. Most American aid is based on money, rather than people. It has been viewed as a buy-off, and the nations receiving it have known and many have resented this approach.

The Peace Corps program offers a chance for people to help people on a shoulder-to-shoulder level. It is the best and the most practical method of acquainting the people of foreign lands with the real purposes and the real sincerity of the American people and the democratic process.

Its potential is great. It should be endorsed by all those who have ever taken a basket of flowers to a sick friend, who have ever taken a sack of groceries to an unemployed family, and who have ever offered help to a dejected and lonely stranger. The Peace Corps is intended to meet these same ends in the same spirit.

FAKE MAIL BY ORGANIZED INTEREST GROUPS

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the RECORD a column written by Mr. Ralph McGill and published in the Washington Evening Star of March 23, 1961, describing how organized groups can concentrate fake mail petitions to Representatives and Senators in an attempt to influence their positions on public questions.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

FAKE MAIL FLOODS CAPITOL HILL—ORGANIZED INTEREST GROUPS BLAMED FOR CONTRIVED LETTERS TO CONGRESS

(By Ralph McGill)

President Kennedy was quite accurate in speaking sharply about the "well-organized interest groups" which are promoting mail campaigns to the Congress seeking to give an impression his program lacks public support.

Such campaigns are familiar. Happily they almost always end up by overreaching themselves. A few years ago an investigation into a flood of mail led to revelations of hundreds of fake signatures to letters and telegrams.

Today, there are a few new techniques. There are, for example, organizations which, for a fee, will add any person's name to form letters. They even advertise in magazines and publications representing the extreme rightwing of American conservatism. A couple of samples will illustrate:

"Conservatives: Help block leftist measures and support sound ones, by sending skillfully prepared and carefully written letters to key Congressmen and newspapers, etc. * * * Join _____, the legislative service that keeps an eye on legislation and alerts conservatives."

Another is more subtle:

"Why do we fail? Perhaps we fail to sell conservative ideas * * * consult a communications specialist."

In other words, under this for-a-fee idea, these letters to Congress agencies will decide which bills they consider leftist, and which sound. The voter will not have to write the letters. They will be written for him. Note the promise. The contents will be skillfully prepared. The person who pays the fee to have his name used in floods of letters presumably will have his vanity soothed by the vicarious pleasure of receiving the routine answers which harrassed congressional secretaries send out.

There are a number of these press-the-button-for-letters-to-Congress agencies. In the long run, this will be beneficial. The most obtuse Congressmen cannot forever fail to see that these so-called conservative organizations take him for a fool who will be influenced by such mass-produced mail campaigns. And certainly, the citizen who hires some faceless persons to write his letters and make decisions for him about leftists and soundness can't really be considered as being very influential. What he has done is put some smart boys in the business of making an easy living out of turning out offset printed letters which look like the real thing.

There are, of course, the large special interest lobbies which do the same thing. Between them, they can put stacks of mail on congressional desks.

But the wise Congressman will hardly fail to see that the polls show a very substantial percentage of the American people like what President Kennedy is doing.

The Congressmen will realize also that it was the same sources now producing mail campaigns against the Kennedy program which contributed to the stagnation of the Eisenhower administration program. They were responsible for eliminating the word "modern" from association with the word "Republicanism" within weeks after that dynamic phrase was launched at the 1956 convention in San Francisco. They were, in a very real sense, in part responsible for the failure of our foreign policy to produce ideas and contributed, too, to the economic decline which began in 1958. Not being willing now to make an open, direct attack on the Kennedy administration, they try to come in from the flanks.

The voters, meanwhile, are beginning to see he is committed to no party dogma. He has a program which has at least a chance of working out for the national good. It will be a grave error if the special interest mail campaigns are permitted to deprive the country of it.

THE CONGO AND LAOS

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the RECORD, a column written by Walter Lippmann, entitled "The Congo and Laos," published in yesterday morning's Washington Post and Times Herald.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE CONGO AND LAOS

(By Walter Lippmann)

Summing up the position of the Soviet Union, Mr. Gromyko told the General Assembly on Tuesday that on the one hand the U.N. should withdraw its troops from the Congo within a month, on the other hand that it should remove "all Belgian troops and Belgian personnel now in that country." It should arrest Tshombe in Elizabethville and Mobutu in Leopoldville, and it should give the necessary assistance and support to Gizenga in Stanleyville. A rather busy month for a withdrawing army.

Does this make any sense, to expect the U.N. forces which would be in the process of packing their bags and moving to the ports to exercise the authority of overwhelming power in all the centers of the vast territory of the Congo? How could a departing force move into Katanga and arrest Tshombe and expel all the Belgians?

Mr. Gromyko's summary of the position is such an irrational and contradictory one as to leave the observer asking whether the Soviet Union has any policy in the Congo except to demolish the United Nations as an influence in world affairs.

The U.S. position on the Congo rests on a decision which was first taken by President Eisenhower, and which was recently reaffirmed by Mr. Henry Cabot Lodge. The decision was to act with and through the United Nations in African affairs. This policy is also that of the Kennedy administration, and it is being carried out with extraordinary diplomatic skill by Governor Stevenson. What is now at stake is more than the pacification of the tribes of the Congo. It is the preservation of the integrity of the United Nations as an instrument of peace during the liquidation of the colonial empires. The liberated countries would become the victims of a new imperialist conflict if the United Nations were to disappear.

We can have a reasonable confidence that on this issue, we shall find ourselves alined with the great majority of the uncommitted nations of the world, including the largest of them, India. The uncommitted nations cannot assent to Mr. Gromyko's demand that the U.N. withdraw from the Congo in 30-days unless they are willing to abandon the only institution on earth in which the small and the weak can stand up to the great and powerful. Were the United Nations to disappear, or were it to be humiliated and reduced to an object of derision, all international relations would become sheer power politics. The importance of a nation would be measured solely by its military power and its strategic geography, and the importance of the weak would be how much trouble they could kick up.

We have very good reason to believe that on this crucial issue—the survival of the United Nations—we are not only on the right side, we are on the winning side. Let the matter be tested in this General Assembly: shall the U.N. withdraw from the Congo or shall it remain until the objectives laid down by the Conciliation Commission have been achieved?

However it must be said that if the United States policy is to succeed, it must have the support and the cooperation of our allies—particularly of Belgium and France. As things stand today, an overwhelming majority of the nations have sanctioned the continuing presence of the U.N. in the Congo. But this sanction was voted with the understanding that the Belgians would withdraw their paramilitary forces and their political agents. If that were refused, the U.N. operation might well fail, with all the contending factions siding with Mr. Gromyko and demanding that the U.N. withdraw. After that the African future might well be quite out of any influence that the United States could exert.

As compared with the Congo, where the United States has a clear position and an intelligible strategic policy, the situation in Laos is confused and dangerous. Our commitment in the Congo, which was taken only last year, lies within the reach of our strategic and political power. Laos does not. Laos is a classic example of a great power being overextended. The commitment in Laos goes back to the days when we were strong enough, or thought we were strong enough, to bring that remote and landlocked country within the American sphere of military influence.

As Laos borders on the Communist world but is far out of our effective reach, our false and imprudent commitment was bound to boomerang as the balance of power became more favorable to the Communist nations.

It has now boomeranged, and President Kennedy has to find a way between a diplomatic defeat and a meaningless war. That may not be impossible to do. But it is a difficult thing to do. And he is entitled to try without too much advice from the backseat drivers.

INTERESTS OF THE AMERICAN CONSUMER

Mrs. NEUBERGER. Mr. President, this promises to be a decisive year for the consumers. Congressional hearings

last year have clearly revealed that leading networks, leading advertising agencies, and leading advertisers have been joint partners in television fraud.

Our colleague the Senator from Tennessee [Mr. KEFAUVER] is to be commended for the hearings he held, which have awakened American consumers of all ages.

Bills to protect the interests of consumers, for the first time in many years, have begun to receive genuine and sympathetic consideration from Members of Congress and from the public at large.

The fact of the matter is that consumers are becoming better educated and are not quite such easy victims of the planned obsolescence championed by grinning television artists.

Consumers cannot be content with such minor goals as having an occasional advisory committee appointed and writing letters protesting some of the more obvious frauds.

Prof. Colston E. Warne, president of Consumers Union, has said:

> The primary goal in a consumer platform is to have a Department of the Consumers, an agency which should in its scope be as important to the Nation as the Department of Commerce or the Department of Agriculture.
>
> A second consumer goal is that of protecting and of expanding the existing consumer outposts in Washington, D.C.; specifically, the Food and Drug Administration and the Federal Trade Commission.

When I was a member of the Oregon Legislature, I fought to get a meat-grading and a meat-inspection law passed in my State. The difficulties we encountered were astonishing. Since that time I think the consumers have rallied to support proposed legislation important to their own protection.

Professor Warne has also stated that—

> Consumer programs, at the State as well as at the Federal level, need to be developed in a dozen fields; such as eliminating unsightly billboards, preventing bait advertising, eradicating the racket of fictitious pricing, tightening the laws affecting consumer credit, coordinating the laws with respect to usury so that outrageous rates will be eliminated, and developing a clear and explicit definition of the cost of doing business.

Seldom has there been a time in which the consumer movement has been more vigorous. National organizations, ranging from the General Federation of Women's Clubs to the AFL–CIO, have placed consumer programs on their agendas. Schools and colleges are increasingly using consumer materials in classes.

While our expectations still outrun our results, we do have a considerable number of new consumer credit protection measures.

I recommend about five ways in which we should consider consumers particularly vulnerable to deceptive merchandising practices.

First. Fictitious pricing, when large price reductions are made from unrealistically high list prices.

Second. "Bait" advertisements, which offer a well-known product at an extremely low price without any intention of selling it, as a lure to get customers into a store.

Third. Mislabeled or undisclosed contents of so-called miracle products, including patent medicines, cosmetics, nutritional supplements, and weight-reducing remedies.

Fourth. Deceptive interest rates and undisclosed finance charges in consumer credit.

Fifth. Lack of grade labeling on many products which makes price competition meaningless and places undue stress on particular product brands through heavy promotional and advertising expenditures.

This morning's Washington Post and Times Herald carried a popular feature column called "The District Line," written by Bill Gold. I should like to read from this column. It includes a letter from a reader of the Washington Post and Times Herald to Mr. Gold, in which it is said:

> "It was with much amusement and a feeling of personal identification that I read of your experiences in trying to figure out whether the large 'economy' package was really a bargain," writes Mrs. William O. Brimijoin of La Plata, Md. "I discovered several years ago that the second word in the designation 'giant economy size' is often as exaggerated as the first. Now I don't buy such items unless I'm accompanied by my engineer husband and his slide rule.
>
> "The first time my husband ran through these pennies-per-ounce problems for me we discovered the absurd fact that in one particular item—dog food—it was cheaper to buy the smaller, easier-to-handle-and-store size."
>
> Yes, many District Liners have written in the same vein recently. Pounds and ounces and fractions of ounces have to be searched out in a hunt through tiny type, and then multiplied by the number of packages involved, because these days so many items are sold two-for or three-for or four-for something or other.
>
> The average person has neither the time nor the patience to struggle with the problem, and sometimes also lacks an aptitude for slide rule research. I am reasonably at ease with simple arithmetic problems, but I, too, hesitate when I get one set of answers and a resolute clerk gets another.
>
> This week, for example, I responded to advertisements that invited me to consider the advantages of buying the big "economy" sizes. One offering was on behalf of a well-known potion priced at $2.62 a pint, $4.43 a fifth and $11.38 a half gallon.

I interpolate in Mr. Gold's column at this point to say I am still quoting, because I myself am not in the habit of making this particular purchase. I continue reading Mr. Gold's column:

> I phoned the store. "Why does this stuff cost more in larger quantities than it does in smaller quantities?" I asked.
>
> "My dear sir," was the reply. "This is not so."
>
> "Maybe I made a mistake in my figures," I hedged, as I checked them. "There are two pints to a quart, and two quarts to a half-gallon. Right? So that's four pints in a half-gallon."
>
> "Now you're on the right track," the clerk said. "So multiply four times $2.62."
>
> I followed his suggestion. Then, imitating his tone, I said: "My dear sir, I have again multiplied four times $2.62 and I have again reached an answer of $10.48—not $11.38. So again I ask: Why do you charge 90 cents more for the same amount of this stuff in one bottle as you charge for it in four separate bottles?"
>
> First he tried to tell me my multiplication was wrong.
>
> Then he switched his defense. "You've got to remember, my dear sir," he said, "that the half-gallons are a hand operation, and this costs a few pennies more. You see, the pints and fifths are filled by machine."
>
> "If the pints and fifths are both filled by machine," I asked, "why does it cost more per ounce in the larger fifths than in the smaller pints? The pint rate is $20.96 a gallon, the fifth rate is $22.15 a gallon, and the half-gallon rate is $22.76 a gallon. The bigger the bottle, the higher the rate per ounce."
>
> "That's the way the prices are set up," he muttered. "We have nothing to do with them."
>
> "If that's the way they're set up, maybe they're set up wrong," I suggested.
>
> "No," he said flatly. "There's nothing wrong with them. We sell them every day at those prices. You're the only one who has complained."
>
> I must be some kind of nut or something. I not only like to know what I'm buying and how much it costs, but I even count my change before I leave the box office window. Clerks must find it terribly annoying to have to wait on customers like me.

President Kennedy has expressed his concern for and interest in the American consumer. He said:

> The housewives who shop for their families—the wage earners who pay the rent and meet the bills—all have a vital interest in the activities of government which affect the value, the quality and accessibility of the goods which they buy. And yet those interests have been virtually unrepresented before the agencies, the congressional committees and the executive departments whose work has a direct impact on the daily life and long-term standard of living of the American consumer.

Consumers have been the "ignored Americans." They lack a lobby. They have been more or less voiceless at the Federal level.

Up until the First World War, the processes of production were neither so complex nor so remote that they were not understood by the society at large. A great proportion of our people still lived on farms or in a rural environment. The production-consumption unit was a single-phase operation, with food and fiber being produced and consumed within a fairly small community unit. The degrees of specialization was low and a consumer was able to make an informed appraisal of his purchases.

There has been a change. Today we are operating under new conditions, primary among which is the concept of the second exchange.

The basic consuming unit is still the family, but few families produce what they consume. We earn wages by performing a relatively specialized service in a highly technical economy. We trade labor and skill for money. This is the first exchange.

But we do not eat money. We must take the money we have received for our skill and labor and make a second exchange. We buy the goods and services that are provided for us by the labor and skill of others.

Transforming money into goods and services is the act of consuming. This is the second exchange.

It is to protect our hours of labor and the real value of the money we receive

for that labor that the interests of the consumer must be protected in the second exchange.

The President has announced his intention "to appoint a consumer counsel in the Office of the President." He said that it would be "the function of this counsel to represent the interests of the American consumer in all the activities of government."

I have introduced a resolution calling for the establishment of a Senate Select Committee on the Consumer Interest. Such a committee would conduct a study with respect to the nature and extent of economic problems of consumers within the United States.

I urge consideration of this part of the President's program.

Along the same line I wish to call attention to a bill termed the "truth in lending bill," which I hope will be reintroduced by the Senator from Illinois [Mr. DOUGLAS], dealing with one facet of this important subject. I enjoyed reading the transcript of the committee hearings and reports on the bill last year. In fact, during my campaign I found that the bill was a very popular proposal, and wherever I spoke about it, the greatest interest was manifested and many questions were asked about it.

The American consumer is becoming increasingly concerned. We, as his representatives, should show this feeling.

BRITISH BROADCASTING CORP. REBROADCAST OF FILM "HARVEST OF SHAME"

Mr. HOLLAND. Mr. President, on Wednesday, March 22, I addressed the Senate on the presentation by the British Broadcasting Corp. of the film "Harvest of Shame" on the preceding night under an arrangement with the American owner, Columbia Broadcasting System. I deplored the sale by CBS of the right to present this film throughout Great Britain, and predicted what I felt must be the inevitable result of presenting that extremely untrue and unfavorable picture of America and American life to our stanch friends, kinsmen, and allies, the British. Mr. President, I have now received clippings from the British press which abundantly support my prediction that the effect of the presentation of this so-called documentary was as I said it would be, and that such presentation would be a great disservice to our country.

I shall read into the RECORD quotations from some of the British press clippings, which abundantly show the extent to which our British friends had already been misled by the time of the publication of the British papers on the next day, following the night of the telecast. The first reaction which I shall note is a program announcement in the Radio Times, an official BBC publication, covering the period from March 18 to March 24. I ask unanimous consent that the announcement be printed as a part of my remarks at this point in the RECORD.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

[From Radio Times, Mar. 18–24, 1961]

THE "HARVEST OF SHAME"—THE PLIGHT OF AMERICA'S MIGRATORY FARM WORKERS

(By Kenneth Lamb)

Every year at about this time a horde of some 3 million Americans take to the road. Their exodus has its beginning in Florida, or on the Mexican border in California. In the next 9 months they will travel thousands of miles. They will follow the sun and bring in the harvest.

Tonight's program is about these men, women and children; and the way they live and move around in search of work. Mr. James P. Mitchell, who was President Eisenhower's Secretary of Labor, calls them "the excluded Americans." One of them, a 29-year-old Negress, a migrant worker since she was 8, now the mother of 14 children, describes how she earns $1 per 10-hour day of picking beans.

There are scenes in this film reminiscent of "The Grapes of Wrath." It pulls no punches. One farmer is quoted as saying: "We used to own our slaves; now we just rent them." In one place in Florida, when the producer unloaded his camera outside a worker's shack, a father of four children drove him off with a hammer, shouting, "Nobody's going to photograph my kids living like this." But the concern of many farmers about the workers' living conditions is also made clear.

This is one of the last television programs in which Ed Murrow appeared before President Kennedy appointed him Director of the U.S. Information Agency.

Mr. HOLLAND. Mr. President, to illustrate the seriousness of the impact of the showing of the film upon the British people, I shall read some excerpts from the official announcement of the British Broadcasting Corp. of the approaching showing of the film:

Tonight's program is about these men, women and children—

Previously it had mentioned the "3 million" Americans who are "migratory farmworkers."

Tonight's program is about these men, women and children; and the way they live and move around in search of work. Mr. James P. Mitchell, who was President Eisenhower's Secretary of Labor, calls them "the excluded Americans." One of them, a 29-year-old Negress, a migrant worker since she was 8, now the mother of 14 children, describes how she earns $1 per 10-hour day of picking beans.

There are scenes in this film reminiscent of "The Grapes of Wrath." It pulls no punches. One farmer is quoted as saying: "We used to own our slaves; now we just rent them."

Mr. President, the RECORD will show abundantly that the Senator from Florida had protested vigorously to two of the items—the false and troublemaking items which are mentioned in that brief part of the announcement. One of them is the statement that a dollar for a 10-hour day is a wage. The Senate will note from later clippings that that idea seems to have prevailed in the minds of several of the members of the British press who reported on the actual showing of the film. I fully discussed the falsity of that statement on the floor of the Senate on February 6. The second one was covered by my very strong objection, voiced last Wednesday, to the showing of this film on the ground that the word "slaves" and similar words had been used in this film in conjunction with the showing of members of the Negro race who were among these migratory workers, and that I was sure that that factor would be among the troubles and misunderstandings which this film would create.

It is very clear from the actual announcement, an official publication of the British Broadcasting Corp., that both of these items became sensational items which the writer of this publicity item felt should be stated to attract people to look at the film, so that they would see how horrible we Americans have become, paying a dollar a day for a 10 hour day's work, and "renting our slaves now," rather than owning them.

I wish to pass now to the reviews and news articles in the British press for Wednesday last with reference to the program after it had been presented, which I now offer for the RECORD, to show the damage which already had been done to our Nation's image abroad by this untrue film presentation.

I ask unanimous consent that an excerpt from an article in the Daily Herald of March 22 be printed in the RECORD at this point in my remarks.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

MURROW TELLS OF AMERICA'S SHAME

(By Phil Diack)

Part of the underbelly of the American economy was shockingly exposed in the CBS-Ed Murrow documentary "Harvest of Shame," shown on BBC last night.

This deliberately disturbing report on the modern slaves of rural U.S.A.—the migrant agricultural workers—was one of the last TV programs on which Murrow worked before President Kennedy appointed him Director of the U.S. Information Agency.

WRETCHED

I am sure that the appointment means a clear and decent official expression of the American conscience, but I cannot help fearing that our TV as well as theirs is bound to be the poorer.

Murrow's documentary blazed fiercely with his incomparable and indispensible indignation * * * fury backed by hard facts, harshly framed on film.

His all-American style as a commentator has sometimes offended me. That does not really matter. He has had a massive influence on TV—not so much as a technician, but as the questioning voice of American liberal conscience.

Apart from the Murrow masterpiece, the night's viewing was familiar rather than auspicious.

Mr. HOLLAND. Mr. President, I shall read a few excerpts from this article, printed in one of Britain's great newspapers on the morning after the showing, to give to the American people an idea of the immense harm done to our Nation by the unprincipled act of CBS in the selling of the film for presentation overseas after they knew full well its controversial nature and also of the charges of complete falsity of several

of the items in the film, which charges have not been answered or disproved.

I read this excerpt:

This deliberately disturbing report on the modern slaves of rural United States—the migrant agricultural workers—was one of the latest TV programs on which Murrow worked before President Kennedy appointed him Director of the U.S. Information Agency.

Mr. President, I not only call attention to what I thought was certain to happen, that this use of the word "slaves" would bring about improper connotations and improper interpretations and charges, but also that there would be no way of divorcing from the showing of this film the gentleman who narrated it, Mr. Murrow, now head of USIA, who, I must say, had very little to do with the actual production of the film, because everything I have been able to learn is to the effect that a field worker named David Lowe took the pictures and then culled what he wanted out of the tremendous number of pictures he had taken, which would have been more representative of the situation, and prepared a film which was highly discriminatory against American rural life and against American migratory rural workers, and then CBS presented that film for narration by Mr. Murrow. Mr. Murrow's connection with the matter was much less than that of Mr. Lowe.

There are other items in the article. I shall not refer to them at this time.

The third item which I offer, is one of the same date, March 22, from the Daily Sketch of London. It is entitled, "How I see It," written by Neville Randall. I ask unanimous consent that the article may be inserted in the RECORD at this point as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW I SAW IT

(By Neville Randall)

I have seen five TV films on the American way of life this year. All were critical. But none matched the devastating condemnation of Ed Murrow's "Harvest of Shame," screened—under protest from America—by the BBC last night.

The picture he presented of 2 million to 3 million migrant farm laborers made the slums of Chicago seem like a paradise.

CLIMAX

This climax to an orgy of self-criticism nearly lost Murrow his appointment as the new head of the U.S. Information Agency.

I can only say that if Murrow builds up America as skillfully as he tore it to pieces last night, the propaganda war is as good as won.

Mr. HOLLAND. I quote two very brief sentences from the report on the film showing by Mr. Randall:

The picture he presented of two to three million migrant farm laborers made the slums of Chicago seem like a paradise.

I quote further:

I can only say that if Murrow builds up America as skillfully as he tore it to pieces last night, the propaganda war is as good as won.

Was there any chance for British critics or newspaper commentators to fail to attempt to fix the responsibility upon the head of our U.S. Information Agency for the promulgation and publications of this film, which in so many particulars is false and malicious and slanderous to good people in this country, both employers and workers?

We have noted already that there have been two references to the "3 million" figure with reference to migrant workers. The fact is that the number of domestic migrant workers and their families is only about 400,000. I ask unanimous consent that the statement from the U.S. Department of Labor on the subject, furnished as an official publication of our Government to cover this field, which is already included in the CONGRESSIONAL RECORD for February 16, 1961, where it had been placed at the request of the distinguished Senator from New Jersey [Mr. WILLIAMS], be printed again in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Employment of seasonal farmworkers

[In thousands]

	Total seasonal farm labor employment	Foreign (mostly Mexican workers)	Domestic workers		
			Total	Local	Migrant
1959					
November	823	185	638	493	145
December	399	97	302	248	54
1960					
January	343	77	265	233	42
February	328	72	256	218	38
March	309	71	238	205	34
April	417	81	336	284	52
May	766	109	657	543	114
June	1,225	137	1,089	867	222
July	1,200	123	1,077	784	293
August	1,112	133	979	716	263
September	1,282	184	1,099	848	251
October	1,316	236	1,079	823	256
